ONE UC DAVIS IS YOU, a global network of people connected to our university—students, faculty, staff, alumni, parents, friends, donors and partners. It is the positive impact of our unsung heroes, imaginative research teams and innovative thinkers.

Together we are transforming lives, celebrating humanity and nature, and inspiring breakthroughs in California and beyond—and in the process, we are elevating ourselves and each other to new heights.

FRONT COVER
DNA: "Living" in the Sciences Laboratory Building, the 50-foot-tall Portrait of a DNA Sequence sculpture represents a segment of DNA first deciphered at UC Davis.

Eggheads: The five Egghead sculptures by late art professor Robert Arneson bemuse and captivate visitors and campus community alike.

### Quarter begins

- **Fall 2014:** Sep 29
- **Winter 2015:** Jan 2
- **Spring 2015:** Mar 26
- **Fall 2015:** Sep 21
- **Winter 2016:** Jan 4
- **Spring 2016:** Mar 24

### Instruction begins

- **Fall 2014:** Oct 2
- **Winter 2015:** Jan 5
- **Spring 2015:** Mar 30
- **Fall 2015:** Sep 24
- **Winter 2016:** Jan 4
- **Spring 2016:** Mar 28

### Last day to:

- **Make final late payment of registration fees with penalty**
- **Drop 10-day-drop courses**
- **Change student status (part-time/full-time)**
- **Last day to file for PELP**

### Last day to:

- **Add courses**
- **Drop 20-day-drop courses**
- **Opt to take courses on a P/NP or S/U basis**
- **Change units in a variable unit course**

### Instruction ends

- **Fall 2014:** Dec 12
- **Winter 2015:** Mar 16
- **Spring 2015:** Jun 4
- **Fall 2015:** Dec 14
- **Winter 2016:** Mar 14
- **Spring 2016:** Jun 2

### Final examinations

- **Fall 2014:** Dec 13–19
- **Winter 2015:** Mar 17–21
- **Spring 2015:** Jun 6–8, 11
- **Fall 2015:** Dec 7–11
- **Winter 2016:** Mar 15–19
- **Spring 2016:** Jun 4–6, 9

### Quarter ends

- **Fall 2014:** Dec 19
- **Winter 2015:** Mar 21
- **Spring 2015:** Jun 11
- **Fall 2015:** Dec 11
- **Winter 2016:** Mar 19
- **Spring 2016:** Jun 9

### Commencement

- **Fall 2014:** Dec 20
- **Winter 2015:** ----
- **Spring 2015:** Jun 12–14
- **Fall 2015:** Dec 12
- **Winter 2016:** ----
- **Spring 2016:** Jun 10–12

### Academic and Administrative Holidays

- **Fall 2014:** Nov 11, Nov 27–28, Dec 23–26, Dec 31-Jan 1
- **Winter 2015:** Jan 19, Feb 16, Mar 27, May 25
- **Spring 2015:** Nov 11, Nov 26–27, Dec 24–25, Dec 31-Jan 1
- **Fall 2015:** Jan 18, Feb 15, Mar 25
- **Winter 2016:** ----
- **Spring 2016:** May 30

### Filing for Candidacy (Graduation)

- **Fall 2014:** Aug 1–Sep 12
- **Winter 2015:** Nov 8–Dec 12
- **Spring 2015:** Feb 1–Mar 16
- **Fall 2015:** Aug 1–Sep 11
- **Winter 2016:** Nov 8–Dec 4
- **Spring 2016:** Feb 1–Mar 14

### Last day to file minor with the Dean’s Office or the Biology Academic Success Center

- **Fall 2014:** Oct 15
- **Winter 2015:** Jan 16
- **Spring 2015:** Apr 10
- **Fall 2015:** Oct 7
- **Winter 2016:** Jan 15
- **Spring 2016:** Apr 8

### Undergraduate Admission

- **Fall 2014:** Nov 30, 2013
- **Winter 2015:** Jul 31, 2014
- **Spring 2015:** Oct 31, 2014
- **Fall 2015:** Nov 30, 2014
- **Winter 2016:** Jul 31, 2015
- **Spring 2016:** Oct 31, 2015

### Last day to file an application for admission scholarships; usually closed for winter and spring

- **Fall 2014:** Nov 30, 2013
- **Winter 2015:** Jul 31, 2014
- **Spring 2015:** Oct 31, 2014
- **Fall 2015:** Nov 30, 2014
- **Winter 2016:** Jul 31, 2015
- **Spring 2016:** Oct 30, 2015

### Last day to file a readmission application with return to undergraduate status

- **Fall 2014:** Jul 31, 2014
- **Winter 2015:** Oct 31, 2014
- **Spring 2015:** Jan 30, 2015
- **Fall 2015:** Jul 31, 2015
- **Winter 2016:** Oct 30, 2015
- **Spring 2016:** Jan 29, 2016

### Summer Sessions 2014

- **Jun 23–Aug 1
- **Aug 4–Sep 12

### Summer Sessions 2015

- **Jun 22–Jul 31
- **Aug 3–Sep 11

### Financial Aid Filing Period

- **Fall 2014:** Jan 1–Mar 2, 2015
- **Winter 2015:** May 8–Jun 4
- **Spring 2016:** Jul 7–Aug 11

### Symbol Key

- Dates are subject to change without notice.
- **†** Filing period for students graduating:
  - **Sep 2014:** May 8–Jun 5
  - **Sep 2015:** May 8–Jun 4
  - **Sep 2016:** May 9–Jun 2
- **‡** Deadline to file a minor program with the Dean’s Office or the Biology Academic Success Center for students graduating:
  - **Sep 2014:** Jul 7
  - **Sep 2015:** Jul 7
  - **Sep 2016:** Jul 7
THE PROVISIONS OF THIS CATALOG REFLECT INFORMATION AS OF THE DATE OF PUBLICATION.

NOTICE: This General Catalog is not a contract nor an offer to enter into a contract. While every effort is made to ensure the accuracy of the information provided in this General Catalog, it must be understood that all courses, course descriptions, designations of instructors, curricular and degree requirements and other academic information described herein are subject to change or elimination at any time without notice or published amendment to this catalog. In addition, The University of California reserves the right to make changes at any time, without prior notice, to other programs, policies, procedures and information, which are described in this General Catalog only as a convenience to its readers. Fees and all other charges are subject to change at any time without notice. Students should consult the appropriate academic or administrative department, school, college, graduate division or other service provider for currently accurate information on any matters described in this General Catalog; contact information is available at http://www.ucdavis.edu.

IT IS THE RESPONSIBILITY OF THE INDIVIDUAL STUDENT TO BECOME FAMILIAR WITH THE ANNOUNCEMENTS AND REGULATIONS OF THE UNIVERSITY PRINTED IN THIS GENERAL CATALOG.

The University of California, Davis, will provide assistance to the visually impaired regarding the information contained in this catalog. Questions should be directed to the office or department concerned.

The General Catalog may be purchased from UC Davis Repro Graphics; see http://catalog.ucdavis.edu/.

FROM THE CHANCELLOR

Welcome to UC Davis. We're delighted you've chosen our campus as the place to pursue your academic goals. All of us—faculty, staff and alumni—are committed to helping you toward their successful attainment.

In the time you spend at UC Davis, you will acquire knowledge and skills that will help you shape the rest of your life. In whatever program you study, you will receive an exceptional education and a degree that is respected by graduate schools and employers around the world. Our philosophy of learning, discovery and engagement means that you will graduate with a very strong academic foundation that will serve you well whatever you do next in life. It also ensures that you will understand how your learning is relevant to the greater world. UC Davis has a century of commitment to public service and seeking solutions to today's critical issues, and we encourage you to integrate these goals into your education.

Students who take advantage of what the university has to offer love UC Davis! While you're here, you'll make lifelong friends and have experiences that will help you reach your full potential and also serve the larger community in which you live. Your passion, intellectual curiosity and vision give our campus the energy and inspiration that make UC Davis special and your time here meaningful.

We are extremely proud of UC Davis. Our alumni have made significant and lasting contributions to society as leaders in government, business, technology, media and the arts. They share their knowledge and resources with the campus and help students build social and career networks before they graduate. Members of our faculty have won MacArthur genius grants, Pulitzer prizes, Fulbright scholarships and election to the nation's top academies of the arts and sciences. They connect with students in the classroom, during freshman seminars and through research, arts and honors activities.

UC Davis continues to grow and offer new and exciting opportunities to learn and progress. Residence halls and dining facilities, a multipurpose stadium, new math and sciences buildings and the Mondavi Center for the Performing Arts are a few of the developments that reflect our commitment to offering the best educational experience available.

Together, we are using our talents and ingenuity to build a community that honors our diversity as individuals and reflects our belief in a shared set of values and mutual respect. I am delighted you have chosen to join our community.

Congratulations on becoming an Aggie!

Linda Katehi
Chancellor

DEGREES OFFERED BY UC DAVIS

Undergraduate majors are administered by the colleges of Agricultural and Environmental Sciences (A&ES), Biological Sciences (CBS), Letters and Science (L&S), and Engineering. Professional studies are administered by the schools indicated. All graduate programs are administered by the Office of Graduate Studies. The list below indicates the major or discipline, the degree(s) offered and the school or college offering the major.

## MINOR PROGRAMS OFFERED BY UC DAVIS

Minor programs are offered by the College of Agricultural and Environmental Sciences (A&ES), the College of Biological Sciences (CBS) and the College of Letters and Science (L&S). The College of Engineering (ENGR), the School of Education (SOE) and the Graduate School of Management (GSM) each offer one undergraduate minor. The list below indicates the minor program, the offering department (if the department name is different than the name of the minor) and the college offering the minor.

### African American and African Studies
- L&S

### Aging and Adult Development (Human & Community Development)
- A&ES

### Agricultural Pest Management
- A&ES

### Agricultural Systems and Environment (Plant Sciences)
- A&ES

### American Studies
- L&S

### Animal Science—Animal Biology
- A&ES

### Animal Science—Animal Genetics
- A&ES

### Animal Science—Aquaculture
- A&ES

### Animal Science—Dairy/Livestock
- A&ES

### Animal Science—Equine
- A&ES

### Anthropology
- L&S

### Applied Computing & Information Systems (Plant Sciences)
- A&ES

### Arab Studies
- L&S

### Art History
- L&S

### Art Studio
- L&S

### Asian American Studies
- L&S

### Atmospheric Science (Land, Air, and Water Resources)
- A&ES

### Biological Sciences
- CBS

### Biomedical Engineering
- ENGR

### Chemistry
- L&S

### Chicanica/Chicano Studies
- L&S

### Chinese (East Asian Languages and Cultures)
- L&S

### Classical Civilization (Classics)
- L&S

### Coaching Principles and Methods
- L&S

### Communication
- L&S

### Community Development (Human & Community Development)
- A&ES

### Community Nutrition (Nutrition)
- A&ES

### Comparative Literature
- L&S

### Computational Biology
- ENGR

### Computer Science
- L&S

### Construction Engineering and Management (Civil Engineering)
- ENGR

### Contemporary Leadership
- A&ES

### Dramatic Art (Theatre and Dance)
- L&S

### East Asian Studies
- L&S

### Economics
- L&S

### Education
- SOE

### Energy Efficiency (Biological and Agricultural Engineering)
- ENGR

### Energy Science & Technology (Biological and Agricultural Engineering)
- ENGR

### Energy Policy (Biological and Agricultural Engineering)
- ENGR

### English
- L&S

### Environmental Geology (Geology)
- L&S

### Environmental Horticulture
- A&ES

### Environmental Policy Analysis & Planning (Environmental Science and Policy)
- A&ES

### Environmental Toxicology
- A&ES

### Evolution, Ecology and Biodiversity
- CBS

### Exercise Biology (Neurobiology, Physiology, and Behavior)
- CBS

### Fiber and Polymer Science (Textiles and Clothing)
- A&ES

### Film Studies
- L&S

### Food Service Management (Nutrition)
- A&ES

### Forensic Entomology
- A&ES

### Forensic Entomology (Entomology)
- A&ES

### French
- L&S

### Fungal Biology and Ecology
- A&ES

### Geographic Information Systems (Biological & Agricultural Engineering)
- A&ES

### Geographic Studies (Environmental Design)
- A&ES

### Geology
- L&S

### Geophysics (Geology)
- L&S

### German
- L&S

### Global and International Studies (Humanities)
- L&S

### Greek (Classics)
- L&S

### History
- L&S

### History and Philosophy of Science (Science & Technology Studies)
- L&S

### Human Development (Human & Community Development)
- A&ES

### Human Physiology (Neurobiology, Physiology, and Behavior)
- CBS

### Human Rights (Religious Studies)
- L&S

### Hydrology (Land, Air, and Water Resources)
- A&ES

### India and South Asia Studies
- L&S

### Insect Biology (Entomology)
- A&ES

### Insect Ecology and Evolution (Entomology)
- A&ES

### International Agricultural Development (Human & Community Development)
- A&ES

### International Science Studies (Land, Air, and Water Resources)
- A&ES

### Iran & South Asia Studies
- L&S

### Italian
- L&S

### Japanese (East Asian Languages and Cultures)
- L&S

### Jewish Studies (Humanities)
- L&S

### Landscape Restoration (Plant Sciences)
- A&ES

### Latin (Classics)
- L&S

### Latin American and Hemispheric Studies
- L&S

### Linguistics
- L&S

### Linguistics for Language Teachers
- L&S

### Luso-Brazilian Studies (Spanish and Portuguese)
- L&S

### Materials Science
- ENGR

### Mathematics
- L&S

### Medical-Veterinary Entomology
- A&ES

### Medieval and Early Modern Studies
- L&S

### Middle East/South Asia Studies
- L&S

### Music
- L&S

### Native American Studies
- L&S

### Nematology
- A&ES

### Neuroscience (Neurobiology, Physiology, and Behavior)
- CBS

### Nutrition and Food (Nutrition)
- A&ES

### Nutrition Science (Nutrition)
- A&ES

### Oceanography (Geology)
- L&S

### Philosophy
- L&S

### Physics
- L&S

### Plant Biology
- CBS

### Political Science
- L&S

### Precision Agriculture (Biological and Agricultural Engineering)
- A&ES

### Professional Writing (University Writing Program)
- L&S

### Public Health
- L&S

### Quantitative Biology and Bioinformatics (Biological Sciences)
- CBS

### Religious Studies
- L&S

### Russian
- L&S

### Science and Society
- A&ES

### Sexuality Studies
- L&S

### Social and Ethnic Relations (African American and African Studies, Asian American Studies, Native American Studies, Women and Gender Studies)
- L&S

### Sociology
- L&S

### Soil Science (Land, Air, and Water Resources)
- A&ES

### Spanish
- L&S

### Statistics
- L&S

### Sustainability in the Built Environment
- ENGR

### Technology Management
- GSM

### Textiles and Clothing
- A&ES

### War-Peace Studies (International Relations)
- L&S

### Watershed Science (Land, Air, and Water Resources)
- A&ES

### Wildlife, Fish and Conservation Biology
- A&ES

### Women's Studies
- L&S
INTRODUCTION
INTRODUCTION

As one of the leading institutions of higher education in the world, the University of California, Davis, is committed to serving a broad student population and society at large through the generation and advancement of knowledge and discovery. Over its 100-year history, the University of California, Davis, has grown from its early beginnings as an agricultural college into a world-class comprehensive research university. Originally founded as the University Farm in 1905, UC Davis was formally designated an independent University of California campus in 1959. U.S. News & World Report ranks UC Davis ninth among public universities nationally, and the campus is among only 62 universities admitted into the prestigious Association of American Universities (AAU).

Advancing Knowledge

A comprehensive research university, UC Davis offers 101 undergraduate majors and 94 graduate and professional degrees across four colleges and six professional schools. One-third of the 51 UC Davis doctoral programs participating in the National Research Council's 2010 Assessment of U.S. Doctoral Programs ranked in the top 25 percent in their respective fields, with six programs ranking in the top five percent. With students from across California, the nation and the world, UC Davis is home to a diverse student body numbering more than 34,000 students.

The campus’ reputation has attracted a distinguished faculty of scholars and scientists in all fields. Honors received by UC Davis faculty include five U.S. Presidential Awards, 279 National Academy memberships, 13 Fulbright Senior Scholars and two Pulitzer Prizes.

A Place for Discovery

Research at UC Davis works toward solving the world’s most difficult problems and supports California’s economic, intellectual and social development. Over the last decade, annual research funding at UC Davis increased by 150 percent, from $300 million to over $750 million. The campus’ varied research programs explore the intellectual frontiers across the sciences, humanities and arts, with particular global leadership in agricultural science and environmental sustainability.

Research is an integral part of teaching at UC Davis. Faculty members share their research findings in the classroom, and students learn firsthand about discovery while working with professors in the laboratory and field. A number of undergraduate research programs offer students the opportunity to work on a research project in a faculty laboratory, in some cases as early as their freshman year.

Leader in Public Service

In the tradition of land-grant universities, UC Davis uses knowledge and discovery in addressing the needs of the region, state, nation and globe.

The UC Davis Health System serves the needs of 6 million people in 33 counties and operates the region’s only Level 1 trauma center as well as a National Cancer Institute-designated cancer center, a comprehensive children’s hospital and a world-renowned telemedicine network. The UC Davis Veterinary Medical Teaching Hospital cares for more than 45,000 small and large animals each year. The School of Law offers community support in the areas of immigration, prison law, civil rights litigation and family protection. And since its inception in 2002, the School of Education has prepared nearly 6,000 teachers for California classrooms. The University’s most recent school, the Betty Irene Moore School of Nursing, was founded in 2009 and uniquely serves the role of increasing patient safety and creating interprofessional opportunities for nurse leaders.

Life at UC Davis

Life at UC Davis is as diverse as the members of our university community. Students enjoy sports, community internships, public service, outdoor activities, concerts and clubs.

UC Davis is known for its student-run facilities; the Coffee House, the radio station KDVS and the Unitrans bus service provide paid employment and real-world experience to hundreds of students each year. Some 70 percent of UC Davis students interested in gaining work experiences participate in internships locally, nationally and globally through the Internship and Career Center, among the largest university-based academic internship programs in the country.

A cultural center in the region, the Robert and Margrit Mondavi Center for the Perforing Arts features internationally known artists and speakers and showcases the university’s music and theatre and dance departments. Museums and galleries house valuable teaching, research and general interest collections that range from the Bohart Museum of Entomology’s insects to contemporary Native American art at the C.N. Gorman Museum. In 2014, the University broke ground for a way to showcase its art collections with the construction of the Jan and Maria Manetti Shrem Art Museum.

In 2007, UC Davis made the transition to Division I of the National Collegiate Athletic Association. UC Davis sponsors 14 varsity sports for women and nine for men. Thirty-seven club sports, organized by students, compete against other area colleges. Intramural sports annually draw some 19,000 students who participate in 60 different men’s, women’s and coed activities.

A city of more than 65,000 people, Davis is known as an environmentally aware, physically fit and socially innovative community. The city was named best bicycle community in the U.S. by the League of American Bicyclists (the only city ever to receive platinum recognition) and has more than 103 miles of dedicated bike lanes and paths and nearly 500 acres of parks and greenbelts. Davis’ proximity to the state capital, Lake Tahoe and the San Francisco Bay Area makes it easy to take advantage of big-city attractions while enjoying the lifestyle of a university town.
THE UNIVERSITY OF CALIFORNIA

UC Davis is one of 10 campuses of the University of California, which was chartered as a land grant college in 1868 and has become the country’s premier system of public higher education. Together, the campuses have an enrollment of more than 240,000 students, with more than 1.7 million alumni living and working around the world. Some 150 laboratories, extension centers, research and field stations strengthen teaching and research while providing public service to California and the nation. The collections of the more than 100 UC campus libraries are surpassed in size in the United States only by that of the Library of Congress.

VISITING THE CAMPUS

UC Davis Welcome Center
530-752-8111; http://visit.ucdavis.edu

Welcome Center operating hours are 8:00 a.m.-5:00 p.m., Monday-Friday and 9:00 a.m.-3:00 p.m. Saturday and Sunday. Monday-Friday campus tours are offered at 9:00 a.m. and 1 p.m. Saturday and Sunday tours are offered at 11:00 a.m. Over-the-counter admissions advising is offered seven days per week at the Welcome Center. To register for a tour, visit http://visit.ucdavis.edu or call 530-752-8111. If you have questions regarding application procedures or entrance requirements, write or visit the UC Davis Welcome Center at 550 Alumni Lane, Davis, CA 95616.

THE UNDERGRADUATE COLLEGES

The College of Agricultural and Environmental Sciences

The College of Agricultural and Environmental Sciences offers a diverse program of majors and courses and is committed to education that emphasizes a spirit of discovery. Based on the premise that tomorrow’s citizens will need to anticipate, understand and solve emerging societal problems and contribute to the discovery and application of new knowledge, the college fosters:

• Critical thinking and an appreciation for diversity in thought and approaches to problem solving
• An ethos of lifelong learning—of teaching oneself and others while confronting challenges and solving problems
• An ability to move beyond either/or thinking and to pursue innovative and integrative understanding of the agricultural sciences, environmental sciences and human sciences
• Intellectual skills that prepare individuals to secure a life-affirming physical and cultural environment based on sound, respectful management of resources
• A commitment to serve the public with informed and open-minded dedication to understanding, critiquing and addressing complex societal needs and interests

The college is proud of its rich agricultural history. From this foundation, it has expanded its educational offerings to encompass programs that highlight interconnections among the environment, plant and animal sciences, biological sciences and human sciences. Through a wide array of major programs, the college prepares high-potential students for advanced studies in diverse disciplines and leadership in such arenas as public policy; research and development; managerial and natural resource economics; agricultural systems; environmental protection, safety and design; human nutrition, health and development; and the food, fiber, textile and apparel industries.

Undergraduate students enjoy early contact with faculty advisers, graduate students and postgraduate researchers, enriching and broadening the educational experience of all.

Several levels of academic advising are available that are designed to enhance your undergraduate experience. Advisers help you plan your courses, meet degree requirements and take maximum advantage of the resources available at UC Davis. You are encouraged to meet regularly with your assigned faculty adviser and with the Advising Associates and departmental peer advisers. Through a shared commitment to education for service to society, college faculty, staff and students work together to improve the relationship between humanity and the natural world.

The College of Biological Sciences

Biology Academic Success Center
1023 Sciences Laboratory Building
530-752-0410; http://biosci.ucdavis.edu/BASC

The mission of the College of Biological Sciences is to prepare students to fully engage and actively participate in all areas of the exciting and rapidly expanding field of biology. Courses offered by the college span the basic biological disciplines of biochemistry, behavior, cell biology, evolution, ecology, genetics, physiology and neurobiology and apply these concepts to the study of microbes, plants and animals ranging from genetic model organisms to humans. Recent additions to the curriculum, including courses in genomics, bioinformatics and computational biology, reflect the profound changes sweeping biology as new technologies enable new areas of research.

Coursework in the college’s majors is rich in hands-on laboratory instruction as well as lectures and seminars. Every department in the College offers laboratory courses in the Sciences Laboratory Building—a state-of-the-art facility featuring advanced instrumentation and a student-friendly environment. In addition, many students in the college participate in laboratory research and internships that enable them to bridge classroom experiences to life beyond the university.

Biology is integral to a multitude of career options. Whether interested in a professional career in the health sciences, research, education, environmental work, business, law, administration, pharmaceutical sales or communications, students in the College of Biological Sciences receive the attention and preparation they need to excel in their chosen field.

To learn more about the nine majors offered through the College of Biological Sciences, see our website at http://biosci.ucdavis.edu/BASC, select Students, then Undergraduate Students, and then select Learn about the Majors Offered.
Introduction

University of California, Davis

Principles of Community

The UNIVERSITY OF CALIFORNIA, DAVIS, is first and foremost an institution of learning and teaching, committed to serving the needs of society. Our campus community reflects and is a part of a society comprising all races, creeds, and social circumstances. The successful conduct of the University’s affairs requires that every member of the University community acknowledge and practice the following basic principles:

WE AFFIRM THE DIGNITY inherent in all of us, and we strive to maintain a climate of justice marked by respect for each other. We acknowledge that our society carries within it historical and deep-rooted misunderstandings and biases, and therefore we will endeavor to foster mutual understanding among the many parts of our whole.

WE AFFIRM THE RIGHT of freedom of expression within our community and also affirm our commitment to the highest standards of civility and decency towards all. We recognize the right of every individual to think and speak as dictated by personal belief, to express any idea, and to disagree with or counter another’s point of view, limited only by University regulations governing time, place, and manner. We promote open expression of our individuality and our diversity within the bounds of courtesy, sensitivity, and respect.

WE CONFRONT AND REJECT all manifestations of discrimination, including those based on race, ethnicity, gender, age, disability, sexual orientation, religious or political beliefs, status within or outside the University, or any of the other differences among people which have been excuses for misunderstanding, dissension, or hatred. We recognize and cherish the richness contributed to our lives by our diversity. We take pride in our various achievements, and we celebrate our differences.

WE RECOGNIZE that each of us has an obligation to the community of which we have chosen to be a part. We will strive to build a true community of spirit and purpose based on mutual respect and caring.

The “Principles of Community” were prepared and adopted after extensive discussion within the campus community about the need for a statement that reflects UC Davis’ commitment to a learning environment characterized by diversity, understanding and the acceptance of all people. This statement of common principles was published on April 20, 1990, carrying the endorsement of Chancellor Theodore L. Hullar and the leadership of the Davis Division of the Academic Senate, the Academic Staff Organization, the UCD Staff Assembly, the UCDMC Staff Assembly, the Associated Students of UC Davis (ASUCD), and the Graduate Student Association.
Mission Statement:

Philosophy of Purpose

The core purpose of UC Davis as a comprehensive research university is the generation, advancement, dissemination and application of knowledge. To that end, UC Davis is committed to offering leading programs throughout the academic disciplines and in its professional schools. These programs integrate three purposes: teaching students as a partnership between faculty mentors and young scholars; advancing knowledge and pioneering studies through creative research and scholarship; and applying that knowledge to address the needs of the region, state, nation and globe. UC Davis is committed to the land-grant tradition on which it was founded, which holds that the broad purpose of a university is service to people and society.

UC Davis offers its undergraduates an experience which comprises the central elements of a liberal education—a broad general education with specialization in a scholarly discipline—and opportunities for personal development and academic enrichment through undergraduate research, work-learn experiences and extracurricular student life. To its post-baccalaureate students, UC Davis offers an array of programs which draw upon its wide range of specialized academic fields. By stimulating cross-disciplinary approaches and using its distinctive graduate groups, UC Davis continues to follow and redefine the mandate of a major research university.

The campus is committed to advancing teaching and scholarly work in the arts, humanities and the social sciences—studies that enrich the life of each person and society as a whole, and infuse the pursuit of careers in education, law, management and medicine. UC Davis’ prominence in the STEM fields, including distinguished programs in agricultural and environmental sciences, make the campus a leader in solving critical issues in local, state, national and global health and sustainability.

UC Davis extends service to the region, state, nation and the world in many forms, such as cooperative extension to agriculture and education; medical services to central California and beyond through the multifaceted UC Davis Health System in Sacramento; University Extension programs that share knowledge with the region; the emerging work of the World Food Center; voluntary contributions of faculty, staff and students; and athletic and cultural programs for the campus and community at large.

UC Davis is surrounded by vibrant, local communities and its proximity to the state capital gives this outreach urgency and opportunity. Collaborative studies and cooperation between UC Davis and state agencies and the Legislature are both a special responsibility and a unique opportunity. UC Davis is characterized by a distinguished faculty, a dedicated and high-achieving staff and students of great potential and accomplishment. As we move forward, we recognize that our continued excellence is dependent upon our ability to diversify our university community, consonant with the citizenry of California.
Educational Objectives for Students

The Educational Objectives for Students were adopted by the Academic Senate in April 2002. They articulate our aspirations for student learning; help to establish campus priorities and guide decision making related to student development; and guide academic programs in the review of how their classes and course requirements interact with the goals to demonstrate educational effectiveness.

- **Develop effective communication skills:**
  Written, oral, interpersonal, group

- **Develop higher cognitive skills:**
  Critical thinking, creativity, analytical ability

- **Cultivate the virtues:**
  Ethics, responsibility, honor, tolerance, respect for others, empathy

- **Develop focus and depth in one or more disciplines**

- **Develop leadership skills:**
  Ability to stimulate and direct collaborative learning and collaborative action

- **Develop a global perspective:**
  Broad intellectual and cultural experience through active engagement, an understanding of the interactions among the individual, society, and the natural world

- **Prepare for lifelong learning:**
  Independent thinking and learning, learning to find information, asking the right questions
The College of Engineering

Dean’s Office
1050 Kemper Hall
http://www.facebook.com/UCEEEngineering

The College of Engineering at UC Davis is among the top engineering colleges in the nation.

With a strong record of academic excellence, a rich tradition of interdisciplinary research and a diverse and distinguished faculty, the College's undergraduate program has earned a place among our nation's top twenty public undergraduate colleges of engineering and among the top forty public university graduate engineering programs.

With an enrollment of 3,460 undergraduates and 1,130 graduate students, the College is one of the largest undergraduate engineering colleges in the University of California system.

We have 198 engineering faculty, with 16 current and emeriti members named to the National Academies of Engineering, Science and Medicine.

The Engineering Accreditation Commission of ABET (http://www.abet.org) accredits the following ten programs:

- Aerospace Science and Engineering
- Biochemical Engineering
- Biological Systems Engineering
- Biomedical Engineering
- Chemical Engineering
- Civil Engineering
- Computer Engineering
- Electrical Engineering
- Materials Science and Engineering
- Mechanical Engineering

The Engineering Accreditation Commission and the Computing Accreditation Commission of ABET accredit the following program:

- Computer Science and Engineering

The College maintains a long-standing commitment to undergraduate students, preparing them to contribute to the engineering professions as well as ongoing engineering research. To that end, our academic programs balance the fundamentals of engineering theory with practice, visionary research with practical application—preparing students for entry into engineering practice and graduate-level research.

Undergraduate research experiences and mentoring services smooth the transition from undergraduate to graduate study at UC Davis. Undergraduates are able to interact with faculty and graduate students from ten graduate engineering programs as well as researchers from a broad spectrum of disciplines university-wide. Award-winning faculty researchers strive to develop more effective, real-world solutions to society's most complex problems in the uniquely friendly, open-society of collaborative, cross-disciplinary and rigorous scholarship for which UC Davis is widely known. Undergraduates have opportunities to be contributing members of this rich learning environment.

In the proud tradition of America's great land-grant research universities, the UC Davis College of Engineering integrates teaching, research and service to society. While advancing the leading edge of engineering knowledge, the College trains the next generation of engineers who will make a difference in our world.

The Department of Biological and Agricultural Engineering combines study in engineering with instruction in the biological sciences to solve challenging environmental and technical problems.

The Department of Biomedical Engineering educates students in a highly interdisciplinary combination of the biological sciences and engineering as this combination applies to medicine.

The Department of Chemical Engineering and Materials Science offers curricula integrating knowledge of chemistry, biological sciences or materials science and engineering that enable students to solve problems in both current and future manufacturing technologies or to analyze the structure, properties and behavior of materials.

The Department of Civil and Environmental Engineering educates students to plan and design safe and sustainable infrastructure systems that have a direct impact on the quality of human life and on health and human productivity.

The Department of Computer Science offers programs in all aspects of the design and use of computer hardware and software systems. The department also plays a significant service role for programs throughout the campus.

The Department of Electrical and Computer Engineering offers programs in research and education crucial for the continued success of high technology industries in California and the nation, preparing students to design, analyze and use electronic and computer systems effectively.

The Department of Mechanical and Aerospace Engineering educates students in the design and manufacture of complex engineering systems for transport, industry or energy and in the design, manufacture and operation of aircraft and aerospace structures.

Every effort has been made to provide engineering students with the maximum flexibility consistent with rigorous professional education standards. The key to flexibility is academic advising. You are expected to attend the New Student Orientation program, held the summer before your first quarter on campus. New Student Orientation sessions can give you the information you need to make your academic experience both rewarding and effective. As an incoming student, you will be given the name and office hours of your departmental staff adviser; you should arrange to meet with your adviser before you register for courses for the first time. Academic and peer advisers in the Undergraduate Advising Office in 1050 Kemper Hall supplement departmental advisers.

Undergraduate education in engineering at UC Davis serves as a sound basis for beginning professional practice in engineering design and development, as a preparation for careers in corporate or governmental operations and as a foundation for graduate study. To these ends, the College emphasizes fundamental sciences to give students the maximum postgraduate flexibility. In order to remain relevant in a quickly changing technical world, engineering education must be based on fundamentals or rapidly become obsolete.
Engineers will continue to face new challenges in the race to improve the quality of life for everyone and keep our state and nation competitive in the global marketplace.

As part of one of the nation's 76 land-grant institutions, UC Davis Engineering's mission is to help maintain the United States' technical leadership and advance technology for the benefit of everyone.

**The College of Letters and Science**

Undergraduate Education and Advising Office
200 Social Sciences and Humanities Building
530-752-0392; [http://www.ls.ucdavis.edu](http://www.ls.ucdavis.edu)

The College of Letters and Science provides students with the opportunity to actively engage the central academic disciplines of the university. The largest of the four undergraduate colleges at UC Davis, the College of Letters and Science offers the majority of the campus' general education courses, more than 50 major programs of study and thousands of courses per year across a broad range of subject areas. Its nearly 500 faculty members are organized into three Divisions—Humanities, Arts and Cultural Studies; Mathematical and Physical Sciences; and Social Sciences. The college confers Bachelor of Arts (A.B.), Bachelor of Science (B.S.) and Bachelor of Arts and Science (B.A.S.) degrees.

The College of Letters and Science is a community of scholars and students sharing a commitment to liberal education rather than to specialized, vocationally-oriented training. The college exposes you to the worlds of human experience, of ideas, of artistic accomplishments and of matter and things. Within this curriculum you are able to explore a variety of academic fields, engage in the pursuit of fundamental knowledge and gain the capacity for independent study and thought. By learning to think carefully and critically, you will be able to continue the ongoing process of education that begins in the classroom but continues over a lifetime. You will have learned how to learn—the ultimate objective of a liberal arts education.

The educational goals of the college are reflected in the three primary groups of requirements established by the faculty: the English Composition Requirement, the Foreign Language and Area Requirements and the Major Requirements.

The English Composition Requirement ensures that you are well versed in written communication skills.

The Foreign Language and Area Requirements provide you with a broad background of knowledge, guide you in an exploration of the interdependencies of knowledge and acquaint you with other cultures.

The College of Letters and Science acknowledges the value of language learning and encourages students to acquire proficiency in a foreign language before graduating from UC Davis. The goals of language learning are the following: communicating complex ideas in the target language; acquiring understanding of a variety of cultural perspectives and differences; fostering intercultural communicative competence; gaining access to cultural production from another time and place; enhancing knowledge of other disciplines through the target language; recognizing the nature and structure of languages, including one's own; and developing the capacity to participate actively in multilingual communities both at home and abroad.

The Major Requirements provide you with intellectual depth and competence in a selected area of study.

The college has a well-developed system of faculty advisers, professional staff advisers and student peer advisers who are available for individual consultations with undergraduates in a variety of settings, from the college undergraduate education and advising office to departmental offices to campus residence halls.

The strength of the college lies in the faculty's commitment to advancing the frontiers of human knowledge through research, artistic expression and other creative endeavors and to the effective communication and application of that knowledge through teaching and public service. Together, faculty and students in the College of Letters and Science create a climate that enables students to achieve their highest potential.

**GRADUATE STUDY**

Office of Graduate Studies
250 Mrak Hall
530-752-0650; [http://gradstudies.ucdavis.edu](http://gradstudies.ucdavis.edu)

Graduate students at UC Davis have the opportunity to work with and learn from accomplished faculty, recognized for their contributions to research in their fields. The Office of Graduate Studies oversees nearly 100 graduate programs leading to master’s and doctoral degrees, which together enroll approximately 4,800 graduate students. Many graduate programs are offered through graduate groups, an interdisciplinary concept that allows students to study and work with faculty in interrelated areas to broaden their intellectual experiences; see Graduate Studies, on page 110.

**PROFESSIONAL STUDY**

UC Davis has six professional schools—the School of Law (J.D.), the School of Medicine (M.D.), the School of Veterinary Medicine (D.V.M., M.P.V.M.), the School of Education (M.A., Ph.D., Ed.D.), the Betty Irene Moore School of Nursing (M.S., Ph.D.), and the Graduate School of Management (M.B.A.). These schools and programs are described in later chapters.
**ACADEMIC RESOURCES**

**The University Library**
530-752-8792; [http://www.lib.ucdavis.edu](http://www.lib.ucdavis.edu)

The University Library is an integral part of the University of California, Davis, one of the top 100 research university libraries in the U.S. It also participates in and benefits from the collective activities of the University of California's system of libraries and the California Digital Library. The library's omnidisciplinary and highly regarded collections and research services have long supported the faculty, students and researchers of the university, as well as the health care professionals of the UC Davis Health System and the citizens of California.

The Library's vision is to be the academic hub of UC Davis, advancing research, education and innovation in a networked world. The Library will be an interdisciplinary resource for the entire community that enables transformative research and education through its provision of critical scholarship, tools, and services.

The University Library is comprised of four facilities: the Peter J. Shields Library, the Physical Sciences & Engineering Library, the Loren D. Carlson Health Sciences Library, and the F. William Blasdell Medical Library in Sacramento. The combined collections of the various University Library facilities total more than 4 million volumes. An extensive variety of journal titles, government documents, maps, microfilms, media, and other formats are also part of the collection, including over 600,000 ebooks. The law library, administered by the School of Law, is located in King Hall.

Library services and resources information is available at the Library's website; [http://www.lib.ucdavis.edu](http://www.lib.ucdavis.edu). In addition, the library's online catalogs identify library collections at UC Davis and at the other nine UC campuses which include full-text electronic journals and ebooks. The Library provides classes on the use of the online catalogs, as well as subject specific electronic journals and databases. Librarians are available for consultation to effectively and efficiently identify and use information resources for research projects and dissertations. Research workstations are available for patron use in all library facilities. The campus wireless network is available within all libraries and connects authorized laptop users to library and campus resources and services.

**UC Davis Arboretum and Public Garden**

Arboretum and Public Garden Headquarters
530-752-4880; [http://arboretum.ucdavis.edu](http://arboretum.ucdavis.edu)

UC Davis—already known for its heritage trees and park-like atmosphere—elevated the profile of its outdoor spaces by launching the UC Davis Arboretum and Public Garden in 2011. Through close partnerships with students, academic departments, and community members, the UC Davis Arboretum and Public Garden seeks to provide a visitor-friendly, living museum complete with educational and sustainable landscapes that showcase our campus’ academically-diverse expertise hand-in-hand with programs that allow for a wide-range of community participation including student internships, volunteer opportunities, and all-ages programming highlighting the arts and sciences.

One of the gems of the campus landscape is the 103-acre UC Davis Arboretum, founded in 1936, which contains a documented collection of more than 50,000 trees, shrubs and perennials from Mediterranean-climate areas throughout the world. Here visitors enjoy winding paths for walking, jogging, and bicycling, benches for enjoying the views, and picnic tables for casual gatherings. Demonstration gardens of drought-tolerant flowering perennials and collections of California native plants, oaks, acacias, conifers, and eucalyptus are resources for teaching and research; these landscapes also serve as a backdrop for a diverse array of events in addition to operating as an outdoor gallery for student and community-created art.

Students are integral to the Arboretum and Public Garden’s vision for transforming our campus grounds into an engaging outdoor experience through internship opportunities in sustainable horticulture, arts in the environment, education, and museum science. Students gain leadership skills and expertise in areas including nursery management, landscape design, geographic information systems (GIS), project management, exhibit development, and sustainable farming. Students, as well as community members, are also invited to volunteer for short-term projects ranging from event management to garden planting.

Although still in its infancy, the UC Davis Arboretum and Public Garden is gaining national attention for its sustainable landscape management as well as its practice of harnessing community collaboration to enhance the visitor experience.

**Information and Educational Technology**

IT Express
530-754-HELP (4357); [ithelp@ucdavis.edu](mailto:ithelp@ucdavis.edu)

Information and Educational Technology (IET) provides a wide range of services and support to undergraduate and graduate students. For more information, and to access those services, see the Student Computing Guide at [http://studentcomputing.ucdavis.edu/](http://studentcomputing.ucdavis.edu/).

**Taking Care of Business Online**

- Enroll in classes, add or drop courses, view and print your class schedule
- Access course grades
- View and print your unofficial academic record
- Check balances, view bills, make payments, and manage your student account
- Apply for and view financial aid awards
- Chart and plan your degree; see [http://sisweb.ucdavis.edu/](http://sisweb.ucdavis.edu/)
- Make campus bookstore purchases; see [http://ucdavisstores.com](http://ucdavisstores.com)

**Learning and Teaching with Technology**

- Manage coursework and collaborate online with SmartSite. You can use it to communicate with your instructors and fellow students; collaborate on papers and projects; manage assignments and study with classmates; or just set up your own project site; see [http://smartsite.ucdavis.edu](http://smartsite.ucdavis.edu)
- Searchable electronic databases. Find them at Shields Library. You’ll have free, easy access from on- or off-campus; see [http://www.lib.ucdavis.edu](http://www.lib.ucdavis.edu)
- iTunes, YouTube and podcasting. Digital audio recording equipment is installed in several lecture halls, and portable digital recorders are available for rental from IET-Academic Technology Services (Surge II). Audio and video podcasting services are available to all instructors and campus groups; see [http://podcasting.ucdavis.edu & http://itunes.ucdavis.edu](http://podcasting.ucdavis.edu & http://itunes.ucdavis.edu)
• Classroom technology. All 128 general assignment classrooms have audio, network and projection capabilities, and include a projector, CD player, DVD player, VCR, built-in microphone and laptop hook-up. Classrooms with more than 30 seats also have assistive hearing systems; see http://iet.ucdavis.edu/rooms/classrooms.cfm

The Essentials: Computers, Email, Software, Labs

• Email. Every student has a free Gmail-based email account; see http://davis.ucdavis.edu

Computer purchases. Our recommendations can help guide your purchases. Financial aid is available for qualified applicants; see http://computerownership.ucdavis.edu. To buy computers and accessories at the campus bookstore, see http://ucdavisstores.com

• Software. Various programs are available free of charge or at a discount; see http://software.ucdavis.edu

• The Virtual Lab lets you remotely log on to software in IET's computer labs after hours; see http://virtuallab.ucdavis.edu

• Multimedia. You'll want to check out the video, audio, and graphic design software, as well as printers, scanners, etc., in the IET Media Lab; see http://clm.ucdavis.edu/rooms/rooms.html#medialabs

• Computer rooms. Computer classrooms and labs distributed around the campus provide access to PCs, Macs and printers. Some labs have both Mac and PC computers, and many have extended hours during the week; see http://iet.ucdavis.edu/rooms

• Printing. All computer rooms are equipped with printers, and seven rooms also have color printing; see http://clm.ucdavis.edu/rooms/printing. You may also send a print job from your computer, over the Internet, to any printer in five locations; see http://wirelessprinting.ucdavis.edu

Networking

• Wireless Internet. MoobilenetX is the campus secure wireless network. You can access it throughout much of the central campus, including Shields Library and the Memorial Union. For access requirements and instructions, see http://wireless.ucdavis.edu

• Wired Internet. Students living on campus can connect to the Internet by using ResNet, the high-speed residence hall network. Each residence hall also has a computer center with computers, printers, and scanners; see http://www.housing.ucdavis.edu/computers/

Security

Computer security. Blocking computer viruses and preventing unauthorized access to computing systems are important parts of campus computing life. Keep up with campus security efforts, review instructions on how to maintain your computer system, and guard against security problems, including compromised passwords and identity theft; see http://security.ucdavis.edu.

Technical Support

RESEARCH PROGRAMS AND RESOURCES

Organized Research Units

Organized Research Units (ORUs) are campus-wide interdisciplinary research programs that further the university's missions of teaching, research and public service, but do not offer courses of instruction. Members of an ORU come from more than one department and normally from more than one school, college division.

Air Quality Research Center (AQRC)

3050 Bainer Hall 530-754-6558
Anthony Wexler, Director; awexler@ucdavis.edu http://airquality.ucdavis.edu/

The Air Quality Research Center provides support for teams of collaborative researchers to conduct scientific, engineering, health, social and economic research to inform planning and regulations for air quality and climate change. The AQRC educates through conferences, outreach, scholarly publications, and training grants. Researchers at UC Davis employ theoretical approaches, mathematical models, measurements in the field and in laboratories, and policy analysis to tackle state, federal and intercontinental air quality problems. The center is composed of over 60 faculty and research staff members from six schools and colleges across campus. This breadth of expertise allows us to take a broad, interdisciplinary approach to air-quality problem solving.

Bodega Marine Laboratory and Reserve

Bodega Marine Laboratory
P.O. Box 247
Bodega Bay, CA 94923
707-875-2211; Fax 707-875-2009
ucbml@ucdavis.edu, http://bml.ucdavis.edu

The Bodega Marine Laboratory is dedicated to research and teaching in marine science. Research areas include: Ecology and Evolution—invasive species, biodiversity, community ecology, etc., Coastal Oceanography—upwelling, estuaries and land runoff, nearshore hydrodynamics, ocean observing, Ocean Health—developmental and reproductive toxicology, shellfish health, environmental assessment, Physiology—comparative physiology and biochemistry, reproductive physiology, seagrass and seaweed physiological ecology, Conservation—fisheries management, marine protected areas, endangered species restoration, Climate Change—ecological impacts, ocean acidification, paleoceanography. Well-equipped facilities feature running seawater in two classrooms and many laboratories, a marine science library, lecture hall, housing facilities, computer labs, state of the art microscopy imaging facility, experimental climate change facility, greenhouses, experimental freshwater system for anadromous/estuarine invertebrate and fish studies, network of automated environmental sensors on marine and terrestrial habitats, 42-foot research vessel and various small boats, and a dive locker and air station. Faculty teach a number of undergraduate and graduate courses during the academic year and summer session. The laboratory is located in Bodega Bay, Sonoma County, 100 miles west of Davis.
The Bodega Marine Reserve, part of the UC Natural Reserve System, is 362 acres of remarkably diverse habitats, including an excellent rocky intertidal zone, sand beaches, saltmarsh, lagoon tidal flats, freshwater marsh, coastal prairie and dunes. The reserve also administers adjacent subtidal sand and rock habitats in a marine life refuge. Areas of research include a broad spectrum of field studies of plants and animals in coastal marine, intertidal and terrestrial ecosystems.

**California National Primate Research Center**

Primate Center
530-752-0447; [http://www.cnprc.ucdavis.edu](http://www.cnprc.ucdavis.edu)

The California National Primate Research Center (CNPRC) investigates selected human health problems for which the nonhuman primate is the animal model of choice. Research programs include brain, mind and behavior, reproductive sciences and regenerative medicine, respiratory diseases, infectious diseases, immunology, stem cell biology, gene therapy, genetics and a variety of biomedical collaborative research projects. Self-sustaining breeding colonies of macaques are available for study of behavior and spontaneously occurring disorders.

**Center for Health and the Environment**

530-752-1340; [http://che.ucdavis.edu/](http://che.ucdavis.edu/)

The Center for Health and the Environment (CHE) coordinates and engages in interdisciplinary research on environmental agents, including chemicals and radiation, and health outcomes in humans, animals and other organisms. Researchers conduct epidemiologic studies in human populations, as well as experiments in whole animals, organisms, cells and molecules. Research on the development of agents for population control of humans and wildlife seek to mitigate the adverse effects of overabundance on the environment. Studies on toxic, radioactive, mutagenic, carcinogenic and teratogenic compounds are carried out in special animal holding facilities. Laboratories are equipped for studies in analytical chemistry, biochemical toxicology, cell and molecular biology, endocrinology, inhalation toxicology, morphology and reproductive and developmental biology. The Center houses a major university-wide program and federally funded center in occupational and agricultural medicine, nanotechnology and, a School of Medicine program in reproductive biology.

**Crocker Nuclear Laboratory**

530-752-1460; [http://crocker.ucdavis.edu](http://crocker.ucdavis.edu)

The Crocker Nuclear Laboratory is an interdepartmental laboratory for the application of nuclear science to a variety of disciplines, including air pollution and visibility, nuclear physics and chemistry, medical therapy with proton beams, material damage studies, and the effect of background and extraterrestrial radiation on electronic components.

**Institute for Data Analysis and Visualization**

2343 Academic Surge 530-752-0481
Kenneth Joy, Director; kjoy@ucdavis.edu
[http://idav.ucdavis.edu](http://idav.ucdavis.edu)

The mission of the Institute is the integration of research efforts at UC Davis in data analysis and visualization. The Institute draws students and faculty from a variety of departments and colleges, allowing researchers to work together on real-world, applied problems that deal with the massive data analysis and visualization problems encountered in science, engineering, and other fields. The integration of the two fields, especially in biological applications of high throughput biological assay data such as gene expression arrays, proteomics, metabolomics and NMR spectroscopy, produce methods that impact a substantial number of scientific fields. In neuroscience, computer science, computational science, computational physics, and engineering applications, the Institute contributes data exploration and problem-solving methods through visualization, computer graphics, data analysis, and expressive interfaces that enable discovery and analysis from massive information streams. The collaborative efforts of the faculty and students of the Institute enable the University to address a wide-variety of application areas and contribute methods that enable scientists and engineers to make decisions from their data.

**Institute of Governmental Affairs**

469 Kerr Hall 530-752-0966; Fax 530-752-8666; [http://www.iga.ucdavis.edu](http://www.iga.ucdavis.edu)

The Institute of Governmental Affairs (IGA) serves as a research base for social science faculty at UC Davis. IGA serves approximately 60 faculty from 10 campus departments as well as scholars visiting from throughout the United States and around the world.

Located in the center of the UC Davis campus, IGA houses eight formal research programs: Center for International Data; Center for State and Local Taxation; Center for the Evolution of the Global Economy; Conflict Processes Group; Economy, Justice and Society (EJS); Migration Dialogue; the Network Sciences Group; the Public Opinion Workshop, and the Rural Economies of the Americas Program (REAP).

Specialized services include grant advising, preparation and administration; research program development; library and data services; social science computing, programming and statistical consulting; seminar, workshop and conference organization; and much more. The institute sponsors an active public affairs program and enhances the education of students by providing research opportunities. IGA serves as the UC Davis liaison to the system-wide program, Institute on Global Conflict and Cooperation (IGCC) and the All-UC Group in Economic History.

**Institute of Transportation Studies**

West Village, 1605 Tilia St, Suite 100; 530-752-6548
Dan Sperling, Director; dsperling@ucdavis.edu
[http://www.its.ucdavis.edu](http://www.its.ucdavis.edu)

The Institute of Transportation Studies conducts multidisciplinary research on complex problems related to the transportation system and disseminates research results to the broader academic and professional community. Research priorities are travel behavior, alternative-fueled vehicle technology and policy, energy and environmental projects and advanced vehicle and highway systems. About 60 faculty members and 130 graduate students from more than 13 academic disciplines, including four Engineering departments, Economics, Environmental Science and Policy, Ecology, Agricultural and Resource Economics, and the Graduate School of Management, participate in the research activities of the Institute. The Institute administers a graduate program in Transportation Technology and Policy, and a number of research centers, including the National Center for Sustainable Transportation, the UC Davis Energy Efficiency Center (EEC), the UC Davis Plug-In Hybrid Electric Vehicle (PH&EV) Center, the Sustainable Transportation Energy Pathways (NextSTEPS) program, the UC Davis Western Cooling Efficiency Center (WCCE), the China Center for Energy and Transportation (C-CET), and the Urban Land Use and Transportation Center (ULTRANS).
John Muir Institute of the Environment
Mark Schwartz, Director 530-754-9135
The John Muir Institute of the Environment (JMIE) supports innovation and discovery aimed at solving real-world environmental problems. The Institute’s faculty are committed to strengthening the scientific foundation for environmental decision making through collective entrepreneurship, a team-oriented approach that recognizes the complexities of environmental problems and the societal context in which they occur. JMIE champions science and technological innovation, provides campus-wide leadership, hosts centers and projects, and seeds research and educational initiatives to solve real-world environmental problems. The Institute links science and technology to policy by providing the intellectual setting for interactions between researchers, regulatory agencies, policy-makers and the public.

Nanomaterials in the Environment, Agriculture and Technology (NEAT)
4415 Chemistry Annex 530-752-3292
Alexandra Navrotsky, Director; anavrotsky@ucdavis.edu
http://neat.ucdavis.edu/
NEAT is a multidisciplinary research and education program linking the fundamental physics, chemistry, and engineering of small particles and nanomaterials to several challenging areas of investigation, including applications in ceramic, chemical, electronic, environmental, and agricultural technology; environmental transport and transformation and the resulting factors of environmental pollution and remediation; and interactions with the biosphere, especially microorganisms and the consequential effects on health.

Program in International and Community Nutrition
Kathryn G. Dewey
3283 Meyer Hall
530-752-1992; Fax 530-752-3406; hgdewey@ucdavis.edu
http://picn.ucdavis.edu
Faculty members of the Program in International and Community Nutrition are studying the epidemiology and causal mechanisms of the major nutritional problems of human populations in low-income countries and in disadvantaged ethnic minority groups in the United States, with the ultimate objective of planning, implementing and evaluating programs to ameliorate these problems. Current areas of research include maternal and child nutrition, control of micronutrient deficiencies, determinants of food intake, nutrition and infection, nutritional assessment, and food and nutrition programs and policy.

Additional Research Centers and Resources

Adult Fitness Program
UC Davis Sports Medicine Program
916-734-6805
The UC Davis Adult Fitness Program is designed to help individuals improve their health and physical fitness to prevent disease and improve quality of life. Our team of exercise specialists includes sports medicine physicians, exercise physiologists and nutritionists trained by UC Davis Sports Medicine, Exercise Biology and Nutrition Faculty in exercise testing and prescription and sports nutrition. This program exists to provide a public health service to the university and surrounding communities; to provide clinical learning opportunities for UC Davis students; to provide opportunities to study the benefit of exercise and proper nutrition in the prevention of disease and assist individuals in evaluating their progress through discounted repeat testing and evaluation.

Advanced Highway Maintenance & Construction Technology (AHMCT) Research Center
Academic Surge 1003 530-752-5981
Steve Velinsky, Director; savelinsky@ucdavis.edu
Bahram Ravani, Director; bravani@ucdavis.edu
http://www.ahmct.ucdavis.edu/
In cooperation with state, federal, and private agencies, the Center for Advanced Highway Maintenance and Construction performs applied and basic research to develop innovative technologies in the areas of highway and civil infrastructure construction, maintenance, and operations. Our ultimate goal is the deployment of these technologies. Our efforts center on safety, mobility, lean operations, reliability, and the minimization of environmental impacts. To achieve these aims, we combine and leverage advanced automation and robotics, information technology, sensing and mechatronics, design and sustainability, life-cycle analysis, and advanced communication and computer technologies.

The Center also helps Caltrans access university and industry research, maintain a leadership position in maintenance and construction technology, access federal and pooled funds for research, test and evaluate new technologies, improve the Caltrans public image as a technology-oriented organization, and train students and professionals in transportation operations and technology.

Advanced Materials Characterization and Testing Laboratory (AMCaT)
Kemper Hall, lower level
Lab Manager: Fred Hayes; fahayes@ucdavis.edu
The AMCaT labs place their major emphasis on analytical electron microscopy (micro analysis) in the material sciences. The vision and goal of AMCaT is to embrace and support a multi-disciplinary user base of students (undergraduate and graduate), post doctoral fellows, and faculty researchers at UC Davis. The facility also offers its users a variety of sample preparation equipment, a light microscopy lab with image analysis, an x-ray lab, and a materials testing lab. AMCaT supports numerous lab classes in engineering.

Advanced Transportation Infrastructure Research Center Facility (ATIRC)
West Campus
John Harvey, Director (UCPRC); jtharvey@ucdavis.edu
The UC Davis Advanced Transportation Infrastructure Research Center (ATIRC) project provides a facility for two research programs: the UC Pavement Research Center (UCPRC) and the Advanced Highway Maintenance and Construction Technology Research Center (AHMCT). Research at the UCPRC at ATIRC includes accelerated pavement testing of new types of materials and pavement structures using the Heavy Vehicle Simulators, laboratory specimen preparation and testing, and analyses. ATIRC houses the UC Davis staff of the UCPRC.
Agricultural Sustainability Institute
Thomas P Tomich, Director
143 Robbins Hall
530-752-3913; Fax 530-752-2829; asi@ucdavis.edu
http://asi.ucdavis.edu/

The Agricultural Sustainability Institute (ASI) provides a hub that links initiatives and education in sustainable agriculture and food systems across all divisions of the College of Agricultural and Environmental Sciences at UC Davis, across the University of California, and with other partners across the state, nation, and planet. ASI includes:

- Advising and internship coordination for the UC Davis undergraduate major in Sustainable Agriculture and Food Systems
- UC Davis Student Farm
- UC Davis Russell Ranch Sustainable Agriculture Facility
- UC ANR statewide Sustainable Agriculture Research & Education Program (SAREP)
- The Inter-institutional Network on Food, Agriculture and Sustainability (INFAS), a national academic network

California Agricultural Experiment Station
College of Agricultural and Environmental Sciences
530-752-1610

The California Agricultural Experiment Station has branches on the UC Davis, UC Riverside and UC Berkeley campuses. The UC Davis branch includes approximately 400 faculty and CE Specialists, mostly in the College of Agricultural and Environmental Sciences, but also in the College of Biological Sciences and the School of Veterinary Medicine. In addition to laboratory facilities, it has approximately 3,000 acres devoted to field research in the environmental and crop sciences, as well as facilities to support animal and long-term experimental research. The Experiment Station supports faculty in research involving agricultural production, food processing, nutrition, animal care and disease prevention, consumer sciences and community development and in natural resources and ecosystem science management, with an emphasis on maintaining and improving environmental quality of both natural and managed ecosystems.

Center for Advanced Laboratory Fusion Science and Engineering (CALFUSE)
3001 Ghausi Hall 530-754-9069
Neville Luhmann, Director; ncluhmann@ucdavis.edu
David Hwang, Director; dqhwang@ucdavis.edu
http://calfuse.ucdavis.edu/

The purpose of Center for Advanced Laboratory Fusion Science and Engineering (CALFUSE) is to promote interaction between research and educational entities within the University and among the University, the national laboratories, and industrial laboratories. Fusion research is an extremely broad field, encompassing topics that cut across numerous engineering, science, and policy disciplines. The initial set of topics includes plasma accelerators, high-energy particle accelerators, plasma diagnostics (specifically, millimeter wave and Terahertz technology developments), advanced computing, advanced materials, and energy policy. The Center invites participation from all fields that may have relevance to fusion education and research.

Center for Biophotonics (C4B)
2700 Stockton Blvd., Suite 1400
Sacramento, CA 95817 916-734-8600
Dennis Matthews, Director; dtmatthews@ucdavis.edu
http://cbst.ucdavis.edu/

The Center for Biophotonics applies biophotonics—the science of light interaction with biological matter—to solve problems in biology and medicine. Work at C4B advances the research, development, and application of new optical/photonic tools and technologies in medicine and the life sciences, enabling engineers to collaborate with basic scientists and physicians at the UC Davis Medical Center to translate new technologies from the benchtop to the bedside. Center projects are highly diverse and include superresolution optical microscopies, advanced imaging and manipulation of living cells and other biological systems, engineered fluorescent proteins, label-free cell analysis by Raman spectroscopy and second harmonic generation, molecular sensors and assays, in vitro and in vivo devices and assays for diagnosis, monitoring and treatment of disease.

C4B is the successor of the NSF Center for Biophotonics Science and Technology, which was funded by the National Science Foundation and participating institutions between 2002-2013.

Center for Child and Family Studies
Center for Child and Family Studies (main office in West House) 530-752-2888; http://ccfs.ucdavis.edu
The Center for Child and Family Studies (CCFS) houses the Early Childhood Laboratory (ECL), a research, teaching and demonstration laboratory of the Division of Human Development and Family Studies in the Department of Human Ecology. At the ECL, students enrolled in human development courses learn observational techniques and participate with peers, children, parents and professionals in developmental programs for infants through preschoolers. Students study early development in a naturalistic setting, linking research and theory to principles of interaction and learning about developmental differences. Selected undergraduate students participate in faculty and graduate student research at the laboratory. The CCFS also houses several research and outreach facilities, including the Eichhorn Family House.

Center for Geotechnical Modeling
2655 Brooks Road 530-752-7929
Ross W. Boulanger, Director; rwboulanger@ucdavis.edu
http://cgm.engineering.ucdavis.edu/

The Center performs research in the broad area of geotechnical engineering, with a focus on earthquake engineering problems such as dynamic site response, liquefaction, ground failure, and soil-foundation-structure interaction for buildings, bridges, dams, tunnels, and port facilities. The Center emphasizes physical modeling using one of the world’s largest and most advanced geotechnical centrifuge facilities, but also performs numerical simulations using advanced computational tools, develops design procedures, and develops new techniques for site characterization. The centrifuge is available for shared use by researchers from around the country and is supported by the George E. Brown, Jr., Network for Earthquake Engineering Simulation.
Introduction

Center for Information Technology in the Interest of Society (CITRIS)

3179 Kemper Hall 530-752-7063
Nina Amenia, Director;
http://ucdavis.citris-uc.org

The Center for Information Technology Research in the Interest of Society (CITRIS) is one of the California Institutes of Science and Innovation. The Center involves a partnership among four UC campuses: UC Davis, UC Berkeley, UC Merced and UC Santa Cruz.

CITRIS creates information technology solutions for many of our most pressing social, environmental, and health care problems. CITRIS was created to ‘’shorten the pipeline’’ between world-class laboratory research and the creation of start-ups, larger companies, and whole industries.

CITRIS facilitates partnerships and collaborations involving faculty members and students from numerous departments at the four UC campuses with industrial researchers from corporations. Current initiatives include i4Energy (using information technology, sensors, and controls for stable and sustainable energy); the delivery of quality health care everywhere for Californians; intelligent infrastructure for water, transport, and cities; and data and democracy.

Center for Mind and Brain

267 Cousteau Place, Davis, CA 95618 530-297-4651
Steven J. Luck, Director;
http://mindbrain.ucdavis.edu/

The Center for Mind and Brain is an interdisciplinary research center that is dedicated to understanding the nature of the human mind. Our scientists probe the mind using state-of-the-art approaches from the social, biological, engineering, and medical sciences. Our core research areas include attention, development and aging, memory, multisensory integration, music, and disorders of mind and brain. We focus on both discovering the fundamental principles of the healthy human mind and understanding and treating conditions such as autism, schizophrenia, and Alzheimer’s disease.

Center for Molecular Genomic Imaging (CMGI)

451 Health Sciences Drive 530-754-8960
Simon Cherry, Director; srcherry@ucdavis.edu
http://imaging.bme.ucdavis.edu

The Center for Molecular Genomic Imaging (CMGI) offers the research community dedicated, state-of-the-art imaging technologies for in vivo and specimen imaging. Imaging modalities include PET, SPECT, CT, MRI, ultrasound, autoradiography, and optical (fluorescence and bioluminescence). The CMGI has become a core facility serving a wide range of campus investigators and is integrated in many major centers, programs, and institutes.

Imaging studies can provide new insights in many areas of biomedical research, including oncology, cardiology, neuroscience and pharmacology. Molecular and genomic imaging can play an important role in advancing basic science investigations and in the development of new diagnostic and therapeutic approaches for use in the clinical setting. CMGI staff provide services that include consultation, protocol planning and experimental design, animal handling and physiologic monitoring, injection of contrast agents and radiopharmaceuticals, scanning, data reconstruction and visualization, image analysis and data backup. CMGI facilities are open to all researchers at UC Davis, and are also open, on a space-available basis, to external researchers.

Center for Nano and Micromanufacturing

The Center for Nano and Micromanufacturing (CNM2) includes a 10,000 square-foot Class 100 cleanroom, offering a broad line of lithography tools with resolution capabilities down to 50nm, metal and dielectric thin-film deposition, dry etching, as well as numerous characterization tools to support device manufacturing for a variety of industries and applications. The facility has capabilities to accommodate a wide variety of substrate materials including: Si, SiO2, borosilicate glass, InP, GaAS as well as biocompatible polymer materials such as PDMS. External to the cleanroom we have an additional 3000+ square feet of research space which houses both a high-resolution SEM and FIB system used for sample characterization and TEM sample preparation. The staff is available from 9:00 a.m.-5:00 p.m. (PST) to assist internal and external users with process development and training to help streamline research projects.

Center for Neuroscience

530-752-7063; Fax 530-752-7065
http://neuroscience.ucdavis.edu

The Center for Neuroscience is an interdisciplinary unit that serves as the focal point for the study of the neurosciences at UC Davis. Faculty affiliated with the Center are from 13 departments and sections. The center sponsors a seminar series, conferences and symposia, provides research space for center members and supports graduate students, postdoctoral scholars and distinguished visitors.

Faculty and students are engaged in the study of brain mechanisms responsible for normal human cognitive and perceptual processes and in the study of fundamental aspects of nerve cell function and development. A core group of cognitive neuroscientists uses various imaging techniques and electrophysiological techniques to study both the normal and lesioned cerebral cortex to understand how the normal brain controls behavior. Other faculty members use either animal models to understand how information is processed in the brain or simple systems to study the fundamental biology of nerve function and development and disorders affecting them.

Center for Population Biology

Storer Hall 530-752-1274
Jay Stachowicz, Director; jstachowicz@ucdavis.edu
http://cpb.ucdavis.edu

The UC Davis Center for Population Biology (CPB) aims to advance understanding of the fundamental ecological and evolutionary processes that control the origins and maintenance of biological diversity, at all levels of organization ranging from molecules to ecosystems. Our activities promote integrative, multidisciplinary research in population biology through collaborations, mentorships, workshops and meetings. Faculty in the Center are drawn from nine academic departments and three colleges (Biological Sciences, Agriculture and Environmental Sciences, and Letters and Sciences).
Center for Science and Innovation Studies

1246 Social Sciences and Humanities Building & 1127 King Hall
Mario Biagioli, Ph.D., Program Director
http://cson.ucdavis.edu/

The Center for Science and Innovation Studies (CSIS) studies the many dimensions of the process of technoscientific innovation. We focus predominantly on the upstream spectrum of innovation—from the design, articulation, and funding of research programs to the patenting and publication of their outcomes—paying particular attention to the process, practices, instruments, and techniques of innovation and to the conceptual and practical problems of knowledge transfer. Through detailed case studies (contemporary as well as historical), CSIS analyzes the role that training, cultural background, and cross-disciplinary mobility play in the emergence of innovation, as well as the new institutional, technical, and social arrangements that sustain it (from innovative laboratory architecture and university-industry configurations, to distributed and cyberinfrastructure-based collaborations, to alternative systems of publication and new metrics of quality and performance assessment). Intellectual property (both traditional regimes and more recent platforms like free software, open source, science commons, and norm-based reward systems) is a central focus of CSIS, as are issues pertaining to bioprospecting and the access to and reward of traditional knowledge.

Coastal and Marine Sciences Institute

Storer Hall 530-752-1274
Rick Grosberg, Founding Director; rkgrosberg@ucdavis.edu
http://csmi.ucdavis.edu

The UC Davis Coastal and Marine Sciences Institute (CMSI) aims to catalyze and foster innovative partnerships for discovering, understanding, and communicating science for effective stewardship of ocean and coastal environments in California and beyond. We especially strive to build collaborations with diverse stakeholders, including private-sector organizations and corporations that have significant economic, social, and environmental interests in the coastal ocean and at the land-sea interface. We believe that such partnerships can lead to the development of sustainable policies that protect biodiversity, nurture ecosystems, and enhance beneficial uses of the ocean in parallel with socio-economic development. With its focus on humans and the coastal oceans, the institute assembles globally-recognized experts from more than 20 academic units on the main campus and Bodega Marine Laboratory. CMSI also coordinates research and academic programs across campus, including a new major in Marine and Coastal Sciences, as well as emerging graduate and professional programs.

Computer Security Laboratory

2063 Kemper Hall; seclab-contact@cs.ucdavis.edu
Matt Bishop, Hao Chen, Karl Levitt, Felix Wu, Directors; bishop@cs.ucdavis.edu, levitt@ucdavis.edu, wu@ucdavis.edu, hchen@ucdavis.edu
http://seclab.cs.ucdavis.edu/

The mission of the UC Davis Computer Security Laboratory is to improve the current state of computer and information security and assurance through research and teaching. The Security Lab investigates security problems in the network infrastructure, in computer security, and in information assurance in general. Current projects include research into the balance between privacy and analysis in data sanitizing, vulnerabilities analysis, social links, the provision of a secure programming clinic, forensic logging and auditing, e-voting research, and biology-inspired security techniques. The Security Laboratory also researches and detects malicious code (viruses, worms, time bombs, etc.) in programs and detects attempts to penetrate or misuse computer systems. Research projects are supported by corporate and government organizations.

Genome Center

4303 Genome and Biomedical Sciences Facility 530-754-9648
Richard Michelmore, Director; rwmichelmore@ucdavis.edu
http://genomecenter.ucdavis.edu

The UC Davis Genome Center integrates experimental and computational approaches to address questions at the forefront of genomics and bioinformatics. The Center is housed in a purpose-built research building with state-of-the-art computational and laboratory facilities. The Center has recruited 16 research faculty and established five technology cores that serve the whole campus. The five service cores are DNA Technologies, Expression Analysis, Proteomics, Metabolomics, and Bioinformatics. These technology service cores have been established to provide researchers with access to the latest technologies on an at-cost, as-needed basis. Further details are available from the website.

Health Sciences Research Laboratory—Animal Surgery

Buildings H and J, Center for Laboratory Animal Science
530-752-7756; latalken@ucdavis.edu, jesdavis@ucdavis.edu

This unit is a surgical research facility in compliance with NIH, AAALAC and USDA standards. Instruction in surgical techniques is available including multiple training stations for larger groups. Surgical instruments, drapes, anesthesia machines, scrub suits, and equipment for monitoring vital signs and physiologic parameters are available. Assistance with animal procurement is available. Staff are available to perform or assist with both survival and non-survival surgical procedures depending on the investigator's requirements. Staff are also available for post-operative care, data and sample collection as required, and assistance with preparation of the IACUC Protocol for Animal Care and Use.

Human Performance Laboratory

164 Hickey Gym 530-752-0965

The Human Performance Laboratory (HPL) was founded in 1963 and has a long history of basic and applied research and outreach in exercise physiology, biomechanics and sports psychology. The HPL has been involved in a variety of research areas since its inception including metabolism, heat stress, fluid balance, injury prevention, body composition and health benefits of physical activity and fitness. The HPL is represented by full-time and adjunct faculty members with varying research backgrounds and scientific interests. The HPL facilities allow measurement of a comprehensive list of human performance characteristics. Investigators have access to advanced data acquisition systems for evaluation in the areas of biomechanics, motor learning, environmental physiology, cardiopulmonary and thermoregulatory physiology, human nutrition and exercise and muscle metabolism. Specific technologies and capabilities include extensive computing facilities, high speed 3-D video motion analysis, ground reaction force measurement, ultrasound imaging, a temperature and humidity controlled environmental chamber and systems for measurement of oxygen consumption, body composition and psychomotor performance. The HPL meets the needs of today's creative researcher and has the capacity to assist in answering tomorrow's research questions.
Humanities Institute

David Biale, Director
Molly McCarthy, Associate Director
227 Voorhies Hall 530-752-1254; Fax 530-752-4263

The UC Davis Humanities Institute (DHI) is an interdisciplinary research center that fosters intellectual collaborations and facilitates access to resources for faculty and graduate students who are actively engaged in research and teaching in the humanities, the arts, cultural studies and the humanistically oriented social sciences. It advocates for the humanities within the UC Davis community and works with funding agencies to secure individual and programmatic resources for faculty. To explore emerging research areas and provide collaborative opportunities for faculty and graduate students, the Institute sponsors faculty and graduate research fellowships, interdisciplinary research clusters, and administers the Mellon Research Initiatives in the Humanities. The Institute also organizes conferences, workshops and lectures and provides partial funding for events that serve humanities scholars at UC Davis.

Institute for Ultra-Scale Visualization

2121 Kemper Hall;
530-734-8579
Kwan-Liu Ma, Director; http://www.scidac.gov/viz/ultraviz.html

The SciDAC Ultra-Scale Visualization Institute is a research, education, and outreach effort sponsored by the DOE SciDAC program. The Institute’s mission is to address the upcoming peta and exa-scale visualization challenges facing computational science and engineering. The Institute fosters the exchange of knowledge between universities, DOE laboratories, and industry to make advanced visualization an integrated component in scientific discovery. The Institute revolutionizes the very process of scientific discovery by equipping scientists with tools that shed light on the knowledge hidden in previously incomprehensible datasets.

Mann Laboratory

105 Mann Laboratory
Trevor Suslow, Faculty Contact
Lee Ann Richmond, Facility Manager and Safety Officer
530-754-8313; Fax 530-752-4554

Plant scientists in the Louis K. Mann Laboratory study the physiology, biochemistry, microbiology and molecular biology of pre-harvest and harvested fruits, ornamentals, and vegetables to improve and maintain their quality and safety during harvest, storage, processing, distribution and marketing. The three current faculty and two Emeritus Faculty housed in this facility are members of the Department of Plant Sciences and one USDA/ARS research scientist. Research and extension activities are supported by students, postdoctoral researchers and visiting scientists. Research includes basic plant molecular biology, plant physiology, applied postharvest biology and technology, produce safety microbiology, and practical storage technologies for horticultural crops, including whole and lightly processed products. Results are of interest to other researchers in the plant sciences and food science as well as to growers, shippers, transportation and logistics providers, marketers and consumers of fresh fruit and vegetables. This Special Postharvest Facility is a CAES resource and is equipped with 18 controlled-temperature rooms, eight research laboratories, specialized postharvest analytical equipment, advanced rapid test equipment for human pathogens, and a small conference room for up to 25 with a 60” wall-mounted flat-screen monitor.

Natural Reserve System

John Wingfield, Director
Virginia Boucher, Associate Director
The Barn
530-752-6949; http://bhrs.ucdavis.edu; http://nrs.ucop.edu

The UC Davis campus administers five reserves that are available for teaching and research.

- Bodega Marine Reserve, located at Bodega Bay, 100 miles west of campus, consists of both terrestrial and coastal marine habitats including grasslands, dunes, fresh water and brackish marshes, mudflats, sandy beaches, rocky intertidal and subtidal areas. There are facilities for overnight and longer stays.
- Jepson Prairie Reserve, located in Solano County 13 miles south of Dixon, consists of native California bunchgrass grasslands, vernal pools, playas and freshwater sloughs.
- Donald and Sylvia McLaughlin Reserve, located near Clear Lake about 70 miles northwest of campus, consists of Inner Coast Range habitat with a mix of serpentine and non-serpentine soils. The reserve has a facility for overnight and longer stays and a camping area for class groups.
- Quail Ridge Reserve consists of Inner Coast Range habitat located about 30 miles west of campus on a peninsula jutting into Lake Berryessa. The reserve has facilities for overnight and longer stays and tent cabins for class groups.
- Stebbins Cold Canyon Reserve, located about 24 miles west of campus, has representative populations of several different plant communities found in California’s Inner and Outer Coast Ranges. A five mile loop trail is popular with recreational hikers. The University of California maintains 39 reserves throughout the state, many of which are available for teaching and research.

Nuclear Magnetic Resonance Facility

Medical Sciences 1D
530-752-7677; http://www.nmr.ucdavis.edu

The Nuclear Magnetic Resonance Facility provides access to state-of-the-art NMR instrumentation for spectroscopy and imaging to researchers in the biological, medical and physical sciences. At present, the facility operates ten spectrometers of varying purposes and capabilities at field strengths from 300 to 800 MHz. Applications include structural characterization of organic molecules, determination of protein structure and dynamics, metabolomics, imaging and in vivo spectroscopy of small animals, plants, and materials, and spectroscopy of solids. The Facility also has workstations for off-line data processing. Three full-time staff members are available to assist campus researchers in utilizing the instrumentation. A training course, Biological Chemistry 230, is offered in the fall quarter.

UC Pavement Research Center

2001 Ghausi Hall;
530-734-6409
John Harvey, Director, UC Davis Site; jharvey@ucdavis.edu
http://www.ucprc.ucdavis.edu

The UC Pavement Research Center (UCPRC) uses innovative research and sound engineering principles to improve pavement structures, materials and technologies. Work at the UCPRC focuses on asphalt and concrete pavements, including design, materials, rehabilitation, life cycle, maintenance and reconstruction; pavement cost analysis and strategy selection; the effects of
pavement activities on traffic in urban areas; pavement performance modeling; and environmental life-cycle assessment for pavements.

**Social Science Data Service**
105 Social Sciences and Humanities Building
530-752-4009; http://www.ssd.s.ucdavis.edu
The Social Science Data Service (SSDS) is a unit in the Division of Social Sciences. SSDS provides quantitative computing and consulting services in support of faculty and graduate students involved in social science research on the UC Davis campus. SSDS provides consulting services for the wide range of software used by social scientists and assists with questions regarding the use of SSDS computers and statistical and data-related programming. SSDS manages a UNIX system and a PC research lab used for quantitative social science computing.

**Sustainable Transportation Energy Pathways (NextSTEPS)**
Institute of Transportation Studies, UC Davis
Joan Ogden, Director; jmo@ucdavis.edu
Paul Gruber, Manager; pgruber@ucdavis.edu
http://steps.ucdavis.edu

NextSTEPS is a four-year (2011-2014) research consortium that addresses the technical, operational, logistical, and strategic issues related to the transition to an alternative fuel-based economy. The program comprises 100+ interdisciplinary research projects addressing the potential transportation energy pathways: electricity, hydrogen, biofuels, and fossil fuels. These pathways are analyzed and compared across program threads: consumer demand and travel behavior; innovation and business strategy; infrastructure system analysis; environmental, energy and cost analysis; vehicle technology evaluation; policy analysis; and integrative scenarios and transition strategies.

The program draws upon research methods from a broad range of academic fields including: vehicle engineering and design, systems analysis and operations research, chemical and mechanical engineering, lifecycle cost and emissions analysis, market research, sociology and anthropology, economics and business strategy, and policy analysis.

The overarching program goal of NextSTEPS is to generate new insights about the transitions to a sustainable transportation energy future and disseminate that knowledge to decision-makers in the private sector and governmental agencies so that they can make informed technology, investment, and policy choices.

**Tahoe Environmental Research Center (TERC)**
UC Davis Administration Office; Watershed Sciences Building; 530-754-8372
TERC site Laboratories in Incline Village, NV 775-881-7560
Geoffrey Schladow, Director; jschladow@ucdavis.edu
http://terc.ucdavis.edu

The Tahoe Environmental Research Center is dedicated to research, education and public outreach on lakes and their surrounding watersheds and airsheds. Lake ecosystems include the physical, biogeochemical and human environments, along with the interactions among them. The Center is committed to providing objective scientific information for the restoration and sustainable use of the Lake Tahoe Basin and for freshwater ecosystems worldwide.

**UC Agricultural Issues Center**
252 Hunt Hall; 530-752-2320; agissues@ucdavis.edu
http://www.aic.ucdavis.edu

The UC Agricultural Issues Center is a university-wide research and outreach unit with core competencies in economics while drawing on expertise from many disciplines. The Center focuses on California’s agricultural issues related to science and technology, international trade and markets, agribusiness trends, rural-urban issues, natural resources and the environment, human resources and agricultural policy.

**UC Davis Center for Plant Diversity**
Formally the UC Davis Herbarium
Dr. Dan Potter, Director; Ellen Dean. Curator
1026 Sciences Laboratory Building, Department of Plant Sciences
530-752-1091; http://herbarium.ucdavis.edu

The UC Davis Center for Plant Diversity provides information on the names, uses, toxicity and distribution of plants. Anyone can visit the Herbarium to use its dried plant collections (300,000 specimens), botanical library and microscopes, but a phone call is suggested to make sure staff will be available to assist you. The collections are used most commonly to check plant identifications, but they are also used by campus faculty and students for teaching and research in plant systematics and ecology. Herbarium staff answer hundreds of public service requests each year (especially identification of weeds and poisonous plants). Collections include vascular plants, bryophytes, lichens and algae. The majority of these specimens are angiosperms (flowering plants), mainly from California, but the collections are worldwide in scope, with strong holdings from North America, Ecuador, Baja California and regions with Mediterranean climate regimes. The Herbarium is well known for its collection of weeds and poisonous plants, although it also has world-class collections of grasses, oaks and spurge. The Herbarium’s support group, the Davis Botanical Society, hosts a wide range of botanical events, workshops and trips each year.

**UC Davis Energy Institute**
West Village, 1605 Tilia St, Suite 100; 530-752-4909
Dan Sperling, Director; energy@ucdavis.edu
http://energy.ucdavis.edu

The Energy Institute at UC Davis is home to energy research and education programs of the University of California, Davis. It was established to accelerate the global transformation to a sustainable energy future and is structured to coordinate the world-class strengths of UC Davis in energy research, education and outreach to foster new innovations, expand public service and inform decision-making about new energy solutions. The Energy Institute encompasses critical areas of energy research at UC Davis—including renewable and sustainable energy systems, energy efficiency, fuels and transportation, infrastructure, environment, and economics. The Institute actively targets the demand for well-trained energy professionals.
The research areas at the UC Davis J. Amorocho Hydraulics Laboratory include engineering hydraulics, fisheries protection, and ecological and environmental hydraulics. UC Davis JAHL was built to perform hydraulic modeling studies for the California State Water Project and has been conducting hydraulic investigations through scaled physical, prototype and numerical models to provide modeling services to federal, state, and local water agencies and private entities. With the recently constructed large flume, which has a circulation capacity of 200 cfs, it is now possible to perform prototype physical modeling studies at the laboratory. Recent research projects have included the assessment of hydraulics, fish behavior, and swimming, near unscreened diversions; studies of sturgeon passage; and investigations of the effects of California riparian vegetation on flow, roughness, and erosion. With the help of the state and federal agencies, researchers have actively participated in the development of solutions to fish protection for the Bay Delta river system and are developing a better understanding of the hydraulic and biological issues in the Sacramento River and Bay Delta system. Fish biologists, hydraulic engineers and other UC Davis JAHL researchers have many years of experience in testing Sacramento River and Bay Delta fish species under various hydraulic and environmental conditions and in handling invasive water plant species that occur in the Delta fish facilities.

**X-Ray Crystallographic Laboratory**

James C. Fettinger, Ph.D.
Department of Chemistry
530-754-7822

The X-Ray Crystallographic Laboratory, located in the Department of Chemistry, provides crystal structure determinations for researchers. Single crystals from all branches of chemistry are studied. The laboratory is equipped with three single crystal Bruker X-ray diffractometers, an APEX Duo equipped with both Cu and Mo anode sources, and two Mo source systems, an APEXII and a SMART1000. The laboratory also possesses a stereo-microscope. All instruments have variable low temperature systems including the capability of cooling the crystal to 5K. Consultation and collaboration on a variety of single crystal related projects can be arranged.
UNDERGRADUATE ADMISSIONS
Undergraduate Admissions
One Shields Avenue
University of California
Davis, CA 95616-8507
530-752-2971; Fax 530-752-3712
http://admissions.ucdavis.edu
Visit our Welcome Center
550 Alumni Lane
Advising: Monday-Friday, 8 a.m.–5 p.m. (PST)

APPLYING TO UC DAVIS
Apply for admission online at http://universityofcalifornia.edu/apply.
The initial filing periods to apply for undergraduate admission and scholarships at UC Davis are:

<table>
<thead>
<tr>
<th>Quarter</th>
<th>Initial Filing Period (prior year)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fall</td>
<td>November 1-30</td>
</tr>
<tr>
<td>Winter*</td>
<td>July 1-31</td>
</tr>
<tr>
<td>Spring*</td>
<td>October 1-31</td>
</tr>
</tbody>
</table>

*UC Davis is rarely open to applicants for winter and spring quarters.

For up-to-date details regarding winter and spring quarter admission, and tips on completing the UC application and writing your personal statement, see http://admissions.ucdavis.edu/apply.

After applying, transfer students are required to update their grades and course records online using the UC Transfer Academic Update (TAU). This ensures that campuses have current academic information. For details and deadlines, see http://admission.universityofcalifornia.edu/how-to-apply/after-you-apply/update-transfer-application.

APPLICATION FEES
The domestic filing fee for each University of California campus you apply to is $70. For international applicants, the filing fee is $80 per campus.

Fee waivers are available to students who meet strict eligibility guidelines based on household size and family income. When you apply online, you can fill out the fee waiver form included with the online application. If, after review by UC staff, you are not eligible for a fee waiver, you will be billed for all application fees. For current information on application fees and waivers, see http://admission.universityofcalifornia.edu/how-to-apply/application-fees.

ADMISSION AS A FRESHMAN
UC Freshman Applicant Definition
The University of California defines a freshman applicant as one who is either currently enrolled in, or has graduated from, a high school and has not registered in a regular session at any collegiate-level institution since high school graduation. An applicant who has completed college courses while in high school or in a summer session immediately following high school graduation is considered a freshman applicant.

UC Freshman Admission Requirements
To be considered for admission to UC Davis, freshman applicants must earn a high school diploma or equivalent* and satisfy the following UC admission requirements:

1. Subject Requirement,
2. Scholarship Requirement, and
3. Examination Requirement

* The University of California will accept the California High School Proficiency Examination or the General Education Development (GED) Certificate awarded by any state's Department of Education in lieu of a regular high school diploma. However, you must also meet all other university entrance requirements: subject, scholarship and examination.

1. Subject Requirement: “a-g”

Subject requirement courses must be completed with a C grade or better and, for California residents, must be on your high school’s UC-approved course list. See your school’s UC-approved course list at http://ucop.edu/doorways. At least 11 of the 15 units (one unit equals one year of study) defined by the “a-g” requirements must be taken prior to your senior year.

a. History/Social Science—2 years required
b. English (or Language of Instruction)—4 years required
c. Mathematics—3 years required; 4 years recommended
d. Laboratory Science—2 years required; 3 years recommended
e. Language other than English (LOTE)—2 years required; 3 years recommended
f. Visual and Performing Arts (VPA)—1 year required
g. College Preparatory Electives—1 year required

2. Scholarship Requirement

The Scholarship Requirement is satisfied if you earn a GPA of 3.000 or higher. All courses must be completed with a C grade or higher. Out-of-state applicants must earn a GPA of 3.400 or higher in the 15 college-preparatory “a-g” courses with no grade lower than a C.

3. Examination Requirement

Freshman applicants are required to take the:
• ACT Plus Writing
OR
• SAT Reasoning Test
Highest scores from one sitting will be used.
SAT Subject Tests are no longer required and UC Davis will consider SAT Subject Tests only if they benefit the applicant; some UC campuses recommend that applicants take certain SAT Subject Tests.

Applicants for fall must take the required test no later than December of the previous year—official scores must be received by the end of January. You are responsible for making sure that testing agencies send your scores to the University of California.

Make arrangements to take the required ACT Plus Writing exam with your high school or at the ACT website at http://act.org. The UC Davis ACT code is 0454. You may make arrangements to take
the required SAT Reasoning Test or optional SAT Subject Tests through the College Board website at http://collegeboard.org. The UC Davis College Board code is 004834.

**UC Pathways for California Residents**

For the highest-achieving California applicants, UC has two paths:

- Statewide Path
- Local Path, also known as Eligibility in the Local Context (ELC)

Learn more at http://admission.universityofcalifornia.edu/freshman/california-residents.

**UC Freshman Admission Requirements for Out-of-State Applicants**

For additional information, see http://admission.universityofcalifornia.edu/freshman/out-of-state.

**Campus Selection vs. UC Admission Requirements**

The University of California, Davis is a highly selective public research university with a strong reputation around the world. To prepare for admission and the academic rigor necessary to be successful at our campus, make sure you meet or exceed the UC admission requirements. Simply meeting these requirements does not guarantee admission to UC Davis—applicants who are admitted typically exceed them by a considerable margin. The selection criteria that UC Davis considers as part of its comprehensive review process for each UC applicant are available at http://admissions.ucdavis.edu/admission/freshmen/fr_selection_process.cfm.

**Transfer Credit for College Courses**

Freshman applicants taking UC-transferable college courses while in high school may receive transfer credit upon receipt of an official final college transcript.

**Advanced Placement (AP) Examinations**

Transfer credit is granted for each College Board Advanced Placement (AP) examination completed with an official score of 3, 4 or 5. The credit will be part of the minimum 180 quarter units you need in order to receive a bachelor’s degree. The credit from the AP examinations may also be used to satisfy specific degree requirements.

To learn how many units you may receive for an AP examination, see College Board Advanced Placement (AP) Examination Credit, on page 35—under the column heading, Credit Toward Degree. How those units will be applied toward specific degree requirements in each college is explained for each exam category. Please note that the courses for which AP credit has been granted may not be used as a substitute for courses required as part of the UC Davis General Education Requirement; see General Education Requirement, on page 97.

In general, you may not earn university credit for college courses or International Baccalaureate (IB) transfer credits that duplicate credits already earned through AP. There are, however, a few exceptions to this general rule. Since it is often difficult to know exactly which UC Davis course you should take when you have earned AP credit, you should speak with an academic adviser in your major department, dean’s office, or the Biology Academic Success Center before selecting and enrolling in classes.

A Guide for Students with Advanced Placement (AP) Credit for a UC Davis Course

In general, you may not earn university credit for college courses that duplicate credit already earned through Advanced Placement (AP). There are, however, a few exceptions to this general rule, indicated in the chart College Board Advanced Placement (AP) Examination Credit, on page 35 and summarized here.

**NOTE:** Courses for which AP credit has been granted may not be used as substitutes for courses required as part of the UC Davis General Education Requirement.

**International Baccalaureate (IB) Examinations**

UC Davis recognizes the International Baccalaureate (IB) examinations for college credit. Higher Level examinations presented with official scores of 5, 6 or 7 receive 8 quarter units (5.3 semester units) of degree credit and, in specific instances, are deemed comparable to various lower-division courses. Students completing the International Baccalaureate (IB) diploma with a score of 30 or above will receive a maximum of 30 quarter units (20 semester units). The credit will apply toward the minimum 180 quarter units needed to receive a bachelor’s degree.

To learn how many units you may receive for an acceptable IB examination, see International Baccalaureate (IB) Higher Level Examination Credit, on page 39—under the column heading, Credit Toward Degree. The chart also specifies which UC Davis

Note: This is not a comprehensive list as new tests are possible. If your exam is not listed, it will be determined in consultation with an adviser.

¹ Examining:
- Last test administration for discontinued exams:
  - May 2009—Computer Science AB, French Literature, Italian, Latin Literature
  - May 2011—French Language, German Language
  - May 2013—Spanish Literature, Latin (Wright)
  - May 2014—Physics B

² UC Transfer Admissions Eligibility Areas:
- UCB—Behavioral and Social Sciences, UCE—English, UC+H—Humanities, UCM+Math, UC+BP—Biological and Physical Sciences
- UCE: If English AP test score of 3, 4, 5 was achieved prior to completing any transferable English composition coursework, 8 quarter units of transfer credit are awarded for the AP exam, and one of two English Composition requirements (UCE) is satisfied. UC Davis articulates AP English Language and Composition, and English Literature and Composition, with scores of 4 or 5 as WUP 1 and English 3; therefore we will not allow transfer credit for any duplicated English courses.
- See www.assist.org. Help Topic: UC Transfer Admissions Eligibility, for details related to UC transfer admission courses.

³ IGETC Areas:
- Each AP exam may be applied to one IGETC area as satisfying one course requirement, with the exception of Language other than English (LOTE).
- There is no equivalent AP exam for the Area 1B—Critical Thinking/Composition requirement.
- For details regarding IGETC certification, see your California community college adviser and www.assist.org. Help Topic: IGETC. Students entering UC Davis with partial IGETC certification should contact their dean's office.

⁴ Duplicate Credit Allowance for Coursework/Exams:
- Students who take the Calculus BC exam and earn a sub-score of 3 or higher on the Calculus AB portion will receive credit for the Calculus AB exam, even if they do not receive a score of 3 or higher on the BC exam. The Calculus BC/AB sub-score satisfies IGETC Area 2A.

¹ Examination: Last test administration for discontinued exams:

</table>

**Note:** This is not a comprehensive list as new tests are possible. If your exam is not listed, it will be determined in consultation with an adviser.

**Examination:**
- English A1 last offered in 2012; name changed to English Literature in 2013.
- All Language A2 exams eliminated as of May 2012: English A2, French A2, German A2, Italian A2, Portuguese A2, Spanish A2.

**IGETC Area:**
For details regarding IGETC certification, see your California community college adviser and http://assist.org. Help Topics: IGETC. Students with partial IGETC certification should contact their dean’s office or Biology Academic Success Center to determine any restrictions and courses that will provide the greatest benefit.

**UC Davis Pattern of General Education:**
Courses for which IB credit may not be used as a substitute for courses required as part of the UC Davis GE Requirement; see International Baccalaureate (IB) Examinations on page 34 and page 42.

**UC Davis Course Equivalencies and Credit Allowance for Duplicate Coursework/Exams:**
The university does not generally award full credit for college courses that duplicate credit already earned through IB exams, whether taken before or during enrollment in the university. Exceptions to this policy are indicated in the column. We encourage students who have IB credit to speak with an academic advisor in their major department, dean's office or Biology Academic Success Center to determine any restrictions and courses that will provide the greatest benefit.

**UC Davis College Area Requirements:**
- UC Davis College Area Requirements: a. Satisfies first half of English Composition requirement.
- UC Davis College Area Requirements: b. Satisfies 4 lower-division units of the English Composition requirement.
- UC Davis College Area Requirements: c. Satisfies first course toward English Composition requirement.
- UC Davis College Area Requirements: e. Music major partially satisfies Area (Breadth) requirement for A.B. degree.
- UC Davis College Area Requirements: f. Credit or preparatory coursework allowed for science majors for each Natural Sciences exam passed, except 8 units of credit allowed for Mathematics and Physics exams.
- UC Davis College Area Requirements: g. Credit or preparatory coursework allowed for science majors for each Natural Sciences exam passed, except 8 units of credit allowed for Mathematics and Physics exams.
selecting and enrolling in classes. Please note that the courses for which IB credit have been granted may not substitute courses required as part of the UC Davis General Education Requirement; see General Education Requirement, on page 97.

In general, you may not earn university credit for college courses that duplicate credit earned through IB. There are, however, a few exceptions as indicated in the chart International Baccalaureate (IB) Higher Level Examination Credit, on page 39. Similarly, students will not receive duplicate credit for comparable AP examinations if granted IB transfer credit. Each college may have special restrictions on the use of IB examinations—please check with your dean's office, department adviser or the Biology Academic Success Center to determine any restriction in their use toward breadth requirements and lower-division major course requirements before selecting and enrolling in classes.

ADMISSION AS A TRANSFER STUDENT

UC Transfer Applicant Definition

The University of California defines a transfer applicant as a student who has been a registered student in a regular term at a college, university or in college-level extension classes since graduating from high school. Summer session attended immediately following high school graduation is excluded in this determination. If you are a transfer applicant, you may not disregard any of your college records and apply for admission as a freshman.

Campus Selection and Priority

UC Davis gives highest priority to junior-level transfer applicants from California community colleges. To apply to majors in the Colleges of Biological Sciences, Engineering and Letters and Science, students must be junior-level applicants with a minimum of 90 quarter units (60 semester units) of UC-transferable coursework, including courses in progress or planned. In the College of Agricultural and Environmental Sciences, junior-level applicants will be given highest priority, but lower-division applicants may be considered if space allows.

Meeting transfer admission requirements for the University of California does not guarantee admission to UC Davis. Due to limited enrollment space, transfer applicants who are admitted generally well exceed UC admission criteria. Foremost is the applicant's academic performance and preparation for the selected college and major. To be competitive, you must maintain a GPA of 2.800 or higher. In some cases, personal characteristics, experiences and circumstances will also be considered.

Applications far exceed the number of spaces available in majors such as biotechnology, communication, international relations, psychology, viticulture and enology and all majors in the Colleges of Biological Sciences and Engineering. Applicants must complete specific lower-division major preparation courses with a specific GPA in the major and an overall required GPA.

To view our selective majors and their specific requirements for admission, see http://admissions.ucdavis.edu/admission/transfers/tr_selection_process.cfm.

UC Transfer Admission Requirements for California Residents

To be eligible for admission to UC as a junior transfer student, you must fulfill both of the following criteria:

1. Complete 90 quarter units (60 semester units) of UC-transferable credit with a minimum 2.400* GPA. No more than 21 quarter (14 semester) units may be taken Pass/No Pass.

2. Complete the following seven UC-transferable college courses, earning a grade of C or better in each course:
   - Two courses in English composition;
   - One course in mathematical concepts and quantitative reasoning;
   - Four courses chosen from at least two of these subject areas: arts and humanities, social and behavioral sciences, and physical and biological sciences.

Each course must be worth at least 4-5 quarter (3 semester) units. Completing the Intersegmental General Education Transfer Curriculum (IGETC) before transferring to UC may satisfy the required seven-course pattern for UC admission, depending on the courses you take. For more information, see http://www.assist.org.

*Please note that meeting UC admission requirements does not guarantee admission to UC Davis. To be a competitive candidate for admission, you must have an overall GPA of 2.800 or higher.

Alternatives for Satisfying UC Transfer Admission Requirements

If you were eligible for admission to UC when you graduated from high school—meaning you satisfied the subject, scholarship and examination requirement—or were identified by UC during your senior year as Eligible in the Local Context (ELC) and completed the Subject and Examination Requirements by your senior year, you are eligible to transfer with a minimum C (2.000)* average in your UC-transferable college coursework.

If you met the Scholarship Requirement in high school, but did not satisfy the 13-course Subject Requirement, you must take UC-transferable college courses in the missing subjects, earn a C or better in each required course and maintain a 2.000 GPA to be eligible to transfer.

*Please note that meeting UC admission requirements does not guarantee admission to UC Davis. To be a competitive candidate for admission, you must have an overall GPA of 2.800 or higher.

UC Transfer Admission Requirements for Out-of-State Applicants

The UC transfer admission requirements for transfer applicants from out-of-state are very similar to those for California residents. Applicants must have a GPA of 2.800* higher in all UC-transferable college coursework.

*Please note that meeting UC admission requirements does not guarantee admission to UC Davis. To be a competitive candidate for admission, you must have an overall GPA of 2.800 or higher.
Transfer Credit

Coursework from other colleges and universities is considered UC-transferable if the applicant completed the course at an institution that is recognized by the University of California. In addition, the coursework must be comparable to courses and levels offered within the University of California.

A total of 105 quarter (70 semester) UC-transferable units toward a university degree may be earned for lower-division coursework completed at any institution or combination of institutions. Lower- or upper-division units earned at UC (Extension, summer, cross/concurrent, UC-EAP, and regular academic year enrollment) are added to the maximum lower-division credit allowed and might put applicants at risk of being denied admission due to excessive units. For more information, see http://admission.universityofcalifornia.edu/counselors/files/uc-transfer-maximum-limitation-policy-chart.pdf. You can find information about transferable credit from California community colleges at http://assist.org. Only subject credit will be granted for courses taken in excess of this amount.

If, after applying UC lower-division unit limitations and exclusions, you have completed 120 quarter units (80 semester units) or more of UC-transferable units, your admission is subject to approval by the respective dean for majors in the Colleges of Agricultural and Environmental Sciences, Biological Sciences and College of Letters and Science.

Advanced Placement (AP) Examinations

Transfer credit is granted for each College Board Advanced Placement (AP) examination completed with an official score of 3, 4 or 5. To learn more, see Advanced Placement (AP) Examinations, on page 34.

International Baccalaureate (IB) Examinations

UC Davis recognizes the International Baccalaureate (IB) examinations for college credit. Higher Level examinations presented with official scores of 5, 6 or 7 receive 8 quarter (5.3 semester) units of degree credit and in specific instances are deemed comparable to various lower-division courses. Students completing the International Baccalaureate (IB) diploma with a score of 30 or above will receive a maximum of 30 quarter (20 semester) units. The credit will apply toward the minimum 180 quarter units needed to receive a bachelor’s degree. To learn more, see International Baccalaureate (IB) Examinations, on page 34 and International Baccalaureate (IB) Higher Level Examination Credit, on page 39.

Limited Status

Students in limited status are those whose special achievements qualify them to take certain university courses toward a definite and limited objective.

Currently the Colleges of Agricultural and Environmental Sciences, Biological Sciences, Engineering and Letters and Science do not consider limited status applicants. As an alternative, you may wish to consider enrolling in our UC Davis Extension Open Campus program.

Second Baccalaureate

Applicants who have a bachelor’s degree substantially equivalent to one granted by the University of California, are considered as undergraduates seeking a second bachelor’s degree. Admission under this status will require a superior academic record and clear evidence of a change in objective. The College of Engineering will consider applicants if their first degree is not in engineering and if they complete the lower-division engineering program at a California community college. Admission to the College of Engineering requires approval of the Associate Vice Chancellor of Undergraduate Admissions and dean of the college. You must submit the online UC undergraduate application for admission and scholarships during the appropriate UC filing period. The Colleges of Agricultural and Environmental Sciences, Biological Sciences and Letters and Science do not consider second baccalaureate applicants.

UC Intercampus Transfer

If you are an undergraduate student who is currently or was previously registered at another UC campus and have not since registered at a non-UC institution, you may apply for transfer to the UC Davis campus. Filing dates, application, fees and admission and selection requirements are the same as those listed for new transfer applicants. Current UC students who wish to attend UC Davis as intercampus visitors and plan to return to their home UC campus should refer to the Intercampus Visitor Program, on page 79.

ADMISSION AS AN INTERNATIONAL STUDENT

International students and researchers from countries around the world are part of the UC Davis community. During the 2011 academic year, the campus community represented more than 100 countries, including 1,600+ international students and nearly 1,000 international scholars.

International Freshman Applicants

Non-immigrants studying in the United States must meet the same requirements as domestic California and non-California residents. Students studying outside the United States must complete secondary school, earn superior marks in academic subjects, sit for the UC-required exam and may be required to demonstrate English proficiency. For more information, see http://admissions.ucdavis.edu/international.

International Transfer Applicants

International students applying to transfer to UC Davis from California or U.S. colleges or universities are considered for admission using the same transfer admission criteria as domestic students. Applicants who have attended international colleges or a combination of international and domestic colleges and universities will be evaluated using courses and grades from both institutions.

Priority admission consideration is given to prospective California community college transfer students, including international students, who are prepared to begin their junior or third year of study. Coursework from other colleges and universities is considered UC-transferable if the applicant completed the course at an institution that is recognized by the University of California and when the coursework is comparable to courses offered within the University of California. For more information, see http://admissions.ucdavis.edu/international.
**Required International Academic Records**

International students are responsible for providing UC Davis with official academic transcripts and/or certificates beginning with secondary school records. College and university records should indicate subjects taken; grades or marks earned; rank in class; number of academic terms per year; number of weeks in each academic term; and number of hours per week devoted to lecture and laboratory. Certifications must be provided for any university or government examinations the student has undertaken. Note: It is not possible to disregard any college or university coursework undertaken within the United States or abroad.

**English Proficiency**

Applicants must demonstrate English proficiency if they have been studying in the United States for less than two years, English is not their native language, and/or the language of instruction prior to study in the United States was not English. Applicants may demonstrate proficiency in one of the following ways:

- Complete two UC-transferable college courses (3 semester or 4–5 quarter units each) in English composition with C grades or better at an accredited U.S. college or university.
- Achieve a minimum score of 550 on the paper-based Test of English as a Foreign Language (TOEFL) or 80 on the Internet-based TOEFL. For more information, see [http://toefl.org](http://toefl.org).
- Achieve a minimum score of 7 (academic module) on the International English Language Testing System (IELTS).
- Achieve a minimum score of 560 on the Writing component of the SAT Reasoning Test.

**AFTER YOU APPLY FOR ADMISSION**

A few weeks after you apply, the University of California will notify you that your application has been received and processed. UC Davis will also notify you once the application has been received at our campus. At this time, you can create a MyAdmissions account at [http://myadmissions.ucdavis.edu](http://myadmissions.ucdavis.edu), using your UC Davis Student ID. You will be able to use this secure website to check your application and admission status at the UC Davis campus.

Students admitted to UC Davis can use MyAdmissions to view upcoming events for admitted students, check deadlines and complete pre-enrollment tasks, review their financial aid and scholarship awards (MyAwards) and accept our offer of admission. Admitted students who wish to officially accept our offer of admission must submit their Statement of Intent to Register (SIR) and complete all pre-enrollment tasks related to:

- MyAwards—Financial Aid Notice and Scholarships
- Student Housing
- Orientation (fall admits only)
- Statement of Legal Residence (SLR)
- High School Transcripts
- College/University Transcripts

- AP/IB Examination Results
- Test Scores
- Requests for I-20 or DS-2019
- International Records
- Accommodation for a Disability (if applicable)
- Health Insurance Requirement
- Hepatitis B Statement

After applying, transfer students are required to update their grades and course records using the online UC Transfer Academic Update (TAU) to ensure that the campuses have the most current academic information before making admission decisions. For details and deadlines, see [http://admission.universityofcalifornia.edu](http://admission.universityofcalifornia.edu).

**Required Academic Records for All Students**

You must accurately report all examination scores, as well as high school and any college/university work undertaken within the United States or abroad.

If you are admitted to UC Davis, you are expected to arrange to have all of your official final transcripts sent to Undergraduate Admissions by deadlines indicated on MyAdmissions. You do not need to submit official transcripts before this time, unless requested. All students must provide official final:

- High school transcripts
- College transcripts

All students completing the following examinations will be required to submit official scores:

- Advanced Placement (AP)
- International Baccalaureate (IB)

International applicants will be required to submit official scores for the following examination:

- TOEFL
  OR
- IELTS

Freshman applicants are also required to submit official scores for the following examinations:

- ACT Plus Writing
  OR
- SAT Reasoning Test
  and
- SAT Subject Tests (if taken)

For more information regarding ACT, see [http://act.org](http://act.org); the UC Davis ACT code is 0454. For more information regarding SAT, see [http://collegeboard.org](http://collegeboard.org); UC Davis College Board code is 004834.

Submit official documents and test scores to:

Undergraduate Admissions
University of California
One Shields Avenue
Davis, CA 95616-8507
SPECIAL PROGRAMS

Deferred Enrollment

The Deferred Enrollment program allows newly admitted undergraduate students to postpone their initial enrollment at UC Davis for up to one year. The purpose is to allow time to pursue other non-academic activities and opportunities that will assist students in clarifying their educational goals; e.g., travel, job opportunities, non-collegiate experience, time to resolve personal or medical problems. Students are not allowed to enroll in any coursework at another college or university during this time.

To be eligible for Deferred Enrollment, you must submit your Statement of Intent to Register (SIR) and deposit by the stated deadline, satisfy all university admission and entrance requirements and provide all official transcripts and examination scores. After submitting the SIR, you can browse our deferred enrollment FAQs and apply for deferred enrollment through the MyAdmissions website. You must also submit a $70 processing fee within seven days of submitting your deferred enrollment application.
FEES, EXPENSES AND FINANCIAL AID
FEES AND EXPENSES

Given the careful consideration to the total financing of your university education. If you will need funds beyond those that you and your family can provide, you should apply for financial aid well in advance of enrollment. The deadlines for applying for financial aid (grants, loans, Work Study and scholarships) are listed on the following pages.

The most up-to-date student fee information is available at http://budget.ucdavis.edu/studentfees. Every student must pay the quarterly fees, and any amounts charged to the student account, in full by the fee payment deadline listed in the Fees and Billing calendar at http://registrar.ucdavis.edu/calendar/. A Deferred Payment Plan (DPP), which allows students to pay quarterly student and housing fees in three monthly installments, or semester fees in four monthly installments, is available.

Course Materials and Services Fees

Students may be charged fees in some courses for the use, rental or consumption of materials, tools or equipment, or for the costs of materials or services necessary to provide a special supplemental educational experience. For example, course materials fees may cover the purchase of chemicals and glassware for a science laboratory or art supplies for an art studio class. They might also cover film rentals, field trips, or the purchase or rental of specific equipment. Courses that may be subject to the course materials fee are listed in the Class Schedule at http://registrar.ucdavis.edu/faculty-staff/.

Part-Time Students

Students approved for enrollment on a part-time basis pay the same fees as full-time students, but pay only one-half of Tuition. Part-time nonresidents pay one-half of the Nonresident Supplemental Tuition. The Part-Time Petition should be filed with the Office of the University Registrar in 12 Mrak Hall. The petitions must be filed on or before the 10th day of instruction for the term in which the reduction is to be applied. Petitions are also available at the Office of the University Registrar's website at http://registrar.ucdavis.edu.

UC Employee-Student Fees

Reduced fees are available to UC career employees and certain UC retirees who are qualified for admission to the university. The employee-student must file a petition, the Employee-Student Reduced Fee Authorization Form, with the Office of the University Registrar in 12 Mrak Hall for the reduction of fees. The form must be filed on or before the 10th day of instruction for the term in which the reduction is to be applied. Employee-students pay one-third of the full-time Registration Fee and one-third of the full-time Tuition. Employee-students also pay the Memorial Union Fee and the Student Facilities Safety Fee.

Employee students may enroll for up to nine units or three courses per quarter or semester, whichever is greater. Information is in Personnel Policies for Staff Members (section 51), available in department offices, at Shields Library, the Staff Development and Professional Services Office, and on the Internet. Petitions are also available at the Office of the University Registrar's website at http://registrar.ucdavis.edu.

Motor Vehicle Parking Permit and Bicycle Licensing Fees

Parking permit information and rates are available from TAPS at http://taps.ucdavis.edu or call 530-752-8277.

A California State bicycle license sticker is required on all bicycles operated on campus (new license, $10.00; renewals, $5.00—both valid through December 31 of the second year after purchase). For more information, call 530-752-2453 or see http://taps.ucdavis.edu.

Costs for a Year at UC Davis

Cost of living expenses are adjusted annually and fees are subject to change without notice. For the most recent Cost of Attendance figures, please refer to the Financial Aid Office's website for undergraduate and graduate and professional students at http://financialaid.ucdavis.edu.

International Student Expenses

International students are responsible for all of their expenses while studying at UC Davis. The expenses include nonresident supplemental tuition, system-wide tuition and fees, campus-based fees, room and board, books and a modest amount for personal expenses. For the 2013-2014 academic year, costs for international undergraduates living on campus were $55,951. Because the exact cost for tuition and fees is not determined until just before the beginning of the academic year, this amount is likely to increase without advance notice. For the latest costs, see http://financialaid.ucdavis.edu/undergraduate/cost/UGBudgets.html.

During the admission process, most international undergraduate students are required to complete the “Confidential Financial Statement” form certifying that support funds are available for twelve months. It is very important that students have adequate, reliable and continuing financial support for the whole time they are here. After students arrive in the United States, it is extremely difficult to obtain additional funding. The university does not offer grants or financial aid to international undergraduate students.

It is extremely important that you arrive on campus with sufficient funds for the entire academic year to cover all fees, tuition and expenses such as room and board, health insurance, books, supplies, transportation and other miscellaneous expenses. Careful budgeting is essential for international students.

FEE REFUNDS

Cancellation, Withdrawal and Fee Refunds

To cancel your registration before the first day of instruction or to withdraw from the university on or after the first day of instruction, you must complete a Cancellation/Withdrawal Form and return the form to the Office of the University Registrar. If you do not submit a Cancellation/Withdrawal Form, you will be liable for tuition and student fees according to university policy (below). No exceptions will be made to this policy.

If you are enrolled in classes, you will be dropped from all of your courses automatically when the Cancellation/Withdrawal Form is processed.

For students who pay fees and then cancel or withdraw with official approval before the end of any quarter, fees may be refunded according to the Schedule of Refunds, on page 48.
**Student Fees**

Unless otherwise noted, these are the estimated quarterly fees for Fall, Winter and Spring the 2014-15 academic year. The tuition, fees, and charges posted here are estimates based on currently approved amounts. These figures may not be final. Actual tuition, fees, and charges are subject to change by the Regents of the University of California and could be affected by State funding reductions. Accordingly, final approved levels (and thus a student's final balance due) may differ from the amounts shown. For up-to-date fee information, see [http://budget.ucdavis.edu/studentfees/](http://budget.ucdavis.edu/studentfees/). Programs and courses may have fees that are not listed here, check with your advisor.

* All new Undergraduate, Graduate Academic, and Graduate Professional students admitted will be charged a one-time, life-time document fee of $150.00. Graduate students in the strictly professional degrees (M.D., J.D., D.V.M. and M.B.A.) are excluded and will continue with pay-per-service charges. More information about the document fee is available at [http://registrar.ucdavis.edu/local_resources/docs/disclaimer/document_fee.pdf](http://registrar.ucdavis.edu/local_resources/docs/disclaimer/document_fee.pdf).  
1 The Disability Insurance Fee is assessed annually fall quarter at $41.00. This fee applies only to medical students, not interns, residents or health science academics.  
3 The fees above exclude students enrolled in self-supporting degree programs. Students enrolled in self-supporting degree programs pay a program fee in lieu of the fees above. Fees for self-supporting programs are available at [http://budget.ucdavis.edu/studentfees/current/index.html](http://budget.ucdavis.edu/studentfees/current/index.html).  
4 The Law School operates on the semester system. Nonresident law students pay a Professional Degree Supplemental Tuition of $15,594.00 per semester.  
5 Students in these programs must attend the summer quarter and pay fees the summer. For fee information, see [http://budget.ucdavis.edu/studentfees/documents/special/course-materials-fees.pdf](http://budget.ucdavis.edu/studentfees/documents/special/course-materials-fees.pdf).  
6 The fees above reflect fees for students in the Graduate School of Management (GSM) full-time MBA program. Students enrolled in the GSM part-time MBA programs (Bay Area MBA and Sacramento MBA) and Master of Professional Accountancy (MPAC) program are self-supporting programs and students pay a program fee in lieu of the fees above. For fee information, see [http://budget.ucdavis.edu/studentfees/current/index.html](http://budget.ucdavis.edu/studentfees/current/index.html).  
7 Full-time MBA students are only required to pay the quarterly course materials and services fee in their first year of instruction.  
8 School of Veterinary Medicine operates on the semester system. 4th year Veterinary Medicine D.V.M. students also attend during summer and pay $4,822.08 in fees the summer prior to their final academic.  
9 Nonresident Master of Public Health students pay a Professional Degree Supplemental Tuition of $2,532.00 per quarter and nonresident Master of Preventive Veterinary Medicine students pay a Professional Degree Supplemental Tuition of $2,066.00 per quarter.  
10 The Betty Irene Moore School of Nursing at UC Davis offers a Nursing and Healthcare Leadership - Master of Science (for Nurse Practitioners) degree program. The students in this M.S. Nurse Practitioner track must attend the summer quarter and pay additional summer fees. For fee information, see [http://budget.ucdavis.edu/studentfees/current/index.html](http://budget.ucdavis.edu/studentfees/current/index.html).  
11 Undergraduate and Graduate students are automatically in the Student Health Insurance Plan (SHIP) unless they are able to prove comparable coverage under another insurance plan. For more information, see [http://shs.ucdavis.edu/insurance](http://shs.ucdavis.edu/insurance).
The effective date for determining a refund of fees is the date you file a completed Cancellation/Withdrawal Form with the Office of the University Registrar and it is presumed that no university services will be provided to you after that date. The percentage of tuition and student fees that may be refunded is determined by the number of calendar days (not school days) elapsed, beginning with the first day of instruction.

If you are enrolled but have not paid fees in full by the tenth day of instruction, you will be administratively withdrawn and fees for the first 10 days of instruction will be charged to your account.

**New Undergraduate Students**

The nonrefundable $100 deposit paid when you accepted admission and returned your Statement of Intent to Register (SIR) is withheld from tuition and the Schedule of Refunds is applied to the balance of tuition and student fees assessed.

Therefore, on or before the first day of instruction, tuition and student fees paid are refunded in full minus $100. After the first day of instruction, the nonrefundable $100 deposit is withheld from tuition and the Schedule of Refunds is applied to the balance of tuition and student fees assessed.

**All Continuing Students, Readmitted Students and New Graduate Students**

On or before the first day of instruction, registration fees are refunded in full minus a $10 service charge for cancellation/withdrawal. After the first day of instruction, the Schedule of Refunds is applied to tuition and student fees. The Schedule of Refunds does not apply to the Health Insurance Fee.

**Planned Educational Leave Program (PELP)**

The Schedule of Refunds also applies to students who participate in the Planned Educational Leave Program (PELP). Thus, for a full refund of tuition and student fees paid, you must file a completed approved PELP Form with the Office of the University Registrar before or on the first day of instruction; see Leave of Absence: Planned Educational Leave Program (PELP), on page 86 in the Academic Information chapter.

**Schedule of Refunds**

The Schedule of Refunds applies to all new, continuing and readmitted students who do not receive federal financial aid.*

The Schedule of Refunds refers to calendar days—not school days—beginning with the first day of instruction. The number of days elapsed is determined from the date the completed Cancellation/Withdrawal Form or PELP Form is returned to the Office of the University Registrar. Percentages listed (days 1-35) will be applied respectively to Tuition, Nonresident Supplemental Tuition, and all student fees except the Health Insurance Fee.

*New students who receive federal financial aid and withdraw during their first academic term may be refunded fees according to a Modified Fee Refund Schedule, available at the Financial Aid Office.

**UC Davis Student Health Insurance Plan (Davis SHIP) Coverage and Refund of Davis SHIP Fees**

The University of California requires that all students have health insurance. To help students meet this requirement, UC Davis automatically enrolls all registered students in the UC Davis Student Health Insurance Plan (Davis SHIP). Fees for Davis SHIP coverage are automatically charged to the student’s account each term along with registration fees: for

- Students who want to be enrolled in Davis SHIP, enrollment is automatic-no action is required.
- Students with comparable insurance, who do not want to be enrolled in Davis SHIP, must submit a Davis SHIP waiver application at http://shcs.ucdavis.edu/insurance by the published deadline; see the Academic Calendar, on page 1. If a waiver is approved, Davis SHIP enrollment will be waived through the end of the academic year. An approved waiver is effective for the duration of the current academic year only. Waiver applications must be filed each academic year.

On campus medical and mental health care is available to all students at SHCS, even if Davis SHIP is waived.

More waiver information or information regarding benefits, eligibility, deadlines, or insurance coverage if your registration status changes, can be found at http://shcs.ucdavis.edu/insurance or by visiting the SHCS Insurance Services office at the Student Health & Wellness Center.

**FINANCIAL AID**

Financial Aid Office
1100 Dutton Hall
530-752-2390 530-754-6073 (Hearing Impaired)
http://financialaid.ucdavis.edu

The Financial Aid Office provides financial assistance in the form of grants, scholarships, loans, and work-study employment. To apply, undergraduates and graduate students are required to file the Free Application for Federal Student Aid (FAFSA), available at http://www.fafsa.ed.gov or the California Dream Act Application at http://dream.csac.ca.gov.

The priority-filing period is January 1 to March 2 each year; however, students are encouraged to apply even if the deadline has passed. Although state and university funding may be depleted, Federal Pell Grants and Direct Loans are available throughout the year for eligible applicants.
UC Education Finance Policy for Undergraduates

UC Davis uses the University of California Education Financing Model to determine financial aid awards for undergraduates. The policy looks at four factors to choose the type and amount of aid for each student:

1. Cost of Attendance
2. Expected Family Contribution (EFC) as determined by the information on your application
3. Federal, State, and University grant eligibility
4. Undergraduate Self-Help and Loan Contribution, which is the amount that undergraduates are expected to contribute toward their cost of education at UC Davis

The Financial Aid Office can assist students with dependents or child care costs that exceed the standard student budgets.

Undergraduates with outstanding academic records are encouraged to apply for scholarships. For information about scholarship application process, see Undergraduate Scholarships and Awards, on page 51.

Graduate Student Funding

Graduate students and students in the professional schools at UC Davis (Medicine, Law, Veterinary Medicine and the School of Management) apply for financial aid by completing the Free Application for Federal Student Aid (FAFSA), available at http://www.fafsa.ed.gov or the California Dream Act Application at http://dream.csac.ca.gov. Financial need is based on the information provided on your application. FAFSA applicants will receive a Student Aid Report (SAR) with the Student Contribution (SC) assigned by the federal processor, while Dream Act applicants will receive their SC from CSAC. The SC is subtracted from the UC Davis Cost of Attendance (for the student’s graduate program) to determine need-based eligibility. Graduate scholarships, fellowships and teaching and research assistantships are administered through the Office of Graduate Studies.

Satisfactory Academic Progress

Federal regulations require that undergraduate and graduate student financial aid recipients meet the published Standards for Satisfactory Academic Progress (SAP) for Financial Aid concerning units and maximum quarters of attendance allowed to obtain a degree. A copy of our SAP standards is available at http://financialaid.ucdavis.edu/undergraduate/students/SAP.html. Review the policy in detail and discuss it with your academic adviser.

For more information, contact the Financial Aid Office. Regulations and deadlines are subject to change.

Types of Financial Aid

Grants

A grant is an award that does not have to be repaid as long as the student remains eligible. Whenever criteria and funding levels permit, a student’s financial aid award includes grants.

Federal Pell Grants. All undergraduate financial aid applicants are required to apply for a Federal Pell Grant each year by filing the FAFSA. Recipients must be enrolled at full time to receive the full amount of awarded Pell Grant and must maintain good academic standing and make satisfactory academic progress. Eligibility is determined by the federal government according to a formula developed by the Department of Education and approved annually by Congress. The UC Davis electronic financial aid notice (MyAwards) informs the student of the Pell Grant award amount.

Cal Grants. All undergraduate financial aid applicants who are California residents are encouraged to apply for a Cal Grant by submitting the FAFSA or California Dream Act Application and a GPA Verification form before March 2. Cal Grants are awarded by the California Student Aid Commission (CSAC) and may be renewed each year for four years, see http://www.csac.ca.gov.

• Cal Grant A Awards are based on financial need and academic achievement and can be extended for one year for students entering a teaching credential program. Cal Grant A pays partial registration fees.

• Cal Grant B Awards are based on financial need and are for undergraduate students primarily from low-income backgrounds. Recipients are required to complete at least 12 units each quarter. Cal Grant B pays a quarterly stipend for living expenses for first-year students and a portion of the registration fees plus a quarterly stipend for living expenses for students in their second through fourth years.

Cal Grant A and B recipients who plan to enroll in a Teaching Credential Program (TCP) may be eligible to renew their Cal Grant award for an additional year. The additional year of payment is provided to students who are seeking an initial teaching credential and cannot be used for other graduate level courses of study.

University Grants (UC Grant). The university determines grant eligibility for undergraduates by subtracting a student and parent contribution, any federal or state resources the student receives, and a standard work and loan contribution from the cost of attendance. Any remaining eligibility would be funded with UC Grant. UC Grant funding for graduate students is awarded by the Office of Graduate Studies. Students in the professional schools and the School of Education are awarded grant by their academic departments.

Loans

Financial Aid almost always includes a long-term loan. Awards are dependent on funding available. Some loan fund sources do not receive allocations each year. Repayment of these loans (with the exception of Federal Direct PLUS loans) begins after graduation or withdrawal from school. Students are encouraged to work as much as possible (while remaining full-time students) and to develop modest personal budgets to keep final loan indebtedness within a manageable range.
Health Profession Student Loans (HPSL) are awarded to students in the School of Veterinary Medicine who demonstrate financial need. Parental income information is required for HPSL applicants regardless of age and dependency status.

- $2,500 plus fees maximum
- 5% interest
- Repayment begins twelve months after receipt of the degree or withdrawal

Federal Direct Subsidized and Unsubsidized Student Loans (Direct Loans) are available through the Financial Aid Office. Subsidized loans are based on financial need and interest accrued while the student is in school is paid by the federal government. Unsubsidized loans are available to students regardless of income and assets, and there is no interest subsidy.

- Undergraduates may borrow up to annual maximums of $3,500 subsidized plus $2,000 unsubsidized = $3,500 for freshmen, $4,500 subsidized plus $2,000 unsubsidized = $6,500 for sophomore, and $5,500 subsidized plus $2,000 unsubsidized = $7,500 for juniors and seniors, up to a maximum aggregate indebtedness of $23,000 for subsidized loan and $31,000 in combined subsidized and unsubsidized loan
- Independent undergraduates may borrow unsubsidized Direct Loans up to annual maximums of $9,500 for freshmen, $10,500 for sophomores, and $12,500 for juniors and seniors, up to a maximum aggregate amount of $57,500, of which $23,000 can consist of subsidized loans
- Graduate and professional students may borrow subsidized Direct Loans up to an annual maximum of $8,500. Health professionals students may borrow higher amounts dependent on the length of their academic year
- Graduate and professional students may borrow unsubsidized Direct Loans up to an annual maximum of $12,000
- For the most current interest rates on Direct Loans, see https://studentloans.gov
- A minimal loan fee is charged on all Direct Loans, which varies by loan type. The fee is deducted proportionately from each disbursement
- For Direct Loans, repayment begins six months after graduation or withdrawal from school

Federal Direct Parent Loans for Students (Direct PLUS) are government-insured loans that are made to parents of dependent students.

- Direct PLUS loans are available up to the cost of education minus other financial aid received during the years if the dependent student is an undergraduate
- There is no interest subsidy for this loan
- A loan fee is charged and deducted proportionately from each disbursement
- For the most current interest rate and loan fee information, see https://studentloans.gov
- Repayment begins within 60 days after loan disbursement

Direct Grad PLUS Loans. The Grad PLUS Loan is provided by the William D. Ford Direct Loan Program. (Students in Teaching Credential programs are not eligible for Graduate PLUS loans.)

- Credit checks are required to be eligible for the Grad PLUS. Students who do not meet the credit requirements for a Grad PLUS may still obtain the loan with an endorser who does meet the credit requirements
- An origination fee is deducted from the loan amount
- For the most current interest rate and loan fee information, see https://studentloans.gov
- Repayment begins 60 days after loan disbursement

Federal Perkins Loans are for U.S. citizens or permanent U.S. residents. Loans may be limited to a percentage of student's need because of demand and limited funds. This is a subsidized loan, which means the federal government pays the interest on the loan while the student is enrolled in school. Repayment starts nine months after graduation or withdrawal from school and may be extended over 10 years. Additional deferments are possible for temporary total disability or volunteer service in a private, non-profit organization, VISTA or the Peace Corps. Some teachers of students from low-income families and full-time teachers of handicapped children may also qualify for partial loan cancellation.

Annual Federal Perkins Loan Limits
- $4,000 for undergraduate students
- $6,000 for graduate/professional students

Aggregate (Maximum) Loan Limits
- $8,000 for a student who has not completed the first two years of undergraduate work and for programs that are less than two years in length
- $20,000 for a student who has successfully completed two years of a program of education leading to a bachelor's degree but who has not completed degree work
- $40,000 for a graduate/professional student (includes loans borrowed at the undergraduate level)

Emergency, Short-Term and Assistant Loans meet temporary or emergency financial needs of currently enrolled students. Please visit the financial aid website for requirements, instructions and the online application. Loan funds are provided by UC Davis alumni, ASUCD, the Cal Aggie Foundation, the Regents of the University of California and private donors.

- Emergency Loans. $500 maximum. The maximum repayment period is 30 days
- Short-Term Loans. $500 or higher. Assistant Loans: graduate students who are in the teaching assistant, research assistant, readership, associate-instructor or postgraduate researcher classifications can apply for a maximum of one month's salary. The maximum repayment period is six months or the end of the academic year, whichever occurs first
- Assistant Loans. Graduate students who are in the teaching assistant, research assistant, readership, associate-instructor or postgraduate researcher classifications can apply for a maximum of one month's salary. The maximum repayment period is six months or the end of the academic year, whichever occurs first

For applications and more information about applying, see http://financialaid.ucdavis.edu.

Work-Study

Student Employment
1100 Dutton Hall
530-752-0520; sec@ucdavis.edu; http://jobs.ucdavis.edu

Undergraduate Work-Study

Work-Study allows students to earn part of their financial aid through part-time employment. Federal Work-Study is available
for students eligible to complete the Free Application for Federal Student Aid Form (FAFSA), and the FAFSA must be completed by March 2 annually to be considered. Institutional Work-Study is available to international and AB 540 students who are eligible to work and is also based on need. For AB 540 students that are also undocumented, need is determined by the California Dream Act Application, which must be completed by March 2 annually to be considered. Dream Act applicants must also meet Deferred Action for Childhood Arrivals (DACA) requirements to be eligible. International and other AB 540 students must complete a separate application to be considered for Institutional Work-Study. Please see our office for details. Work-Study awards offer both money for education and work experience. Work-Study recipients should obtain a Work-Study job or ask to defer the Work-Study before December 1 or the award will be canceled. Student Employment coordinates Work-Study for undergraduates at UC Davis.

Community Service. A wide variety of community service jobs are available for students who apply for Work-Study funding. These jobs provide educational and rewarding work experience and help students connect with the community at large. Students applying for community service jobs also receive priority consideration for Work-Study funding.

Work-Study for Graduate Students

Work-Study funds for graduate students are allocated directly to the chairpersons of the graduate programs. Graduate students seeking Work-Study funding should contact their respective departments for further information. Students must file a FAFSA or California Dream Act application and have financial need to be considered for Work-Study funding.

Undergraduate Scholarships and Awards

Undergraduate and Prestigious Scholarships Office: 2128 Dutton Hall 530-752-2804; scholarships@ucdavis.edu; http://scholarships.ucdavis.edu/scholarships/

Mailing address: Undergraduate and Prestigious Scholarships Office University of California One Shields Avenue Davis, CA 95616-8606

UC Davis recognizes outstanding students with scholarships awarded on the basis of academic excellence and exceptional promise. The Scholarship Office administers approximately 220 different undergraduate scholarships. Many more scholarships are handled through outside agencies.

Committees made up of faculty and staff determine scholarship eligibility. In addition to academic records (a minimum grade point average of 3.250 is required), selection may be based on letters of recommendation, test scores and a personal essay in which your university goals and objectives are stated. Some awards are limited to students in specific majors or colleges, residents of certain geographical areas, students of a particular class standing, or students with demonstrated financial need. Most scholarships are not renewable and you must reapply each year for scholarship aid.

Students applying to the university are considered for scholarships using the same forms completed for admission purposes. The undergraduate scholarship application for continuing students becomes available online in October and is due in early January. See the Scholarship Office website for instructions and the application. Scholarship recipients will be notified beginning in April and continue through late summer.

Regents Scholarships, among the highest honors that undergraduates at the university can receive, are granted to exceptionally promising freshmen or juniors enrolling in the fall quarter. Awards may be honorary (honorarium) or may be accompanied by a stipend (for students demonstrating financial need), which generally covers the difference between family resources and yearly educational costs. These scholarships are renewable as long as students maintain a 3.250 cumulative grade point average.

• 2-year and 4-year renewable scholarships

Prestigious Scholarships and Fellowships are highly competitive, merit-based awards open to all UC Davis students. These awards have an extensive application process, and our office is available to assist you. Please visit the Undergraduate or Graduate Prestigious Scholarships & Fellowships section of our website for more details.

Special Prizes at UC Davis recognize outstanding performance, achievement and promise in special programs or majors. The most prestigious prize is the University Medal, presented to the most outstanding graduating senior.

• Plaques or certificates and cash awards

• College and school medals to outstanding graduates

Alumni Scholarships provided by the Alumni Association in cooperation with the university, are based primarily upon leadership and scholastic achievement. Your financial need and extracurricular activities may also be considered. For more information, see http://alumni.ucdavis.edu/s/787/index.aspx?id=787&gid=1&pgid=322.

• $1,000 minimum

• New undergraduates only

• Selection by local alumni association chapters

Military Scholarships are awarded to outstanding high school seniors without regard to financial need, as well as to UC Davis students who have demonstrated exceptional leadership and scholastic achievement during their freshman and/or sophomore years. Eligible high school seniors apply for the full 4-year scholarship and must file applications by November. UC Davis scholarship students participate in the Military Science (ROTC) Program. Information and applications are available from the Department of Military Science in 125 Hickey Gymnasium 530-752-5211.

• Full fees, books and supplies

• $1,000 per year for miscellaneous expenses

• 1-, 2-, 3- or 4-year scholarships

Other Scholarships are made possible by individual donors, private corporations and various agencies. Many organizations and groups conduct their own scholarship programs. In most cases, you apply directly to these sponsoring groups. Information on available outside scholarships and scholarship search services are available at http://financialaid.ucdavis.edu/scholarships/outside.html.

• Graduate students are also eligible for various scholarships and fellowships; see Fellowships, Assistantships and Loans, on page 113.
**STUDENT LIFE**

As a UC Davis student, you are part of a diverse student community that fosters academic and career exploration as well as personal growth. The campus offers assistance with the practicalities of student life such as finding housing, staying healthy and affording a university education. Faculty members, staff and peer advisors are here to support your academic goals by helping you master concepts, study effectively, manage time and apply classroom material to careers. Whatever your academic and career aspirations, you’ll find opportunities to enrich your student experience through internships, research, community service, student clubs and study abroad. UC Davis students also enjoy myriad recreational choices, from impromptu Frisbee games on the Quad to intercollegiate athletics, craft classes, backpacking trips and more.

**LIVING AT DAVIS**

**On-Campus Housing**

Student Housing Office  
330-752-2033; studenthousing@ucdavis.edu; http://housing.ucdavis.edu  
Living on campus adds a measure of convenience to your life and helps familiarize you with the campus. Over 6,000 students live in Student Housing each year, including over 90 percent of incoming freshman students.

All incoming fall quarter freshmen and transfer students are guaranteed housing in Student Housing, provided they meet eligibility requirements and all Student Housing and university deadlines. Freshmen are guaranteed two years of housing. Transfer students are guaranteed one year of housing. See the Student Housing website for more information about the housing guarantee. All other students should contact Student Housing to inquire about their housing options.

**Residence Halls**

There are many residence halls at UC Davis, located in three different Student Housing areas: Segundo, Tercero, and Cuarto. In each of the residence hall complexes, students and staff create and maintain an environment conducive to personal growth and educational achievement. Academic and social events are held many times throughout the year. An Academic Advising Center, a Computer Center, and a dining hall (dining commons) are located in each area.

Rooms are furnished with a bed and mattress, desk and chair, bookcase, chest of drawers, study lamp, and wastebasket and recycling basket for each resident. Furnished common rooms in each residence hall are available for studying, relaxing and hanging out with friends.

Cost is based on room occupancy (single, double, or triple) and meal plan choice. Rates are available at http://housing.ucdavis.edu/fees. Each year’s rates are subject to approval by the UC Regents, are typically finalized in May, and are effective for the following academic year.

Incoming first-year freshmen students are eligible to live in the residence halls. Some years, as space allows, incoming first-year transfer students may also live in the residence halls. Student Housing will send housing offers to incoming freshmen students (and incoming transfer students in years where space is available) after they submit their Statement of Intent to Register (SIR). All other students are encouraged to call Student Housing to inquire about housing availability.

Students who require a special accommodation or consideration, including a medical condition, disability, dietary requirement or other circumstance will be able to submit their request and supporting documentation as a part of the residence hall application process.

Visit the Student Housing website to learn more about the residence halls and how and when to apply for housing. Call or email Student Housing with any questions.

**Apartments**

There are several apartment properties on the UC Davis campus that provide housing to students with families, graduate and professional students, and undergraduate students. There is a dedicated transfer student apartment community. And in the next 2-3 years, multiple housing projects will bring many new apartments to the UC Davis campus with an emphasis on graduate students and students with families.

**Student Housing Apartments (SHA)—Transfer Student Communities**

Student Housing created a special community for transfer students called “Student Housing Apartments,” or SHA. SHA is comprised of multiple apartment complexes both on and very close to campus. SHA residents have access to academic support and tutoring, as well as access to on-campus computer centers and optional dining plans.

Rooms are furnished with a bed and mattress, desk and chair, bookcase, chest of drawers, study lamp, and wastebasket and recycling basket for each resident. Living and dining rooms are also furnished, and all apartments feature full kitchens.

Cost is based on room occupancy and meal plan choice. Rates are available at http://housing.ucdavis.edu/fees. Each year’s rates are subject to approval by the UC Regents, are typically finalized in May, and are effective for the following academic year.

Incoming first-year transfer students are eligible to live in SHA. Student Housing will send housing offers to incoming transfer students after they submit their Statement of Intent to Register (SIR).

Students who require a special accommodation or consideration, including a medical condition, disability, dietary requirement or other circumstance will be able to submit their request and supporting documentation as a part of the Student Housing Apartments application process.

Visit the Student Housing website to learn more about SHA and how and when to apply for housing. Call or email Student Housing with any questions.

**Solano Park Apartments**

Solano Park offers over 130 university-operated, unfurnished one- and two-bedroom apartments surrounded by green lawns and shade trees that create a serene family-friendly atmosphere. Priority is given to students with families, and then to graduate students, but all UC Davis students are eligible to live at Solano Park.

Students may submit an application to live at Solano Park before being admitted to UC Davis, and should apply for housing several months in advance to ensure housing is available. Solano Park
rates are available at http://housing.ucdavis.edu/fees. Each year’s rates are subject to approval by the UC Regents, are typically finalized in May, become available after approval, and are effective on August 1.

Students who require a special accommodation or consideration, including a medical condition, disability, dietary requirement or other circumstance will be able to submit their request and supporting documentation as a part of the application process.

Visit the Student Housing website to learn more about Solano Park Apartments and how and when to apply for housing. Call or email Student Housing with any questions.

8th & Wake Apartments

8th & Wake is a new complex for graduate students. It is scheduled to open for fall 2014. 8th & Wake is a privately-owned and managed on-campus complex. For more information, call 8th & Wake at 530-298-7777.

The Atriums at La Rue

The Atriums offers studio and two-bedroom unfurnished units for single graduate students. The Atriums is a privately-owned and managed on-campus complex. For more information, call The Atriums at 530-753-7322.

Russell Park Apartments

Russell Park offers one-, two-, and three-bedroom unfurnished units for students with families. Russell Park is a privately-owned and managed on-campus complex. For more information, call Russell Park at 530-753-7322.

West Village

West Village is a neighborhood featuring three apartment complexes as well as a park, retail and dining space, a community college, and single family homes. The apartment complexes offer housing for UC Davis students, as well as faculty and staff. West Village is a privately-owned and managed on-campus complex. For more information, call the West Village Leasing Center at 530-759-0661.

Cooperatives

Cooperatives present unique and independent living opportunities to their residents. Communities share daily chores, including cooking, cleaning, and gardening, and host a variety of dinner parties and events. There are two Cooperatives at UC Davis: the university-operated Tri-Cooperatives and the privately-owned and managed Baggins End.

For more information about the Tri-Cooperatives, call or email Student Housing. To learn more about Baggins End, see the Solar Community Housing Association website at http://schadavis.org.

Off-Campus Housing

The majority of UC Davis students live off campus. The City of Davis has ample apartments for rent, from one-person studio apartments to five- or six-person suites. Townhouses, duplexes and houses throughout the city are also available for student rental. ASUCD maintains a list of available community housing at http://chl.ucdavis.edu. And every February ASUCD hosts “Housing Day,” an event that brings dozens of local housing managers to campus to introduce their communities to UC Davis students.

TRANSPORTATION AND PARKING

Transportation and Parking Services (TAPS)

Motorist Assistance Program: 530-752-8277
Bicycle Program: 530-752-BIKE (2453)

The central campus is closed to unauthorized motor vehicles. Walking and bicycling are the most common ways to traverse the campus.

Bicycles. All bicycles ridden or parked on campus must have a current California state bicycle license. You may buy a license or renewal tag at TAPS. Bicycle traffic and parking regulations are strictly enforced. Bikes may be parked only in designated parking areas and may only be secured to bike racks. The Bicycle Program rents bicycle lockers on a quarterly or annual basis for storage of bicycles only. The ASUCD Bike Barn, at the Silo, offers repairs and rentals, and sells new and used bikes, bicycle parts and accessories.

Parking. Vehicles (including motorcycles and mopeds) parked on campus are required to display a valid UC Davis parking permit or pay for time at a meter. Parking is permitted in marked spaces only, with permits displayed so all information is visible through the front window. All permit types may be purchased at TAPS. Daily visitor permits may also be purchased from permit dispensers located at entrances to most visitor parking lots. Visitor permits are valid in areas posted for visitor or “C” permits. After 5 p.m. (PST), they are also honored in “A” permit areas and at meters.

Motorist Assistance Services. TAPS provides complimentary off-campus motorist assistance services including vehicle lock-outs, battery jumps, gasoline retrieval and tire inflation services.

Alternative Transportation. UC Davis encourages the use of alternative transportation through the goClub. The goClub provides incentives for those who carpool, vanpool, walk, bike, or ride the train or bus to campus on a regular basis. For more information, see http://goclub.ucdavis.edu or call 530-752-6453.

The UC Davis/UC Davis Medical Center Shuttle provides hourly service Monday through Friday between the UC Davis campus and the medical center in Sacramento. The shuttle is available to all members of the UC Davis community. You may purchase shuttle passes at Transportation & Parking Services or the Cashier’s Office (cash or check only).

The Davis/Berkeley Shuttle provides transportation between the UC Davis campus and the UC Berkeley campus for university employees, registered students and other university affiliates. Advanced reservations are required. For schedule information and reservation, visit Fleet Services at http://fleet.ucdavis.edu or call 530-752-8287.

Buses

Unitrans
5 South Hall
530-752-BUSS; http://www.unitrans.com

Unitrans, operated entirely by undergraduate students, provides year round public transit service on 16 lines on the UC Davis campus and the City of Davis. Unlimited access is provided to undergraduate students with a valid UC Davis registration card; others may ride by paying the single-ride cash fare or by purchasing discounted multi-ride passes from TAPS or at the Unitrans business office.
office. Full service is provided each UC Davis school day (Monday-Friday; 7:00 a.m.-8:30 p.m.) and at nights (Monday-Thursday; 8:30 p.m.-11:00 p.m.) during the regular school year. Reduced schedule service operates during the summer, finals week, and all academic break periods. Unitrans operates seven of its primary lines on Saturdays, Sundays, and designated holidays. Schedules are available at the MU Campus Information Center, bus terminals, Davis City Hall, the Unitrans office and at http://www.unitrans.com. Real-time bus location information is available by phone, text, and website via the Nextbus automated system.

**STUDENT EMPLOYMENT**

Many employment opportunities are available at UC Davis and with private employers. Full-time or part-time students, students on PELP and students with a letter of acceptance for the following quarter who have not yet registered are eligible. With a part-time job students are able to borrow less and still meet their Self-Help Contributions. Most students work 10-12 hours a week while attending school, many in jobs on campus. There are also a wide variety of community service jobs, which can be both educational and personally rewarding.

To research available jobs, please see [http://iccweb.ucdavis.edu/students/jobsandcareers.htm](http://iccweb.ucdavis.edu/students/jobsandcareers.htm).

**WORKLIFE**

Heitman Staff Learning Center
530-754-8791; worklife@ucdavis.edu; http://www.hr.ucdavis.edu/worklife-wellness

WorkLife is the principal resource on campus for referrals, outreach, education and programming that enable students, faculty and staff to meet commitments and pursue interests both in and outside of the university. Services address child care, elder care, breastfeeding support, health and wellness, and workplace flexibility. The unit serves as the university’s liaison with the on-campus child development centers.

**On-Campus Child Care Programs and Resources**

  Posts listings for parents seeking child care providers.

**Community Child Care Programs**

City of Davis Child Care Services
600 A Street
Davis, CA 95616

City of Davis Child Care Services offers many services relating to child care and parenting to residents of Davis, West Sacramento, Woodland and Yolo County. Services are divided into Resource and Referral to child care providers and parent support programs and Child Care Subsidy to assist low-income parents in paying for care.

**HEALTH AND COUNSELING SERVICES**

**Student Health and Counseling Services (SHCS)**

SHCS provides a wide variety of medical, mental health and wellness services to all registered UC Davis students regardless of insurance coverage. Most services are provided through scheduled appointments, however urgent care (services without appointments) for acute medical and mental health needs are also available.

Services are provided at two primary locations: The Student Health and Wellness Center and North Hall.

To make an appointment for SHCS services contact our appointment desk at 530-752-2349.

SHCS supports students’ academic goals by providing highly accessible wellness, counseling, illness and injury care at affordable rates. Student fees subsidize SHCS services so students pay small fees for most medical services, with most advice and mental health counseling services at no charge.

**Advice Nurse and Urgent Medical and Mental Health Care Services** 530-752-2349.

SHCS offers both medical and mental health urgent care services on the first floor of the Student Health and Wellness Center. Appointments are not required for Urgent Care Services, but students are encouraged to call the Advice Nurse before coming in. The nurse will discuss your concerns and determine if urgent care is appropriate. Patients are seen according to severity and urgency. In addition, our Advice Nurse service is free for all UC Davis students to discuss health concerns and the need for care. Some issues may be resolved through self-care or over the counter treatment.

**Primary Care Clinics & Specialty Clinics** 530-752-2349.

Medical professionals are available by appointment five days a week for primary care treatment and referrals. Appointments can be made to fit around class and work schedules. To ensure continuity of care, students are assigned a primary care provider and are asked to schedule with this provider when requesting an appointment. For convenience, appointments may be scheduled on the same day that a student calls. Appointments can be scheduled for routine primary care, nutrition and fitness, men's/women's health and physical exams, allergy care, sports medicine, travel immunizations and other services. Physician specialists are available upon referral from a primary care provider. Services include acupuncture.
ture, dermatology, endocrinology, internal medicine, neurology, orthopedics, physical medicine & rehabilitation, podiatry, and psychiatry.

**Other SHCS Services** at the Student Health and Wellness Center include Insurance Services, Laboratory, X-ray, Pharmacy, over the counter products, Physical Therapy, Massage Therapy, Alcohol and Drug Abuse prevention and intervention education and Dietitian services.

**Health Insurance Requirement.** The University of California requires that all students have health insurance. To help students meet this requirement, UC Davis automatically enrolls all registered students in the UC Davis Student Health Insurance Plan (Davis SHIP). Fees for Davis SHIP coverage are automatically charged to the student's account each term along with registration fees.

- For students who want to be enrolled in Davis SHIP, enrollment is automatic-no action is required.
- Students with comparable insurance, who do not want to be enrolled in Davis SHIP, must submit a Davis SHIP waiver application at [http://shcs.ucdavis.edu/insurance](http://shcs.ucdavis.edu/insurance) by the published deadline; see the Academic Calendar, on page 1. If a waiver is approved, Davis SHIP enrollment will be waived through the end of the academic year. An approved waiver is effective for the duration of the current academic year only. Waiver applications must be filed each academic year.

On campus medical and mental health care is available to all students at SHCS, even if Davis SHIP is waived.

More waiver information or information regarding benefits, eligibility, deadlines, or insurance coverage if your registration status changes, can be found at [http://shcs.ucdavis.edu/insurance](http://shcs.ucdavis.edu/insurance) or by visiting the SHCS Insurance Services office at the Student Health & Wellness Center.

**SHCS Counseling Services**

219 North Hall
530-752-2349; Appointments: 530-752-2349

SHCS Counseling Services offers short term counseling services to all registered students with liaison to off campus community resources. Students often seek individual or group counseling for issues such as depression, anxiety, stress, relationships, isolation, academic issues, life stressors, family problems, cultural issues, and many others. Additionally, staff can assist with educational concerns such as coping with university life, academic performance, test anxiety and reentry adjustment.

To make a counseling appointment, you can either make an appointment in-person at 219 North Hall or call 530-752-2349 during normal hours of operation and speak with one of our appointment desk staff.

- Be sure to have your class and work schedule with you before calling.
- Please check in 15 minutes prior to your scheduled appointment time.
- Registration stations are located in each waiting area.
- If you are late for your scheduled appointment time, you may be asked to re-schedule. Please keep this in mind when scheduling your appointment.

- If you cannot make your appointment, please call our appointment cancellation message line at 530-752-8821 to cancel your appointment.

**For 24-Hour Consultation.** After normal hours of operation call SHCS Counseling Services at 530-752-0871 and follow the prompts to reach a mental health counselor (press 55).

Students, faculty or staff who are concerned about a student or desire consultation or assistance in making a referral are encouraged to contact SHCS Counseling Services at 530-752-2349. Parents who are concerned about their UC Davis student's emotional reactions or behavior can also call to discuss their concerns.

**The House**

Note: For the 14-15 academic year, The House program services will be provided at North Hall on the south side of the first floor while Temporary Building 16 (two-story house by Student Housing) is undergoing renovations. TB-16 is projected to be back on line for Fall 2015.

530-752-0871; [http://shcs.ucdavis.edu/thehouse](http://shcs.ucdavis.edu/thehouse)

The House is a professionally supervised mental health Peer Advocate program of Student Health and Counseling Services. UC Davis Students receive confidential support, information and referrals regarding personal, emotional or social problems. Well-trained student volunteers assist fellow students through individual peer advocacy services and a wide variety of workshops held in an informal setting. Stress reduction and wellness resources include facilitated meditation and yoga classes, audio and video stations with relaxation and educational compact discs, and an automatic massage chair. No appointment is necessary and services are offered on a drop-in basis Monday-Friday from 9:00 a.m.-4:00 p.m. (PST) during fall, winter and spring quarters. The House program is closed during the summer quarter and quarter breaks.

Volunteers for Peer Advocate positions at the House are selected during winter quarter. Students are trained in basic listening and peer education skills and can receive units for training. Transcript notation is also available for quarters working as a peer volunteer.

**Health Education and Promotion**

A Department of Student Health and Counseling Services

UC Davis Student Health and Wellness Center
530-752-9652; [http://shcs.ucdavis.edu/hep](http://shcs.ucdavis.edu/hep)

Health Education and Promotion (HEP) helps students stay healthy, thrive and enhance their academic and personal success through the creation of health-promoting campus and community environments and student-centered health education. HEP focuses on promotion of healthy eating, physical activity, sexual health, alcohol, tobacco, other drug risk reduction, wellness, sleep, and other wellness issues.

**Anonymous HIV Counseling and Antibody Testing Program.** In partnership with the LGBTQIA Resource Center, HEP facilitates anonymous HIV counseling and antibody testing to registered UC Davis students. Free, oral, rapid testing is available weekly during the academic year at the LGBTQIA Resource Center; for more information, see [http://shcs.ucdavis.edu/services/hiv-testing.html](http://shcs.ucdavis.edu/services/hiv-testing.html).

Sexual health services also include the “Love Lab” mobile cart offering safer sex supplies and educational information at no charge to students. More sexual health resources can be found at [http://shcs.ucdavis.edu/hep/sh/index.html](http://shcs.ucdavis.edu/hep/sh/index.html).
Equestrian Center
Craft Center
Activities and Recreation Center (ARC)
Campus Recreation and Unions:
The following facilities are managed through the Department of University and enhance the quality of life for the campus. These programs complement the academic mission of the university by creating opportunities to build community, cultivate friendships and enhance learning.

The UC Davis Department of Campus Recreation and Unions may participate in extracurricular activities sponsored by the campus. Some activities have additional eligibility criteria, so you are encouraged to inquire about the particular requirements of the groups and programs that interest you.

EXTRACURRICULAR ACTIVITIES

By participating in extracurricular activities at UC Davis, you can benefit from numerous opportunities for educational, personal, cultural and social enrichment. In general, registered and enrolled UC Davis students may participate in extracurricular activities offered through the Department of University. Faculty in locating resources related to the various aspects of wellness. This “one stop shop” for wellness includes campus resources, as well those in the City of Davis and the larger Web community; see http://mywellness.ucdavis.edu.

Outreach Presentations 530-752-9652. Peer Health Educators and professional staff are available to facilitate small and large group presentations and workshops for residence halls, fraternities, sororities and other student organizations. For a complete list of programs offered or to schedule a program, see http://shcs.ucdavis.edu/hep/presentations.html.

Student Positions. HEP offers paid and volunteer opportunities for students. The positions provide an excellent opportunity to develop skills in: conducting group presentations, changing health-related policies and influencing media. Transcript notation and/or academic credit are available. All positions require a three quarter commitment. See our website beginning winter quarter regarding student opportunities at http://shcs.ucdavis.edu/hep/student-positions.html.

EXTRACURRICULAR ACTIVITIES

By participating in extracurricular activities at UC Davis, you can benefit from numerous opportunities for educational, personal, cultural and social enrichment. In general, registered and enrolled UC Davis students may participate in extracurricular activities sponsored by the campus. Some activities have additional eligibility criteria, so you are encouraged to inquire about the particular requirements of the groups and programs that interest you.

CAMPUS RECREATION AND UNIONS

The Department of Campus Recreation and Unions

The Activities and Recreation Center (ARC)
232 ARC, One Shields Ave, Davis CA 95616
530-752-1730; http://cru.ucdavis.edu

The UC Davis Department of Campus Recreation and Unions manages the following programs and facilities, which serve the campus by creating opportunities to build community, cultivate friendships and enhance learning.

These programs complement the academic mission of the university and enhance the quality of life for the campus.

The following facilities are managed through the Department of Campus Recreation and Unions:

- Activities and Recreation Center (ARC)
- Craft Center
- Equestrian Center
- Hickey Pool
- Memorial Union
- Memorial Union Games Area
- Outdoor Adventures Center
- Pavilion
- Putah Creek Lodge
- Recreation Fields
- Recreation Pool
- UCDHS Student Fitness Center

The following programs are offered through the Department of Campus Recreation and Unions:

Campus Recreation and Unions Memberships, Informal Recreation and Fitness & Wellness Programs

Activities and Recreation Center (ARC) 530-752-1730; http://cru.ucdavis.edu/arc; http://cru.ucdavis.edu/fitnessandwellness

The ARC, the region’s premier full-service fitness facility, offers a variety of features, such as four indoor basketball courts (convertible to volleyball and badminton), eight four-wall courts, a multi-use activity center (MAC), an indoor track, large fitness/weight areas, and an indoor climbing wall. In addition, the complex includes group exercise, dance and martial arts studios, a student lounge with computer terminals and wireless access points, a large ballroom, a small conferencing center, a full-service Starbucks, and a Pro Shop. Currently enrolled UC Davis students may use the ARC at no additional cost. Programming within the ARC—including group exercise, dance classes, martial arts classes, personal training, rock climbing, and intramural sports—may require an additional fee. UC Davis faculty, staff, alumni, and retirees may enjoy the ARC by purchasing an affordable membership. For more information on the ARC, see http://cru.ucdavis.edu.

Cal Aggie Marching Band

Activities and Recreation Center (ARC) 530-752-8069; http://cru.ucdavis.edu/calaggiemarchingband

The California Aggie Marching Band is a student-run volunteer organization dedicated to providing support for UC Davis and is committed to student development and camaraderie through excellence in musical entertainment and the embodiment of Aggie Pride. Known by many as the “Band UH!,” the band celebrates campus traditions and entertains participants and spectators at athletic, campus and community events.

Aquatics

Recreation Pool

Corner of La Rue Road and Hutchison Drive
530-752-1730; http://cru.ucdavis.edu/aquatics

Located near the ARC, the Recreation Pool’s distinctive shape allows for a wide variety of water activities. The pool includes lap lanes, diving boards, an island, a large grass area for sunbathing and a shallow wading pool. Picnic tables and a barbecue are also available on a first-come, first-served basis. The Rec Pool also offers swim lessons for all ages. The pool opens for the season in mid-April and closes on the last day in September.
**Hickey Pool**

Hickey Gymnasium Building, central campus
530-752-1730; http://cru.ucdavis.edu/aquatics

Hickey Pool is a seven-lane, 33-and-1/3 yard pool with a movable bulkhead previously used as the competitive pool on campus, housing six intercollegiate athletic teams, as well as physical education classes, intramural sports, sport clubs, and University Extension classes. Today, the heated Hickey Pool is available to students and ARC members for lap swimming hours during the year.

**Craft Center**

South Silo
530-752-1475/1730; http://cru.ucdavis.edu/craftcenter

The Craft Center is an ideal place to channel your creative energy, offering more than 90 affordable and fun classes each quarter. The center’s 10 well-equipped studios are available for informal use on a daily or quarterly basis. Workshops and classes are offered each quarter in woodworking, weaving, jewelry making, art and graphics, computer imaging, ceramics, photography, silk-screen printing, welding, leather working, stained glass and other crafts.

**Equestrian Programs**

Garrod Drive; southwest of Veterinary Medical Teaching Hospital
530-752-2372; http://cru.ucdavis.edu/equestriancenter

The 25-acre Equestrian Center is open year round, offering horse riding instruction in both English and Western riding. Group lessons are available for beginning through advanced levels, along with training in horse care and stable management. The Equestrian Center sponsors clinics, horse shows, and special events. The center is also home to the UC Davis Equestrian Club.

**Intramural Sports and Sport Clubs**

Activities and Recreation Center (ARC)
530-752-1730; http://cru.ucdavis.edu/arc

The Activities and Recreation Center (ARC) hosts many recreational activities for the UC Davis community. The building itself has four indoor basketball courts (convertible to volleyball and

Griffin Lounge serves as a comfortable space for studying and getting together with friends. The Art Lounge, on the second floor, provides a comfortable and relaxed space that is popular for studying.

**Memorial Union Games Area**

Games Area; located below the UC Davis Bookstore
530-752-2580; 530-752-1730; http://cru.ucdavis.edu/gamesarea

The Games Area features bowling lanes, billiards, video game consoles, lounge space and storage lockers. Bowling leagues, classes, clinics and tournaments are offered for all ages from beginning through advanced skill levels. The facility is fully accessible to those with disabilities.

**Outdoor Adventures**

Located between the Colleges at La Rue Apartments and the Recreation Pool on La Rue and Hutchinson Barn; corner of California and Hutchison
530-752-1995; http://cru.ucdavis.edu/outdooradventures

Outdoor Adventures will help you develop your outdoor skills and plan your outdoor excursion. You can rent professional quality equipment and arrange custom-designed trips. An up-to-date library contains topographic maps, trail guides and other materials. Outdoor Adventures offers classes, excursions and clinics for backpacking, rock-climbing, whitewater rafting, sea kayaking, mountaineering, cross-country skiing and more. Outdoor Adventurers also offers health care training classes in wilderness first aid, EMT, CPR, and AED and swift water rescue.

**The Buzz**

530-752-2027; http://studentlife.ucdavis.edu/thebuzz

The campus kicks off the school year on the first Friday of Fall Quarter with The Buzz, a festival filling the entire Quad. Part of Fall Welcome week, The Buzz welcomes new and returning students to campus with a night of live entertainment, games, prizes, free food and campus resources.

**UC Davis Stores**

530-752-6846; http://ucdavisstores.com

The UC Davis Stores are full-service stores owned and operated by the university. They provide goods and services for the campus community to support the university’s academic mission, as well as UC Davis-branded apparel, general merchandise and gifts.

**Silo Union**

The Silo Union houses food services, meeting/conference facilities, lounges and the campus pub. Students will enjoy favorite programs like Trivia Night. Silo food services include both quick, popular and familiar fast food, such as Taco Bell, Carl’s Jr. and Pizza Hut, as well as a large selection of fresh and healthy prepared items, Starbucks Coffee and a custom sandwich line. Located in the South Silo are the ASUCD Experimental College, Craft Center, Graduate Student Association, and the Silo Bookstore serving the School of Law.

**The UC Davis Activities and Recreation Center (ARC)**

530-752-1730; http://cru.ucdavis.edu/arc

The Activities and Recreation Center (ARC) hosts many recreational activities for the UC Davis community. The building itself has four indoor basketball courts (convertible to volleyball and
hadminton), eight four-wall courts, a multi-use activity center (MAC), an indoor track, large fitness/weight areas and an indoor climbing wall. In addition, the complex includes group exercise, dance and martial arts studios, student lounges with computer terminals and wireless access points, a large ballroom, a small conferencing center, a full-service Starbucks, and a Pro Shop. The building is separated into three distinct areas: the controlled area, the conference and event area and The Pavilion. All fitness related activities comprise the controlled area that is open to all students with a valid UC Davis identification card. Faculty, staff, alumni, retirees and others may purchase membership to the ARC for an annual or monthly fee. The conference area is accessible through the main entrance to ARC or through a smaller corridor on the Northeast side of the building that leads into the conferencing area.

The UC Davis Pavilion, formerly Recreation Hall, hosts athletic competitions, concerts, trade shows, conferences and miscellaneous spectator events each year. The Pavilion houses approximately 149,000 square feet of space and encompasses the home court of the UC Davis Aggies volleyball team, gymnastics team, and men’s and women’s basketball teams. The Pavilion hours and access vary depending upon the event being hosted. More information regarding the ARC can be found at the ARC website, calling the number listed or by stopping by the ARC member services desk located in the lobby area.

**UC DAVIS INTRAMURAL SPORTS AND SPORT CLUBS**

330-752-1730; [http://cru.ucdavis.edu/intramuralsports](http://cru.ucdavis.edu/intramuralsports)

The UC Davis Intramural Sports and Sport Clubs programs offer many different competitive sports activities ranging from the traditional team sports like football, basketball and soccer to individual or dual sports such as racquetball, table tennis and golf. Additionally, we offer some non-traditional activities like inner tube water polo, floor hockey and dodgeball. All UC Davis students are eligible to participate in intramural activities. Our Sport Clubs program offers many opportunities for intercollegiate competition. Each club is formed, developed, directed and controlled by its members within University guidelines. Stop by the office or see our website for a complete list of clubs.

**INTERCOLLEGIATE ATHLETICS**

264 Hickey Gymnasium
330-752-1111

The Intercollegiate Athletics (ICA) program is an integral part of the total educational process and a vital part of the human development of young men and women.

Intercollegiate athletics attempts to strengthen the integration of its objectives with the academic and developmental objectives of the university while maintaining a program of academic and athletic excellence; where students are supported in their efforts to reach the highest level of performance by providing them with adequate to outstanding facilities, quality coaching, appropriate support of health and wellness needs, and competitive opportunities with students from similar institutions.

Currently, the program consists of varsity teams in 14 women’s and 9 men’s sports. UC Davis is an active member of Division I. A majority of the varsity sports compete in the Big West Conference. Approximately 600 students compete on varsity teams each year.

**ARTS**

Whether you want to participate, be entertained or be inspired, an abundance of musical, theater, art, design and dance offerings take place on campus all year long.

**Robert and Margrit Mondavi Center for the Performing Arts | UC Davis**

Mondavi Center Administration Building
530-754-5000; [http://www.mondaviarts.org](http://www.mondaviarts.org)

The Mondavi Center is the premier performance venue in Northern California and the regional destination for the best in music, dance, distinguished speakers, jazz, theater, and world music. UC Davis students receive 50% off every Mondavi Center Presents event ticket, while UC Davis Staff and Faculty enjoy 10% off their ticket purchases. Tickets are available through the Mondavi Center Ticket Office at 530-754-2787 or at [http://www.mondaviarts.org](http://www.mondaviarts.org).

**Music**

Department of Music
330-752-5537; [http://music.ucdavis.edu](http://music.ucdavis.edu)

The Department of Music sponsors the UC Davis Symphony Orchestra, the University Chorus, Early Music Ensemble, Concert Band and Wind Ensemble, Jazz Band, several world music ensembles, and chamber music groups. Music majors and other interested students can receive credit for participating in these groups, which perform at concerts and recitals open to the university community. The department sponsors artists-in-residence who give concerts, recitals and lectures. Free noon concerts featuring individual performers and ensembles—both professional musicians and music students—are a favorite weekly event during the school year. The Empyrean Ensemble is in residence on campus. The Department of Music sponsors nearly 100 public concerts each year.

**Theatre and Dance**

Department of Theatre and Dance
Wright Hall; [http://arts.ucdavis.edu/theatre-dance](http://arts.ucdavis.edu/theatre-dance)

The Department of Theatre and Dance has one of the finest theatre facilities in California, with an unusually good stock of scenery, props, costumes, and state-of-the-art lighting and sound equipment. Facilities are complemented by an excellent faculty and production staff, as well as the Granada-Artist-in-Residence program, which brings a major director, choreographer or playwright to the department three times a year. Students, both majors and non-majors, can audition for department productions or apply to the Institute for Exploration in Theatre, Dance and Performance. Each year’s schedule includes opportunities to work with professional directors and choreographers in three Granada Artists-in-Residence productions; the Main Stage Dance/Theatre Festival; the UC Davis Film Festival; projects generated through the Institute for Exploration in Theatre, Dance and Performance; and workshops and performance projects developed by M.F.A and Ph.D. students. These productions are staged in our prosenium (Main), thrust (Wyatt), black box (Arena), performance studio (Nelson Hall) and intimate laboratory theatre (Lab A), as well as in the Mondavi Center’s Vanderhoef Studio Theatre and Jackson Hall. These productions are part of the academic program of the department and serve an important purpose in the study of theatre and dance. Participation is open to all students.
Art Galleries

**UC Davis Design Museum**
124 Cruess Hall 530-752-6150; [http://designmuseum.ucdavis.edu](http://designmuseum.ucdavis.edu)

The UC Davis Design Museum and Collection enhances and supports the teaching and research activities of the Department of Design, exploring how design shapes, improves and makes economically viable the objects, technology and environments we use, inhabit and experience every day. The museum exhibits national and international design-related materials including architecture, fashion, textiles, graphics, new media, product, furniture and lighting, and serves as a laboratory for experimental exhibition design and interpretation.

**Richard L. Nelson Gallery**
Nelson Hall 530-752-8500

The Richard L. Nelson Gallery was dedicated in memory of the first Chairperson of the Art Department at UC Davis. Established as an exhibition venue and teaching resource for the Art Department, the gallery program also serves the campus population, art communities, and general public of Northern California and the Central Valley. The Fine Arts Collection contains over 5,000 objects representing diverse historical periods and cultures, as well as significant holdings in contemporary art, most notably artists associated with the Davis faculty of the “Funk” period: Arneson, Wiley, Thiebaud, Gilhooley, de Forest, Hudson, et. al.

**Fine Arts Collection**
Art Building, adjacent to the Nelson Gallery 530-752-8500

The Fine Arts Collection, representing various historical periods and cultures, is the UC Davis campus’ major collection of art.

**Basement Gallery**
Art Building basement

The Basement Gallery is a student-directed gallery that exhibits the artwork of advanced UC Davis art majors. The Basement Gallery is a vital alternative space for seeing important new work and for experiencing interesting and innovative art shows. There are approximately three shows per quarter. For more information, see [http://ucdbasementgallery.com/informaion/](http://ucdbasementgallery.com/informaion/).

**C.N. Gorman Museum**
1316 Hart Hall 530-752-6567; [http://gormanmuseum.ucdavis.edu](http://gormanmuseum.ucdavis.edu)
Monday-Friday, 12-5 p.m.; Sun: 2-5 p.m. (PST), closed holidays and holiday weekends.

The C.N. Gorman Museum is committed to the creative expressions of Native American artists, and artists of diverse cultures and histories. Changing exhibits feature contemporary artwork in a wide range of media, reflecting the canon in which Indigenous artists are working today. Founded in 1973 by the Department of Native American Studies, the museum is named in honor of retired faculty member, Carl Nelson Gorman, Navajo artist, WWII code-talker, cultural historian, and advocate for Native peoples.

**STUDENT GOVERNMENT**

ASUCD Student Services Office
347 Memorial Union 530-752-1990; [http://asucd.ucdavis.edu](http://asucd.ucdavis.edu)

The Associated Students of the University of California, Davis (ASUCD), authorized by the regents and the chancellor, represents all undergraduate students and is responsible for over $11 million used to enhance the student experience. Graduate and law students also have access to all ASUCD commercial activities. Funds allocated to ASUCD provide for activities and services that make life as a student a little easier, less expensive and/or simply more fun.

ASUCD operates more than 40 activities, including the Unitrans bus system, The California Aggie newspaper, the Bike Barn repair services, free legal advice for undergraduate students, Campus Copies, Classical Notes, Project Compost, Cal Aggie Camp, U.S. Post Office and the Coffee House, among others.

The ASUCD-sponsored Experimental College offers a variety of nontraditional classes each quarter for students interested in diversifying their educational experience. The community garden is available to students and non-students alike. Radio KDVS stereo 90.3 FM, the student-run campus radio station, broadcasts at 5,000 watts. Other ASUCD activities include Entertainment Council and the Whole Earth Festival.

Picnic Day, a UC Davis tradition since 1909, is the largest student-run event in the nation. This annual spring open house features more than 100 exhibits and cultural displays, including a parade, a fashion show, sports, sheep dog trials, dachshund races, food, music and dancing.

You can find information about ASUCD programs at [http://asucd.ucdavis.edu](http://asucd.ucdavis.edu), in the Student Directory, which combines details about ASUCD services and organizations with the ASUCD student telephone directory or by visiting the ASUCD Student Services Office in the Memorial Union.

Allocated funds are budgeted through the ASUCD Senate. Based on a modified form of the U.S. Senate, the ASUCD senate consists of 12 elected senate members and the ASUCD president and vice president. The senate is the policy-making body for ASUCD and supervises all aspects of the association. The ASUCD president is the chief administrative officer and is assisted by the vice president. ASUCD is the liaison for the undergraduate student body and represents the students with other universities, the UC Office of the President and the regents.

The ASUCD Senate is the policy-making body of the student government and are responsible for allocating funds through their annual budget hearings. The Senate consists of 12 members who serve year-long terms with elections held during the fall and winter quarters.

Seven commissions and one committee advise the senate and assist the governing board with its decisions by researching legislation and making recommendations. Commission chairs are ex-officio members of the senate. Each commission also involves itself with various projects that relate to its specific area.
• Academic Affairs advocates students’ rights in the area of academics, including dealing with the Academic Senate and with issues such as grading policies, tenure and teacher evaluations. Academic Affairs also sponsors the popular “Last Lecture Series.”

• Business and Finance makes recommendations to the Senate on all financial matters and conducts audits on ASUCD commercial units.

• Environmental Policy and Planning addresses all issues and concerns that pertain directly to the environment.

• Ethnic and Cultural Affairs makes recommendations on policies and programs concerning UC Davis’ ethnic community, acts as a liaison between on-campus and off-campus bodies affecting ethnic students and their quality of life at the university.

• External Affairs deals with off-campus concerns including the regents, UC Office of the President, and the Davis City Council.

• Internal Affairs recommends policies to improve ASUCD operations and the quality of nonacademic student life on campus.

• The Gender and Sexuality Committee actively promotes awareness of gender and sexuality issues, and prevention of sexual assault through outreach efforts and education programs.

• The Elections Committee ensures the fair administration of ASUCD online elections. The Committee coordinates candidate and ballot measure forums and provides unbiased election information.

The ASUCD President is the chief administrative officer and is assisted by the Vice President. ASUCD is the liaison for the undergraduate student body and represents the students with other universities, the community, the UC Office of the President and the regents.

The judicial branch consists of the ASUCD Student Court. The nine member court has the responsibility to carry out all rules designated to it in the ASUCD Constitution and its bylaws. ASUCD Court Members serve “life” terms, lasting four years or their entire academic career at UC Davis.

UC Davis Administrative Advisory Committees
Office of the Chancellor, /http://aac.ucdavis.edu/
The Office of the Chancellor encourages students to participate in issues affecting the campus community by applying for membership on an administrative advisory committee. Each committee focuses on a specific area, such as childcare, disability issues, diversity, Regents’ scholarships or student services and fees. The committees respond to requests for advice, identify needs or concerns within the charge of the committee and recommend action to the campus administration.

Applications are accepted each winter for service on committees the next academic year. Undergraduate students should contact ASUCD Student Advocacy. Graduate students should contact the Graduate Student Association.

Graduate Student Association (GSA)
Graduate Student Association (GSA)
Room 253, South Silo
530-752-6108; Fax 530-752-5158; gsa@ucdavis.edu; http://gsa.ucdavis.edu

The Graduate Student Association (GSA) is the officially recognized student government for UC Davis graduate students. GSA provides a forum for addressing the concerns of graduate students and promotes communication with campus administrators. GSA also serves as an advocate at all levels of the university on behalf of graduate students. Funded by graduate student fees, GSA provides services to all academic graduate students and to professional students in both the Graduate School of Management and the School of Education. Services include new student orientation, legal service, travel awards, announcements and assorted social events. Other professional students are eligible to join GSA by paying a fee.

GSA General Assembly representatives are usually designated by other students in their department or graduate group but can be selected through other processes determined by their department or graduate group. General Assembly meetings are held once a month and are open to all graduate and professional students. Each year the General Assembly elects the members of the Executive Council, who serve in a variety of positions to carry out the policies and functions of the organization.

CENTER FOR STUDENT INVOLVEMENT (CSI)
4th floor, Memorial Union
530-752-2027; http://csi.ucdavis.edu

Studies show that college students involved in campus life through activities and organizations are more connected to campus, more satisfied with their college experience and more likely to graduate than non-involved students. The Center for Student Involvement (CSI) provides opportunities for campus involvement, leadership development, learning, exploration, community service, cross-cultural competence and collaboration by supporting a wide variety of student organizations and campus programs.

Student Organizations

Over 600 student organizations are registered and supported at UC Davis through Center for Student Involvement. They consist of cultural, political, religious, service, ethnic, academic, professional, international, social, recreational, performing arts, fraternity/sorority and advocacy groups that are at the heart of student life and provide students and the entire campus with important educational experiences. More information about each registered student organization and how to start a club is available at http://csi.ucdavis.edu.

Activities Fair
530-752-2027; http://csi.ucdavis.edu

The Activities Fair, held every October, is an ideal opportunity to learn how to get involved, meet new people, try new activities and find a place to belong, with 200 student organizations and campus programs providing information and recruiting members.
**Sorority and Fraternity Life**

530-752-4606 or 752-3828; [http://osfl.ucdavis.edu/](http://osfl.ucdavis.edu/)

Affiliation with fraternities and sororities provides a connection to campus through friendships, a support group for academic and personal growth, leadership opportunities and involvement in campus activities and traditions.

**Student Retention and Recruitment Center**

1100 Student Community Center
530-754-6836; [http://srrc.ucdavis.edu](http://srrc.ucdavis.edu)

The Student Recruitment and Retention Center (SRRC) offers student-run and student-initiated programs that foster holistic academic and personal development, raise political and cultural awareness. We aim to empower students to act as dynamic leaders in their communities. SRRC programs include peer mentoring, academic/study support, leadership development, transfer student support, community building, self-awareness, K-12 enrichment, transfer outreach/support and funding for services and activities complementary to the SRRC’s mission.

**Cal Aggie Student Alumni Association (SAA)**

Walter A. Buehler Alumni Center
530-752-0286; [http://www.alumni.ucdavis.edu/saa](http://www.alumni.ucdavis.edu/saa)

Student Alumni Association (SAA) follows the mission of “advancing student-alumni relations” by building community through networking events, providing student leadership opportunities, upholding Aggie traditions, and offering benefits and services, such as 10% off textbooks from the UC Davis Bookstore. Programs include Aggie Diner, Interview with an Aggie, Take an Aggie to Work, Pajamarino, and community service opportunities. You may join SAA at any time during the academic year. SAA membership fees are applied to your Cal Aggie Alumni Association life membership after graduation. For more information about joining SAA, see [http://saaform.ucdavis.edu](http://saaform.ucdavis.edu).
ACADEMIC ADVISING AND STUDENT SERVICES
ACADEMIC ADVISING

UC Davis offers many different types of academic advising to help you get the most from your education. College advisers can assist you in meeting degree requirements and taking maximum advantage of the resources available at the university. A conference at least once a quarter with your faculty or staff adviser is especially desirable during your first year and during your final quarters preceding graduation. A meeting with a faculty or staff adviser is required each year for engineering students. Matriculating students in their first year at UC Davis in the College of Biological Sciences are required to meet with a staff adviser in the Biology Academic Success Center.

COLLEGE ADVISING

College of Agricultural and Environmental Sciences

Office of the Dean
150 Mrak Hall
530-752-0108; http://www.caes.ucdavis.edu

In the dean's office you will find:

- Staff advisers who can help with university and college rules, regulations and policies and procedures that affect students
- Academic advising; in-depth advice regarding probation/dismissal status, admission to the college, readmission, second baccalaureate options, and limited status enrollment requirements
- Advice and action on petitions
- Other services including college English requirement check, release of holds on registration and final evaluation for graduation

Associate Dean of Undergraduate Academic Programs

Associate Dean
150 Mrak Hall
530-752-0108

The college has an associate dean of undergraduate academic programs and advising staff who welcome the opportunity to become acquainted and to talk with individual students. They can also help you with academic problems if you are placed on probation or subject to dismissal.

Faculty Advisers/Staff Advisers. You will be assigned a faculty adviser to help you plan a program that corresponds to your individual educational interests. The master advisers coordinate advising within a major. Staff advisers in the department can advise you on courses, specific requirements of majors and career opportunities. You are strongly urged to consult with your faculty adviser or staff adviser each quarter before selecting your courses.

As educational objectives evolve, you may, in consultation with the master adviser for your major, choose a new faculty adviser whose area of expertise corresponds more directly to your specific objectives.

Undeclared/Exploratory Program (non-degree program)

150 Mrak Hall
530-752-0610

Are you unsure what major you really want to pursue? If so, you may want to register in the Undeclared/Exploratory Program. With the help of staff in the dean's office and the major advisers, you can explore specialized options, develop your decision-making abilities and select the major best suited to your needs. For registration purposes, indicate “Undeclared/Exploratory” on your admissions materials. You must declare a major before you complete 90 units; see Declaration of Major, on page 75, in the Academic Information chapter.

College of Biological Sciences

Biology Academic Success Center
1023 Sciences Laboratory Building
530-752-0410; http://biosci.ucdavis.edu/BASC

The College of Biological Sciences offers complete academic advising services at the Biology Academic Success Center (BASC) for all students working on, or interested in, a major administered by the College. Students who declare or intend to declare majors in Biochemistry and Molecular Biology; Biological Sciences, Cell Biology; Evolution, Ecology and Biodiversity; Genetics and Genomics; Microbiology; Neurobiology; Physiology; and Behavior; Plant Biology; or are Undeclared Life Sciences should meet with their BASC adviser for program planning. At the BASC, academic advisers advise on all major, college and university requirements, policies, and procedures, including PELP, withdrawal, readmission, change of major or college, multiple majors and late actions. We evaluate transfer work, discuss petitions for variance and provide degree checks for graduation purposes.

The BASC is responsible for the academic progress of all students majoring in the college. If you have any problems (personal, medical, financial) that are affecting your academic performance, or if you are on academic probation, we invite you to make an appointment to see your academic adviser in BASC. You may schedule an appointment using the website located above.

Peer Advisers. Peer advisers are College of Biological students who are pursuing, but have not yet completed, a degree at UC Davis. Students may meet with a peer adviser in the BASC on a daily, drop-in basis.

College of Engineering

Undergraduate Advising Office
1050 Kemper Hall
530-752-1979; http://engineering.ucdavis.edu
Facebook: UC Davis College of Engineering

Information and assistance on academic, career and personal matters is available in the Undergraduate Advising Office, either through direct assistance from one of the staff advisers or through referral to other offices on campus. The Undergraduate Advising Office handles student petitions, transfer evaluation, articulation of transfer coursework, and degree certifications, and it also advises students who are not in good academic standing.

Advising. Before registering for courses your first quarter, consult with your departmental staff adviser, whose name and office hours you can obtain at the department office or at http://engineering.ucdavis.edu/undergraduate/advisors/. The departmental staff adviser is aware of the requirements for your major and will assist you with planning your program.

Mandatory Advising. The College has implemented a mandatory advising system, enforced through SISWeb and myucdavis Schedule Builder. You are required to meet with your adviser once a year, during a specific quarter, which is determined by the first letter of your last name (A-G = Fall; H-N = Winter; O-Z = Spring). Students are notified of the hold by checking SISWeb or Schedule Builder at the time of registration. If you fail to clear your hold during your specified period, you may be unable to make changes to your current registration and to register for future quarters. If you meet
with your adviser during this quarter and have your hold released, there should be no difficulties with subsequent registration. For more information on mandatory advising, talk to your major adviser or call the Undergraduate Advising office at 530-752-1979. Students seeking information about graduate school preparation or undergraduate research opportunities in engineering can participate in the Gearing up for Grad School (Winter Quarter) seminar series offered by the College of Engineering. Additional advising about graduate school preparation and undergraduate research opportunities is available from faculty or staff advisers in the program you are interested in from the Undergraduate Advising Office in 1050 Kemper Hall 530-752-1979 or through the Pre-Graduate School advising unit of the Student Academic Success Center; see http://advisingservices.ucdavis.edu/advising/grad/.

Peer Advisers. A well-developed peer advising system complements faculty and staff advising. Peer advisers are available in 1050 Kemper Hall. They are also available during designated hours in the residence halls. To speak with a peer adviser, call the Undergraduate Advising Office at 530-752-0553.

**College of Letters and Science**

Undergraduate Education and Advising Office
200 Social Sciences and Humanities Building
530-752-0392; http://www.ls.ucdavis.edu/advising/
The Associate Dean and staff in the Undergraduate Education and Advising Office can help you with issues relating to your academic goals and experiences. You can consult the Advising Office on matters such as program planning, selection of a major, exceptions to regulations and academic enrichment opportunities. To find answers to your questions and other useful information, including contact information and how to arrange to meet with an adviser, see http://www.ls.ucdavis.edu/advising/.

The Undergraduate Education and Advising Office also provides a number of additional services:
- Determines how your transfer credits from other institutions apply towards completion of university, campus, and college requirements for the bachelor’s degree. Applicability of transfer credit toward the major is determined by your major faculty adviser
- Performs degree checks to identify remaining university, campus, and college requirements, and certifies graduation
- Acts on petitions requiring the dean’s approval
- Reviews the records of students who are subject to disqualification and determines whether such students may continue at UC Davis

Advisers. All new students who have selected a major will be assigned an adviser within that major department. New students should contact their department or program office during the first quarter of residence on the UC Davis campus to meet with their adviser. If your adviser is not available when you need assistance, or if you wish to consult an adviser in a major program other than the one represented by your assigned adviser, contact the department or program office for help.

New students are encouraged to see their faculty adviser at least once every quarter during their first year on campus to discuss their educational goals, course program and progress.

Continuing students who have completed three quarters in residence in the college should consult with an adviser at certain important checkpoint stages in their academic careers. You are urged, however, to maintain regular contact with an adviser in your major to avoid program errors that may delay graduation.

Seniors should maintain close contact with their advisers to ensure that they are meeting the major requirements.

**Academic Options Program.** Students who have not yet selected a major are automatically placed in the L&S Academic Options Program which provides academic advising to lower division students. Residence Hall Advising Team sites are located in on-campus residence hall areas. Each site is staffed by a team of L&S Peer Advisers who will be available to Academic Options Program students living in that residence hall complex. Through individual advising, group sessions, and programs, this team will work with you over the next several quarters. They will help you with your academic planning, ensuring progress toward your educational goals and satisfaction of degree requirements. They also can assist you in exploring your options before you select your major.

L&S Academic Options Program students not living in a university residence hall complex will receive academic advising from the L&S Undergraduate Education and Advising Office. Advisers there also are available to provide academic assistance to all students in the College of Letters and Science.

**Advising Checkpoints.** At a minimum, you should consult with your faculty adviser at two, possibly three, critical stages in your academic career:
- Before you complete 90 units of degree credit, including transfer work, you must develop in consultation with your faculty adviser, a proposal for a quarter-by-quarter program of courses showing how you will meet your educational goals and graduation requirements. You must also have declared a major by this time. Filing this plan with your adviser does not preclude subsequent modifications of the plan or a change of major.
- When you complete 90 units of degree credit, including transfer work, and have a declared major you may request a Degree Check from the Letters and Science Undergraduate Education and Advising Office and should consult your faculty adviser concerning course selection and satisfaction of requirements in the major.
- Before you complete 200 units of degree credit, including transfer work, you must develop in consultation with your faculty adviser, a firm study plan in the form of a quarter-by-quarter program that will satisfy all remaining degree requirements as expeditiously as possible. This plan will be filed with your adviser. If the plan indicates that you will have to register beyond the 225-unit limit in order to meet degree requirements, you must contact the Undergraduate Education and Advising Office immediately. Exceptions to the 225-unit limit are granted by the dean only rarely. Typically, approval is granted only to allow completion of minimum degree requirements.

If you have not met with your faculty adviser before these established checkpoints, a hold may be placed on your registration as a reminder.

**Peer Advisers.** Student-to-student advising is an important part of the university advising services. The College of Letters and Science deans’ office peer advisers are available in the Undergraduate Education and Advising office, in 200 Social Sciences and Humanities Building, and on a weekly basis in the campus residence halls to talk with students about their academic concerns.
ACADEMIC ADVISING SERVICES

Academic Peer Advising 530-752-1736, places Peer Advisors in over 70 departments, Dean's offices or the Biology Academic Success Center to help students find the answers to their questions about major requirements, courses and university regulations. The Academic Peer Advisor complements faculty advising by providing a student perspective. The Academic Peer Advising program is managed by the Academic & First-Year Transition Services office in Student Housing, and the peer advisors are trained by the major departments to provide information and assistance about graduate schools, career opportunities and college requirements.

Educational Opportunity Program (EOP)

Educational Opportunity Program (EOP) 530-752-9711, offers an array of services to support students both academically and socially. EOP provides a caring and supportive environment for students to meet with peer and staff advisers for help with course selection, registration procedures, campus processes and resources, choosing a major, social challenges and other general advising questions.

Students interested in learning more about EOP may inquire at eop@ucdavis.edu or see http://eop.ucdavis.edu. Visitors are always welcome and no appointment is necessary.

The EOP Guardian Scholars Program (GSP) provides academic and personal support to former foster youth. The program offers services to help students transition to the University and increase their potential to succeed. The staff adviser serves as the liaison between students and various campus units, providing assistance with academic planning, financial aid, housing and other campus resources. The Guardian Scholars office is located in the EOP Building.

Student Disability Center

54 Cowell Building 530-752-3184, http://sdc.ucdavis.edu

As part of UC Davis' commitment to providing students with disabilities equal access to educational programs, the Student Disability Center (SDC) facilitates academic accommodations and promotes accessibility of instruction and classrooms. SDC advises students on their rights and responsibilities, as well as strategies and tools for managing their disabilities. The SDC specialists assist students with clinically documented disabilities in identifying accommodations needed for their classes. SDC also provides information and guidance to faculty and staff about working with students with disabilities. SDC provides information to current, entering, and prospective students with disabilities about available services, resources, and the accommodations process.

Student Housing

160 Student Housing 530-752-1736, http://housing.ucdavis.edu

The First-Year Experience Program 530-752-4546, is one component of the Student Housing Academic & First-Year Transition Services office, which includes the new student Orientation program and the academic year First-Year Experience Peer Advising program. All first-year and transfer students living in Student Housing and second year students have access to an extensive network of academic support services referred to as the “Residence Hall Advising Team,” a partnership between Student Housing, the four Colleges and the Student Academic Success Center. Included are residential Academic Advising Centers, which offer drop-in peer advising provided by peer advisers from the four Colleges and the FYE Program. The peer advisers are able to assist with registration procedures, course selection, choosing a major or other general advising questions. The peer advisers can either answer your questions or put you in contact with others who can. Peer tutors from the SASC provide drop-in tutoring services during the evenings in the Academic Advising Centers for new students enrolling in common first-year courses such as Math, Chemistry, Writing and Statistics. Upper-division students should visit their major department adviser. College Dean's office or the Biology Academic Success Center for academic advising and support services.

New Student Orientation 530-752-4443, orientation@ucdavis.edu, http://orientation.ucdavis.edu, assists new students and their families with the transition to UC Davis. Orientation includes assistance with academic advising, course registration, information for campus resources and social integration. The staff will introduce you to the campus environment, procedures and opportunities, and offers programs relevant to your changing needs. Your contribution to orientation programs, through ideas and assistance, is always welcome.

STUDENT CONDUCT AND GRIEVANCES

Student Judicial Affairs 3200 Dutton Hall 530-752-1128; http://sja.ucdavis.edu

Student Judicial Affairs (SJA) upholds campus standards of academic honesty and student conduct by resolving alleged violations of university policies or campus regulations. SJA also provides information about campus grievance options and addresses student complaints of prohibited discrimination or harassment, arbitrary treatment, or unfair policies or practices. SJA can also help with conflict resolution and provide interpretations of university policies and regulations.

Misconduct and Discipline

Students enrolling or seeking enrollment in the university have an obligation to act honestly, ethically and responsibly. As members of our academic community and of society at large, students have both rights and responsibilities and are expected to comply with the general law, University policies and campus regulations. Standards for student conduct include but are not limited to the University of California Policies Applying to Campus Activities, Organizations and Students and the UC Davis Code of Academic Conduct. The UC Davis Administration of Student Discipline explains the student conduct process. These policies may be found on the SJA website. Most referrals are resolved through mutual agreement with a focus on honesty, education, and accountability. If unresolved, a student has the right to a formal hearing process with appropriate due process.

In summary, students may be subject to discipline for the following behaviors: academic dishonesty or misconduct; disruption or obstruction of University activities; providing false information, forgery, theft, misuse of any University property, documents or resources; sexual assault, relationship violence, or other physical assault; threats of violence or conduct that threatens health and safety or is intended to terrorize; possession of weapons; harassment, including stalking and sexual harassment; possession, use, distribution or sale of drugs or alcohol that is illegal or against
University policy; hazing; preparing, selling, or distributing course materials or notes for commercial purposes without the consent of the course instructor; or recording, photographing, or viewing a person in a private location without express consent.

If admitted or found in violation, disciplinary sanctions may range from censure to probation, suspension or dismissal from the university. Additional requirements may include but are not limited to community service, educational programs, or restitution. Suspected violations of campus or university standards by students should be reported to Student Judicial Affairs. Online reports can be submitted on the SJA website.

Student Responsibilities

Students are responsible for complying with the announcements and regulations printed in this catalog and with all policies, rules and regulations of the university and this campus. Students will not be able to register or receive transcripts of record or diplomas until they have met all university obligations.

Discrimination/Harassment

If students believe that they have been discriminated against or harassed, they may contact Student Judicial Affairs at 530-752-1128 or the Campus Chief Compliance Officer at 530-752-9466, for information and assistance. It is important to seek assistance as soon as possible, as time limits may apply to some grievance processes. Advice is also available from the Harassment and Discrimination Assistance and Prevention Program. Individuals may use an Anonymous Call Line at 530-752-2255 or the HDAPP Office at 530-752-9255.

RESOLVING ACADEMIC PROBLEMS

Grade Changes

Grades may not be changed once they have been submitted to the Office of the University Registrar unless (1) a clerical error has been made (e.g., homework score was added incorrectly) or (2) a procedural error has affected the student's grade (e.g., misapplication of grading procedures). Students who believe they received an incorrect grade due to a clerical or procedural error should ask their instructor to file a Request for Grade Change form with the Office of the University Registrar. If the instructor does not agree, the student should discuss the matter with the chair of the department. If at that point the matter is still unresolved, the student may request a change of grade by filing a Request for Grade Change form with a Deputy to the Academic Senate Committee in the Office of the University Registrar in 12 Mrak Hall. Requests must be made by the end of the following quarter.

The Academic Senate Committee on Grade Changes reviews requests for grade changes and, like the instructor, has no authority to reevaluate student work but can change the grade if it finds a documented clerical or procedural error. In the case of a challenged grade, the student will be expected to bear the burden of proving that a clerical or procedural error occurred and caused the incorrect grade to be assigned. If a student believes that the grading error was the result of prohibited discrimination or arbitrary treatment, the student may file a complaint with Student Judicial Affairs. For more information, contact the Office of Student Judicial Affairs at 530-752-1128.

For more details, see the http://registrar.ucdavis.edu/records/grades/changes.cfm. See guidelines for the Committee on Grade Changes at http://academicsenate.edu/GCC. Questions regarding this process should be directed to the Deputy to the Committee on Grade Changes at GradeChanges@ucdavis.edu.

Other Academic Problems

If you need a requirement waived or any other type of variance, contact your faculty adviser or the appropriate dean's office or the Biology Academic Success Center for information on your college's procedures. If you cannot get satisfaction through normal channels, contact the ASUC Student Advocacy Grievance Center or the Committee on Student-Faculty Relationships; see ASUC Student Advocacy Grievance Center, below.

ASUCD Student Advocacy Grievance Center

349 Memorial Union
530-754-4131/6101/3339
The ASUCD Student Advocacy Grievance Center advocates students' academic and nonacademic concerns to the faculty and administration. Grievance counselors assist students one-on-one, directing them to appropriate channels through which to state their academic grievances (e.g., student-faculty relations, sexual harassment, grade change problems, pre-judicial treatment in the classroom and problems with academic procedure and policy) and nonacademic grievances (e.g., campus facilities, campus safety, ASUCD and any other nonacademic concerns). All information discussed between counselors and students is completely confidential. Students can get counseling, referrals and support to aid in the resolution of these matters.

STUDENT ACADEMIC SUCCESS CENTER

Academic Resources

2205 Dutton Hall
530-752-2013; http://success.ucdavis.edu
At the Student Academic Success Center, you can receive help with general study skills, math and science concepts, writing essays and term papers, reading efficiency, English as a second language, and test anxiety reduction.

Learning specialists can help you in small groups, during office hours, drop-in, or you may participate in workshops covering specific areas of study. Undergraduate tutors provide drop-in tutoring in specific BIS, Chemistry, Math, Physics, Statistics courses, and writing across the curriculum.

The Student Academic Success Center (SASC) offers pre- and co-classes in mathematics and physics for EOP students. Pre-classes help prepare students for the regular university class they usually take the following quarter. Co-classes provide supplementary instruction for students enrolled in the regular class. The SASC offers pre-classes for Mathematics 16A, 21A and Physics 9A. The SASC also offers co-classes for the Mathematics 16 and 21 series and the Physics 9 series. All pre-classes carry three workload units and co-classes carry one workload unit. These units count toward minimum progress and financial aid eligibility, but do not count toward graduation.
Educational Opportunity Program (EOP) Services

EOP Building
530-752-9366; http://eop.ucdavis.edu

Educational Opportunity Program (EOP), offers an array of services to help students adapt both academically and socially to the University setting and successfully achieve their educational goals. EOP provides a caring and supportive environment for students to meet with peer and staff advisers and network with other students.

Services include:
- Orientation and welcome activities to introduce new students to UC Davis
- First-year seminars
- Summer bridge program
- Academic advising and pre-enrollment assistance
- Personal and social support from trained peers and staff counselors
- General study skills and graduate school preparation advising
- Supplemental instruction in math and science
- Online EOP newsletter
- Guardian Scholars Program (GSP); a support network for former foster youth

Guardian Scholars Program (GSP)

EOP Building
530-752-1211

The mission of the Guardian Scholars Program (GSP) is to empower foster youth at UC Davis to reach their potential by providing a community network that supports their academic progress and personal growth. The GSP is a one-stop center where students can get help from professionals who understand the challenges of former foster youth and where students can meet other students who have a similar background. In addition to the services available through EOP, Guardian Scholars offers one-on-one mentoring with faculty and staff and a network of off-campus resources specifically intended for former foster youth.

Mentorships for Undergraduate Research in Agriculture, Letters and Science (MURALS)

EOP Building
530-752-9931

Mentorships for Undergraduate Research in Agriculture, Letters and Science (MURALS) is designed to enrich the research experience of students situationally disadvantaged in their access to graduate school. The program aims to encourage students to further their education beyond the baccalaureate. By working with a faculty mentor, students not only have an opportunity to participate in academic research, but their experience may give them an incentive to pursue graduate work leading to a master's or doctoral degree. Students must be a junior or senior with a GPA of 3.000 and 90 units and meet additional eligibility requirements.

For more information, please see the MURALS website at http://murals.ucdavis.edu.

Transfer Reentry Veterans (TRV) Center

1210 Dutton Hall
530-752-2200 Transfer Reentry

If you transferred to UC Davis, are a reentry student, the TRV Center is here to serve you. Reentry refers to undergraduate students who are 25 or older, graduate students who are 30 or older, married students or student parents.

If you or your parent(s) served in the U.S. military and you are unsure of what benefits you may be eligible for, the TRV Center can help.

TRV Center services include: drop-in academic peer advising, Osher Reentry Scholarship program, access to the TRV Resource Network, Veteran educational benefit certifications and fee waivers, resources for commuting students, computer access, study space and networking with the community of TRV students through events and activities.

Linda Alexander Scholars Program (LFA)

123 South Hall
530-752-2430

LFA is a partnership between SASC and the African Continuum. The program is a comprehensive student retention and success program for students of the African Diaspora. LFA supports the academic, social, and personal growth of its participants. Students enter the program as new freshmen or transfers, and remain through graduation.

Program goals are to:
- Increase the recruitment and retention of students from the African Diaspora,
- Increase student engagement in campus academic and social domains,
- Provide integrated network of resources for success and
- Provide culturally sensitive events programming that increase student satisfaction with overall UC Davis experience

Pre-Graduate/Pre-Professional Services

South Hall, 1st Floor
530-752-4475

Pre-Professional/Pre-Graduate School Advising offers individualized advice and information to students interested in admission to professional and graduate schools (medical, dental, vet med, law, Masters and Ph.D. programs, etc.) including prerequisite course planning, exam preparation, evaluation of competitiveness and assistance with all aspects of the application process such as writing the personal statement, getting good letters of recommendation, selecting schools/programs and strategies for becoming the most competitive applicant possible. In addition, the program offers small group advising and informative workshops, and hosts visits from admissions officers from various professional schools.

Graduate School Information Day is held on campus each October to give students an opportunity to speak with representatives from Universities across the country in preparation for entrance to graduate school. Similarly, Law School Information Day is held each fall where students have an opportunity to speak with law school admissions representatives from law schools around the United States.
Special Transitional Enrichment Program (STEP)
2205 Dutton Hall
530-752-2013
Freshman EOP students are invited to participate in the Special Transitional Enrichment Program (STEP). The program begins in summer and continues through the first two academic years, offering preparatory course work, academic assistance and advising. It helps students adjust academically and socially to the campus by strengthening their learning skills and study habits, and by providing an extensive orientation to campus life.

Study Skills Assistance
111 South Hall
530-752-4475
Advising and workshops are offered to help students strengthen skills that have significant impact on college achievement and academic success. Students may attend a workshop or meet with an adviser to get help with time management, test preparation, success strategies, note taking and other study skills. The workshop schedule is available each quarter at http://success.ucdavis.edu.

INTERNSHIPS AND CAREER SERVICES

Internship Programs
The Internship and Career Center
1st, 2nd and 3rd Floors, South Hall 530-752-2855;
http://icc.ucdavis.edu
You can take advantage of one of the hundreds of organized internships through the Internship and Career Center or initiate your own.

An internship may be full time or part time, credit or non-credit, voluntary or involving a stipend, depending on your needs and interests and the availability of openings. Internship experiences must emphasize learning rather than routine activities, must include field supervision by a qualified professional and, where appropriate, the faculty member responsible for giving credit. Academic credit is awarded only for experiences planned and approved in advance by the sponsoring faculty member.

The Internship and Career Center (ICC)
1st, 2nd and 3rd Floors, South Hall 530-752-2855;
http://icc.ucdavis.edu
If you are an undergraduate, graduate or alumnus, ICC can help you identify your abilities and interests and relate them to jobs; gain access to practical experience to increase your competitiveness in the job market; and find out how and where to look for the jobs you want. ICC staff present workshops and seminars each quarter on finding an internship, beginning a job search, developing a resume and preparing for an interview. Webshops on these topics are also available at the ICC website.

The ICC Career Library (2nd floor, South Hall) contains materials that can help you learn how your major field of study can be translated into job opportunities and provides data concerning types of employment graduates have obtained. Useful to job-seekers-and available free of charge in print and at the ICC website is ICC's Career Resource Manual, which provides guidelines for preparing a resume, tips on being interviewed and information on employment in government, business and education.

The ICC coordinates Aggie Job Link, an online compilation of internship opportunities, part time student jobs and career vacancies that are augmented daily and accessible through the ICC website. ICC's Career Recruiting Programs, located on the 3rd floor South Hall, arranges employment interviews and schedules on-campus recruiting by employers.

Graduate Student and Postdoctoral Career Services
The Internship and Career Center
2nd floor, South Hall
530-752-8342
Students pursuing a master's or doctoral degree or enrolled in the teaching credential program should visit the Graduate Student and Postdoctoral Career Services offices in South Hall.

Services include special workshops on writing teaching resumes, curriculum vitae, and preparing for interviews for positions within and outside of academia. Individual advising is available by appointment.

Advisers provide resources to graduate students and postdoctoral scholars on career opportunities. The office sponsors the Graduate Career Options Program for advanced degree candidates considering career options outside of academia, and hosts the Pathways Symposium, a day-long career services event for graduate students and postdoctoral scholars.

Community Service Resource Center
The Internship and Career Center
1st floor, South Hall
530-752-3813
If you are interested in providing community service please visit the UC Davis Community Service Resource Center (CSRC) coordinated through the ICC. Public service work can be a rewarding and satisfying experience that may also improve your qualifications for the job market. Community service may involve compensation or stipend, academic credit or transcript notation and can vary from a one-day activity to a long-term commitment. The Community Service Resource Center is a referral program for students who want to perform community service and a resource for agencies and campus units with service opportunities. The office has a database and directories with information about non-profit agencies in California, community service opportunities throughout the world and employment in the non-profit or public sectors after graduation. The CSRC assists in coordination of the Community Service Fair which is a part of ICC's Fall Internship and Career Fair; plans quarterly Weekends of Service; and hosts the annual Community Service Awards event that honors individual students and student groups for their commitment to community service.

ACADEMIC RESOURCES

UC Davis Study Abroad
207 Third Street, Suite 120
530-207-4633; Fax 530-207-4695;
studyabroad@ucdavis.edu
http://studyabroad.ucdavis.edu/

Study abroad is one of the richest educational experiences a student can have. When students return from study abroad in places like Italy or Hong Kong, they describe their time abroad as an experience that changed their lives. Students study abroad to explore their academic interests in a global context, to learn a language, to gain practical field work or lab experience, to prepare for a job in the global economy and to add distinction to an application for graduate or professional school.
UC Davis Study Abroad advisors can help students decide which program is best for them, whether to study abroad for a summer, quarter, semester or a full year and when to go abroad (freshmen through senior years). UC Davis Study Abroad also provides freshman seminars, advising sessions for new and transfer students, information sessions for particular majors, countries or regions, and financial aid workshops to assist with funding study abroad programs. Staff also advise on programs that have internship opportunities. UC Davis Study Abroad also administers the Global and International Studies (GIS) minor, which is sponsored by the Humanities Program in the College of Letters and Science.

UC Davis Study Abroad is home to UC Davis Quarter Abroad, UC Davis Summer Abroad, UC Davis Seminars Abroad and the University of California Education Abroad Program (UCEAP). UC Davis Study Abroad also provides advising for students interested in non-UC “independent” programs and administers the non-UC study abroad leave program, and provides student services for international UCEAP Reciprocal Exchange students.

First-Year Seminar Program
1350 Surge III
cell@ucdavis.edu; http://cell.ucdavis.edu/courses-and-events/first-year-seminars/
The UC Davis First-Year Seminar Program gives first-year students the opportunity to study with faculty members in small groups, meeting in settings more informal than the ordinary classroom. The seminars focus on a current intellectual interest of the faculty member. All seminars emphasize student participation, providing intense intellectual exchange among students and between student and teacher.

Mathematics and Science Teaching Program (MAST)
104 Everson Hall
530-754-9621; mast@ucdavis.edu; http://mast.ucdavis.edu
The UC Davis Mathematics and Science Teaching Program (MAST) program helps students explore mathematics and science teaching careers while working on their math, science, or engineering degree. Part of the statewide University of California Science and Mathematics Initiative, MAST offers seminars on education, internships in K-12 classrooms, and academic advising to help students choose coursework compatible with multiple goals, including preparing for a teaching credential program.

Student Farm
530-752-7645; http://studentfarm.ucdavis.edu
The Student Farm offers students diverse hands-on learning and research opportunities in sustainable agriculture through internships, formal courses (e.g., in organic crop production, sustainable agriculture, environmental education) and research projects. Students grow and sell organic vegetables in the Market Garden, develop diverse horticultural skills in the Ecological Garden, operate and maintain tractors and equipment, make compost, and provide hands-on farm tours for school children. Students may also create specialized projects in related areas. The Student Farm is a part of the Agricultural Sustainability Institute and is located on the west edge of the campus core, near the Rec Pool. The Student Farm is open to all students, regardless of major or background.

Undergraduate Research Center
2300 Student Community Center
530-752-3390; http://urc.ucdavis.edu
The Undergraduate Research Center serves as the home to several campus programs and represents a campus-wide collaborative to encourage and facilitate faculty-sponsored undergraduate research, scholarship and creative activity opportunities for UC Davis undergraduates. These experiences serve as a vehicle to help students understand what it means to attend a premier research university, enhance the quality of students’ interactions with faculty, and learn first-hand that knowledge is not just learned, but discovered. Programs and services are available to all majors and all class levels and include advising, coaching and academic planning; referrals to sponsored research programs and faculty research projects; and educational programs, seminars and workshops related to the student researcher’s professional development and training; and funding and awards for student researchers.

Washington, D.C. Program
230 South Hall
530-752-6652; http://washingtonprogram.ucdavis.edu
The University of California hosts a system-wide academic and residential program for undergraduate students attending from each of the UC campuses. Housed within the UC Washington Center (UCDC), an 11-story, state of the art facility, convenient to public transportation, and located in downtown D.C., the programs provide undergraduates an opportunity to enrich their education while in residence for one quarter in the nation's capital. The program's principal activities include enrollment in credit-bearing courses, participation in academic internships, and opportunity to explore the many educational, cultural and historical activities in the Washington area.

UCDC is open to undergraduates from all majors who will have upper-division standing by the start of the quarter in which they plan to participate. A GPA of at least 3.000 is recommended for admission although not required. Applicants are also evaluated based on overall relevant experience, a written statement, and letters of recommendation.

The program offers both an 11 week academic year component, where students earn academic credit and continue to be registered as full-time UC Davis students during the quarter in which they participate; and a 10-week summer component with a credit or non-credit option. The academic component includes an internship that requires students to work three to four days per week as interns in Congress, federal agencies, interest groups, trade associations, research institutions, media corporations, museums, or in other organizations related to the interests and objectives of individual students; a research seminar that requires students to write a research paper in consultation with Washington Program faculty and graduate fellows; and an upper division seminar chosen from elective courses that vary each quarter but typically include international relations, history, political science, public policy and other social sciences; the arts and humanities; and science policy. In addition to regular instruction, seminars often include guest speakers, observations of congressional committees and federal agencies, and other relevant Washington experiences. Courses are taught by UCDC faculty appointed by the various UC campuses, or visiting faculty from the Washington area.
STUDENT RESOURCE AND INFORMATION CENTERS

Campus Violence Prevention Program

Police/TAPS Building
200 Dairy Road Bikeway
530-752-3299

The goals of the UC Davis Campus Violence Prevention Program (CVPP) are to reduce the incidence of sexual assault, intimate partner violence, stalking and bias related incidents in the campus community and at the UC Davis Medical Center by increasing the knowledge and awareness of students, staff and faculty about such offenses; to provide crisis intervention, advocacy, support, counseling and referrals to victims of such offenses, their families and friends; to serve as a resource for information regarding sexual assault, intimate partner violence, stalking and bias related crime; and to cooperate with other campus units and community agencies to provide a safer campus community and a concerted integrated effort.

The Program’s primary mission is to eliminate all forms of violence and in the interim, to ensure that comprehensive and appropriate support services are available for survivors. The Violence Prevention Program provides confidential and supportive responses to victims and offers one on one advocacy with initial medical evaluation, legal and police procedures, and academic and housing issues. Confidential crisis intervention, problem-solving and advocacy is also available to recent survivors and to those working to recover from past incidents, as well as short-term intervention and support being available for friends, family, housemates and co-workers. With the overall purpose of providing for a comprehensive model program of support, education, training and outreach.

Center for Leadership Learning

Surge III Room 1350
530-752-6908; http://cll.ucdavis.edu/

The Center for Leadership Learning (CLL) offers a variety of co-curricular programs and activities to help undergraduate students develop their leadership and professional skills. The CLL provides students a unique opportunity to formally learn about leadership and professionalism, while receiving invaluable, hands-on training that will assist them for a lifetime.

The CLL’s programs and services are open to all UC Davis undergraduate students and are free of charge. Undergraduates from all majors, class levels, degrees of leadership and professional experience are welcome to participate. Students may elect to participate in our quarterly workshops, complete any of our optional certificate programs, attend our special events, or all the above! The CLL embraces all students who wish to enhance their personal and professional lives and you get to choose the degree of involvement that works for you!

Cross-Cultural Center

Steven Baissa, Director
Student Community Center, First Floor
530-732-4287; Fax 530-752-5067;
ccc@ucdavis.edu; http://ccc.ucdavis.edu

The mission of the Cross-Cultural Center (CCC) is to foster a multi-cultural community through education and advocacy regarding systematic group oppressions, ethnic and cultural diversity, and establishing an environment of cross-cultural learning and exchange for the entire campus. The CCC advocates for a campus environment free of racism, classism, sexism, heterosexism, ableism, body image oppression, religious/spiritual oppression and any other forms of oppression.

The CCC strives to build an inclusive and welcoming campus community through the annual Culture Days programs that raise awareness and celebrate our cultural diversity. Programs include Asian Pacific Culture Week, Black Family Week, La Raza Cultural Days and Native American Culture Days and Powwow. Everyone is invited to share in these programs featuring speakers, workshops, films, entertainment and family events.

The center features much more, as well. It is home to Danzantes del Alma, a popular student folklórico dance troupe that celebrates the culture and heritage of Mexico through performances on campus and throughout northern California. All students are invited to participate and no prior dance experience is required. Peer Education and Community Empowerment (PEACE), is a student-to-student train the trainer program dedicated to undoing racism, sexism, homophobia, and to promoting a welcoming, respectful, living and learning environment. The CCC also puts on the REACH Retreat, Mixed Heritage Week and the Asian Pacific Islander Leadership Retreat, and has an affiliate program for registered campus student organizations called SoDA.

Lesbian Gay Bisexual Transgender Queer Intersex Asexual Resource Center

Elizabeth Coté, Interim Director
Student Community Center, 397 Hutchison Drive
530-752-2452; http://lgbtqia.ucdavis.edu

The LGBTQIA Resource Center provides a comprehensive range of education, information and advocacy services and works to create and maintain an open, safe and inclusive environment for lesbian, gay, bisexual, transgender, queer, intersex, and asexual students, staff, faculty, their family and friends and the entire campus community. The LGBTQIA Resource Center offers a library of over 1,500 books, most of which can be borrowed for two weeks for personal use. The Center can also serve as a meeting space for local organizations or support groups. Our focus is respect, pride and unity with regard to all individuals. The LGBTQIA Resource Center is open Monday-Thursday, 10 a.m.-6 p.m. and Fridays 9 a.m.-5 p.m. (PST).

Services for International Students and Scholars (SISS)

Services for International Students and Scholars
530-752-0864; siss@ucdavis.edu

Services for International Students and Scholars assists international students, faculty and researchers in gaining and maintaining an appropriate immigration status while at UC Davis. SISS provides orientation and other information and assistance as part of its mission to build a campus community that is fully inclusive of international students and scholars.

All new and transfer international students must attend a special orientation program held just before each quarter begins. The orientation helps new students with immigration regulations and finding campus services and community resources, and is a vital addition to campus and departmental orientation programs. Orientation for new J-1 international scholars is held every two weeks. Students and scholars should report to SISS as soon as possible after arriving in Davis.

Academic Advising and Student Resources

71
Estimated Costs for 2014-2015

International students are responsible for all of their expenses while studying at UC Davis. The expenses include Nonresident Supplemental Tuition, Tuition, room and board and a modest amount for personal expenses. For the 2014-2015 calendar year (12 months), we estimate the cost will be $53,000 for undergraduates, and $54,700 for graduate students. Because the exact cost for tuition and fees is not determined until just before the beginning of the academic year, these are only preliminary figures. This minimum allowance may be increased without advance notice.

Women’s Resources and Research Center (WRRC)

North Hall, First Floor
530-752-3372; http://wrrc.ucdavis.edu

The Women’s Resources and Research Center (WRRC) promotes gender equity and aspires for a campus where students, faculty, and staff of all genders can thrive. All are welcome to visit the WRRC and learn about gender equity, connect with community, and find resources and support.

The WRRC focuses on four areas:

• Leadership for Gender Equity: Training and skills-building opportunities to develop leaders that promote gender equity across campus, such as the EDGE Peer Education Program, Volunteer Program, Internship Program, and the Women in Science and Engineering Program

• Community Empowerment: Student-led initiatives and coalitions that foster self-empowerment and strengthen communities, including: Semana de la Xicana, the Empowerment Conference, International Womyn’s Day, Vagina Our Stories, and Gender Equity Awareness Week

• Research & Scholarship: Conferences and scholarships to encourage critical inquiry of feminisms, intersectional systems of oppression, and equity

• Resources & Support: Confidential information and referrals on a broad range of topics, such as: gender bias, harassment and violence, health, self-esteem, childcare, and more
REGISTRATION AT UC DAVIS

Registration

Office of the University Registrar
12 Mrak Hall

Registration is the way you become a student at the university. To be a continuing UC Davis student, you must register each quarter. Registration includes enrolling in classes, the financial obligation to pay tuition, fees and all other charges on your student account, filing your current address with the Office of the University Registrar, and completing and filing any forms pertaining to your registration status.

If you are a new or reentering student you must also:

- Submit a Statement of Legal Residence; see Residence for Tuition Information, on page 594.
- California Health and Safety Code requires first time enrollees who are 18 years of age or younger to provide a statement of immunization status for the Hepatitis B virus prior to enrollment. For more information, see Student Health and Counseling Services (SHCS) at http://healthcenter.ucdavis.edu/newstudent/hep-b.html.
- Have a student ID card produced; see the AggieCard website at http://aggiecard.ucdavis.edu or information on how to upload your photo and obtain your AggieCard.

New graduate students who have been registered previously at UC Davis as undergraduates are considered to be new students.

Change of Name. Your legal name must be on file with the Office of the University Registrar. If your name has changed since the time of your application, please complete the Name Change Form and submit it with the legal documentation for verification to the Office of the University Registrar in 12 Mrak Hall or use the form at https://registrar.ucdavis.edu/records/changes-personal-information.cfm.

Change of Address. Be sure to inform the Office of the University Registrar of any change of address. Failure to file your current addresses can result in a hold on your registration. You can update your address using SISWeb; see http://sisweb.ucdavis.edu.

Late Registration

Late registration privileges extend through the 10th day of instruction, but you are assessed a late fee to defray the extra administrative costs. Registration after the deadline is allowed only if action or inaction on the part of the university delays registration. A recommendation from an appropriate administrative unit is required and tuition and registration fees must be paid with cash, cashier's check, credit union check, university check or fee credit.

ENROLLING IN COURSES

Online Registration. Students enroll in courses by using SISWeb; see http://sisweb.ucdavis.edu or myucdavis Schedule Builder; see https://students.myucdavis.edu/schedulebuilder/.

The Class Search Tool and other registration information are available at http://registrar.ucdavis.edu.

Undergraduate Registration Priority. Access to registration is by priority groups. The groups are established according to student class level, as determined by the number of units completed. Undergraduate Class Level is determined as follows:

- Freshman Level 0–44.99 units
- Sophomore Level 45–89.99 units
- Junior Level 90–134.99 units
- Senior Level 135 units and above

You are officially registered in all courses listed on your individual class schedule. Once registered, you are financially liable for all tuition and fees associated with the term and responsible for completing each of the courses. View your class schedule using SISWeb or myucdavis Schedule Builder.

Adding and Dropping Courses

You can adjust your schedule by adding or dropping courses until the deadlines published in the Quarter Dates and Deadlines calendar at http://registrar.ucdavis.edu/calendar/.

The last day to add courses is the 12th day of instruction. The last day to drop courses without dean’s permission or fee is the 20th day of instruction, except for those courses designated by departments as 10-day-drop courses. You need to obtain the permission of your dean and pay the processing fee to drop a designated 10-day-drop course after the 10th day of instruction or to drop any other courses after the 20th day of instruction.

See Adding and Dropping Courses, at http://registrar.ucdavis.edu/registration/schedule-adjustments/add-drop.cfm, on how to adjust your schedule and what add/drop procedures and fees apply after the published deadlines. The Quarter Dates and Deadlines calendar, at http://registrar.ucdavis.edu/calendar/, also lists the course add and drop deadlines.

Late Add

To add a course after the deadline, but on or before the last day of instruction, you need approval of the department. A processing fee applies to late adds.

Late Drop

To drop a course after the deadline, but on or before the last day of instruction, you need approval of the dean of your college or school. Graduate students must have their adviser’s approval in order to drop courses. A processing fee applies to late drops. Permission to drop courses after the deadline may be granted only in exceptional circumstances.

Retroactive Drop

Occasionally, in exceptional circumstances, students are allowed to drop a course after the course is completed. Reasons for seeking a retroactive drop are very specific: medical problems, severe emotional difficulties, or recent death or severe illness in the immediate family. Retroactive Drop petitions must also include an explanation as to why the class being petitioned was more affected than other classes completed during the term. Petitions are subject to approval by the Academic Senate Committee on Grade Changes. Petitions for Retroactive Change are available from the Office of the University Registrar and should include a detailed account of the problem, appropriate documentation and an adequate explanation of why an I grade or late drop was not taken during the quarter in which the problem occurred. Retroactive
drop petitions should be submitted by the student to the instructor of the course, who will then submit the petition on the student’s behalf to the Office of the University Registrar. A processing fee is applicable on all retroactive drops.

**Retroactive Add**

In some rare circumstances, students are allowed to add a course after the course is completed. Petitions are subject to approval by the Academic Senate Committee on Grade Changes. Petitions for Retroactive Change are available from the Office of the University Registrar. Each petition must include the reason for the student’s failure to add the course during the quarter in which it was offered. Retroactive add petitions should be submitted by the student to the instructor of the course, who will then submit the petition on the student’s behalf to the Office of the University Registrar. A course grade must be assigned by the instructor. A processing fee is applicable on all retroactive adds.

**COURSE LOAD**

**Expected Progress.** Undergraduate students are expected to graduate in 12 quarters (four years). To do so, students should plan to complete an average of 15 units per quarter (15 units per quarter for 12 quarters totals 180 units). Because occasions arise which prevent students from achieving expected progress towards the degree, the campus has established minimum progress requirements, to which students must adhere.

**Minimum Progress Requirements.** To meet minimum progress, a full-time regular undergraduate is required to maintain an average of at least 13 units passed over all quarters of enrollment. Minimum progress is calculated at the end of every Spring Quarter for the preceding three quarters (Fall, Winter, Spring) comprising the academic year. Undergraduate students falling below this requirement are not in good minimum progress and may be disqualified from further enrollment at the University. Quarters for which a student was officially approved for part-time status are omitted from the minimum progress calculation. For more information, see Probation and Dismissal, on page 83.

**Certification of Full-Time Status.** Undergraduate students must carry a study load of at least 12 units (including workload units) each quarter in order to be certified as full-time students for insurance and financial aid purposes or to compete in intercollegiate athletics. Graduate students must carry a study load of at least 12 units each quarter in order to be certified as full-time students.

**Course Load Limits in the College of Letters and Science.** Freshman students in their first year and transfer students in their first quarter of residence may not take more than 17 units each quarter. For all other Letters and Science students, the class schedule may not exceed 21 units each quarter. These unit limitations include non-credit remedial courses and repeated courses, but not make-up work to remove incomplete grades.

**Course Loads in the College of Engineering.** Because of the large number of required units in engineering programs, many students must take more than 15 units per quarter and/or attend summer session to finish in four years.

**Part-Time Student Status**

If, for reasons of occupation, family responsibility, health or, graduating-senior status (one term only), you are unable to attend the university on a full-time basis, you may qualify for enrollment in part-time status. Undergraduate students must file for part-time status each quarter. Graduate students with approved part-time status will remain part-time until the student enrolls full-time. To be considered eligible, undergraduate students must be registered in 10 units (including workload units) or fewer by the tenth day of instruction that quarter and graduate students must be registered in 6 units or fewer by the tenth day of instruction. Minimum progress requirements are waived for part-time students. The Part-Time Petition is available at the Office of the University Registrar’s website or at the Office of the University Registrar in 12 Mrak Hall. Part-time students have use of the same facilities and are eligible for the same services, including student health services, as full-time students.

**THE MAJOR**

You will find a complete list of the majors offered at UC Davis under Degrees Offered by UC Davis, on page 11.

**Declaration of Major**

**College of Agricultural and Environmental Sciences.** Students must declare a major by the time they have completed 90 units. Failure to declare a major at this point may result in a hold on further registration. In order to declare a major, you must meet with your faculty adviser and/or advising associate, fill out a Change of Major petition available at the Office of the University Registrar website (http://registrar.ucdavis.edu) or dean’s office and file the petition with the dean’s office. If you have completed 90 units, you must prepare a study plan with your adviser and/or advising associate at the same time. You are accepted into a major only after your major department and the dean’s office have approved the Change of Major petition. With the approval of the College Executive Committee, additional requirements, such as completion of a particular set of required courses with a specified grade point average (usually well above a C average), may be introduced as conditions for acceptance into any major at any time.

**College of Biological Sciences.** Students must declare a major by the time they have completed 90 units. A hold will be placed on your registration if you are still undeclared after completing 90 units. Students can obtain a Change of Major petition from the Biology Academic Success Center website or the Office of the University Registrar website at http://registrar.ucdavis.edu. They must meet with an academic adviser for the major, discuss a projected plan of studies, obtain the adviser’s signature and return the signed petition to the Biology Academic Success Center. The minimum requirement for entry into a major is a C average in all courses used to satisfy major requirements. Students are accepted into the major when their adviser and the dean have approved the petition. Students who fail to maintain a 2.000 GPA in courses required for their major over two consecutive quarters may be required to withdraw from the major.

**College of Engineering.** Students must declare a major when they apply to the College of Engineering. The ability to change majors is subject to meeting the requirements set forth by the faculty of the College of Engineering. Requirements for changing to a College of Engineering major can be found at http://engineering.ucdavis.edu/undergraduate/advising/answers.html#1 or by contacting the Undergraduate Advising Office 530-752-1979.

**College of Letters and Science.** Students must declare a major by the time they have completed 90 units. If you have not declared a major by this point, a hold may be placed on your registration.
Such a hold would be removed only when your Change of Major petition is filed in the Undergraduate Education and Advising Office. Petitions can be obtained from department offices or the Office of the University Registrar’s website at http://registrar.ucdavis.edu. As a part of the declaration procedure, you must, in consultation with a faculty adviser, prepare a projected plan of study. You are accepted into the major when your adviser and the Undergraduate Education and Advising Office have approved the petition.

To be accepted into a major, you must have a C average in all courses you have completed that are required for that major. With the approval of the College Executive Committee, additional requirements, such as completion of a particular set of required courses with a specified grade point average (usually well above a C average), may be introduced as conditions for acceptance into any major at any time.

If your performance is unsatisfactory after you have declared a major program, you may be required by the dean to withdraw from that major, upon written recommendation from the chair of the department or the curriculum committee that administers the major.

**Change of Major Within a College**

To change from one major to another within a college, you need the consent of the department or committee in charge of your proposed new major and the approval of the dean. Admission into a major program may be denied by the program or by the dean if your grade point average (GPA) in courses required for the selected major is less than 2.000.

Procedures for change of major within a college are the same as for declaration of major and the same conditions apply. If you wish to change to a major that has admission restrictions, you must comply with the special procedures and requirements for that major.

Except under unusual circumstances, no change of major will be permitted after you attain senior standing (135 units). Students wishing to petition for such an exception should consult in advance with the relevant dean's office or Biology Academic Success Center regarding additional restrictions and requirements.

It is not possible to change or declare a major in the quarter in which you file to graduate.

**College of Biological Sciences.** Students who wish to change their major after completing 135 units should include a quarter-by-quarter graduation plan with the change of major petition. Changes of major will not be permitted by the Dean after the beginning of the quarter of the student's graduation.

**College of Engineering.** Requirements for changing to a College of Engineering major can be found at http://engineering.ucdavis.edu/undergraduate/advising/answers.html#a1 or by contacting the Undergraduate Advising Office 530-752-1979.

**College of Letters and Science.** Requirements for changing to a College of Letters and Science major can be found at http://www.ls.ucdavis.edu/advising/faq.html.

**Multiple Majors**

**College of Agricultural and Environmental Sciences.** A student choosing to major in multiple majors must petition the departments/programs/divisions responsible for the major(s) and the dean of the college. The dean's approval of declaration for multiple majors is subject to the following:

1. Eighty percent of the upper division units offered in satisfaction of course and unit requirements of each major must be unique; that is, they may not be offered in satisfaction toward the upper division unit requirements of any of the other selected majors. Courses with substantial overlap in content will not count as part of the eighty percent. Departmental advisers may approve only one course for substitution when considering the eighty percent in upper division courses and units required for each major.

2. When unit requirements of the majors included in a request differ, the major with the smaller number of upper division units required should be used to compute the minimal unit difference that must be met.

3. A student in good academic standing and with a minimum of a C average in the upper division courses taken toward the major may elect to declare simultaneously more than one major within the college or a combination of majors offered by the college and other undergraduate colleges on campus.

**College of Biological Sciences.** Admission into multiple majors is subject to the approval of offices in charge of the majors involved and the Dean of the College. Departments, curriculum committees and other teaching units, singly or collectively, as well as faculty advisers have the right to disapprove a student's request for a multiple major.
Approval of a request to declare more than one major is subject to the following:

1. Eighty percent of the upper division units used to satisfy requirements in each major must be unique; that is, they may not be offered in satisfaction of requirements of any of the other majors involved.
2. If the major programs differ in the number of upper division units required, the major program requiring the smaller number of upper division units will be used to compute the minimum number of units that must be unique.
3. In determining that the eighty percent requirements have been satisfied, advisers and the Dean must count both specific courses and courses with substantial overlap of content as common to the majors involved.
4. Students must complete all majors within the 225-unit limit.
5. Students may only petition for a multiple major after completing two Depth Subject Matter courses in each major.

A student who completes all requirements for approved multiple majors in which one major normally leads to an B.A. degree and another normally leads to a B.S. degree, will receive a B.A.S. degree. A single degree is granted to students who graduate with multiple majors.

**College of Engineering.** Students may choose to complete two engineering majors. Enrollment in an engineering major and a non-engineering major may be possible. Double-major students must satisfy the requirements for both majors. Degree requirements for such double majors ordinarily cannot be completed within four academic years. A change of major petition is required for all requests and appropriate approvals from all applicable departments and dean's offices are necessary.

The Department of Computer Science does not allow double majors of Computer Science and Engineering and Computer Engineering, or Computer Science and Engineering and Electrical Engineering, or Computer Science and Engineering and Computer Science (L&S).

Triple majors will not be approved.

If you want to double major in any over-subscribed engineering major, you will be subject to the additional restrictions for changing into those majors and must satisfy the requirements of both majors.

**College of Letters and Science.** Students choosing to major in multiple subjects must notify the Undergraduate Education and Advising Office of their decision by submitting for approval a petition endorsed by faculty advisers in the majors. The dean's approval of the declaration of more than one major is subject to the following conditions:

1. At least 80 percent of the upper division units used to satisfy course and unit requirements in each major selected must be unique and may not be counted toward the upper division unit requirements of any other major undertaken. Courses with substantial overlap in content will not count as part of the 80 percent.

2. At the time of request, a substantial part of the preparatory subject matter in each major must have been successfully completed.

3. All degree requirements must be completed within the 225-unit limit.

Combination proposals that cannot be approved are two or more majors offered by the same discipline, except art history and art studio.

A student who completes all requirements for approved multiple majors in which one major normally leads to an A.B. degree and another normally leads to a B.S. degree, will receive a B.A.S. degree. A single degree is granted to students who graduate with multiple majors.

**Cross-College Majors**

**College of Agricultural and Environmental Sciences.** The College does encourage multiple majors between colleges whenever your academic interests and abilities indicate this to be the best route. After endorsement of the Change of Major petition by the appropriate faculty or staff adviser in the colleges involved, each dean may approve the petition if there are sufficient differences between the requirements for the major programs you wish to study.

At least 80 percent of the upper division units used to satisfy course and unit requirements in each major selected must be unique and not duplicate those of the other major. In planning for multiple majors, you should determine the total requirements needed for each major as well as for graduation from each college involved.

All degree requirements must be completed within the 225-unit limit.

The same conditions apply for cross-college majors as for multiple majors.

**College of Biological Sciences.** The same conditions apply for cross-college multiple majors as for multiple majors within the college. In addition, approval of the deans of all involved colleges are required for cross-college multiple majors.

**College of Engineering.** Enrollment in a combination of an engineering major and a non-engineering major may be possible. A change of major petition is required for all requests and appropriate approvals from all applicable departments and deans' offices are necessary. Such double-major students must satisfy the requirements for both majors. Degree requirements for such double majors ordinarily cannot be completed within four academic years.

**College of Letters and Science.** The same conditions apply for cross-college majors as for multiple majors. Cross-college programs will not be approved if the majors involved are available within a single college as well.

**Individual Major**

Students with academic interests not covered by an established major have the opportunity to develop an individual major. Such a major requires the selection of interrelated courses totaling a minimum of 45 upper division units from two or more areas of study. If you choose this option you will work closely with faculty advisers to develop a coherent and rigorous academic program. This program is then submitted to a faculty committee for review and
If you want to have completion of a minor certified on your transcript, you must have any courses in common. Your minor. If you elect more than one minor, the minors may not be approved by the department or program. For minors offered by the College of Agricultural and Environmental Sciences, at least half of these units and courses must be completed in residence on the UC Davis campus. You are also expected to complete all courses that are prerequisite to the upper division courses required for the minor. Minors offered by the College of Letters and Science do not require that a portion of the units be completed at UC Davis.

Students in the College of Biological Sciences may not complete a minor in the same field as the student’s major. This includes any minor offered by the department or curriculum committee in charge of the student’s major. All major and minor requirements must be completed within the 225 total unit limit.

With the exception of interdisciplinary minors approved by the College Executive Committee, students in the College of Letters and Science may not complete a minor offered by the department or program in charge of the student’s major.

To request certification of a minor, you must have a grade point average of 2.000 in all courses required for the minor. At most, one course used in satisfaction of your major may be applied to your minor. If you elect more than one minor, the minors may not have any courses in common.

If you want to have completion of a minor certified on your transcript, you must obtain a minor petition from your dean’s office or Biology Academic Success Center and file it no later than the deadline for filing for graduation. You can elect only one minor in a subject area. Requirements for the minor must be met by the time of graduation.

College of Engineering. Students in Engineering who plan to complete a minor must file a minor petition, available on the College of Engineering website at http://engineering.ucdavis.edu/undergraduate/advising/answers.html#a14. The completed petition must be approved by the minor adviser and then turned into the Undergraduate Advising Office of the College of Engineering for certification at least one quarter prior to graduation. Not more than one course applied to the satisfaction of requirements in the major program shall be accepted in satisfaction of the requirements of the minor.

There are currently nine approved minor programs in the College of Engineering. Information about these minors can be obtained by contacting the undergraduate adviser in the home department of each minor:

- Department of Biological and Agricultural Engineering:
  - Energy Efficiency
  - Energy Science & Technology
  - Energy Policy
- Department of Biomedical Engineering:
  - Biomedical
- Department of Chemical Engineering & Materials Science:
  - Materials Science
- Department of Civil and Environmental Engineering:
  - Construction Engineering and Management
  - Sustainability in the Built Environment
- Department of Computer Science:
  - Computational Biology
- Department of Electrical and Computer Engineering:
  - Electrical Engineering

In addition, the Department of Computer Science offers a minor in Computer Science. For information, contact the Undergraduate Adviser in the Department of Computer Science 530-752-7036.

School of Management. The minor offered by the Graduate School of Management requires that students apply and be admitted to the program prior to taking courses. There is a quarterly admission process. Students who are not admitted to the minor will not be allowed to take courses. Students who have not been admitted to the minor program and enroll in these courses will be dropped.

ACADEMIC CREDIT

Units of Credit

Academic work at the university is measured by “units of credit.” In conjunction with the letter grade you receive from the course instructor, units of credit give a fairly accurate evaluation of the amount of time you have devoted to a given subject. Units of credit also make it possible to anticipate the amount of work involved in a particular course and enable you to transfer from one campus or university to another without undue difficulty. To convert quarter units to semester units, multiply by 0.66; from semester to quarter units, multiply by 1.5.

Units of credit are assigned to courses based on 1 unit of credit for three hours of work by the student per week. Usually this means one hour of lecture or discussion led by the instructor and two hours of outside preparation by the student. In laboratory courses, two or three hours of work in the laboratory are normally assigned 1 unit of credit.

In most courses at UC Davis, the standard procedure prevails, so that a 3-unit course meets for three hours a week, a 4-unit course for four hours and so on. Courses that are an exception to this pattern may require additional class time or give more demanding assignments. If you have questions about the number of units assigned to a course, you should check the expanded course descriptions (available at your college, department, or on the
Internet) or ask the instructor what is required in terms of outside reading, term papers, problem sets or field trips. These are not always spelled out completely in the General Catalog. By knowing the amount of work that will be required, you can plan your course load more systematically and realistically.

Credit by Examination

Under certain prescribed conditions, currently registered students in good standing may receive course credit by taking an examination without formally enrolling in a course. You may obtain a petition and a copy of the prescribed conditions from the Office of the University Registrar. The petition is subject to the approval of the instructor giving the examination and the department involved.

The completed petition, accompanied with the processing fee, must be presented for final approval to the dean of your college or school, or if you are a graduate student, to the dean of Graduate Studies. The completed petition must be submitted to the Office of the University Registrar no later than the business day before the date of the scheduled examination; petitions that are submitted after this date will be denied. Students who are approved by the Office of the University Registrar to take credit by examination shall be issued a permit to take the examination, which the student will present to the instructor at the time of the examination.

The credit received for the examination may not duplicate any credit you have already earned toward your degree. You may not use credit by examination to repeat any course you have taken previously, regardless of the grade you received in that course. Credit earned by examination may not be applied towards satisfaction of the General Education requirement. The final examination results will be reported to the Office of the University Registrar, which will assign the appropriate grade and grade points to you. Since failure to pass the examination will be recorded as an F, you are encouraged to prepare fully for such an examination before attempting it. Optional P/NP or S/U grading is subject to approval by the appropriate dean.

You may also receive credit for learning in nonacademic settings through credit by examination.

To earn credit through the credit by examination process, the examination must be given by a UC Davis instructor and be for a course listed in the current General Catalog. Students are not eligible to take a credit by examination in a quarter in which they are not currently enrolled.

Concurrent Credit from Another Institution

A student may not obtain transfer credit for courses taken at a non-University of California campus in a term during which the student is registered as a full-time student at UC Davis. A variance can be obtained only by petitioning the dean of your college well in advance of the desired registration. When a variance is granted, units earned are counted toward minimum progress for the term in which the dual registration occurs. Summer Session courses are exempt from this regulation.

Students may gain credit for courses taken during the summer at other institutions, provided the courses parallel those given in the University of California. Assurance that such credit will be accepted, however, can be given only after the courses have been completed. You should arrange to have the transcripts of your Summer Session grades sent to Undergraduate Admissions for evaluation.

Intercampus Visitor Program

Qualified undergraduates may take advantage of educational opportunities on other University of California campuses as an Intercampus Visitor (ICV). This program enables students who have completed at least one year in residence on their home campus and have maintained a grade point average of at least 2.000 to take courses not available on their home campus, to participate in special programs, or to study with distinguished faculty members on other campuses of the university. Students who meet the above requirements should complete an application available in the Office of the University Registrar or at http://registrar.ucdavis.edu.

Summer Sessions

1350 Surge III 530-752-7622; http://summer-sessions.ucdavis.edu

Every summer, many students earn units, complete their undergraduate degrees, expand their knowledge, do research, take special study courses, meet prerequisites or take courses that are often over-enrolled during the academic year by participating in Summer Sessions at UC Davis. Per unit course fees are equivalent to academic year tuition based on the standard 15-unit quarter.

Summer Sessions offers more than 600 lower and upper division course sections in a wide range of subject areas that provide full university credit transferable to most campuses. Since admission is open to virtually all adults, Summer Sessions traditionally attracts students from US and international universities and colleges, high school graduates and many other qualified applicants. Admission to a summer session, however, does not guarantee or imply admission to the university’s regular academic quarters.

Summer offerings include Special Sessions that either occur off-campus or take place outside the normal six-week terms.

Summer Sessions dates are listed at the bottom of the Academic Calendar, on page 1, and at http://summer-sessions.ucdavis.edu.

UC/CSU/Community College Cross Enrollment

If you are interested in taking a particular class at a nearby California State University or community college campus, you may now do so through the Intersegmental Cross Enrollment program. Enrollment is limited to one course per term and participating students need the approval of both the home and the host campus. Please note that the Los Rios Community College district is not participating in the program.

Senate Bill 361 requires that UC, CSU and the California Community Colleges permit students to enroll in one course per term at a campus of either of the other two systems on a space available basis at the discretion of the two campuses. This program aims to encourage community college students to enroll concurrently in courses offered at local universities, potentially increasing the number of community college transfers, including students from underrepresented groups.

Students must meet certain qualifications and be certified by their home campus as to eligibility, residence, fee, financial aid and health status. Generally, students will be allowed to add a class, if space is available, after the add/drop period on the host campus. To add a course, students must obtain the faculty member’s approval and signature on a Cross-Enrollment form, available at their home campus Registrar’s Office. The student takes the signed
form to the Registrar's Office at the host campus for processing. If you are interested in participating, come to the Office of the University Registrar in 12 Mrak Hall for more information.

**Open Campus (Concurrent) Program**

UC Davis Extension
1333 Research Park Drive
(800) 752-0881 or 530-757-8777
http://www.extension.ucdavis.edu/opencampus

Most of the classes taught at UC Davis are available to members of the public through the Open Campus (Concurrent) Program on a space available basis. The enrollment limitations, deadlines and fee schedule are provided in the Open Campus brochure-available online, by mail or from the UC Davis Extension office. Students previously registered at UC Davis who have not graduated may not enroll through Open Campus (Concurrent) until twelve months after withdrawing from UC Davis except with permission of the student's College Dean's Office or the Biology Academic Success Center. Upon admission or readmission to regular student status at UC Davis, the units and grade points earned when enrolled in Open Campus courses will count toward both the 180-unit undergraduate degree requirement and the UC GPA.

**UC Davis Extension**

1333 Research Park Drive
(800) 752-0881 or 530-757-8777
http://www.extension.ucdavis.edu/

As the outreach arm of UC Davis, UC Davis Extension provides continuing education in numerous professional and academic fields. Details on Extension courses are available by visiting the Extension website, calling or coming to the Extension office. Students enrolled at UC Davis who wish to use UC Davis Extension courses, other than those offered through Open Campus (Concurrent), towards degree requirements must obtain written approval from the dean's office of their college or the Biology Academic Success Center before enrolling in the Extension courses. Upon approval students may apply a limited number of credits towards the undergraduate or graduate degree requirement.

**EXAMINATIONS**

**Midterms**

In undergraduate courses for which a midterm examination is required, each student has the right to take the midterm (or submit the take-home examination as opted by the instructor) during one of the regularly scheduled meetings of the class. The scheduling of a midterm examination at a time other than a regularly scheduled class meeting requires mutual written consent of the instructor and each student registered in the course. A student who does not consent in writing to the different time must be permitted to take the examination (or submit the take-home examination) at the officially scheduled time. A student who consents in writing to the change of examination time waives the right to take the midterm at the officially scheduled time.

**Final Examinations**

**Scheduling.** The quarterly final examinations schedule is listed at http://registrar.ucdavis.edu/registration/schedule/finals.cfm. Exams are set according to the day-and-start time of the classes offered during the quarter. This information is available so that you can avoid final examination conflicts. A student who has multiple exams on the same day may discuss the situation with the instructor receiving credit. The writing time (in undergraduate courses) of a take-home and an in-class final examination together should not exceed three hours. In each course in which a final examination is required, the students have the right to take the final examination (and/or submit the take-home examination) at the time published in the quarterly final examinations schedule at http://registrar.ucdavis.edu/registration/schedule/finals.cfm.

An instructor may release each student's original examination, or a copy, at any time. Otherwise, the instructor will keep the exams, or copies thereof, until the end of the next quarter and students may pick up their exams during this period.

For on-line courses, the instructor of each on-line class will be provided the option to have the final in the last time slot on the last day of finals or at a time on dead day. Students shall be notified of the time and place of the final on or before the first day of instruction.

**Changing a Final Examination Date.** An in-class final examination may not be rescheduled for a date earlier than the first day of finals week. The due date for a take-home final examination may not be rescheduled for a date earlier than the first day of finals week. The scheduling of an examination at a time other than the specified time requires the written mutual consent of the instructor and each student involved in the change. Any student who does not consent in writing to a different time will be permitted to take an examination (or submit the instructor-opted take-home examination) at the officially scheduled time. A student who consents in writing to the change in the final examination time waives the right to take the examination as originally scheduled. Departures from the published examination schedule should be carried out so as not to disadvantage students who are unable to accept the changed schedule.

A student who is improperly denied the right to take a required final examination on the published date (or submit the take-home examination as opted by the instructor) may file a petition with the Executive Council of the Davis Division of the Academic Senate by the end of the next regular term for appropriate action.

**Disabilities.** Students with documented disabilities may be entitled to in-class accommodations. The student shall provide the instructor with a letter from the Student Disability Center (SDC) recommending those academic accommodations that the instructor is responsible for providing. Students must request accommodation as soon as possible, to allow the university reasonable time to evaluate the request and offer necessary adjustments. No accommodations shall alter the nature of the academic demands made of the student nor decrease the standards and types of academic performance, nor require facilities or personnel that cannot
reasonably be provided. SDC coordinates with the Office of the University Registrar to reserve a classroom for examinations for students with documented disabilities during finals week. The instructor should consult with the student and SDC on any questions or concerns.

**Religious Observances.** UC Davis seeks to accommodate any student who, in observance of a religious creed, encounters an unavoidable conflict with a test or examination schedule. The student is responsible for providing, in writing no later than the beginning of the quarter, notification of a potential conflict to the individual responsible for administering the examination and requesting accommodation. Instructors will consider such requests on a case-by-case basis and determine whether such conflicts can be resolved without imposing on the instructor or the other students in the class an undue hardship, which cannot be reasonably avoided. If so, the instructor will determine, in consultation with the student, a time during which the student can take the test or examination without incurring a penalty or violation to the student’s religious creed.

**GRADES**

Every instructor is required to assign a grade for each student enrolled in a course. The following grades are used to report the quality of a student’s work at UC Davis:

- **A** — excellent
- **B** — good
- **C** — fair
- **D** — barely passing
- **F** — not passing (work so poor that it must be repeated to receive recognition)
- **P** — passed (grade C– or better)
- **NP** — not passed
- **S** — satisfactory
- **U** — unsatisfactory
- **I** — incomplete (work is satisfactory but incomplete for a good cause)
- **IP** — in progress

The grades A, B, C and D may be modified by a plus (+) or minus (–).

**Grade Points**

Grade points are assigned each letter grade as follows:

- **A+ = 4.000**
- **B+ = 3.200**
- **D+ = 1.300**
- **A = 4.000**
- **C+ = 3.000**
- **D = 1.000**
- **A– = 3.700**
- **C = 2.000**
- **F = 0.000**
- **B+ = 3.300**
- **C– = 1.700**
- **P/NP = n/a**
- **B = 3.000**
- **D+ = 1.300**
- **S/U = n/a**

**Grade Point Average (GPA)**

The grade point average is computed on courses taken at the University of California. The value of grade points over units attempted determines your grade point average. The grade point balance represents the number of grade points above or below a C average. The grades IP, E, S, NP and U carry no grade points and are not included in grade point computations. Incomplete (I) grades are not included in the GPA at the end of the quarter, but are counted as F in determining if a bachelor’s degree candidate has earned the minimum 2.000 GPA required for graduation.

A student at UC Davis is expected to maintain a C (2.000 GPA) or better in all work undertaken in the university. If you fall below a C average, you are considered “scholastically deficient;” see Probation and Dismissal, on page 83.

**Passed/Not Passed (P/NP) Grading**

Subject to regulation by the faculties of the colleges and schools, an undergraduate student in good standing may request to take specific courses on a Passed/Not Passed basis. Such requests must be submitted and confirmed before the 25th day of instruction.

The grade P is assigned for a grade of C– or better. Units thus earned are counted in satisfaction of degree requirements but are not counted in determining your grade point average.

The intent of this option is to encourage exploration in areas in which you have little or no previous experience by alleviating grading pressures. The maximum number of units graded P that will be accepted for degree credit is one third of the units completed in residence on the UC Davis campus. Consequently, at least two thirds of the units completed in residence at UC Davis and presented in satisfaction of degree requirements must be in courses taken for a letter grade.

In specific approved courses, instructors will assign only Passed or Not Passed grades. Such courses count toward the maximum number of units graded P allowable toward the degree. If you are planning to take courses on a P/NP basis, you should also familiarize yourself with the requirements of your particular school or college, which may have placed conditions or restrictions in addition to the university requirements. If you plan to attend graduate or professional school, you should consult with Pre-Graduate/Pre-Professional Advising Services regarding Passed/Not Passed grading.

If you elect the P/NP grading option for courses graded upon completion of a two- or three-quarter sequence (in-progress grading), a petition must be submitted before half of the time covered by the IP grading has elapsed. The P/NP grading will then be in effect for the entire course sequence.

If you receive a D or an F in a course, you may not repeat it using the P/NP option. If you receive an Incomplete in a course you took for a letter grade, you may not complete the course on a Passed/Not Passed basis.

**College of Agricultural and Environmental Sciences.** The Passed/Not Passed option should be used only for elective courses, not for courses taken to fulfill major requirements. An NP grade in a course required by the major could prevent graduation. When in doubt, check with your faculty adviser before electing to take a course on a Passed/Not Passed grading basis.

**College of Biological Sciences.** All courses used to satisfy major requirements must be taken on a letter-graded basis, unless courses are only offered on a Passed/Not Passed basis. Courses taken before Fall 2006 on a Passed/Not Passed basis will be accepted in fulfillment of major requirements.

**College of Engineering.** Students in the College of Engineering may not take any course used to satisfy a degree requirement, or any course offered by the College of Engineering, on a P/NP basis. College of Engineering students are unable to select the P/NP option in SISWeb or myucdavis Schedule Builder. Engineering students wishing to take a non-engineering course that is not needed to satisfy a degree requirement can obtain a P/NP petition in the Undergraduate Advising Office in 1050 Kemper Hall.
College of Letters and Science. Students in the College of Letters and Science are subject to an additional limitation on the number of units that may be completed employing the Passed/Not Passed grading option; see Bachelor's Degree Requirements for the college in the Undergraduate Education chapter. Graduating seniors and other students planning to undertake graduate or professional studies, should consult an adviser before electing for Passed/Not Passed grading in courses required for the major program.

Satisfactory/Unsatisfactory (S/U)

The grade of S is awarded to graduate students for work in graduate courses that otherwise would receive a grade of B– or better and for work in undergraduate courses that otherwise would receive a grade of C– or better.

Graduate students, under certain circumstances, may be assigned grades of S or U, but units earned in this way will not be counted in calculating the grade point average. Petitions to elect S/U grading are available from the Graduate Studies Office and must be signed by your graduate adviser. Graduate students may petition to take no more than one course per quarter on an S/U grading basis. A graduate course in which a C, D or F grade is received may not be repeated with the S/U option.

In specific approved courses, instructors will assign only Satisfactory or Unsatisfactory grades. Such courses count toward the maximum number of units graded S allowable toward the degree, as specified by each degree program.

In-Progress (IP) Grading

For a course extending over more than one quarter (designated “deferred grading only; pending completion of sequence” in course descriptions), evaluation of student performance is deferred until the end of the final quarter. Provisional grades of IP are assigned in the intervening quarters and are replaced with the final grade at the completion of the sequence. In order to gain credit toward graduation, a student must successfully complete the entire sequence. For electing P/NP grading for a course graded in-progress, see Passed/Not Passed (P/NP) Grading, on page 81.

Incomplete Grades

The grade of I may be assigned when a student’s work is of passing quality and represents a significant portion of the requirements for a final grade, but is incomplete for a good cause as determined by the instructor; good cause may include current illness, serious personal problems, an accident, a recent death in the immediate family, a large and necessary increase in working hours or other situations of equal gravity.

In courses listed in the General Catalog as being letter graded, “passing quality” means “of D– quality or better.” This standard holds in such courses whether or not the student has elected to take the course on a Passed/Not Passed or Satisfactory/Unsatisfactory basis. For courses listed in the General Catalog as being graded on a Passed/Not Passed or Satisfactory/Unsatisfactory basis only, the completed work must be of a quality consistent with a grade of Pass or Satisfactory, respectively.

You may replace an I grade with a passing grade and receive unit credit (and grade points if the instructor assigns a letter grade) provided you satisfactorily complete the course work as specified by the instructor. In order to change your records, you must obtain a petition from the Office of the University Registrar and present it to your instructor for completion and mailing.

An I grade must be replaced with a letter grade (or P or S grade) before the end of the third succeeding quarter (excluding summer sessions) of the student’s academic residence, or the grade will revert to an F (or NP or U). If a student’s degree is conferred before the expiration of the time limit for an I-grade conversion, the graduated student shall have until the end of the third quarter succeeding the quarter in which the I grade was assigned to replace the I grade. If the grade is not replaced by then, the I grade will remain on the student’s record.

You may not re-enroll for credit in a course for which an I grade has been assigned. An undergraduate student whose record shows more than 16 units of I grades will be subject to disqualification. A graduate student who accumulates more than eight units of I grades will be subject to probation.

Incomplete grades will not be included in your grade point average at the end of a quarter. However, at the time of graduation, any remaining I grades are included when your grade point average is computed in order to determine whether you have achieved the 2.000 average required for the bachelor’s degree. An Incomplete grade, in these computations, has the same effect as a grade F, NP or U, depending on which option you have exercised. Therefore, it is recommended that students not delay the clearance of incomplete grades so as not to jeopardize graduation.

Retroactive Grade Changes

All grades except I and IP are final when filed by an instructor at the end of the quarter. No final grade except I may be revised by examination or the submission of additional work after the close of the quarter.

If a clerical or procedural error in the reporting of a grade by the instructor can be documented, you may request a change of grade with a petition available from department offices. The request must be made by the fifth week of the following quarter.

Grade changes for “clerical” errors (such as incorrect addition of points), upon documentation, may be approved by the Office of the University Registrar without requiring review by the Academic Senate Committee on Grade Changes. Requests to interchange P, NP, S or U grades with normal letter grades based upon student need (such as to allow graduation or to meet entrance requirements for professional school) do not involve clerical or procedural errors and are automatically denied. Thus, students should exercise the Passed/Not Passed or Satisfactory/Unsatisfactory grading options with caution.

Students are reminded of their responsibility to be aware of the procedures and regulations contained in the General Catalog, to verify their class schedules, and to familiarize themselves with the expectations of their instructors. No changes, except completion of an I grade as noted above, can be made to the student’s record once he or she has graduated.

Repeating Courses

Undergraduate students may only repeat courses in which they received a D, F or NP. Courses in which students received a grade of D or F may not be repeated on a P/NP grading basis. (Courses in which a grade of NP was received may be repeated on a P/NP grading basis.)

Degree credit for a repeated course will be given only once, but the grades assigned for both the first and second time a course is taken will appear on the student’s transcript. In computing the GPA of
undergraduates who have received a grade of D or F, only the grade and corresponding grade points earned the second time a course is taken will be used, up to a maximum of 16 units for all repeated courses. After the 16-unit maximum is reached, the GPA shall be based on all grades assigned and total units attempted.

Repeating a course more than once requires approval by the appropriate college dean if the student has already completed the course with a grade of C or better.

Graduate students, with the consent of the appropriate graduate adviser and the dean of Graduate Studies, may repeat any course in which they received a C, D, F or U, up to a maximum of 9 units for all courses repeated. Courses in which a grade of C, D or F has been earned may not be repeated on an S/U basis. Courses in which a grade of U as received may be repeated on an S/U basis.

Degree credit for a repeated course will be given only once, but the grades assigned for both the first and second time a course is taken will appear on the student’s transcript. In computing the GPA of graduate students who have received a grade of C, D or F only the most recently earned grade for each course and corresponding grade points will be used, up to a maximum of 9 units for all courses repeated. After the 9-unit maximum is reached, the GPA shall be based on all grades assigned and total units attempted.

**Mid-Term Grade Standing**

Students wishing to know their grade at the mid-quarter should ask the instructor. Those who have deficient grades (D, F or NP) are urged to confer with their advisers.

**Final Grades**

Grades are generally available about three weeks after a quarter has ended. You can check your grades through SISWeb or myucdavis Schedule Builder.

**Transcripts**

A record of each student’s academic work at UC Davis is retained permanently by the Office of the University Registrar. Copies of your official transcript may be obtained from the Office of the University Registrar. For more information on how to request a transcript and applicable transcript fees, see the Office of the University Registrar website at [http://registrar.ucdavis.edu/records/transcripts/](http://registrar.ucdavis.edu/records/transcripts/).

Transcripts of all work done through UC Davis Extension or concurrent enrollment must be requested directly from the UC Davis Extension Office, 1333 Research Park Drive, Davis, CA 95616. Transcripts of work completed at another campus of the university or at another institution must be requested directly from the campus or institution concerned.

**PROBATION AND DISMISSAL**

The following provisions apply to all undergraduates. Graduate and professional students with scholarship deficiencies are subject to action at the discretion of their respective deans.

**Scholastic Deficiencies**

A student will be placed on probation or subject to disqualification for failure to meet qualitative or quantitative standards of scholarship.

**Qualitative Standards.** The qualitative standards of scholarship require that a student maintain a C average (2.000) or better for all work undertaken in the university and for the work undertaken in any one quarter.

A student will be placed on probation for qualitative reasons if, at the end of any quarter, the student’s grade point average (GPA) is:

- Less than 2.000, but not less than 1.500, for the quarter
- Less than 2.000 for all courses taken within the University of California

A student will be subject to disqualification for qualitative reasons if, at the end of any quarter,

- The student’s grade point average is less than 1.500 for the quarter,
- The student’s grade point average is less than 1.500 for all courses taken within the University of California,
- The student has attempted more than 16 units graded I (Incomplete),
- The student has spent two consecutive quarters on academic probation.

In the case of probation or subject to disqualification for qualitative reasons, the official transcript will state that the student is not in good academic standing. Once a student has met the qualitative standards of scholarship, or has satisfied all requirements for graduation, the notation will be removed from the transcript.

**Quantitative Standards.** The quantitative standards, referred to as minimum progress requirements, define scholarship in terms of the number of units that you must satisfactorily complete. It is expected that a student will earn the 180-unit minimum degree requirement within 12 quarters (four years). This means students are expected to complete, on average, 15 units per quarter.

Because occasions arise which prevent students from achieving expected progress towards the degree, the campus has established minimum progress requirements, to which students must adhere. To meet minimum progress, a full-time regular undergraduate is required to maintain an average of at least 13 units passed over all quarters of enrollment. Minimum progress is calculated at the end of every Spring Quarter for the preceding three quarters (Fall, Winter, Spring) comprising the academic year. Quarters during that period for which a student was officially approved for part-time status are omitted from the minimum progress calculation.

The following courses may be counted toward unit minimum progress:

- Required non-credit courses, e.g., Mathematics B, will be evaluated according to the “Carnegie unit” rule and counted as units passed, although these courses shall not be applied toward the satisfaction of baccalaureate degree requirements.
- Repeated courses passed to improve D or F grades up to a maximum of 16 units.
- Courses passed in Summer Sessions at UC Davis or at another accredited school and transferred to UC Davis will be counted as units passed (applied to the next full-time quarter of enrollment immediately following the summer session).
Courses passed by examination in accordance with policies established by the Divisional Committee on Courses (applied to quarter in which exam is taken).

Courses that are IP (in progress) will be counted as units passed.

Courses graded I will be counted as units passed when replaced by a passing grade (applied to the quarter in which the I grade is received).

A student will be placed on probation for quantitative reasons if, at the end of any Spring Quarter, the minimum progress calculation for the preceding academic year shows that the student passed an average of less than 13 units but greater than or equal to 12 units per quarter.

A student will be subject to disqualification for quantitative reasons if, at the end of any Spring Quarter, the minimum progress calculation for the preceding academic year shows that the student passed an average of less than 12 units per quarter.

For every student who fails to meet minimum progress at the end of Spring Quarter, a “degree progress average” will be calculated at the close of the next full-time quarter of enrollment at UC Davis. The degree progress average is defined as the quotient of the number of units passed during all full-time quarters from the initial quarter of matriculation at UC Davis divided by the number of full-time quarters completed at UC Davis.

A student whose degree progress average is less than 13 units shall be “subject to disqualification for quantitative reasons.” A student whose degree progress average is 13 or more units shall not be “subject to disqualification for quantitative reasons.”

If a student fails to make minimum progress at the end of Spring Quarter, the degree progress average shall be calculated each subsequent full-time quarter of enrollment as long as the student is “subject to disqualification for quantitative reasons.” A student who is “subject to disqualification for quantitative reasons” at the end of two consecutive full-time quarters of enrollment shall be disqualified from the university.

In the case of dismissal for quantitative reasons, the official transcript will state that the student is not in good academic standing.” Once a student has met the quantitative standards of scholarship, or has satisfied all requirements for graduation, the notation will be removed from the transcript.

### Dismissal

Dismissal for either qualitative or quantitative reasons (defined above) is based on the decision of the dean of the college in which the student is enrolled. Such dismissal is from the University of California system and not simply the college or the UC Davis campus. Should a former UC Davis student later wish to be readmitted to the UC Davis campus, the authority to do so rests with the dean of the college from which the student was dismissed. If a student is dismissed from their college, they will automatically receive a full refund of registration fees paid for that term.

Students should go to the dean's office of their college or the Biology Academic Success Center if they need academic advising about probation and dismissal.

A student will be placed on probation or subject to disqualification for failure to meet qualitative or quantitative standards of scholarship.

### HONORS AND PRIZES

#### Deans’ Honors Lists

According to UC Davis campus regulations, the quarterly Dean’s Honors List includes names of students who have completed, for a letter grade, a minimum of 12 units in a specific quarter with a grade point average equal to or higher than the minimum grade point average attained by the upper 16 percent of those registered in the same class level and college during that quarter. Honors lists will be posted quarterly on deans’ office websites or made available by other means and a notation of these honors will be placed on each student's permanent record by the Office of the University Registrar.

#### Graduation Honors

Honors at graduation are awarded to students who have a grade point average in the top percent of their college as shown in the table below. The College of Letters and Science requires that additional criteria be met for high and highest honors; see the sections below for more information.

#### Grade Point Average by College

A student who complete the Honors Program of the College of Letters and Science, may be recommended by their departments for graduation with high honors or highest honors on the basis of an evaluation of their academic achievements in the major and in the honors project in particular. Graduating students will not be awarded honors with the bachelor's degree if more than eight units of grade I (Incomplete) appear on their transcripts. The College Committee on Honors may consider exceptions to this condition. Petitions for this purpose should be submitted to the Undergraduate Education and Advising Office.

An honors notation is made on students' diplomas and on their permanent records in the Office of the University Registrar.

#### College of Letters and Science

Graduation with “honors” requires that a student meet the appropriate grade point requirement described in the above table for all UC courses completed. Students who meet the grade point requirement for graduation with honors, and who complete the Honors Program of the College of Letters and Science, may be recommended by their departments for graduation with high honors or highest honors on the basis of an evaluation of their academic achievements in the major and in the honors project in particular. Graduating students will not be awarded honors with the bachelor's degree if more than eight units of grade I (Incomplete) appear on their transcripts. The College Committee on Honors may consider exceptions to this condition. Petitions for this purpose should be submitted to the Undergraduate Education and Advising Office.
The Honors Program of the College of Letters and Science

The Honors Program in the College of Letters and Science permits students to pursue a program of study in their major at a level significantly beyond that defined by the normal curriculum. It represents an opportunity for the qualified student to experience aspects of the major that are representative of advanced study in the field. Successful completion of the College Honors Program is a necessary prerequisite to consideration for the awarding of high or highest honors at graduation.

Entrance into the honors program requires that a student have completed at least 135 units with a minimum grade point average of 3.500 in courses counted toward the major. Other prerequisites for entrance into the program are defined by the major. The program consists of a project whose specific nature is determined by consultation with the student’s major adviser. It may involve completion of a research project, a scholarly paper, a senior thesis, or some comparable assignment depending on the major. The project will have a minimum duration of two quarters and will be noted on the student’s record by a variable unit course number or special honors course designation. Successful completion of the honors program requires that a minimum of six units of credit be earned in course work for the project.

The Honors Program of the College of Engineering

An Honors Program is available to qualified students in the Chemical Engineering, Biochemical Engineering, and Materials Science and Engineering majors. The Chemical Engineering and Materials Science Honors Program is a four-year program designed to challenge the most talented students in these majors. Students invited to participate will take a one-unit honors seminar in their freshman year and will enroll in various one-unit honors courses. In the upper division, students will complete either an honors thesis or a project that might involve local industry (Chemical Engineering 194 HA, HB, HC). Students must maintain a grade point average of 3.500 to continue in the program. Successful completion of the Honors Program will be acknowledged on the student’s transcript.

University Honors Program

(formerly Davis Honors Challenge & Integrated Studies Honors Program)

330-732-9797; http://honors.ucdavis.edu

The University Honors Program (UHP) is an interdisciplinary, campus-wide honors program for highly motivated students interested in enhancing their education through special courses, close contact with faculty, and dynamic interaction with academic peers. High-achieving students are invited in spring to apply for participation in the fall.

General Education Honors courses, seminars, and special study opportunities constitute the course offerings of the University Honors Program. A complete list of these courses, with course registration numbers, is made available to admitted students through the UHP office.

Approximately 185 students live in the Honors Academic Residential Community during their first year. Students ranked within the top 5% of the UC Davis entering class are invited to participate and are selected to create a balanced community of students from all four undergraduate colleges. For specific program details, see the University Honors Program website at http://honors.ucdavis.edu.

Prizes and Awards

The University Medal is the highest campus honor awarded to a graduating senior in recognition of superior scholarship and achievement. A College or School Medal is also given to the outstanding graduating student in each of the colleges and professional schools.

Departmental citations, special awards and prizes are also awarded to students for superior achievement and scholarship.

College of Agricultural and Environmental Sciences. Each year, the outstanding graduating senior in the College is awarded a silver medal, known as the “Agricultural and Environmental Sciences Medal.” Scholastic excellence (in a minimum of six quarters at UC Davis) is the primary basis for choosing the recipient. The Mary Regan Meyer Prize is awarded to an outstanding graduate who has demonstrated expertise and an interest in serving humanity. The Charles E. Hess Award is awarded to the graduate with the most noteworthy record of public/community service while at UC Davis. The Kinsella Memorial Prize, in honor of John E. Kinsella, is awarded annually to an outstanding individual who submits his or her Ph.D. dissertation during the spring, fall winter quarter or summer session immediately preceding the due date for nomination.

College of Biological Sciences. Each year the College Medal is awarded to one outstanding graduating senior. Academic excellence is the primary basis for selecting medal nominees. The College Medal is awarded to a graduating senior based on the criteria of academic excellence, research activity and involvement in service to the campus or community. For additional information regarding college awards, please contact the Dean’s Office or the Biology Academic Success Center.

College of Engineering. Each year, outstanding senior students in engineering are selected by their grade point averages as nominees for the M.S. Ghausi Medal. Academic excellence is the primary basis for selecting the recipient of the award. Graduate students are eligible for the Zuhair Munir Award, given to the student who has submitted the year’s best engineering doctoral dissertation. The award honors Zuhair Munir, former Dean of the College and its Associate Dean for Graduate Studies for twenty years.

College of Letters and Science. Graduating seniors with a distinguished academic record may be recommended by the faculty as nominees for the College’s Herbert A. Young Medal. Each June, one medalist is selected from among the graduates of the current academic year. The Leon H. Mayhew Award is conferred upon the outstanding graduate majoring in the arts or humanities, preferably music, art, or literature. Academic excellence is the primary basis for selecting the recipients of these awards. The Lawrence J. Andrews prize is awarded to a student entering the senior year who not only has achieved academic excellence but who also has demonstrated interests outside of pure scholarship.

Chancellor’s Award for Excellence in Undergraduate Research

This prestigious award recognizes a graduating senior who has distinguished him/herself through their excellence in undergraduate research. The winner, chosen for completing research or scholarship in any academic subject while at UC Davis, is announced and awarded a special plaque at commencement ceremonies in June. In conjunction with the Chancellor’s Award, Professor Dean Singleton of UC Davis’ Department of Psychology established an endow-
ment for funding a cash prize for each year’s student recipient. An award is also given each year to a faculty mentor for his/her outstanding contribution to undergraduate research. For more information, see http://undergraduateeducation.ucdavis.edu/awards.html.

Honorary Societies

Election to an honorary society is one of the most prestigious awards a student can receive. At UC Davis, the following honorary societies are represented:

- Alpha Kappa Delta (Sociology)
- Alpha Omega Alpha (Medicine)
- Alpha Zeta (College of Agricultural and Environmental Sciences)
- Chi Epsilon (Engineering)
- Gamma Sigma Delta (College of Agricultural and Environmental Sciences; College of Biological Sciences)
- Golden Key (All colleges and schools)
- The National Society of Collegiate Scholars (All colleges and schools)
- Omicron Delta Epsilon (Economics)
- Order of Omega (Fraternities-Sororities)
- Order of the Coif (Law)
- Phi Alpha Theta (History)
- Phi Beta Kappa (College of Letters and Science)
- Phi Kappa Phi (All colleges and schools)
- Phi Sigma (Biological Sciences)
- Phi Zeta (Veterinary Medicine)
- Pi Delta Phi (French)
- Pi Mu Epsilon (Mathematics)
- Pi Sigma Alpha (Political Science)
- Prytanean Honor Society (All colleges-undergraduate women only)
- Psi Chi (Psychology)
- Sigma Pi Sigma (Physics)
- Sigma Xi (All colleges and schools-research)
- Tau Beta Pi (Engineering)

LEAVING UC DAVIS

Graduation

Each candidate for an undergraduate degree must file an Application for Graduation with the Office of the University Registrar for the quarter in which the candidate plans to receive the degree; see http://registrar.ucdavis.edu/graduation. The dates for campus filing are published in the Academic Calendar, on page 1, and at http://registrar.ucdavis.edu/registration/leave/graduate/.

Students in the College of Agricultural and Environmental Sciences must have their Major Certification evaluated by the dean’s office before their candidacy for a degree can be finalized; see Bachelor’s Degree Requirements for the college in the Undergraduate Education chapter.

Graduating students who wish to participate in the Commencement Ceremony must register to do so with their college by the filing deadline for that term. For links to each college’s registration website, see http://registrar.ucdavis.edu/graduation. Commencement Ceremonies are held twice a year, in the fall (December) and spring (June).

Please note that to graduate, a student must file an Application for Graduation with the Office of the University Registrar by the stated deadline. To participate in the Commencement Ceremony, a student must register with their college by the stated deadline. These are separate actions.

Leave of Absence: Planned Educational Leave Program (PELP)

The Planned Educational Leave Program allows any registered student—undergraduate or graduate—to suspend academic work at UC Davis temporarily. Undergraduates may take one such leave during their academic career at UC Davis; that leave is limited to one quarter in duration. For graduate students the maximum leave is up to one year. Undergraduates apply for PELP at the Office of the University Registrar or http://registrar.ucdavis.edu. Graduate students apply through their departments and professional students apply through their dean’s office.

Applications for PELP may be filed as late as the tenth day of instruction during the quarter for which the student is requesting a leave. However, approved applications submitted after the first day of instruction will entitle you to only a partial retraction of tuition and student fees assessed, which may provide a refund in accordance with the Schedule of Refunds. The Schedule of Refunds refers to calendar days beginning with the first day of instruction. The effective date for determining a refund of fees is the date the completed and approved PELP Form is returned to the Office of the University Registrar; see the Fees, Expenses and Financial Aid chapter.

An application fee is charged to your account when you enroll in the PELP program.

While students may receive academic credit at other institutions and transfer this credit to UC Davis (subject to rules concerning transfer credit), participants are reminded that the intent of the program is to “suspend academic work.” Therefore, students are urged to carefully evaluate the desirability of taking academic work while away from the campus during PELP. Students enrolled in PELP are not eligible to enroll in Open Campus (Concurrent) courses at the UC Davis campus or to otherwise earn academic credit at UC Davis during the PELP leave.

You will not be eligible to receive normal university services during the planned leave. Certain limited services, however, such as placement and student employment services, counseling, and faculty advising are available. Students on PELP may elect to voluntarily enroll in the Davis Health Insurance Plan (SHIP). Undergraduate students may elect to enroll for one additional quarter of coverage. Graduate students may elect to enroll for up to two quarters or one semester of coverage. Students on PELP may also purchase limited borrowing privileges from the library. International students should consult Services for International Students and Scholars to find out how the PELP will affect their status. Grants and other financial aids will be discontinued for the period
of the leave, but effort will be made, where legally possible, to allow you to renegotiate loan payment schedules and to ensure the availability of financial aid upon your return.

Withdrawal

To cancel your registration before the first day of instruction or to withdraw from the university on or after the first day of instruction but on or before the last day of instruction, you must complete a Cancellation/Withdrawal Form and return the Form to the Office of the University Registrar. If you do not submit a Cancellation/Withdrawal Form, you will be liable for fees according to the Schedule of Refunds; see the Fees, Expenses and Financial Aid chapter. The effective date for determining a refund of fees is the date the completed Cancellation/Withdrawal Form is filed with the Office of the University Registrar. No exceptions will be made to this policy. After filing your withdrawal form, you must complete an Exit Interview with Student Accounting; see the Student Accounting website at http://studentaccounting.ucdavis.edu/.

If you are receiving financial aid, you must report your change of status immediately, in person or by mail, to the Financial Aid Office. If you are receiving veteran's benefits, you must also report your withdrawal to the Veterans Affairs Office.

College of Engineering. Engineering students planning to withdraw from the University are strongly advised to meet with an adviser in the Undergraduate Advising Office in 1050 Kemper Hall or call 530-752-1979 to discuss readmission requirements prior to withdrawing.

Retroactive Withdrawal. Petitions for retroactive withdrawal may be obtained from the Office of the University Registrar. Petitions are subject to approval by the Academic Senate Committee on Grade Changes. Reasons for seeking such are medical problems, severe emotional difficulties, or death or severe illness in the immediate family. Petitions should include a detailed account of the problem, appropriate documentation and an adequate explanation of why withdrawal was not taken during the quarter in which the problem occurred.

RETURNING TO UC DAVIS; READMISSION

If you are a former UC Davis undergraduate student who wishes to resume undergraduate studies, you may reapply through the Readmission process. You are considered a former student if you have interrupted the completion of consecutive terms of enrollment on the UC Davis campus. For details regarding the Readmission process, see http://registrar.ucdavis.edu/registration/return/readmission.cfm.

You may obtain the Readmission application from the Office of the University Registrar or download the application at http://registrar.ucdavis.edu/registration/return/readmission.cfm. The Readmission application must be completed and submitted to the Office of the University Registrar with the non-transferable, non-refundable application fee on or before the following deadlines:

- **Fall.** The last business day of July
- **Winter.** The last business day of October
- **Spring.** The last business day of January
UC Davis offers the Bachelor of Arts (A.B.) and Bachelor of Science (B.S.) degrees in over 100 major programs, as well as over 110 minors in a variety of disciplines.

Undergraduate education is governed by the Vice Provost—Undergraduate Education, and the Undergraduate Council, a standing committee of the Davis Division of the Academic Senate. The Vice Provost is also responsible for education-related programs including the Undergraduate Research Center, the Center for Leadership Learning, the University Honors Program, the Davis Honors Challenge, the UC Washington Center, Entry Level Writing, Summer Sessions, the Center for Excellence in Teaching and Learning, and the Women's Resources and Research Center Library.

Academic programs are offered by the four undergraduate colleges: the College of Agricultural and Environmental Sciences, the College of Biological Sciences, the College of Engineering, and the College of Letters and Science.

COLLEGE OF AGRICULTURAL AND ENVIRONMENTAL SCIENCES

Office of the Dean
130 Mrak Hall
530-752-0108; http://www.caes.ucdavis.edu

Major programs in the College of Agricultural and Environmental Sciences highlight the multiple connections among agricultural sciences, environmental sciences and human sciences within the larger context of the quality of life in the global economy. The majors fall into three broad areas of study described below. The College of Agricultural and Environmental Sciences also offers two college-wide degree programs and two college-wide non-degree programs.

The Undergraduate Programs

Agricultural Sciences

These majors prepare students in animal biology and the management of environmental resources as needed to develop sustainable animal production technologies. Also considered is the impact of production and management processes on animal health and welfare, human diet and health, and the natural environment.

The majors that focus on plant science provide a strong background in the context of agricultural and environmental systems and societal needs; ecological understanding of food and fiber production systems; biological and economic principles that underlie management decisions in agribusiness; and a basic background in all areas of plant biology, including plant development, plant protection, biotechnology and post-harvest physiology.

Majors:
- Agricultural and Environmental Education, B.S.
- Animal Biology, B.S.
- Animal Science, B.S.
- Animal Science and Management, B.S.
- Biotechnology, B.S.
- Entomology, B.S.
- Plant Sciences, B.S.
- Sustainable Agriculture and Food Systems, B.S.
- Viticulture and Enology, B.S.

Minors:
- Agricultural Pest Management
- Applied Computing and Information Systems (Plant Sciences)
- Animal Biology (Animal Science)
- Animal Genetics (Animal Science)
- Apiculture Entomology (Entomology)
- Aquaculture (Animal Science)
- Avian Sciences
- Dairy/Livestock (Animal Science)
- Environmental Horticulture (Plant Sciences)
- Equine (Animal Science)
- Forensic Entomology
- Fungal Biology and Ecology (Plant Pathology)
- Insect Biology (Entomology)
- Insect Ecology and Evolution
- Medical-Veterinary Entomology (Entomology)
- Nematology
- Precision Agriculture (Biological and Agricultural Engineering)

Environmental Sciences

These majors focus on the broad facets of the human and natural environments and their interactions. They draw on the social, physical and biological sciences as needed to prepare students for leadership and advanced studies in the areas of natural resource management, environmental quality and stewardship, community planning and design, and public policy decision making.

Majors:
- Agricultural and Environmental Education, B.S.
- Atmospheric Science, B.S.
- Ecological Management and Restoration, B.S.
- Environmental Horticulture and Urban Forestry, B.S.
- Environmental Science and Management, B.S.
- Environmental Policy Analysis and Planning, B.S.
- Environmental Toxicology, B.S.
- Hydrology, B.S.
- Landscape Architecture, B.S.
- Marine and Coastal Science, B.S.
- Soil and Water Science, B.S.; see Environmental Science and Management
- Sustainable Environmental Design, B.S.
- Wildlife, Fish, and Conservation Biology, B.S.

Minors:
- Atmospheric Science (Land, Air, and Water Resources)
- Environmental Policy Analysis (Environmental Science and Policy)
- Environmental Toxicology
- Geographic Information Systems (Biological and Agricultural Engineering)
- Geographic Studies (Environmental Design)
- Hydrology (Land, Air, and Water Resources)
- Landscape Restoration (Plant Sciences)
- Soil Science (Land, Air, and Water Resources)
- Wildlife, Fish, and Conservation Biology
Human Sciences

These majors foster a deeper understanding of the multiple connections between scientific and cultural issues in the context of human health and the quality of life. Basic physical and biological science, social science, design, and economic principles are taught in this context, linking food and fiber production to consumption, emerging knowledge to societal applications and policy, and human development to active, informed citizenship. Emphasis is on linking resources for humans with humans as resources. Physiological, social and aesthetic dimensions of the human experience are explored.

Majors:
- Agricultural and Environmental Education, B.S.
- Clinical Nutrition, B.S.
- Community and Regional Development, B.S.
- Fiber and Polymer Science, B.S.
- Food Science, B.S.
- Human Development, B.S.
- Managerial Economics, B.S.
- Nutrition Science, B.S.
- Sustainable Agriculture and Food Systems, B.S.
- Textiles and Clothing, B.S.

Minors:
- Aging and Adult Development (Human and Community Development)
- Community Development (Human and Community Development)
- Community Nutrition (Nutrition)
- Fiber and Polymer Science (Textiles and Clothing)
- Food Service Management (Nutrition)
- Human Development (Human and Community Development)
- Managerial Economics (Agricultural and Resource Economics)
- Nutrition and Food (Nutrition)
- Nutrition Science (Nutrition)
- Textiles and Clothing

College-wide Programs

The college-wide programs cut across all of the above areas, providing students in a variety of majors with a background in such areas as public policy, economic principles in a global context and the intersections among environmental, agricultural and socio-economic issues. College-wide programs also include non-degree, lower division curricula aimed at providing students with a foundational knowledge base and the potential for developing individualized programs.

Majors:
- Individual Major, B.S. (suspended)
- International Agricultural Development, B.S.

Minors:
- Contemporary Leadership
- International Agricultural Development
- Science and Society

Non-degree programs:
- Undeclared/Exploratory
- Science and Society

COLLEGE OF BIOLOGICAL SCIENCES

Biology Academic Success Center
1023 Sciences Laboratory Building
530-752-0410; http://biosci.ucdavis.edu/BASC

The College of Biological Sciences administers undergraduate programs in fundamental aspects of biology. The college is organized into five departments that represent major themes of modern biology: Evolution and Ecology; Microbiology and Molecular Genetics; Molecular and Cellular Biology; Neurobiology, Physiology, and Behavior; and Plant Biology. A total of eight specialized majors are offered, each focusing on one of the core disciplines of biology. The Biological Sciences major, the Individual major, the Undeclared Life Sciences program and the Bodega Marine Laboratory Spring Quarter Program are offered by the entire college.

The academic advising for all majors within the college is administered through the Biology Academic Success Center (BASC). Students enrolled, or interested, in any of the college's majors may meet with an academic adviser at BASC to receive information on all major, college and university requirements, policies, and procedures, including PELP, withdrawal, readmission, change of major or college, multiple majors and late actions. Academic advisers work closely with master advisers, who are faculty members in the departments, to connect students to research opportunities in a variety of fields, and career development experiences in the community. Students are encouraged to meet with their academic advisers at least yearly, starting during their first two quarters of enrollment in the college.

The Undergraduate Programs

Biological Sciences

The Biological Sciences major is broad in concept, designed to span the numerous core disciplines of biology. The major covers most dimensions of the study of life, ranging from molecules and cells to populations of organisms. While emphasizing breadth, the Bachelor of Science degree also requires the student to select an area of emphasis that provides concentrated study in one facet of biology at the upper division level. Areas of emphasis are Evolution, Ecology and Biodiversity; Marine Biology; Microbiology; Molecular and Cellular Biology; Neurobiology, Physiology, and Behavior; and Plant Biology.

Major:
- Biological Sciences, A.B., B.S.

Minor:
- Biological Sciences

Evolution and Ecology

The major in Evolution, Ecology and Biodiversity offers the student a broad background in the theoretical and empirical basis of our understanding of the evolution and ecology of living organisms. The program of study begins with a core of introductory courses in mathematics, physical sciences and biology. These are followed by survey courses in evolution and ecology and more specialized courses that focus the student on particular disciplines or organisms, with an emphasis on problem-solving and critical thinking.

Major:
- Evolution, Ecology and Biodiversity, A.B., B.S.
Minor:
  - Evolution, Ecology and Biodiversity

Microbiology and Molecular Genetics
Microbiology deals with bacteria, yeasts and other fungi, algae, protozoa and viruses. These microorganisms are ubiquitous in nature and play a crucial role in areas such as agriculture, biotechnology, ecology, medicine and veterinary science. The field of microbiology contributes to areas of fundamental inquiry such as biochemistry, cell biology, evolution, genetics, molecular biology, pathogenesis and physiology.

Major:
  - Microbiology, A.B., B.S.

Molecular and Cellular Biology
The Department of Molecular and Cellular Biology offers three majors.

The Biochemistry and Molecular Biology major introduces students to the chemistry of living organisms and the experimental techniques that are used to probe the structures and functions of biologically important molecules. Students who enjoy both chemistry and biology and who are comfortable with quantitative approaches to problem-solving will find this major a rewarding field of study.

The Cell Biology major provides a comprehensive understanding of the cell, the basic structural and functional unit of all living organisms. The major emphasizes the principles that govern how biomolecules interact with one another to organize themselves into higher order structures that comprise cells and how cellular organization and function contribute to the development, maintenance and reproduction of adult organisms.

The Genetics and Genomics major provides a broad background in the biological, mathematical and physical sciences basic to the study of heredity and evolution. The major provides a dual focus on the molecular mechanisms that regulate utilization of information encoded within the genome as well as the mechanisms and analysis of inheritance of genetic information. The major is sufficiently flexible to accommodate students interested in the subject either as a basic discipline in the biological sciences or in terms of its applied aspects in medicine, biotechnology and agriculture.

Majors:
  - Biochemistry and Molecular Biology, B.S.
  - Cell Biology, B.S.
  - Genetics and Genomics, B.S.

Neurobiology, Physiology, and Behavior
The Department of Neurobiology, Physiology, and Behavior previously offered two majors.

The admission of new and continuing undergraduate students to the major in Exercise Biology will be suspended for 2015-2016 and the college is pursuing discontinuation of this major. The Neurobiology, Physiology, and Behavior major is undergoing revision to encompass some parts of the previous Exercise Biology curriculum.

The Neurobiology, Physiology, and Behavior major emphasizes the understanding of vital functions common to all animals. All animals perform certain basic functions—they grow, reproduce, move, respond to stimuli and maintain homeostasis. The physiological mechanisms upon which these functions depend are precisely regulated and highly integrated. Actions of the nervous and endocrine systems determine behavior and the interaction between organisms and their physical and social environments. Students in this major will study functional mechanisms; the control, regulation and integration of these mechanisms; and the behavior which relates to those mechanisms at the level of the cell, the organ system and the organism.

Majors:
  - Exercise Biology, A.B., B.S.—suspended for 2015-2016
  - Neurobiology, Physiology, and Behavior, B.S.

Minors:
  - Exercise Biology
  - Human Physiology
  - Neuroscience

Plant Biology
Plant Biology is the study of plants as organisms. It includes the newer disciplines of cellular and molecular plant biology and the traditional areas of botany, such as anatomy, morphology, systematics, physiology, mycology, phycology, ecology and evolution. The major provides breadth in diverse areas of plant biology and depth in one of several areas of specialization.

Major:
  - Plant Biology, A.B., B.S.

Minor:
  - Plant Biology

College-wide Programs

Quantitative Biology and Bioinformatics
The interdisciplinary minor in Quantitative Biology and Bioinformatics is an integrative program that introduces students to the quantitative and computational approaches that are redefining all disciplines in the biological sciences, from molecular and cell biology, through genetics and physiology, to ecology and evolutionary biology. The minor in Quantitative Biology and Bioinformatics is open to all undergraduates regardless of major and is sponsored by the College of Biological Sciences.

Minor:
  - Quantitative Biology and Bioinformatics

Individual Major
Students whose academic interests are not met by any established major, or combinations of majors and minors may develop an Individual major. Students work in conjunction with the Committee on Undergraduate Petitions and a faculty member in the college.

Major:
  - Individual Major, A.B., B.S.

Students who wish to explore the array of life science majors offered at UC Davis before declaring a major may be admitted to the college through the Undeclared-Life Sciences program. These students use the Biology Academic Success Center for their advising center. Students in this program must declare a major before completing 90 units.
Bodega Marine Laboratory Program

http://bml.ucdavis.edu/

Spring Quarter Program

A full quarter of undergraduate course work in marine biology is available each spring quarter at the Bodega Marine Laboratory, located in Bodega Bay, California. Course offerings include lecture and laboratory instruction in the developmental biology and physiological adaptation of marine organisms, and population biology and ecology; a weekly colloquium; and an individual research experience under the direction of laboratory faculty (Biological Sciences courses 120, 120P, 122, 122P, 123; Neurobiology, Physiology, and Behavior 141, 141P). This is a 15 unit program and course offerings and instructors may vary from year to year. Applications are due January 31. For more course detail, see Bodega Marine Laboratory Program, on page 186 or http://bml.ucdavis.edu/.

Summer Sessions Courses

This integrated program offers students a multidisciplinary understanding of coastal ecosystems through intensive, hands-on courses taught at Bodega Marine Laboratory. The program offers students three sequences of instruction with up to 10 units in each. Two sequences occur during the first Summer Session dates and one sequence in the second Summer Session dates. Applications are due April 15. For more course detail, see full description under appropriate academic department listing or http://bml.ucdavis.edu/.

The programs are residential with students housed on the laboratory grounds. Participants are assessed a room and board fee in addition to standard campus registration fees. Additional information is available directly from the Bodega Marine Laboratory at 707-875-2211, P.O. Box 247, Bodega Bay, CA 94923.

COLLEGE OF ENGINEERING

Undergraduate Advising Office
1050 Kemper Hall
530-752-1979; http://engineering.ucdavis.edu
Facebook: http://www.facebook.com/UCDEngineering

Engineering is the profession in which the physical and biological sciences are applied in a practical way for the benefit of society. As an engineering student, you will learn to observe and describe technological problems and to seek useful solutions to them. Your skills upon graduation will be useful to you not only as an engineer, but also as a professional in management, sales, operations, manufacturing and other fields.

Undergraduate Majors. Eleven undergraduate majors are offered. Each of these is a four-year program leading to the degree of Bachelor of Science.

The following programs are accredited by the Engineering Accreditation Commission of ABET; see http://www.abet.org:

- Aerospace Science and Engineering
- Biochemical Engineering
- Biomedical Engineering
- Biological Systems Engineering
- Chemical Engineering
- Civil Engineering
- Computer Engineering
- Electrical Engineering
- Materials Science and Engineering
- Mechanical Engineering

The Engineering Accreditation Commission and the Computing Accreditation Commission of ABET accredit the following program; see http://www.abet.org:

- Computer Science and Engineering

Minor Programs. The College of Engineering currently offers nine minor programs:

- Biomedical Engineering (Department of Biomedical Engineering)
- Construction Management and Engineering (Department of Civil and Environmental Engineering)
- Computational Biology (Department of Computer Science)
- Electrical Engineering (Department of Electrical and Computer Engineering)
- Energy Efficiency (Department of Biological and Agricultural Engineering)
- Energy Science and Technology (Department of Biological and Agricultural Engineering)
- Energy Policy (Department of Biological and Agricultural Engineering)
- Materials Science (Department of Biological and Agricultural Engineering)
- Sustainability in the Built Environment (Department of Civil and Environmental Engineering)

In addition, the Department of Computer Science offers a minor in Computer Science.

The Undergraduate Programs

Biological and Agricultural Engineering

Biological Systems Engineering majors learn to combine the science and art of engineering with the science of biology to design systems that influence, control, or use biological materials and organisms for improving the quality of life. Specific objectives include designing systems to process biological materials into consumer products; designing machines to interact with biological systems in disciplines ranging from agriculture to medicine; managing, recycling and using wastes; developing systems to protect and preserve our natural resources and environment; developing and improving processing systems for food; designing equipment and systems that improve nutrition and diets; and minimizing waste discharge to the environment.

Major:

- Biological Systems Engineering, B.S.

Minors:

- Energy Science and Technology
- Energy Policy
- Energy Efficiency

Biomedical Engineering

The Department of Biomedical Engineering advances fundamental medical concepts; creates knowledge from the molecular to the organ systems levels; and develops innovative biologies, materials, processes, implants, devices and informatics approaches. These approaches are applied to the prevention, diagnosis and treatment of disease. The objective is to prepare students for employment in companies that manufacture medical assist devices, human tissue products and therapeutics. The program also prepares students to enter a graduate program in biomedical engineering or pursue professional degrees in medicine and related health fields.
Majors:
- Biomedical Engineering, B.S.

Minor:
- Biomedical Engineering

**Chemical Engineering and Materials Science**

The Department of Chemical Engineering and Materials Science offers three majors.

Chemical Engineering majors learn to apply chemical and engineering principles to create useful products ranging from antibiotics to zirconium, from petroleum to plutonium, from agricultural chemicals to plastics. Specific objectives include the design of industrial processes as diverse as integrated circuit materials production, integrated waste management and petroleum refining.

Biochemical Engineering majors combine chemical engineering studies with studies in the life sciences and bioprocess engineering. Bioprocess engineering is the application of engineering principles to develop, optimize and commercialize manufacturing processes. Specific objectives include pharmaceuticals production, environmental repair, industrial chemical production and food production.

Materials Science and Engineering majors learn to understand the relationships among microscopic structure, properties and behavior of materials in order to produce new and improved materials with capabilities far superior to common metals, alloys and ceramics. Specific objectives include the development of materials for high-speed transportation systems, surgical and dental implants, new generations of power plants and solid-state electronic devices in computer and optical communications technology.

**Majors:**
- Biochemical Engineering, B.S.
- Chemical Engineering, B.S.
- Materials Science and Engineering, B.S.

**Minor:**
- Materials Science

**Civil and Environmental Engineering**

Civil Engineering majors learn to apply the principles of the physical and biological sciences and engineering to plan and design systems to improve the quality of life. Specific objectives include providing potable water and freedom from disease-carrying wastes; protecting the natural environment; mitigating the effects of earthquakes and other natural disasters; designing land-, water- and air-transportation systems; and building roads and structures.

**Major:**
- Civil Engineering, B.S.

**Minors:**
- Construction Engineering and Management
- Sustainability in the Built Environment

**Computer Science and Engineering**

The field of computer science and engineering encompasses the organization, design, analysis, theory, programming and application of digital computers and computing systems. The curriculum develops versatile engineers with backgrounds spanning a broad computer/software spectrum. The Computer Science and Engineering major provides a solid background in mathematics, physics, chemistry and electronic circuits and systems—all supporting the computer hardware and software courses that form the focus of the curriculum. A key theme is the hardware/software interaction in computer system design; this theme is reflected in the balance between hardware and software course requirements and in the orientation of the courses themselves.

**Major:**
- Computer Science and Engineering, B.S.

**Minor:**
- Computational Biology

**Electrical and Computer Engineering**

Electrical Engineering majors learn to apply the principles of the physical sciences and engineering to the design, analysis, development, production and evaluation of electronic systems. Specific objectives include the provision of systems for communications, control, signal processing, integrated circuit fabrication, optoelectronics, consumer electronics and digital systems.

Computer Engineering majors study the design, development, analysis, organization, theory, programming and application of digital computers. Specific objectives include developing the student's ability to design both software and hardware. In comparison to the Computer Science and Engineering major, the Computer Engineering major provides greater emphasis on hardware in the key hardware/software interaction in computer system design.

**Majors:**
- Computer Engineering, B.S.
- Electrical Engineering, B.S.

**Minor:**
- Electrical Engineering

**Mechanical and Aerospace Science Engineering**

Aerospace Science and Engineering majors learn to apply the principles of the physical sciences and engineering to vehicles whose motion is determined by aerodynamic forces. Specific objectives include the design, development and manufacture of aircraft and other transportation systems integrating the disciplines associated with aerodynamics, propulsion, structures and guidance/control.

Mechanical Engineering majors learn to apply physical and mechanical principles to the design and manufacture of machines and products, energy conversion systems and equipment for guidance and control. Specific objectives include the provision of products and processes for intelligent manufacturing systems, biomechanical and sports equipment, power generation systems, propulsion for transportation, integration of vehicles and automated highways, and applications of computer and automation technologies.

**Majors:**
- Aerospace Science and Engineering, B.S.
- Mechanical Engineering, B.S.
COLLEGE OF LETTERS AND SCIENCE

Office of Undergraduate Education
and Advising
Room 200, Social Sciences
and Humanities Building
530-752-0392; http://www.ls.ucdavis.edu/advising/

Major programs in the College of Letters and Science provide students systematic exposure to the key principles, methods, findings and representations of a selected area of study. In pursuing a major, students gain intellectual depth and competency in that subject matter, explore important linkages with collateral fields of inquiry and are encouraged to engage in independent study.

The academic programs offered through the college are grouped in three divisions: Humanities, Arts and Cultural Studies; Mathematical and Physical Sciences; and Social Sciences. One college-wide degree program, the individual major, also is available.

The Undergraduate Programs

Division of Humanities, Arts and Cultural Studies

These majors focus centrally on the artifacts, expressions and concerns of humankind in various cultures and times. They provide students the opportunity to explore the creation, performance and analysis of works of art, the language and customs of non-English speaking societies, the theory and criticism of literature, and the peoples and cultures of this nation and its hemisphere. Students interested in studying these types of issues may select from more than 25 different majors.

Majors:
- African American and African Studies, A.B.
- American Studies, A.B.
- Art History, A.B.
- Art Studio, A.B.
- Asian American Studies, A.B.
- Chicana/Chicano Studies, A.B.
- Chinese, A.B.
- Classical Civilization, A.B.
- Comparative Literature, A.B.
- Design, A.B.
- Dramatic Art, A.B.
- English, A.B.
- Film Studies, A.B.
- French, A.B.
- German, A.B.
- Italian, A.B.
- Japanese, A.B.
- Medieval and Early Modern Studies, A.B.
- Music, A.B.
- Native American Studies, A.B.
- Religious Studies, A.B.
- Russian, A.B.
- Spanish, A.B.
- Technocultural Studies, A.B.
- Women's Studies, A.B.

Minors:
- African American and African Studies
- American Studies
- Art History
- Art Studio
- Asian American Studies
- Chicana/Chicano Studies
- Chinese
- Classical Civilization
- Comparative Literature
- Dramatic Art
- English
- Film Studies
- French
- German
- Global and International Studies
- Greek
- Human Rights
- Italian
- Japanese
- Latin
- Luso-Brazilian Studies
- Medieval and Early Modern Studies
- Music
- Native American Studies
- Professional Writing
- Religious Studies
- Russian
- Sexuality Studies
- Social and Ethnic Relations
- Spanish
- Women's Studies

Division of Mathematical and Physical Sciences

These majors focus primarily on the description and interpretation of the structure, processes and events of the physical universe. They provide students the opportunity to explore in depth the structure, properties and reactions of substances; fundamental mathematical techniques and models and their application to the interpretation and explanation of phenomena; studies of matter and energy and their interconversions; the nature and development of computer languages; and earth and environmental processes. Students interested in studying these types of subjects may select from twelve different majors. The division strongly encourages undergraduates to enroll in undergraduate research projects with one-on-one instruction by faculty scholar/researchers.

Majors:
- Applied Mathematics, B.S.
- Applied Physics, B.S.
- Chemical Physics, B.S.
- Chemistry, A.B., B.S.
- Computer Science, B.S.
- Geology, A.B., B.S.
- Mathematical and Scientific Computation, B.S.
- Mathematical Analytics and Operations Research, B.S.
- Mathematics, A.B., B.S.
- Natural Sciences, B.S.
- Pharmaceutical Chemistry, B.S.
- Physics, A.B., B.S.
- Statistics, A.B., B.S.

Minors:
- Chemistry
- Computer Science
- Environmental Geology
- Geology
- Geophysics
- Mathematics
- Oceanography
• Physics
• Statistics

Division of Social Sciences

These majors focus largely on issues and problems that characterize social, cultural, political and economic life across human societies. They provide students the opportunity to explore the relationships between people and the groups and organizations of which they are a part, the antecedents of individual behavior, the development of political and economic systems, the social forces that have shaped the contemporary world and the foundations of language, thought, knowledge and perception. Students interested in studying these types of issues may select from 15 dozen different majors.

Majors:
• Anthropology, A.B., B.S.
• Communication, A.B.
• East Asian Studies, A.B.
• Economics, A.B.
• History, A.B.
• International Relations, A.B.
• Linguistics, A.B.
• Middle East/South Asia Studies, A.B.
• Philosophy, A.B.
• Political Science, A.B.
• Political Science–Public Service, A.B.
• Psychology, A.B., B.S.
• Science and Technology Studies, A.B.
• Sociology, A.B.
• Sociology–Organizational Studies, A.B.

Minors:
• Anthropology
• Arab Studies
• Coaching Principles and Methods
• Communication
• East Asian Studies

College-wide Program

Students whose academic interests cannot be satisfactorily met through the completion of an established major have the opportunity to develop an individual major. Individual majors may reflect the most recent trends in scholarship and research and are typically interdisciplinary in nature. The major proposal is developed in close and active consultation with two faculty advisers from the academic disciplines most closely related to the subject matter of the individual major. Careful faculty guidance and review assure that individual majors are comparable in academic rigor and intellectual coherence to those regularly available through the departments and programs of the college.

Major:
Individual Major, A.B., B.S.

BACHELOR’S DEGREE REQUIREMENTS

You must satisfy four groups of requirements before you can become eligible for candidacy for the bachelor's degree; see Bachelor's Degree Requirements, below. The four groups are:

Bachelor's Degree Requirements

University Requirements
All students must fulfill the following University of California requirements:
Entry Level Writing Requirement
American History and Institutions Requirement
Unit Requirement
Residence Requirement
Scholarship Requirement

General Education Requirement
All students must fulfill the campus General Education Requirement; see General Education Requirement, on page 97.

College Requirements

College of Agricultural & Environmental Sciences
Unit
Residence
Scholarship
English Composition
College of Biological Sciences
Unit
Scholarship
English Composition
Foreign Language (only A.B. & B.A.S. degrees)
Breadth (only A.B. & B.A.S. degrees)
College of Engineering
Unit
Residence
Scholarship
English Composition
Design
Current Catalog Curriculum
College of Letters and Science
Unit
Residence
Scholarship
English Composition
Area (Breadth)
Foreign Language (A.B. & B.A.S. degrees)

Major Requirements
Course requirements for each major are listed in the Programs and Courses section of this catalog.
Students whose native or school language is not English, and some students whose schooling combines work in the United States and in another country, must demonstrate proficiency in English. The level of proficiency must meet the standards of both the UWP and the Entry Level Writing program. The results of the Analytical Writing Placement Examination administered at the beginning of each quarter determine whether a student has met the Entry Level Writing Requirement or must take specific course work in the UWP Students held for UWP ESL course work have three quarters to meet the Entry Level Writing Requirement plus the number of quarters required in UWP ESL.

American History and Institutions

The American History and Institutions requirement ensures that every graduating student will have at least a minimum knowledge of the background of this country's development and an understanding of the political, economic and social interrelationships of its way of life.

You may meet this requirement in any of these ways:

- Complete one high school unit in American history, or 1/2 high school unit in American history and 1/2 high school unit in civics or American government, with a grade of C or better in each course
- Complete any one of the following courses:
  - African American and African Studies 10, 100
  - Asian American Studies 1
  - Chicana/Chicano Studies 10
  - Economics 111A, 111B
  - Native American Studies 1, 10, 116, 130A, 130B, 130C
  - Political Science 1, 5, 100, 102, 104, 105, 106, 108, 109, 113, 130, 131, 160, 163
  
  Students electing to complete one of the above courses in order to meet this requirement are subject to the rules for prerequisites and majors
- Present evidence that the requirement has been accepted as satisfied at another campus of the university
- Present evidence that the requirement has been satisfied through courses in the area of American History and Institutions at another collegiate institution whose credits are acceptable for transfer to UC Davis
- Successful completion of the Advanced Placement (AP) Examination in American History or American Government and Politics with a score of 3 or higher
- Successful completion of the International Baccalaureate (IB) Examination in History of the Americas Higher Level (HL) with a score of 5, 6, or 7
- Successful completion of the SAT Subject Examination in U.S. History with a score of 550 or higher

International students, regardless of the type of visa they hold, must meet the university's American History and Institutions requirement for graduation.
Unit Requirements

A minimum of 180 quarter units is required for graduation. These must be distributed according to the minimum requirements set forth by the faculty of your college.

A maximum of 12 units of Internship Courses (92, 192, or a combination) may be counted toward the 180-unit bachelor's degree requirement.

The acceptability of transfer courses for unit credit is determined by Undergraduate Admissions. The acceptability of such courses toward specific requirements is determined by the individual college or school.

Students should refer to the Advanced Placement Examination chart and their transcripts to eliminate the possibility of duplication of credit.

Residence Requirements

The minimum residence requirement for a bachelor's degree at the University of California is one academic year (three quarters).

Thirty-five of the final 45 quarter units completed by each candidate must be earned while in residence on the UC Davis campus. Each summer session in which a student completes a course of at least 2 quarter units may be counted as half a quarter's residence. Not more than 18 of these 35 quarter units may be completed in summer session courses at UC Davis.

Regularly approved courses (laboratory, field, or other individual work) done outside of a regular session but under the direction of a department of instruction may be accepted upon the recommendation of the department in partial fulfillment of the residence requirement for the bachelor's degree. Registration is with the consent of the instructor only.

UC Davis Extension courses are not accepted as part of the university residence requirement.

There are additional residence requirements for students enrolled in the Colleges of Letters and Science and Engineering. If you are planning to study abroad during your senior year, you should consult your college dean's office or the Biology Academic Success Center.

With the approval of the dean of a student's college or school, a candidate for the bachelor's degree who was in active service in the armed forces of the United States in the year preceding the awarding of the degree may be recommended for the degree after only one quarter of university residence in which the candidate completes at least 16 units or passes a comprehensive examination in the major or field of concentration.

Scholarship Requirement

To receive a bachelor's degree, you must obtain twice as many grade points as units (a 2.00 GPA) for all courses you have attempted in the university. An exception to this rule is made for those students undertaking certain honors courses. For specific college requirements consult the college sections following.

GENERAL EDUCATION REQUIREMENT

The General Education (GE) requirement promotes the intellectual growth of all undergraduates by ensuring that they acquire a breadth of knowledge that will enlarge their perspectives beyond the focus of a major and serve them well as participants in a knowledge-based society. It seeks to stimulate continued growth by providing knowledge of both the content and the methodologies of different academic disciplines. It involves students in the learning process by its expectation of considerable writing and class participation, and encourages students to consider the relationships between disciplines.

New General Education (GE) Requirement; Fall 2011 and On

The following section pertains to students who matriculated to UC Davis for the first time in Fall 2011 or later. Students who matriculated prior to Fall 2011 should refer to the Former General Education (GE) Requirement; Pre-Fall 2011, on page 98.

The GE requirement has two components, Topical Breadth and Core Literacies, and is defined in terms of units, not courses.

Topical Breadth Component . . . . . . . . . . . . . . . . 52 units

A GE course in topical breadth addresses broad subject areas that are important to the student's general knowledge. The units of most undergraduate courses at UC Davis are assigned to one of the three Topical Breadth Areas.

Note: In the case of a course that has been certified in more than one Topical Breadth Area, a student may count the units of the course in only one of the areas in which it has been certified.

- Arts and Humanities . . . . . . . . . . . . . . . . . . . 12-20 units
- Science and Engineering . . . . . . . . . . . . . . . . . . 12-20 units
- Social Sciences . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 12-20 units

Core Literacies Component . . . . . . . . . . . . . . . . . . . . 35 units

The literacies are crucial both for success in one's profession and also for a thoughtful engaged citizenship in the community, nation and world.

Note: In the case of a course that has been certified in more than one Core Literacy Area, a student may count the units of the course in only one of the core literacy areas in which it has been certified. Additionally, GE credit for a core literacy course a student completes before it was an approved GE literacy course is subject to the relevant dean's office or the Biology Academic Success Center approval.

1. Literacy with Words and Images . . . . at least 20 units

The objective of this core literacy is to help students communicate their ideas effectively in written, oral and visual forms. The requirement also seeks to enhance students' critical judgment of oral, written, and visual messages created by others.

Note: A student must have completed the Entry Level Writing Requirement (formerly known as the Subject A requirement) before receiving General Education credit for coursework satisfying requirements a, b, and Writing Experience coursework satisfying requirement c, below.
a. **English Composition** ......................... 8 units
   (as described by College of A&ES, College of L&S, College of Biological Sciences, or College of Engineering)

b. **Writing Experience** coursework in the student’s major or in other departments .................. at least 6 units

Courses in writing experience provide students instruction on how to communicate ideas in the subject matter of the course. The opportunity to improve writing after having received careful commentary is crucial to this requirement.

c. **Oral Skills** coursework or additional writing experience coursework .............................. at least 3 units

Courses in oral literacy involve effective communication of ideas through oral presentation and build on and strengthen the critical thinking skills exercised through writing. As an alternative to developing oral communication skills, the student may take additional coursework certified as writing experience (see requirement b, above).

d. **Visual Literacy** coursework ...................... at least 3 units

Courses in visual literacy provide students with the analytical skills they need to understand how still and moving images, art and architecture, illustrations accompanying written text, graphs and charts, and other visual embodiments of ideas inform and persuade people. Coursework may stress the skills needed to communicate through visual means as well as the analytical skills needed to be a thoughtful consumer of visual messages.

2. **Civic and Cultural Literacy** ................. at least 9 units

The objective of this core literacy is to prepare students for thoughtful, active participation in civic society. Students will learn to think analytically about American institutions and social relations, understand the diversity of American cultures, and see the relationships between national and local cultures and the world.

   a. **American Cultures, Governance, and History** ........................................... at least 6 units; of which at least 3 units must be in coursework certified as focusing on issues of domestic diversity.

Courses in American Cultures, Governance, and History provide students with an understanding and appreciation of the social and cultural diversity of the United States and of the relationships between these diverse cultures and larger patterns of national history and institutions.

   b. **World Cultures** ........................... at least 3 units

Courses in World Cultures provide students with a global perspective in a world where communication technologies, economic relationships, and the flow of people across national borders increasingly challenge national identities and create transnational cultures. Students can satisfy this requirement through coursework or through certified study abroad.

3. **Quantitative Literacy** ......................... at least 3 units

The objective of this core literacy is to provide students with an understanding of quantitative reasoning and skills for evaluating claims and knowledge generated through quantitative methods.

4. **Scientific Literacy** ............................ at least 3 units

The objective of this core literacy is to provide students with an understanding of the fundamental ways scientists approach problems and generate new knowledge, and an understanding of how scientific findings relate to other disciplines and to public policy.

**Additional Conditions**

**Meeting Total Units Requirement.** With the exception of units used to satisfy the English Composition element, units approved for a Core Literacy will be accepted toward satisfaction of the appropriate Topical Breadth component. Course units that satisfy requirements in the candidate’s major or majors may also be counted toward satisfaction of General Education requirements.

**Grading.** Students may take courses P/NP to fulfill their General Education requirements, up to the limits set by college and campus regulations.

**Advanced Placement and International Baccalaureate.** Students may not present Advanced Placement or International Baccalaureate credit in satisfaction of GE requirements, except insofar as it may be applied to the English Composition component of the Literacy with Words and Images requirement.

**Transfer Students** who have successfully completed the Intersegmental General Education Transfer Curriculum (IGETC) lower division course work are exempt from all General Education requirements that may be met with lower-division courses. Transfer students who have not completed the IGETC, and who are not entitled to graduate under the provisions of a General Catalog issued prior to Fall 2011 as permitted by the applicable college policy on degree requirement changes, are required to satisfy all General Education components under the revised requirement but may offer previously completed coursework toward their satisfaction.

**Approved Revised General Education Courses**

See New General Education Courses; Fall 2011 and On, on page 552, for a list of the courses that provide General Education credit. Please note that you cannot claim GE credit for a course you completed before it was an approved GE course.

**Former General Education (GE) Requirement; Pre-Fall 2011**

The following section pertains to students who matriculated to UC Davis prior to Fall 2011. Students who matriculated for the first time in Fall 2011 or later should refer to the New General Education (GE) Requirement; Fall 2011 and On, on page 97.

The GE requirement has three components: Topical Breadth, Social-Cultural Diversity and Writing Experience.

**Topical Breadth Component** .......................... 6 courses

Topical breadth courses are grouped into three broad subject areas of knowledge:

1. **Arts and Humanities.** Courses in this area provide students with knowledge of significant intellectual traditions, cultural achievements and historical processes.
2. **Science and Engineering.** Courses in this area provide students with knowledge of major scientific ideas and applications. They seek to communicate the scope, power, limitations and appeal of science.

3. **Social Sciences.** Courses in this area provide students with knowledge of the individual, social, political and economic activities of people.

To fulfill the topical breadth component of the General Education requirement you must successfully complete three approved courses in each of the two subject areas of topical breadth other than the one that includes your major. To identify the area of topical breadth to which your major belongs, see Topical Breadth Assigned Subject Areas for Majors and Minors; Pre-Fall 2011, on page 591. Each academic major has been assigned to one of the three subject areas of GE topical breadth. If you have any questions concerning the subject area to which your major is assigned, consult the relevant dean's office or the Biology Academic Success Center.

A course approved in more than one topical breadth subject area may only be offered in satisfaction of only one of those subject areas.

- **Double majors** will satisfy the topical breadth subject areas to which they are assigned. You will still be responsible for completing any topical breadth subject area in which you do not have a major. If, for example, two majors are assigned to the same subject area, you will need to complete the topical breadth component in each of the other two subject areas. If, on the other hand, you complete two majors that have been assigned to two different areas of topical breadth then you will be responsible for completing the topical breadth component in only the remaining subject area.

- **Individual majors** are assigned to an area of topical breadth at the time they are approved by your college.

- **Each minor** has also been assigned to one of the three subject areas of topical breadth. A minor assigned to a subject area other than the area of your major will satisfy the GE course requirement for topical breadth in that subject area.

- **Courses in your major** may count toward the topical breadth component when those courses are also assigned to subject areas other than the area of your major.

**Social-Cultural Diversity .......................... 1 course**

Courses in social-cultural diversity teach students the significance of the many patterned differences that characterize human populations—particularly differences of gender, race, ethnicity, sexuality, religion or social class.

To fulfill the social-cultural diversity component of the GE requirement, you must successfully complete one course from the approved list; see Former General Education Courses; Pre-Fall 2011, on page 576.

**Writing Experience .............................. 3 courses**

Courses in writing experience improve student writing through instruction and practice. Writing assignments are designed to encourage students to think critically and communicate effectively. Courses require one extended writing assignment (five pages or more) or multiple short assignments. Writing is evaluated not only for content, but also for organization, style, use of language, and logical coherence.

To fulfill the writing experience component of the GE requirement, you must successfully complete three courses from the approved list at the back of this catalog.

**Note:** You must satisfy the university Entry Level Writing Requirement (formerly Subject A) before you take any writing experience course for GE credit. If you take an approved writing experience course, but have not yet satisfied the Entry Level Writing Requirement, you will not receive GE writing experience credit for that course.

**Additional Conditions**

**Letter Grading.** All courses taken to fulfill the GE requirement must be taken for a letter grade. No GE credit will be awarded for a course that you take on a Passed/Not Passed basis.

**College and University Composition Requirements.** The following GE courses may not be used to satisfy university or college requirements in composition and GE writing experience simultaneously:

- Communication 1
- Comparative Literature 1, 2, 3, 4
- English 3
- Native American Studies 5
- University Writing Program 1, 18, 19, 101, 102 series, and 104 series

**Courses Approved for Multiple GE Components.** Courses approved for more than one component of the GE requirement (topical breadth, writing experience and social-cultural diversity) will be accepted toward satisfaction of all components for which the course has been approved.

**College of Engineering.** Beginning in Fall 2011, the General Education requirement changed. The new General Education requirement applies to freshmen admitted Fall 2011 or later. However, students admitted before Fall 2011 may follow the previous General Education requirement. To ensure accurate information about satisfying General Education, all students should schedule an appointment with their Engineering Departmental Adviser or speak with an adviser in the Undergraduate Advising office in 1050 Kemper Hall.

**Transfer Student Exemption for IGETC, TCC and UC Reciprocity.** You are exempt from the UC Davis GE requirement if you come from a California community college and are certified as having successfully completed the “Intergeneral Education Transfer Curriculum” (IGETC) or “Transfer Core Curriculum” (TCC), or if you come from another UC campus and are certified as having successfully completed the lower division breadth or General Education requirements of that UC campus (UC reciprocity).

If you are a Transfer student who has not completed TCC or IGETC prior to attending UC Davis, transfer work comparable to approved UC Davis GE courses may be used to satisfy the GE requirement, as determined by the college’s dean’s office or the Biology Academic Success Center.

**Approved Former General Education Courses**

See Former General Education Courses; Pre-Fall 2011, on page 576, for a list of the courses that provide General Education credit. Please note that you cannot claim GE credit for a course you completed before it was an approved GE course.
**General Education Theme Options**

The following section pertains to students who matriculated to UC Davis prior to Fall 2011.

General Education theme options are sets of GE courses sharing a common intellectual theme. Faculty from the College of Agricultural and Environmental Sciences has worked collaboratively to develop sets of complementary courses in several areas of interest. These GE theme options are not a separate element of the GE requirement, but a way of selecting your GE courses so that you may benefit from a coherent focus of study while completing the GE requirement.

Completion of a theme satisfies the GE requirement for students with majors assigned to the GE topical breadth area of Arts and Humanities. Students with majors assigned to the topical breadth area of either Science and Engineering or Social Science will need to complete additional GE courses in Arts and Humanities to satisfy the campus GE requirement.

Beginning a theme option does not prevent you from later choosing to take other approved GE courses to fulfill the GE requirement. If you choose to mix courses from a theme option and the broader GE course lists, you will need to make sure that the combination of courses you select will complete the campus GE requirement.

**COLLEGE REQUIREMENTS FOR THE BACHELOR'S DEGREE**

**College of Agricultural and Environmental Sciences**

**Unit Requirements**

Of the required 180 units counted toward a degree, 54 units must be upper division work.

**Unit Credit Limitations**

In addition, the following unit limitations apply to all majors:

- Not more than 6 units can be Physical Education 1 and 6
- Not more than 20 units can be courses numbered 90X, 92, 97T, 97TC, 99, 190C, 190X, 192, 197T, 197TC, or 199
- Not more than 12 units can be courses numbered 92 and/or 192 (credit will not be given for 192s or 199s taken before the completion of 84 units)
- Not more than 5 units per quarter of Special Study courses (99, 194H, 199)
- Not more than 9 units of professional courses (numbers 300–499) may be used toward the 54 upper division units

**Limitation on Credit for Units Graded P.** The Academic Senate limits the total number of courses graded P including units earned in courses graded “P/NP only,” to one third of the units completed on the UC Davis campus. The P/NP option is to be used only for elective courses and should not be used for major requirements.

**Credit for Open Campus (Concurrent) Courses.** Students may apply credit for courses taken in the Open Campus (Concurrent) Program through UC Davis Extension towards the 180-unit undergraduate degree requirement. The grade points earned when enrolled in Open Campus courses will count toward the calculation of a student's UC GPA upon his/her admission or readmission to regular student status at UC Davis. Students registered at UC Davis may not enroll in Open Campus courses.

**Credit for UC Davis Extension Courses.** Registered UC Davis students who plan to use academic credit earned in a UC Davis Extension course other than Open Campus (Concurrent) towards their UC Davis degree must obtain prior written approval from their College before registering in the UC Davis Extension. Upon approval students may apply a limited number of credits towards the 180-unit undergraduate degree requirements. Courses completed in UC Davis Extension will not count toward the calculation of a student’s UC GPA.

**Registration Beyond the 225-Unit Limit.** Students may not exceed 225 units; registration for enrollment when the limit has been reached may only be approved by the Dean. A petition to complete excess units may be picked up in the Dean’s office or in your major department.

**Residence Requirement**

Thirty-five of the final 45 quarter units completed by each candidate must be earned while in residence on the UC Davis campus.

**Scholarship Requirement**

Students in the College are required to attain a minimum grade point average of 2.000 for all courses specified as depth subject matter in their major. Options, specializations and emphases may be included. Consult your master adviser. Only grades earned in courses taken at UC Davis are included in the grade point calculation. Each candidate must complete a program of study either as prescribed in (a) a major approved by the Undergraduate Majors and Courses Standing committee and printed in this catalog, or (b) an individual major approved by the Individual Major Standing committee.

**English Composition Requirement**

Once the Entry-Level Writing requirement has been satisfied, you may begin taking courses to meet the College's English composition requirement.

The English Composition requirement may be met in one of three ways:

1. Either two courses emphasizing written expression or one course emphasizing oral expression, with a grade of C- (or P) or better. The following UC Davis courses satisfy this requirement:
   
   (a) one course must be selected from English 3, University Writing Program 1, 18, 19, 101, 102 series, 104 series or Nematology 150 (courses with primary emphasis in writing skills);
   
   (b) one course selected from the courses not selected above, or from Communication 1, Comparative Literature 1, 2, 3, 4, or Native American Studies 5 (courses emphasizing either writing or speaking skills);

2. Advanced Placement English score of 4 or 5 PLUS any course listed in 1(a) or 1(b) above EXCEPT University Writing Program 1 or English 3

OR

3. By passing the English Composition Examination administered by the College of Letters and Science upon completion of 70 units of degree credit (the examination does not yield credit).
English Composition Examination. The no-fee, no-unit examination is typically offered on a Saturday in October, January and April; for specific dates, see http://writing.ucdavis.edu/compexam/.

If students choose to take this challenge exam, they are strongly advised to do so in their junior year. Register for the English Composition Examination at http://writing.ucdavis.edu/compexam/ from the Monday before the exam date until Friday at noon or until no spaces remain. The AWPE/Upper-Division Composition Examination form, available at the UC Davis Bookstore, is required. It is recommended that students with disabilities contact the Student Disability Center at 530-752-3184 and the University Writing Program at 530-752-0450 at least two weeks prior to the exam date to arrange accommodations. No examinations are given during the summer.

General Education

You should consult your Dean's Office or department adviser in advance to determine exactly how your General Education courses will apply toward your major.

You can choose one of four General Education theme options to help plan your GE courses. The themes, Global Population and Environmental Issues; Biodiversity and Cultural Diversity; Food and Fiber; and Changing Agriculture are described in more detail in General Education Theme Options, on page 592.

Study Plan Approval

A Study Plan provides for attainment of specific long-term goals and should allow for the acquisition of prerequisite knowledge for courses to be taken in subsequent quarters; the fulfillment of College and major requirements; a proper balance between the demands of the courses and your ability to master the subject matter; and meeting the minimum progress requirements; see Course Load, on page 75.

In conjunction with a faculty adviser and/or staff adviser, you must plan and prepare a program that specifies your goals and shows how the graduation requirements will be met. It is a regulation that a written “study plan” be filed with your faculty adviser or staff adviser by the end of the second quarter of the junior year (having completed not more than 120 units either in residence and/or by transfer).

You may be denied registration for future quarters if you do not comply with this regulation. However, filing this study plan does not preclude a change of major or program modifications.

Major Degree Certification

A Major Certification is completed during the quarter you plan to graduate. At that time, you and your faculty adviser and/or staff adviser check to see that all major requirements have been completed. The Dean's Office completes the degree certification by verifying that all college and university requirements have been satisfied.

Degree Requirement Changes

On occasion, the faculty make changes in the requirements that students must satisfy to obtain the baccalaureate degree. So that you will not be penalized by changes that may work to your disadvantage and so that you will benefit by changes that assist you in completing your degree requirements, it is college policy that you may choose to fulfill the university, college and major requirements in effect at the time you were registered at UC Davis. If you have transferred to UC Davis from a community college, state college, or another university, you may follow the requirements as stated in any UC Davis General Catalog in effect either during the three years immediately preceding your transfer to UC Davis or at the time you first registered at that institution, whichever is most recent. Once you have chosen the year of the General Catalog under which you wish to be governed, you must satisfy all of the university, college and major requirements specified in that catalog.

College of Biological Sciences

All students in the College of Biological Sciences must satisfy the following college requirements in addition to satisfying the University Requirements, on page 96 and General Education Requirement, on page 97.

Unit Requirements

Total Units. Complete no less than 180 units allowing for the unit credit limitations listed below. No student may exceed 225 units in their academic career without approval of the Dean. Units earned in Advanced Placement and International Baccalaureate exams are not counted toward this 225-unit limit. Upon reaching 200 units, a student must submit a quarter-by-quarter graduation plan to the Biology Academic Success Center or a hold will be placed on his/her registration.

Upper Division Units. Complete 64 upper division units.

Unit Credit Limitations

Passed/Not Passed Units. All courses used to satisfy major requirements must be taken on a letter-graded basis, unless courses are only offered on a Passed/Not Passed basis.

The Academic Senate limits the total number of courses graded P, including units earned in courses graded “P/NP only,” to one third of the units completed on the UC Davis campus.

Physical Education. Maximum of 6 units of Physical Education 1, 6 and similar physical activity courses including transfer work.

Transfer work. Maximum of 105 units of credit earned at two-year institutions (community college).

Graduate Courses. Units from courses in the 200 series (with the exception of course 299) may apply toward the minimum 64-unit upper division requirement and/or as a substitution for undergraduate courses in the major under the following conditions:

Students must obtain written permission from the course instructor and the master adviser for their major.

The master adviser will confirm that students have a minimum 3.400 GPA in the major at the time that they register for the course.

Professional and teaching courses. Maximum of 9 units in courses numbered 300-399 and 400-499. These units may not be applied toward the 64-unit upper division requirement.

Upper division standing. Must complete 84 units before enrolling in 192, 194H and 199 to receive degree and upper division credit.

Special Study. Not more than 5 units per quarter of Special Study courses (99, 194H, 199).
• Nonstandard Courses. Maximum of 20 units of nonstandard courses including transfer work.*
Nonstandard courses are defined here as tutoring, internship, research, research conference, honors research and similar course activities. Some examples of these courses are, but are not limited to, courses numbered 90C, 92, 92C, 97T, 97TC, 99, 189, 190C, 191, 192, 192C, 193, 194H, 197T, 197TC, 199, etc. Courses numbered 98 or 198 are not included in this 20-unit limitation.

There are additional unit credit limitations on tutoring and internship units.
• Tutoring. Maximum of 3 tutoring units including but not limited to 97T, 97T, 97TC and 197TC.
• Internship. A maximum of 6 internship units including but not limited to 92, 192, 92C, 192C.

*Specific exceptions to these limits may be granted by the Committee on Undergraduate Petitions based on the uniqueness of the experiences and their concordance with the petitioner's educational objectives.

Credit for Open Campus (Concurrent) Courses. Students may apply credit for courses taken in the Open Campus (Concurrent) Program through UC Davis Extension towards the 180-unit undergraduate degree requirement. The grade points earned when enrolled in Open Campus courses will count toward the calculation of a student's UC GPA upon his/her admission or readmission to regular student status at UC Davis. However, the units earned do not satisfy the university residence requirement. Students registered at UC Davis may not enroll in Open Campus courses.

Residence Requirement
Meet university residence requirement. No additional college residence requirements.

Scholarship Requirement
Students must attain at least a 2.000 GPA for all courses required in their major. Students must also attain a 2.000 GPA in all Depth Subject Matter courses required in their major. Students who fail to maintain a 2.000 GPA in courses required for their major over two consecutive quarters may be required to withdraw from the major.
• Repeating Courses. Students may once repeat courses in which they received a grade of D+ or less. To repeat a course more than once, students must petition the Dean for approval prior to enrolling in the course.
• Passed/Not Passed Grading Option. All courses used to satisfy major requirements must be taken on a letter-graded basis, unless courses are only offered on a Passed/Not Passed basis.

English Composition Requirement
The English Composition requirement may be satisfied in one of two ways:
1. Completing 8 units, to include 4 upper division units, in English composition courses with at least a C- or Passed grade from the following list: Comparative Literature 1, 2, 3, 4, English 3, Native American Studies 5, University Writing Program 1, 18, 19, 101, 102 series, or 104 series.

OR
2. Passing the English Composition Examination, administered by the Entry Level Writing program, upon completion of 70 units of degree credit. This examination does not yield credit. Students interested in entering the health science field should check with the Health Sciences Advising Office or the Biology Academic Success Center before choosing this option.

English Composition Examination. The no-fee, no-unit examination is typically offered on a Saturday in October, January, and April; for specific dates see http://writing.ucdavis.edu/compexam/.

If students choose to take this challenge exam, they are strongly advised to do so in their junior year. Register for the English Composition Examination at http://writing.ucdavis.edu/compexam/ from the Monday before the exam date until Friday at noon or until no spaces remain. The AWPE/Upper-Division Composition Examination form, available at the UC Davis Bookstore, is required. It is recommended that students with disabilities contact the Student Disability Center 530-752-3184 and the University Writing Program 530-752-6283 at least two weeks prior to the exam date to arrange accommodations. No examinations are given during the summer.

Additional Bachelor of Arts Requirements
Bachelor of Arts degrees are available in Biological Sciences; Evolution, Ecology and Biodiversity; Exercise Biology; Microbiology; and Plant Biology. These degrees offer students an opportunity to broaden their education while pursuing a rigorous life science major.

Candidates for the Bachelor of Arts degrees must complete two additional requirements.

1. Foreign Language. The requirement can be met in one of three ways:
• Complete with passing grades 15 quarter units of college level course work, or the equivalent thereof, in a single language.
• Attain a minimal score prescribed by the Committee on Undergraduate Curriculum and Educational Policy, in the College Entrance Examination Board Achievement Test in Foreign Language, which may be taken at any time during the student's high school career, or any other achievement test approved by the Committee on Undergraduate Curriculum and Educational Policy.
• Placement beyond the 15-unit level on a placement/proficiency examination offered by one of the foreign language departments of the University.

2. Breadth Requirements. Satisfaction of the campus General Education requirement (or IGETC for transfer students) in effect Fall 2011 will satisfy the Breadth requirement. Students that matriculated prior to Fall 2011 have the option of completing the Breadth Requirement specified in the College of Biological Sciences regulations prior to this revision. Completion of a minor in the humanities, social sciences or fine arts can offer structure and coherence to the courses selected for satisfaction of the requirement.

Declaration of Major/Undeclared—Life Sciences
Students must declare a major by 90 units. A hold will be placed on a student's registration if he/she is still undeclared after completing 90 units.
All changes of major and college must be completed before the beginning of the student's quarter of graduation.

Students who are enrolled in a major administered by the College of Biological Sciences and students who are Undeclared-Life Sciences see a staff adviser in the Biology Academic Success Center for their major, university, general education, and college academic advising. Master faculty advisers are also available in the department that houses their major, as listed in the catalog, or at the Biology Academic Success Center.

**Degree Check**

Students are encouraged to meet with their academic adviser at least once a year to ensure timely graduation. Students are required to consult a Biology Academic Success Center academic adviser at three points in their academic careers:

- In their first two quarters on the Davis campus.
- Before accumulating 90 units.
- Before accumulating 135 units.
- In addition, if you are taking courses which, if passed, will cause your unit total to exceed 200 units and you intend to register for the next quarter, you must file a plan with your adviser that leads to graduation within 225 units. If the plan anticipates registering after you have accumulated 225 units, the plan must be submitted to the Dean for approval.

If you do not meet any of these advising requirements, a hold may be placed on your registration.

**Degree Requirement Changes or Catalog Rights**

On occasion, the faculty makes changes in the requirements that students must satisfy to obtain the baccalaureate degree. So that you will not be penalized by changes that may work to your disadvantage and so that you will benefit by changes that assist you in completing your degree requirements, it is college policy that you may choose to fulfill the university and college requirements (see [General Education Requirement, on page 97](#) for an exception) as stated in any UC Davis General Catalog in effect at the time you were registered at UC Davis. If you have transferred to UC Davis from a community college, state college, or another university, you may follow the requirements as stated in any UC Davis General Catalog in effect either during the three years immediately preceding your transfer to UC Davis or at the time you first registered at that institution, whichever is most recent. Once you have chosen the year of the General Catalog under which you wish to be governed, you must satisfy all of the university and college requirements specified in that catalog.

With respect to the completion of your major requirements, most of the majors in the College of Biological Sciences require completion of the major degree requirements in effect at the time you officially declared your major. However, because departments differ in how they handle these matters, check with the department or major program office if you have any questions about which requirements apply to you.

**College of Engineering**

**Prerequisite Requirements**

Engineering is a discipline that requires mastery of prerequisite coursework before you can move forward in the curriculum. You should plan to repeat any engineering requirement in which you earned a grade of less than C-. You are encouraged to adhere carefully to all prerequisite requirements. The instructor is authorized to drop you from a course for which you have not completed the stated prerequisites.

**Current Curriculum Requirement**

Because engineering is a rapidly developing profession, the things an engineer needs to know change on an almost daily basis. To respond to this, the faculty members make changes to the curriculum on a regular basis. In order to ensure that students graduate with the most current engineering knowledge, College of Engineering students must complete the major requirements in effect in the academic year of graduation or in the immediately preceding academic year. The College of Engineering Bulletin is published every year with current degree requirements. Information about undergraduate studies in the College of Engineering can be found at [http://engineering.ucdavis.edu/undergraduate/](http://engineering.ucdavis.edu/undergraduate/).

When degree requirements change, a transition plan is developed to ensure that students who are getting regular advising and following recommended course sequences will be able to graduate within four years. Contact your departmental adviser or the Undergraduate Advising Office for more specific information or questions. The list of advisers can be found at [http://engineering.ucdavis.edu/undergraduate/advisors/](http://engineering.ucdavis.edu/undergraduate/advisors/).

**Unit Requirements**

Each candidate for the degree of Bachelor of Science in Engineering must satisfactorily complete an approved curriculum in engineering. No unit of coursework you complete may be used to satisfy two different degree requirements, except under any of the following conditions:

- You may use course units to satisfy both General Education 3 requirements and course requirements for the major.
- You may use course units for two different degree requirements in cases where the catalog specifically states that course units may be used to satisfy two different degree requirements.
- You may use course units for permitted double majors within the College of Engineering.

Detailed requirements for the approved curricula are given in the Programs and Courses chapter of this catalog; to see the courses required in your major, consult this section. The minimum number of required units varies with the curriculum. You are responsible for planning your program and satisfactorily completing all degree requirements.

You may, for good cause, request a modification of particular degree requirements by submitting a student petition. These petitions, available from your departmental adviser or from the Undergraduate Advising Office, can be valuable aids in resolving individual program conflicts or other special problems. Such petitions are subject to approval by the Undergraduate Educational Policy Committee, composed of one faculty representative from each department and non-voting staff advisers and student repre-
sentatives. The Associate Dean for Undergraduate Studies serves as ex-officio member of this committee. A negative decision by the committee may be appealed to the College Executive Committee.

**Transfer students.** To be eligible for transfer into the College of Engineering, you must have at least ninety transferable quarter units (sixty semester units) from another institution. You must complete all lower division engineering major requirements with a minimum GPA of 3.100 in these required courses.

We give highest priority for transfer admission to California community college transfer applicants who have completed two transferable English composition courses and all of the required lower division engineering major requirements offered at the community college they attended.

We give lower priority for admission to community college applicants who are missing one or two of the required lower division engineering major requirements. Community college applicants will be denied admission if they are missing three or more of the required lower-division courses.

Priority is next given to junior-level transfers from other UC campuses and other four-year institutions in and out of state. These students must also have completed all of the required lower-division engineering major requirements.

Successful applicants are admitted to a specific major. You may be limited in your ability to change majors within the college after you are admitted.

**Transfer students.** To be eligible for transfer into the College of Engineering you must have at least ninety transferable quarter units (sixty semester units) from another institution. To be a competitive applicant, you must have a minimum overall GPA of 3.100.

Highest priority for transfer admission is given to California community college transfer applicants who have completed two transferable English composition courses and all of the required lower division engineering coursework offered at the community college they attended.

We give lower priority for admission to community college applicants who are missing one or two of the required lower division courses. Community college applicants will be denied admission if they are missing three or more of the required lower-division courses.

Priority is next given to junior-level transfers from other UC campuses and other four-year institutions in and out of state. These students must also have completed all of the required lower-division coursework.

Successful applicants are admitted to a specific major. You may be limited in your ability to change majors within the college after you are admitted.

**Transfer advising and information.** For more specific advice on lower-division requirements for community college students, meet with the transfer counselor at your institution or see the Assist website at [http://www.assist.org](http://www.assist.org). Transfer credit agreements are available on the College of Engineering website at [http://engineering.ucdavis.edu/transfer-credit-agreements/](http://engineering.ucdavis.edu/transfer-credit-agreements/). You may also contact the College of Engineering Undergraduate Advising Office 530-752-1979.

California Community college students should consider a Transfer Admission Guarantee (TAG), which is a formal written agreement specifying the courses you need to complete and the grade point average you need to earn to be admitted. A signed agreement guarantees that you will be admitted to UC Davis in the major you want and for the term you have chosen—provided that you complete the agreement and apply for admission during the open filing period. If you would like more information on the TAG program, see your community college counselor or see [http://engineering.ucdavis.edu/undergraduate/transfers/transfer-admission-guarantee-tag-program/](http://engineering.ucdavis.edu/undergraduate/transfers/transfer-admission-guarantee-tag-program/).

We also participate in the Transfer Opportunity Program, which encourages community college students to transfer to UC Davis and provides them with services to ease the transition. You can use the Transfer Opportunity Program to get information about admission and transfer requirements, academic programs, financial aid, housing, tutoring, campus life and other services.

Upon your admission as a transfer student, you are classified as having upper division status, but you are obligated to complete all lower division course requirements for the major before your lower division requirements are considered complete. You may, however, start your upper division coursework while completing your lower division requirements, provided that you meet all prerequisites for the upper division courses.

**Credit for Open Campus (Concurrent) Courses.** Students may apply a maximum of 16 units of credit for courses taken in the Open Campus (Concurrent) Program through UC Davis Extension towards the 180-unit undergraduate degree requirement. The grade points earned when enrolled in Open Campus courses will count toward the calculation of a your UC GPA upon your admission or readmission to regular student status at UC Davis. Students registered at UC Davis may not enroll in Open Campus courses. Open Campus is not available to students who have been enrolled at UC Davis within the last 12 months and have not graduated, unless an exception letter is provided to Extension by the Associate Dean for Undergraduate Studies of the College of Engineering.

**Residence Requirement**

College of Engineering students must meet the university residence requirement. There are no additional college residence requirements.

**Scholarship Requirement**

In addition to meeting the university scholarship requirement, College of Engineering students are required to maintain a 2.000 grade point average for all undergraduate coursework within Engineering.

**English Composition Requirement; Upper Division**

Prospective engineering employers cite the ability to write well and communicate effectively as a desirable trait. Because engineers must be able to explain complex ideas, it is critical that you pay close attention to the development of writing and communication skills. All students admitted to the University must complete the Entry Level Writing Requirement (see page 96) before credit for any composition course or general education writing experience course will be granted.

Once the Entry Level Writing Requirement has been satisfied, there are two distinct composition requirements for engineering students:
• Lower-division composition. This requirement can be satisfied by completion of an Advanced Placement English exam with a score of 4 or 5; International Baccalaureate credit for English 3; or completion of one of the following courses with a grade of C- or better: University Writing Program 1, English 3, Comparative Literature 1-4, or Native American Studies 5.

• Upper division composition. Requirements for upper division composition vary by major. Please see your departmental adviser to determine the coursework that has been approved for your major.

Please note that when you use coursework to satisfy either of the composition requirements, you must earn a grade of C- or better.

Engineering Design Requirement

Engineering design is the process of devising a system, component, or process to meet certain needs. Design involves a decision-making process (often iterative), in which the basic sciences, mathematics and engineering sciences are applied to convert resources optimally to meet a stated objective. Among the fundamental elements of the design process are the establishment of objectives and criteria, synthesis, analysis, construction, testing and evaluation. You must take an appropriate amount of design course work through a combination of required and restricted elective courses. Specific comments about design are included in individual curriculum descriptions. You should also review the design content of your individual program with your adviser in the course of completing the upper division advising worksheet.

Electives

In general, there are three kinds of elective courses in the engineering curricula; General Education, Technical and Unrestricted.

General Education Electives. Because, as an engineer, you will be a significant participant in the human setting, you will need to have a breadth of education that will allow you to deal with contemporary social issues and to understand the impact of engineering solutions in the global and societal context. To these ends, you must complete you must complete the UC Davis General Education requirement details; see page 97.

Since all engineering programs are in the Science and Engineering GE topical breadth area, you will fulfill the campus GE requirements by taking courses in the Arts and Humanities and Social Sciences areas.

In satisfying the GE requirement note that (a) you must take GE courses for a letter grade, and (b) you must satisfy the Entry-Level Writing requirement before you can receive writing experience credit for any course.

In consultation with your academic adviser, you should attempt to design a coherent approach to contemporary issues by using your GE elective.

Students in the College of Engineering will complete any version of the general education requirement in effect between the time of matriculation and the time of graduation. Readmitted students will complete any version of the general education requirement in effect between the time of readmission and graduation.

Unrestricted electives. If your curriculum allows for unrestricted electives, you may count any course for which university credit is allowed as an unrestricted elective in the engineering curricula.

Degree Check

Use a Degree Requirement Check sheet for your major to monitor your progress toward completing degree requirements. These check sheets are available from the Undergraduate Advising Office in 1050 Kemper Hall and from your major adviser. The University holds students responsible for knowing and completing all degree requirements. Degree checks are performed as a courtesy to help you make regular progress toward fulfilling all major, college, and university requirements. You should request a preliminary degree check three quarters prior to graduation and a follow-up degree check prior to the beginning of a your final quarter. Requests can be submitted to the Undergraduate Advising Office in 1050 Kemper Hall.

College of Letters and Science

Unit Requirements

A minimum of 180 units is required for the bachelor’s degree. Of these units, 64 must be earned in upper division courses.

Registration Beyond the 225-unit Limit. You are expected to fulfill all degree requirements within the 180- to 225-unit range. Once 225 units have been completed (excluding units awarded for College Board Advanced Placement Examinations or International Baccalaureate Examinations), you may register only with the permission of the dean. Such permission is rarely granted and then typically only to allow completion of minimum degree requirements. You will be expected to adhere to a program of courses agreed upon and to meet other conditions that may have been set. Approval must be obtained before you will be permitted to register for courses for the quarter following completion of 225 or more units.

If you are in good standing, you will be able to complete 12 quarters or the equivalent (e.g., four years) of college work even if you have earned more than 225 units before you finish your fourth year. You must petition for continuation, however, and file the quarter-by-quarter course program you have planned.

Unit Credit Limitations

For certain courses, limits have been established on the number of units that can be counted towards the 180-unit minimum required for the degree. To avoid discovering just before graduation that you are short units, keep track of the number of units you have taken in each of the following categories.

Limitation on Credit for Graduate and Professional Courses. Undergraduates may enroll in graduate and professional courses in the 200, 300, and 400 series subject to the restrictions described in Academic Information, on page 73, in this catalog. Graduate and professional courses that have been completed will be listed on the student’s transcript in the usual manner. However, the units earned may be counted toward degree requirements only under the conditions listed below.

Within the limitations A, B and C given below, undergraduate students in the College may count an unlimited number of units in graduate 200 series courses and up to a combined total of 9 units in 300 and 400 series professional courses toward degree requirements. These units, however, are not counted as upper division units unless this is granted by petition to the dean.
A. The recommendations of the instructor in the course and the department chairperson—in addition to approval from the dean—must be obtained by petition in order to receive credit toward the degree for the following kinds of courses:

- All graduate courses 200–298, whether offered by a department or program outside of or within the College of Letters and Science
- All professional courses 300–398 for teachers offered outside of the College of Letters and Science
- All postgraduate professional courses 400–498 offered outside of the College of Letters and Science
- All variable unit courses 300–398 and 400–498 offered within the College of Letters and Science

B. The minimum eligibility conditions for an undergraduate student in the College to petition for degree credit for a 200, 300, or 400 series course are a UC grade point average of 3.300 and completion of 18 upper division units basic to the subject matter of the course. These eligibility conditions may be waived, however, upon the recommendation of the course instructor and concurrence of the department chairperson if the student's preparation warrants exception.

C. Undergraduates in the College cannot receive degree credit for special study courses 299, 399, or 499.

Limitation on Credit for Units Graded P. Excluding courses that are graded on a Passed/Not Passed (P/NP) basis only, the number of units graded P that may be accepted towards a degree in the College of Letters and Science is limited to not more than one fourth of the units completed in residence on the UC Davis campus.

The Academic Senate limits the total number of courses graded P, including units earned in courses graded "P/NP only," to one third of the units completed on the UC Davis campus. This limitation applies to all UC Davis undergraduates, including Letters and Science students.

Limitation on Credit for UC Davis Extension Courses.

A. UC Davis Extension courses with a designator of "X." Students may apply credit earned through lower division and upper division UC Davis Extension "X" courses towards the 180-unit requirement only with written approval from the dean prior to registration. The degree credit allowed by the dean for such courses is usually less than the unit value listed in the course description. Additional limitations on UC Davis Extension "X" courses include: a maximum of 9 units may be offered for elective credit only and may not be applied toward fulfillment of the Area, Foreign Language, Upper Division, or Residence requirements of the College.

B. UC Davis Extension courses with a designator of "XD." Students may apply credit earned through lower division and upper division UC Davis Extension "XD" courses towards the 180-unit requirement. Additionally, credit from such courses may be applied toward fulfillment of all university, campus, college and major unit and subject matter requirements—including the Area, Foreign Language, Upper Division and Residence requirements of the College—in the same manner that the corresponding regular UC Davis course is so accepted.

C. UC Davis Extension courses with a designator of "XDC" (Open Campus (Concurrent) Program). Subject to the following conditions, students may apply credit earned through lower division and upper division UC Davis Extension Open Campus (Concurrent) courses i.e., those bearing the "XDC" designator—towards university unit and subject requirements, and, effective Fall 2003, the calculation of the student's UC GPA, upon admission or readmission to regular student status at UC Davis.

- Students on leave of absence and regular status students when matriculated, or regular status students for a period of one calendar year following the last term of regular enrollment at UC Davis, may not enroll in Open Campus (Concurrent) courses. Exceptions to this policy for undergraduate students may be made only under extraordinary circumstances by petition with prior approval by the dean and the Dean of UC Davis Extension.
- Concurrent ("XDC") courses do not count toward satisfaction of the University residence requirement or the residence requirements of the campus or the college.
- Concurrent ("XDC") courses may constitute at most half of the units offered in satisfaction of the upper division requirements of the major.
- In the event that the faculty of the College imposes further restrictions on the number of units of UC Davis Extension Open Campus (Concurrent) course work that may be applied to undergraduate degree programs, the allowable number of units of course work will be determined chronologically, starting with the course completed first. Grade point credit for such courses will be determined in the same manner.

Other Unit Credit Limitations. The following are additional courses that have limits on the number of units that can be counted toward your degree.

- Internship courses (numbers 92, 192): 12 units maximum including internship units taken at other institutions; see Nonstandard courses
- Music 130, 131, 140-150 (combined): 19 units maximum
- Nonstandard courses (92, 97T, 97TC, 99, 192, 194H, 197T, 197TC, 199 and similar courses): 30 units maximum or one-sixth of the units taken at UC Davis, whichever is the smaller; note the separate unit limits on internship, special study and tutoring courses; and major limitations
- Physical Education 1 and 6 (combined): 6 units maximum
- Special Study courses (99, 194H, 199): 5 units maximum in any one quarter; see Nonstandard courses
- Tutoring courses (97T, 97TC, 197T, 197TC): 10 units maximum; see Nonstandard courses, above

Residence Requirement

While registered in the College of Letters and Science, a minimum of 27 upper division units, including 18 upper division units in the major, must be completed on the UC Davis campus; work completed while registered in the UC Education Abroad Program or the UC Davis Extension Open Campus Program does not satisfy campus or College Residence requirements.

Scholarship Requirement

The minimum grade point average to satisfy the scholarship requirement is 2.000 for all courses counted toward the major and for all upper division courses used to satisfy major requirements. Only grades earned in courses taken at UC Davis will be included in the grade point computations. To obtain these minimum aver-
ages in the major, you may repeat courses that are graded D or F. If you have to repeat a course more than once, you need the dean’s prior approval.

**English Composition Requirement**

The English Composition requirement can be met in one of two ways:

1. By passing the English Composition Examination upon completion of 70 units of degree credit (the examination does not yield credit);

   OR

2. By completing with a grade of C– (or P) or better
   - One course from English 3, Comparative Literature 1, 2, 3, 4, Native American Studies 5, or University Writing Program 1, 1V, 1Y, 18, 19;
   - and
   - One course from University Writing Program 101, 102 series, or 104 series, which must be taken after 84 units have been completed.

**Transfer Courses in English Composition.** Transfer courses considered by the Dean to be equivalent or comparable to English 3, Comparative Literature 1, 2, 3, 4, Native American Studies 5, or University Writing Program 1, 1V, 1Y, 18, 19, 101, or 104 series, will be accepted toward satisfaction of the English Composition requirement. Note that University Writing Program 101 and 104 series courses or the equivalent must be taken after you have completed 84 units of transferable degree credit.

If your transfer work does not include an acceptable English composition course taken after you had completed or accumulated 84 units, you may fulfill the requirement by examination (see below) or take one course from University Writing Program 101, 102 series, or 104 series at UC Davis.

**English Composition Examination.** The no-fee examination is typically offered on a Saturday morning in October, January and April. No examinations are given during the summer.

For specific examination dates, instructions, and to sign up to take an examination, see the University Writing Program-Upper Division Composition Exam Information webpage at [http://writing.ucdavis.edu/programs-and-services/upper-division-composition-exam-information/upper-division-composition-exam-information](http://writing.ucdavis.edu/programs-and-services/upper-division-composition-exam-information/upper-division-composition-exam-information). It is recommended that students with disabilities contact the Student Disability Center at 530-752-3184 and the Entry Level Writing Program Office 530-752-0450 at least two weeks prior to the exam date to arrange accommodations.

**Area (Breadth) Requirement**

The College Breadth Requirement promotes the intellectual growth of students by asking them to acquire a broader background of knowledge than is provided by the usual major. The Breadth requirement also guides students in exploring the interdependence of knowledge.

**A.B. Degree.** Satisfaction of the campus General Education requirement.

**B.S. Degree.** A total of 90 units in natural sciences/ mathematics; units used in satisfaction of the campus General Education requirement in Science and Engineering topical breath may also be used to satisfy this requirement.

Courses numbered 92, 97T, 97TC, 98, 192, 197T, 197TC, 198 and from 200 through 499 cannot be counted toward satisfaction of the natural sciences/mathematics Area requirement. A maximum of 10 units in special study courses (99, 194H, 199) may be counted toward that portion of the Area requirement. Subject to the restrictions just listed, courses acceptable for fulfilling the 90-unit natural sciences/mathematics Area requirement are:

**Natural Sciences and Mathematics**

- Anatomy, Physiology and Cell Biology 100
- Anthropology 1, 5, 15, 151, 152, 153, 154A, 154BN, 156A, 156B, 137, 198
- Astronomy
- Avian Sciences 13
- Biological Sciences
- Cell Biology and Human Anatomy 101, 101L
- Chemistry
- Engineering 6, 10, 35, 102
- Engineering: Biomedical 126
- Engineering: Electrical and Computer 70, 170, 173A
- Entomology 10, 100, 153
- Environmental and Resource Sciences 30, 131
- Environmental Science and Policy 30, 100, 121
- Environmental Toxicology 101
- Evolution and Ecology
- Fiber and Polymer Science 110
- Food Science and Technology 100A, 100B, 101A, 101B
- Geology
- Integrated Studies 8A
- Mathematics
- Microbiology
- Molecular and Cellular Biology
- Neurobiology, Physiology, and Behavior
- Nutrition 10, 111AV, 111B
- Pathology, Microbiology, and Immunology 126
- Physical Education 133, 135
- Physics
- Plant Biology
- Psychology 41, 100, 101, 103A, 103B, 104, 113, 121, 122, 123, 124, 126, 127, 129, 130, 131, 135, 146, 180B
- Statistics
- Wildlife, Fish, and Conservation Biology 10

**Foreign Language Requirement; A.B. and B.A.S. Degrees**

A key component of liberal education, the study of another language exposes students to a ubiquitous and highly diverse component of human behavior and interaction. Language learning enables students to communicate effectively in an increasingly internationalized world, enhances their ability to understand ways of thinking different from their own, gives them direct access to cultural production from another time and place, awakens in them an awareness of the conditioned nature of their assumptions about the world, and trains them to cope more effectively with intellectual and practical problems they may face in their future careers.
The College of Letters and Science encourages its students to acquire functional proficiency in at least one language other than English before graduating. At a minimum, the College requires A.B. candidates to complete three sequenced quarters (15 units) of courses, or its equivalent, in one foreign language. B.S. candidate requirements are determined by their respective major program.

Languages Satisfying the Requirement

The Foreign Language Requirement may be satisfied in any language offered at UC Davis, including ancient languages, or which is normally taught at—and for which transfer credit is allowed—from another institution, including American Sign Language. Students may also satisfy this requirement by examination in a language not offered on the UC Davis campus (see below).

Satisfaction of the Requirement

At UC Davis or Another Accredited Institution. You may satisfy the requirement by taking 15 quarter units of one foreign or classical language offered at UC Davis. You may also fulfill this requirement by taking the equivalent number of transferable quarter units in one foreign language at an accredited institution.

Transfer students should consult the Transfer Credit Evaluation, which is issued by the Deans' Office within a quarter after their first enrollment at UC Davis. Students planning to continue to study the same language at UC Davis must consult the relevant language coordinator.

If you have successfully completed the second or third year of a language in the tenth or higher grade in high school, you may receive unit credit for course 1 of that language when taken at UC Davis, but the grading mode will be P/NP only. Although a Passed or Not Passed grade will be charged to your P/NP option, no petition is required; see Pass/Not Passed (P/NP) Grading in the Academic Information chapter.

Through Study Abroad. Certain study abroad programs offered by UC Davis through the Education Abroad Center, UC Education Abroad Program and other accredited institutions may be used to satisfy the requirement. Some of these programs do not have a language prerequisite, but others do. If you intend to apply for a study abroad program with a language prerequisite, you should plan on completing the relevant foreign language requirement by the end of your second or third year, depending on the program.

With the Interssegmental General Education Transfer Curriculum (IGETC). IGETC is a series of courses which prospective transfer students attending California community colleges may complete to satisfy the lower division breadth/general education requirements at the University of California. Students may satisfy the Foreign Language requirement by attaining certification of IGETC completion.

By Examination: Proficiency Exam. The Language Learning Center (LLC) offers proficiency tests in numerous languages. A proficiency test does not yield unit credit—it only determines whether the Foreign Language requirement has been met or at which point in the language sequence you should enroll. Students must follow the language program's placement policy if they decide to study the language at UC Davis.

By Examination: Standardized Tests. College Board Subject Test: Earning a qualifying score of at least 550 on a College Board Foreign Language Subject Test satisfies the requirement. This test may be taken at any time during your high school career. Once your score is on file at Undergraduate Admissions, notify the Letters and Science Deans' Office so that satisfaction of the College requirement can be noted on your record.

College Board Advanced Placement Examination. A score of 5, 4 or 3 on any foreign language College Board Advanced Placement Examination, with the exception of Latin, taken in high school will satisfy the Foreign Language requirement.

International Baccalaureate Higher Level Examination. A score of 7, 6, or 5 on the French A1, A2, or B Examination, the German A1, A2 or B Examination, the Italian A1 Examination, the Latin Examination, the Portuguese A1, A2 or B Examination, or the Spanish A1 Examination taken in high school will satisfy the Foreign Language requirement.

By Examination: Other means. If you have not completed the required level language course, but assume you have attained equivalent language fluency and cultural knowledge, you may satisfy the language requirement by passing a proficiency examination. For more information, consult the appropriate foreign language department.

You may validate your knowledge of a language acquired by any means before matriculating at UC Davis by taking a proficiency test or another form of evaluation (if available in the relevant language department). A test may not be taken, however, in a language for which you have already received degree credit.

Major Degree Certification

Requirements for major programs are described in the Undergraduate Courses chapter of this catalog. These requirements are fulfilled by completing a major program offered by a teaching department or program committee in the College of Letters and Science (see the list of majors) or an individual major program approved by the College's Committee on Individual Majors.

No more than six units in internship courses (numbered 92, 192, or similar internship courses) may be accepted in satisfaction of the requirements of major programs. Courses numbered 97T, 97TC, 197T and 197TC do not satisfy unit or course requirements in the major.

Degree Check

Before the beginning of your senior year, take some time to consider your goals and to plan the academic program for your final year as an undergraduate. To plan properly and to ensure that you get the most out of your remaining education and complete all graduation requirements as well, you should know what requirements remain unsatisfied. To help you in these efforts, the Undergraduate Education and Advising Office provides on its website informational materials and instructions on how to evaluate your progress on college and university requirements; see http://www.lses.ucdavis.edu/advising/. Many departments provide similar information regarding your major requirements.

Once you have completed 90 units of degree credit, you should contact your departmental adviser for a check of your major requirements. At approximately this point, you also should request an official degree check summarizing your progress in fulfilling college and university requirements from the Undergraduate Education and Advising Office; see http://www.lses.ucdavis.edu/advising/ for additional information.
**Degree Requirement Changes**

On occasion, the faculty makes changes in the requirements that students must satisfy to obtain the baccalaureate degree. So that you will not be penalized by changes that may work to your disadvantage and so that you will benefit by changes that assist you in completing your degree requirements, it is College policy that, unless otherwise specified by the Davis Division of the Academic Senate, you may choose to fulfill the university and College requirements as stated in any UC Davis *General Catalog* in effect at any time you were registered as a full-time student at a postsecondary institution of higher education; e.g., community college, college or university.

Once you have chosen the year of the *General Catalog* under which you wish to be governed, you must satisfy all of the university and college requirements specified in that catalog. With respect to the completion of your major requirements, most of the majors in the College of Letters and Science require completion of the major degree requirements in effect at the time you officially declared your major. However, because departments differ in how they handle these matters, check with the department or major program office if you have any questions about which requirements apply to you.
GRADUATE STUDIES

250 Meek Hall
330-752-0650; http://gradstudies.ucdavis.edu

UC Davis offers advanced degrees in nearly 100 graduate programs. A student's graduate study is guided by either departments or graduate groups. Graduate programs are composed of individual faculty members from multiple departments with similar academic interests. The group structure, used extensively at UC Davis, permits faculty to be affiliated with graduate programs in more than one discipline and offers students an interdisciplinary graduate experience that crosses the administrative boundaries of the various departments, colleges, schools, and sometimes campuses. In keeping with UC Davis' progressive spirit, the group structure also allows for evolution of established degree programs and facilitates the development of new ones. More than half of the graduate programs at UC Davis are organized as graduate groups. You will find a complete list of graduate degrees under Degrees Offered by UC Davis, on page 11.

Graduate study is governed by the Graduate Council, a standing committee of the Davis Division of the Academic Senate and by the dean of Graduate Studies. A university-wide Coordinating Committee on Graduate Affairs determines general policies and establishes common procedures.

PREPARING FOR AN ADVANCED DEGREE

Admission to a graduate program at the University of California requires a bachelor's degree that is comparable in quality to a degree from the University of California both in distribution of academic subject matter and in scholarly achievement.

The primary requirement for admission to any program is evidence of intellectual achievement and promise. Your application will be evaluated first on the basis of your transcript to assure that your qualifications meet minimum standards as set by the university and UC Davis Graduate Council. Generally, you must have a minimum B average in undergraduate course work from an institution of acceptable standing to be considered for admission. UC Davis also requires a Statement of Purpose and a Personal History Statement from each applicant. International applicants must demonstrate the ability to understand and use English by submitting TOEFL or IELTS scores. Graduate programs frequently require submission of additional materials such as Graduate Record Examination (GRE) scores, letters of recommendation, and portfolios or examples of written work to assist in selecting from among many highly qualified applicants. Admission to graduate study is limited by the number of spaces available in major programs. Not all eligible applicants can be admitted.

UC Davis is committed to maintaining excellence, preserving fairness and promoting diversity in its student population. In addition to an applicant's past scholastic achievement, admissions criteria include an applicant's potential for service in the field, keeping in mind the needs of our society and of underrepresented and disadvantaged communities. Evaluation criteria also attempt to take into account any prior disadvantages applicants have overcome that may bear on future achievements and services.

APPLYING FOR ADMISSION

To apply for admission, please see http://gradstudies.ucdavis.edu.

Each program to which you apply must receive a complete application, including the nonrefundable application fee of $90 (U.S.) or $110 (international).

To apply for fellowship, please see http://gradstudies.ucdavis.edu.

For application deadlines, please go to the Office of Graduate Studies website at http://gradstudies.ucdavis.edu/prospective/admissiondeadlines.cfm. It is also recommended that you check the website of the program to which you are applying for their application deadlines. No applications are accepted after the published program-specific deadline.

About Admissions

Applications are accepted for fall quarter only. You may apply for admission to graduate study at http://gradstudies.ucdavis.edu. Transcripts of all your college-level academic coursework, along with other supporting documents (if required), must be sent by mail to your graduate major program office.

You should begin the application process as early as possible in the academic year since many programs have early deadlines. In addition, your chances for appointment as a teaching assistant or graduate student researcher, or of receiving financial support, are enhanced by applying early. The application deadlines are available on the Graduate Studies website as noted above or until your proposed graduate program is full, whichever occurs first.

The Graduate Admissions Advisory Committee for the program will submit its recommendation and evaluation to the Office of Graduate Studies; final admission decisions rest with the Dean of Graduate Studies. This approval procedure applies to all applicants, including those seeking a transfer to UC Davis from another UC campus.

Applications for the degrees of Juris Doctor, Doctor of Medicine, Doctor of Veterinary Medicine, Master of Business Administration, Master of Professional Accountancy, and Master of Preventive Veterinary Medicine must be filed directly with the appropriate professional school.

Readmission

If you were formerly registered at UC Davis as a graduate student and wish to return to pursue the same degree objective in the same major, you must apply for readmission and pay the readmission application fee of $70. The readmission application must be filed with the Office of Graduate Studies by the tenth day of instruction of the quarter. If you are seeking to return to a new degree program and/or new major, you must apply for admission along with other new applicants. Apply at http://gradstudies.ucdavis.edu. Transcripts of any college-level coursework undertaken since you were last registered in graduate status at UC Davis must be presented with the application. There is no assurance of reentry, as applicants for readmission will be considered in competition with other applicants for the program.
International Students

http://intlstudents.ucdavis.edu

Assessment of a foreign degree is based on the characteristics of the national system of education, the type of institution attended, and the level of study completed.

If you are an international student with credentials from universities outside the U.S., you should begin the application process as early as one year in advance. Official copies or certified copies of all transcripts in English and in the original language are required before your application can be processed. Do not attempt to convert your grade point average or ranking to a U.S. equivalent. The Office of Graduate Studies will determine your eligibility using U.S. guidelines for credential evaluation. International students are also required to complete the online application process and pay the nonrefundable application fee. International students must apply at http://gradstudies.ucdavis.edu.

English Requirement. Applicants whose native language and language of prior instruction is not English must take the TOEFL or IELTS. The minimum score required for admission to graduate study at UC Davis is total score of 550 for the paper test or a total score of 80 on the Internet-based test for TOEFL, or band score of at least 7.0 on a 9-point scale for IELTS. TOEFL and IELTS scores are valid for two years only. Some programs require higher scores; for more information, see http://gradstudies.ucdavis.edu/programs. UC Davis does not offer conditional admission on the basis of future English language test scores. TOEFL scores must be reported electronically by ETS. The score report is required before application processing begins.

TOEFL Scores. The Test of English as a Foreign Language (TOEFL) is given by Educational Testing Service (ETS), TOEFL Services, PO Box 6151, Princeton NJ 08541-6151, 609-771-7100. Request information from toefl@ets.org or see http://www.ets.org/toefl.

IELTS Scores. The Academic Modules of the International English Language Testing System (IELTS) are designed by the University of Cambridge Local Examinations Syndicate and administered by the British Council worldwide. You are responsible for providing us with an official Test Report Form (TRF) of your IELTS. Remember to order the TRF when you register to take the test. To register for the IELTS, see http://www.ielts.org or contact the IELTS Subject Officer, University of Cambridge, Local Examinations Syndicate, 1 Hills Road, Cambridge, CB1 2EU, United Kingdom.

Visas. If you need a certificate of eligibility for a student visa issued by UC Davis, you will be required to complete a certification of finances form showing the availability of sufficient funding for your graduate program. For complete details, see Services for International Students and Scholars (SISS), on page 71.

PROGRAM OF STUDY

New students are assigned an adviser within the appropriate department or graduate group who assists them in planning a program of study. The program will depend to some degree on the student's undergraduate training and may include undergraduate courses to remove deficiencies. Each student must satisfy the degree requirements as stated by the program and found at http://gradstudies.ucdavis.edu/programs.

Additional requirements for study may be established by the department or group and approved by the Graduate Council. These requirements often include a core of required courses, but considerable flexibility is permitted to suit individual needs. Undergraduates at UC Davis who plan to pursue graduate study should consult with their major adviser at the end of their junior year or the beginning of their senior year to guarantee adequate preparation.

A graduate degree is awarded to recognize a student's command of a wide range of knowledge in an academic field. It is not awarded merely for fulfillment of technical requirements, such as residence or the completion of specific courses.

Master’s Degree

Students working toward a master’s degree must be registered for at least three full-time quarters. Two regular six-week Summer Sessions may count as the equivalent of one quarter. Usually, all work for the master’s degree is done in residence on the UC Davis campus; however, some work taken elsewhere may be credited toward your degree with the consent of the graduate adviser and the Associate Dean for Graduate Students. The limit for such transfer credit is 6 units from another institution, or 12 concurrent units (Open Campus enrollment), or up to one half of the unit requirement if the courses were taken at another UC campus-providing the units were not used to satisfy requirements for another degree.

A master’s degree may be awarded upon completion of one of two basic plans in which either a thesis or a comprehensive examination is required.

Doctoral Degree

The Doctor of Philosophy degree, as granted at the University of California, means that the recipient possesses knowledge of a broad field of learning and has given evidence of distinguished attainment in that field; it is a warrant of critical ability and powers of imagination and synthesis. It means, too, that the candidate has presented a dissertation containing an original contribution to the knowledge in the chosen field of study.

Students working toward a doctorate must be registered for a minimum of six full-time quarters. Experience indicates that it takes considerably longer than this to complete a degree program. Two consecutive regular Summer Sessions may count as the equivalent of one regular quarter.

There is no university unit requirement for the doctoral degree. However, individual programs have course requirements that must be completed before admission to the Qualifying Examination.

The Qualifying Examination is administered by a committee appointed by the dean of Graduate Studies. The examination is intended to demonstrate critical thinking ability, powers of imagination and synthesis and broad knowledge of the field of study. Upon recommendation of the Qualifying Examination Committee, and with the approval of the Graduate Council, the examination may be repeated one time.

After successful completion of the Qualifying Examination, the student must file for Advancement to Candidacy for the degree. At this time, a committee is appointed to direct the research problem and guide in the preparation of the dissertation.

Graduate students in certain doctoral programs may participate in a Designated Emphasis, a specialization that might include a new method of inquiry or an important field of application that is related to two or more existing doctoral programs. The Designated Emphasis is awarded in conjunction with the doctoral degree and is signified by a transcript designation; for example, “Ph.D. in History with a Designated Emphasis in Critical Theory.” Programs approved as Designated Emphases include African American and African Studies, Biology of Vector-borne Diseases, Biophotonics, Biotechnology, Classics and Classical Receptions, Critical Theory; Feminist Theory and Research; International and Community Nutrition; Native American Studies; Organism-Environment Interaction; Reproductive Biology; Second Language Acquisition; Stem and Progenitor Cells; Studies in Performance and Practice; Translational Research; and Writing, Rhetoric, and Composition Studies.

INTERCAMPUS EXCHANGE PROGRAM

A graduate student registered on any campus of the University of California may become an intercampus exchange student with the approval of the graduate adviser, the chairperson of the department or group on the host campus, and the Dean of Graduate Studies on both the home and the host campuses.

An intercampus exchange student has library, health service and other student privileges on the host campus, but is considered a graduate student in residence on the home campus. The grades obtained in courses on the host campus are transferred to the home campus and entered on the student’s official graduate transcript.

Application forms may be obtained from the Office of Graduate Studies website (http://gradstudies.ucdavis.edu) and must be submitted five weeks before the beginning of the quarter in which you wish to participate in the program. Petitions received after the first day of the quarter will not be processed.

FELLOWSHIPS, ASSISTANTSHIPS AND LOANS

http://gradstudies.ucdavis.edu/ssupport

Financial support for graduate study at UC Davis is available in several forms: teaching and research assistantships, financial aid and fellowships/scholarships. For more information, see http://gradstudies.ucdavis.edu/ssupport.

Financial aid is awarded on the basis of demonstrated financial need and is administered by the Financial Aid Office. Federal financial aid includes student loans, grants and work-study funding. You may apply for financial aid before you have been admitted. To be considered for financial aid, or for any awards based on financial need, you must file a “Free Application for Federal Student Aid” (FAFSA), at http://www.fafsa.ed.gov no later than March 2, prior to the fall quarter enrollment. This form, submitted directly to the Federal Student Aid Program Office, Iowa City, IA, is used to determine financial need only. Contact the Graduate Financial Aid Office for information regarding loans, grants and work-study at http://financialaid.ucdavis.edu/graduate.

Graduate fellowships are awarded primarily on the basis of scholarly accomplishment and promise of outstanding academic and professional achievement. Fellowship awards can include a stipend, fees and/or Nonresident Supplemental Tuition. Considered in evaluations are the Graduate Record Examination (GRE) scores, undergraduate and graduate grade point averages, academic transcripts, statement of purpose, letters of recommendation and other documentation such as publications or awards. The minimum cumulative undergraduate or graduate grade point average required for a stipend, Nonresident Supplemental Tuition fellowships or in-state fee award is 3.000 (A=4.000).

UC Davis has a single online application system for the admission application and for the student fellowship application. To apply for fellowship, see http://gradstudies.ucdavis.edu.

For fellowship application deadlines, please go to the Office of Graduate Studies website at http://gradstudies.ucdavis.edu/prospective/admissiondeadlines.cfm. It is also recommended that you check the website of the program to which you are applying for their fellowship application deadline.
GRADUATE ACADEMIC CERTIFICATE PROGRAM

A Graduate Academic Certificate (GAC) program is a structured sequence of courses and requirements that focus on a specialty or area of expertise not offered by a regular graduate degree program. GACs are administered by a UC Davis instructional unit (professional school, department, graduate group or a designated emphasis program) and are an additional sequence of training and expertise for graduate students enrolled in a degree program.

GACs consist of a minimum of 12 units of graduate level instruction and are recognized by transcript notation and an official certificate issued by UC Davis with the gold seal of the University of California. GAC programs include Air Quality and Health, Conservation Management, Development Practice, and Second Language Acquisition. For more information, see http://gradstudies.ucdavis.edu/programs/GACs.html.

GRADUATE CERTIFICATE PROGRAM FOR ENGINEERS

For engineers who already have a degree, the College of Engineering offers Graduate Certificate Programs in various fields of Engineering. The certificate programs consist of course work in selected engineering subjects and require fewer units than the degree programs. The purpose of the Graduate Certificate Program is to provide practicing engineers with an opportunity to develop additional expertise in specific areas and to explore new fields of technical interest.

General requirements for the programs are:
- 15 or 16 units of specified graduate course work, or a combination of specified graduate and undergraduate course work.
- Admission to Graduate Studies.

Further information on the Graduate Certificate Programs may be found within the graduate programs of the College of Engineering; see http://engineering.ucdavis.edu/graduate.

SEMINAR ON COLLEGE TEACHING

The Seminar on College Teaching introduces graduate students to the principles and methods of designing and delivering college-level instruction. The seminar deals with a broad range of skills and issues involved in helping college students learn, including classroom presentations, planning discussions, facilitating active learning, evaluating student learning and employing effective class management strategies.

Participants meet for weekly two-hour sessions. Participants select and complete several assignments, such as developing a syllabus, preparing a lesson plan, investigating an ethical issue related to teaching, creating a teaching blog, or writing a teaching philosophy statement. Readings from various sources complete the seminar experience.

Participants who attend every session and fulfill the required brief assignments in a satisfactory manner receive a certificate of completion that is appropriate to note in a curriculum vitae.
The School of Education offers a wide range of academic and professional development programs that prepare teacher and administrative leaders for the world of public education (P-16), as well as researchers and university faculty. Hallmarks of our work include research that is integrated with practice and policy; deep, sustained engagement with schools and communities; and authentic, collaborative partnerships with those who share our goals.

Through our Ph.D., Ed.D. and M.A. programs, we prepare students to take leadership roles in strengthening schools, community colleges and universities, advancing research and scholarship, and improving education policy and practice. In our credential program (Teaching Credential/M.A.), we prepare students to become teacher leaders and educational advocates for all children.

**PROGRAMS OF STUDY**

The Minor in Education is considered a foundation for undergraduates who wish to obtain a teaching credential; enter any education-related field such as speech therapy, school counseling, occupational learning, or social work; obtain a master's degree in education or a related field; pursue a doctoral degree in education; or develop a better understanding of issues confronting education today. Education Minor coursework focuses on social foundations of education, psychology of learning, schools as institutions, challenges of educational assessment, and educating diverse populations in a wide variety of disciplines and contexts. As part of the Education Minor, students also complete an internship in a local K-12 school or other learning context.

Undergraduates who are interested in exploring teaching mathematics or science in public schools should contact the MAST Program at their first opportunity. The MAST Program offers seminars that give participants experience in elementary, middle school, and high school classrooms. MAST advisors can help students combine the prerequisites for a credential program with General Education requirements. The Natural Sciences major is sound preparation for teaching the science disciplines offered in middle and high schools. A major in Mathematics will provide the broad understanding needed to teach in public schools.

The Master of Arts in Education provides a course of study for examining research and theory about learners, teachers, schools, and related social institutions. The program prepares professionals to conduct research about the education of children, youth, and adults in a multicultural society. Graduates may assume leadership positions in school districts, state education agencies, and private organizations concerned with instructional research, policy and practice.

The M.A. Program in Education offers (1) a general track that serves a broad range of student research interests and career plans, and (2) an M.A./Credential track that integrates the M.A. with the Teaching Credential and focuses particularly on classroom-based research.

The Integrated Teaching Credential with Master's Degree Program offers an opportunity for qualified students to complete the requirements for both a Masters of Arts in Education degree and a Multiple Subject OR Single Subject Credential in English, mathematics, science, social science or agriculture in a 15-month, five-quarter program. The BCLAD (bi-lingual) authorization is available to credential candidates in both the elementary and secondary programs.

The Credential Program prepares students for the teaching profession by immersing them in the total environment of a public school classroom while enrolled in required coursework. The coursework incorporates a theoretical-practical approach to the teaching-learning process, encouraging close interactions among teacher candidates and teacher education faculty. Students complete requirements for the M.A. degree during two part-time quarters following the credential year. This coursework introduces the integration of research into teaching practice, making teachers more informed and pro-active practitioners.

The Capital Area North Doctorate in Educational Leadership (CANDEL) is a collaborative program of UC Davis and Sonoma State University. The program, leading to a Doctor of Education (Ed.D.) degree, is intended primarily for working professionals in P-12 or Community College related leadership positions. Graduates of this program will be prepared to lead in educational environments that promote learning, equity and achievement for all students. Armed with both real-world, problem-based learning, and scholarship skills, program graduates will be uniquely ready to manage the complexities of educational organizations, affect school change processes and shape the educational policies that bear on the practice of education in the public setting.

The Ph.D. in Education is a multidisciplinary program offered by the Graduate Group in Education, with faculty drawn from education, mathematics, science, social science and humanities units throughout the UC Davis campus. The program provides a challenging course of study for examining research and theory about learners, teachers, schools and related social institutions. Through coursework, apprenticeships and mentoring, Ph.D. students are prepared to conduct research and teach about the education of children, youth and adults in a multicultural and multilingual society. Graduates of the program have assumed faculty positions in universities, as well as other leadership positions in universities, school districts, state education agencies and in private organizations that support teaching and learning in schools and communities. The program offers five areas of emphasis: Language, Literacy and Culture; Learning and Mind Sciences; Mathematics Education; Science/Agricultural Education; and School Organization and Educational Policy.
PREPARING FOR THE STUDY OF EDUCATION

Teaching Credential/M.A. Degree Program

Academic preparation for the Teaching Credential Program includes a completed bachelor's degree and a GPA of at least 3.000. For the Multiple Subject credential, many undergraduate majors are appropriate preparation for the program. For Single Subject credential candidates, we recommend an undergraduate major in the intended area of secondary teaching. Use undergraduate internship opportunities to gain classroom experience in the grade levels at which you wish to teach. In addition to these general requirements, learn about current state and UC Davis credential prerequisites at the School of Education website or call our Student Services Office.

- Classroom experience in the appropriate grade levels
- U.S. Constitution course
- Specific preparatory coursework; see adviser for details
- California Basic Educational Skills Test (CBEST)
- For the elementary credential program, the California Subject Examination for Teachers (CSET)
- For secondary credential programs, approved subject matter coursework or the California Subject Examination for Teachers (CSET) for the appropriate subject

Applicants are encouraged to have program prerequisites and testing requirements completed prior to submitting an application. Credential requirements are revised by the State of California. To obtain the most current information, students considering a career in teaching are encouraged to consult with the School of Education advisers throughout their undergraduate career.

M.A. in Education Degree Programs. Applicants to the General Track M.A. must have completed an undergraduate degree with a major in a field that supports their intended area of emphasis. A minimum undergraduate GPA of 3.000 is necessary for graduate admission at the University of California, Davis. Please consult with advisers in the School of Education regarding additional testing or supplemental information that may be required for application to a specific program.

Ed.D. Degree (CANDEL). Applicants to the CANDEL program must meet general admission requirements for graduate study at the University of California. Requirements include a bachelor's and master's degree (or equivalent) from an accredited institution, and a GPA of at least 3.000. In addition, applicants will have demonstrated prior experience in administrative or leadership roles in an educational institution or related areas.

Ph.D. Degree. Applicants to the Ph.D. program in Education must have a bachelor's degree, and normally will have completed a master's degree (or equivalent) in a field that supports their intended area of emphasis. A minimum GPA of 3.000 in previous undergraduate coursework is required for graduate admission at the University of California, Davis. Applicants must demonstrate a high potential for scholarly achievement and research. Individuals possessing graduate degrees in fields other than education are encouraged to apply. Experience in teaching, research, or related areas of education are desirable.

APPLYING FOR ADMISSION

School of Education graduate and teaching credential students are admitted for fall term ONLY. Online applications will be available through the Office of Graduate Studies website at http://gradstudies.ucdavis.edu/.

Application deadlines and requirements vary by program. Please consult with a School of Education adviser regarding your program interests. Applicants with underrepresented and nontraditional backgrounds are encouraged to apply.

Minor in Education

No Application Deadline. The Education Minor is open to students in all majors.

For more information, see http://education.ucdavis.edu or contact the School of Education Student Services Office at 530-752-0757 or eduadvising@ucdavis.edu.

Steps in declaring a minor in education:

- Consult with the education undergraduate adviser in our Student Services Office
- Declare minor by completing a “Declaration of Minor” form available from the Dean's Office in the college of your major

Teaching Credential/M.A. Degree Program

Application Deadline. Please see the School of Education website for Program application information and deadlines at http://education.ucdavis.edu.

For more information or instructions please see our website or contact the School of Education Student Services Office at 530-752-0757 or eduadvising@ucdavis.edu.

Steps in the Admissions Process:

- Complete Office of Graduate Studies online application
- Submit nonrefundable application fee payable to UC Regents
- Submit two (2) official transcripts for all college and university work completed
- Submit to the School of Education any supporting documentation: verification of classroom field experience, copies of test scores, etc.

Applicants will be:

- Screened and scheduled for an admissions interview
- Evaluated and reviewed by an admissions committee
- Recommended to Office of Graduate Studies for admission or denial
- Notified of admission or non-admission by the Office of Graduate Studies
**M.A. Degree**

**Master of Arts in Education General Track**

**Application Deadline.** Please see the School of Education website for Program application information and deadlines at [http://education.ucdavis.edu](http://education.ucdavis.edu).

For more information or instructions please see our website or contact the School of Education Student Services Office at 530-752-0752 or eduadvising@ucdavis.edu.

Steps in the Application Process:

- Complete Office of Graduate Studies online application, which includes three (3) uploaded letters of recommendation
- Submit nonrefundable application fee payable to UC Regents
- Submit official transcripts for all college and university work completed
- Submit to UC Davis your official scores (taken within the last five (5) years) for the Graduate Record Exam (GRE) General Test

**Capital Area North Doctorate in Educational Leadership (CANDEL)**

**Application Deadline.** Please see the School of Education website at [http://education.ucdavis.edu](http://education.ucdavis.edu).

For more information, see the program website at [http://education.ucdavis.edu/candel-admissions](http://education.ucdavis.edu/candel-admissions) or contact the School of Education at 530-754-6664 or eduadvising@ucdavis.edu.

Steps in the application process:

- Complete the online application for the Capital Area North Doctorate in Educational Leadership
- Submit two (2) official transcripts in sealed envelopes as received from the registrar(s) of each college or university attended
- Submit official score(s) for the Graduate Record Examination (GRE) General Test or the Miller Analogies Test (MAT)
- Submit three (3) letters of recommendation written by three employers, professors, or others in a position to assess the applicant's potential for graduate work (must be uploaded online)
- Include a statement of support from employer; a separate document from the applicant's current employer verifying a commitment to provide periodic leave for intensive program activities

Finalists will be interviewed by the CANDEL Admissions Committee.

**Ph.D. Degree**

**Application Deadline.** Please see the School of Education website at [http://education.ucdavis.edu](http://education.ucdavis.edu).

For more information or an application package, see the program website at [http://education.ucdavis.edu/phd-education](http://education.ucdavis.edu/phd-education) or contact the School of Education Student Services Office at 530-752-0757 or phdedua@ucdavis.edu.

Steps in the application process:

- Complete online UC Davis Office of Graduate Studies application
- Submit nonrefundable application fee payable to UC Regents
- Official score(s) for the Graduate Record Examination (GRE) General Test
- Three (3) letters of recommendation
- One (1) official transcript from all institutions attended
- Writing sample (typically a seminar paper, thesis, or published article)
**SCHOOL OF LAW**

School of Law, Admission Office  
530-752-6477; admissions@law.ucdavis.edu, http://www.law.ucdavis.edu

The University of California Davis School of Law offers a three-year professional curriculum leading to the degree of Juris Doctor. Within a uniquely supportive atmosphere, law students are provided a comprehensive modern law school curriculum taught by a nationally and internationally distinguished faculty. The School offers a full range of traditional law courses, opportunities for practical experience through clinical programs and for in-depth study of an area of law in an individualized program of classroom work, research, writing, or experience in the community. It further provides professional skills training in interviewing and counseling, negotiation and dispute resolution and trial practice. The School seeks to promote critical evaluation of law and legal institutions in a broad perspective, integrating non-legal disciplines with professional legal education.

UC Davis Law School is fully accredited by the American Bar Association, is a member of the Association of American Law Schools and has a chapter of the Order of the Coif.

**PREPARING FOR THE STUDY OF LAW**

No specific college major is required for admission to the School of Law and there is no prescribed pre-legal program. Your college record and Law School Admission Test (LSAT) score must, of course, demonstrate that you are highly qualified for the study of law.

As a pre-law student, you should plan a course of study that will give you a broad cultural background and include intensive work for a substantial period of time in a selected field of study. Pre-law students should develop the ability to think critically. You should gain an understanding of people and institutions and know how to gather and weigh facts, to solve problems and think creatively. You should be able to read rapidly with comprehension and express themselves clearly, completely and concisely, both orally and in writing.

You can get help with program planning from the Pre-Law Advising Office in 160 South Silo 530-752-4475.

For additional information, see the [Official Guide to ABA-Approved Law Schools](http://www.law.ucdavis.edu), a publication of the Law School Admission Council and the American Bar Association. The guide includes information on the law and lawyers, pre-law preparation, applying to law school and the study of law, together with individualized information on all ABA approved law schools. It can be found at college and major bookstores or ordered at [https://officialguide.lsac.org/release/OfficialGuide_Default.aspx](https://officialguide.lsac.org/release/OfficialGuide_Default.aspx).

**APPLYING FOR ADMISSION**

Deadline for filing electronic applications for admission to the School of Law:

**March 15**

1. Request the law school catalog to learn more about the School and the admission process. The electronic application can be accessed at the School's website, [http://www.law.ucdavis.edu](http://www.law.ucdavis.edu) or at the Law School Admission Council (LSAC) website at [http://www.LSAC.org](http://www.LSAC.org). Complete instructions about the admission process, including answers to frequently asked questions, can be found in the Prospective Student section of the Law School website.

The last date for filing completed electronic applications, together with all supporting documents, including Law School Admission Test (LSAT) scores, Credential Assembly Service (CAS) reports and letters of recommendation, is March 15 of the year in which admission is sought. Early filing of all application materials is strongly recommended.

2. You must take the Law School Admission Test and register with the Credential Assembly Service so that the score will be reported to the school. You are urged to take the test as early as possible and no later than February of the year in which admission is sought; the June test date is too late for fall admission.

Testing centers are located in all parts of the United States and in many foreign countries. Tests are given four times a year: February, June, September/October, and December.

To obtain information about the test, specific test dates and the location of testing centers, visit the Law School Admission Council (LSAC) website at [http://www.lsac.org/jd/](http://www.lsac.org/jd/). Both the CAS and LSAT registration process are electronic.

3. Register with the Credential Assembly Service (CAS) no later than December 1 at the LSAC website. Arrange to have a transcript from each college or university you have attended sent directly to LSAC. Complete instructions for the online services are available at the LSAC website.

4. Submit an official transcript of college work completed during the first semester or quarter of your senior year directly to the School of Law as soon as it is available. Failure to do so may delay consideration of your application materials. Successful applicants must submit directly to the School of Law a final transcript showing the award of a bachelor's degree.

5. Provide two letters of recommendation from objective and responsible persons who know you well. At least one of these letters should come from a faculty member under whom you studied while in college. UC Davis Law School requires all applicants to submit recommendations to the LSAC Letter of Recommendation Service (LOR) for inclusion with your CAS report.
Your application will be reviewed by the School of Law Admissions Committee, which seeks students of demonstrated academic ability, as evidenced by a variety of factors including information provided in the required two-four page personal statement and letters of recommendation, in combination with the LSAT score and the undergraduate grade point average (GPA). The Committee seeks students of diverse backgrounds and considers economic factors, obstacles overcome, advanced degrees or other advanced studies, significant work experience and extracurricular and community activities during and after the college years. An applicant's growth, maturity and commitment to the study of law are also major considerations. Students are admitted only on a full-time basis and only for fall admission.

6. When accepted by the School of Law, you are simultaneously admitted to Graduate Studies on the UC Davis campus of the university for the program leading to the degree of Juris Doctor. If you intend to pursue studies leading to other graduate degrees, or wish to become a candidate for a Combined Degree Program, you must make separate application to Graduate Studies or the Graduate School of Management before commencing such studies.

Admission to Advanced Standing

If you have completed at least one year of full-time law course work in another American Bar Association (ABA) approved law school, you may be considered for admission to advanced standing with credit for not more than one year of such work. The application filing period is January 1-30. No application for advanced standing will be considered until the Office of Admissions has received transcripts for at least one semester of full-time course work in a three-year program.

Application procedures for advanced standing are the same as described above with the addition of (1) a letter of good standing including class rank from the dean of any law school previously attended; (2) at least one letter of recommendation from a law professor; (3) transcripts of all law school work; (4) LSAT score provided as part of an updated CAS report from LSAC; and (5) an official transcript from the school where you earned your undergraduate degree, stating the date the degree was conferred. The deadline for transfer applications is June 30 of the year for which transfer is sought. Those applicants who demonstrate high academic performance in the first semester of law school may be offered early admission. Those offered early admission must complete the first full year in the top one-third of the class or the School of Law reserves the right to reconsider its offer of admission. All other decisions are normally made in July or early August of the year in which admission is sought.

Students who have been disqualified at another law school will not be admitted to UC Davis Law School.

Recruitment of Underrepresented Groups

The students and faculty of the School of Law recognize the great need for lawyers from under-represented groups. The School, therefore, actively solicits applications from those groups that reflect the many diverse populations of California but, traditionally, have been underrepresented in the law school population.

The School of Law, in cooperation with the Association of American Law Schools (AALS) and the Council on Legal Education Opportunity (CLEO), participates in programs designed to increase the number of law students from underrepresented groups. CLEO applications may be obtained by writing to Council on Legal Education Opportunity, 740 15th Street, N.W., 9th Floor, Washington, D.C. 20005, (202) 828-6100 or toll free (866) 886-4343; http://www.cleoscholars.com.

PROGRAM OF STUDY

The professional curriculum requires six semesters for completion and extends over a period of three years. It is for full-time students only; no part-time or evening program is offered. New students are admitted only at the beginning of the fall semester.

After satisfactorily completing the professional curriculum of 88 semester units and the required period of resident study, you will receive the degree of Juris Doctor (J.D.). Students who fail to attain satisfactory grades may be required to withdraw from the School at the end of any academic year.

The first year's work is prescribed and provides the essential foundation for subsequent legal study. Satisfactory completion of the first-year courses is, in all cases, prerequisite to second- and third-year courses. The work of the second and third years is elective. The courses of the professional curriculum are listed in the Undergraduate Courses chapter.

Combined Degree Programs

Individual students may find a combined degree involving law and another discipline such as economics, business, sociology, or science advantageous. To support this kind of study, the School, in conjunction with other schools and university departments, has established Combined Degree Programs. Under these programs, a student may work toward a J.D. degree and a master's degree in another discipline at the same time. Students working toward a combined degree are required to spend their first year at the law school.

Normally, a Combined Degree Program will take at least four years. You will usually be able to earn up to 10 semester-hours of law school credit for work in the related discipline and normally complete the combined degrees in less time than it would take to earn the two degrees separately. The first year of the Combined Degree Program must be taken entirely in the School of Law. During the remaining years, course work may be divided between the law school and the related discipline. You must satisfy the admission requirements for both programs and file applications with both units.

Students have pursued degree programs in combination with UC Davis departments for the M.A. degree in economics, philosophy, computer science and sociology, and with the School of Management for the M.B.A. degree. The law school will attempt to work out an additional program if you are interested in other disciplines. You may enroll in the Combined Degree Program any time before the beginning of your third year in law school. If you are interested in pursuing a Combined Degree Program, and have made a separate application to another school or department, you should notify the School of Law if that application is accepted.
School of Law

The LL.M. Program

530-757-8569; Fax 530-757-8596; lawinfo@ucde.ucdavis.edu
http://www.law.ucdavis.edu/international/

The Law School LL.M. (Master of Laws) program integrates American and foreign law students at all levels of study. For foreign law graduates, the program provides an opportunity to gain a basic knowledge of the United States legal system. United States law school graduates and selected foreign LL.M. candidates may also seek admission on a thesis rather than a course basis. Other opportunities available to all graduate law students include developing special expertise in a particular area and doing special projects and original research under the direction of a faculty member.

Each LL.M. candidate must successfully complete a minimum of 20 semester units of work, usually 10 units each semester. Foreign LL.M. students must enroll in the 1-unit course Introduction to Legal Research and the 2-unit course Introduction to the Law of the United States. They earn the remainder of their required course credit in regular elective J.D. courses. Each foreign student must also complete an intellectually rigorous legal research and writing project, constituting at least 2 units of credit.

All LL.M. candidates begin their year of study with a complete orientation in the academic and social life of the law school, the UC Davis campus and the city of Davis. LL.M. students are encouraged to enroll in the School of Law’s Orientation in U.S.A. Law Program, given in the month before the LL.M. Program begins.

SCHOOL OF LAW ACADEMIC CALENDAR 2014-2015

The School of Law operates on a semester system rather than the quarter system used on the remainder of the UC Davis campus.

GRADUATE SCHOOL OF MANAGEMENT

Graduate School of Management
Gallagher Hall
530-752-7658; http://gsm.ucdavis.edu

The Graduate School of Management offers a full-time, two-year program leading to the Master of Business Administration degree. The program provides both entry-level and mid-career students with an understanding of management approaches to problem solving and an awareness of the environment within which public and private management decisions are made. Successful completion requires not only a sophisticated understanding of a variety of functional skills in finance, marketing, production, program evaluation and accounting, but also an understanding of computers, information systems and the application of scientific methods to the identification and solution of management problems.

Preparing for the Study of Management

A bachelor's degree and a strong interest in professional management are prerequisites for admission to the Graduate School of Management. The school seeks students from diverse professional and academic backgrounds and does not limit its consideration to applicants from any particular category of majors. Entry-level and mid-career applicants are considered and women and minorities are encouraged to apply.

Although the program has no specific subject prerequisites, it is strongly recommended that students complete the following course work before enrolling:

- **Accounting**—an introductory course in financial accounting
- **Economics**—an introductory course in microeconomics
- **Mathematics**—an introductory course in calculus
- **Statistics**—a course in elementary statistics

APPLYING FOR ADMISSION

Application Deadlines are in November, January, March and May, each year. Dates are subject to change.

For the most current information, see http://gsm.ucdavis.edu.

Admission is for the fall quarter only. Application materials can be obtained in the following ways:

- Apply at http://gsm.ucdavis.edu
- Print the application materials at http://gsm.ucdavis.edu or contact the Admissions office at admissions@gsm.ucdavis.edu
- 530-752-7658

Complete and return your application, with all supporting documents, by the deadlines given above. The application fee is $125.00.

In addition to your application, you need to submit:

- Transcripts from all colleges or universities previously attended
- Graduate Management Admission Test (GMAT) or Graduate Record Exam (GRE) taken within the last five years of the admission date. For further information and registration forms, contact Graduate Management Admission Council at http://mba.com or Educational Testing Service at http://ets.org/gre
- Two letters of recommendation
- Two essays on specific topics
- Interviews are by invitation only

For more information, call 530-752-7658, or contact admissions@gsm.ucdavis.edu.

International Students

International applicants for whom English is a second language must take either Test of English as a Foreign Language (TOEFL) or IELTS within the last two years. For more information, contact TOEFL, Educational Testing Service at http://toefl.org or IELTS Int'l at http://ielts.org.

International students must show proof of financial support for two academic years including fees and living expenses.

Criteria for Admission

Admission to the UC Davis MBA Program is highly selective. The aim of the Admissions Committee is to select those applicants whose academic background, intellectual capability, work experience, demonstrated leadership and communication skills meet the challenging demands of the MBA program and a managerial career. Consideration of an applicant's undergraduate performance includes a review of trends in scholastic performance and areas of academic strength as well an assessment of overall grade point averages. Admissions standards and grading policies of the schools attended are also considered. Verbal, quantitative and analytical scores on the GMAT are used to evaluate general aptitude for management study. Background and maturity as indicated by employment history, service and activity records, recommendations and the applicant's essays are factors in the committee's evaluation. Professional management experience is not required for admission but is favorably considered.

PROGRAM OF STUDY

The hallmark of the two-year UC Davis MBA program is its flexibility. Students are required to take ten core courses, 30 units, and 42 units of elective coursework for the 72 units required for the degree. The required core curriculum is designed to provide you a foundation in the functional areas of business-accounting, economics, finance, marketing, organizational behavior, statistics, and strategy. These management disciplines are examined through the use of case studies, lectures and the analysis of a few select companies on which to base illustrations and spark discussions. As early as the first year of study, students are able to integrate elective courses into their personal curriculum.

Elective courses at the Graduate School of Management place an emphasis on real-world application of management principles through the use of executive guest speakers who present “live” case study analyses and actual “client” businesses for student projects. Many courses require team projects and emphasize managing by innovation and entrepreneurialism. These team projects develop your independent research abilities and hone your presentation skills.

Most students choose functional concentrations such as:

- Business Analytics and Technologies
- Entrepreneurship
- Finance/Accounting
- General Management
Part-Time MBA Programs in Sacramento and Bay Area

In addition to the full-time program, the Graduate School of Management offers two part-time MBA programs in Sacramento and in the Bay Area. Students enrolled in the MBA Program pay a flat rate per unit.

Application Deadlines are in November, January, March, May and June each year. Dates are subject to change. For the most current information, see http://gsm.ucdavis.edu.

If you would like more information about this program, please contact the Graduate School of Management Admissions at 530-752-7658 or see http://gsm.ucdavis.edu.

Master of Professional Accountancy (MPAc)

The Master of Professional Accountancy (MPAc) degree is a full-time, one-year program designed to prepare students for a career in the accounting field, and to fulfill the requirements for those seeking to take the Uniform Certified Public Accountant exam administered by the State of California. The MPAc degree provides students with the skills to be experts in risk assessment, systems analysis, taxation, and corporate governance, and to act as overseers of public trust.

Graduates will gain a breadth of communication, business, and accounting skills that will meet the demands of sought-after organizational leadership roles.

Preparing for the Master of Professional Accountancy

An undergraduate degree in accounting is not a prerequisite for the MPAc program, however in order to prepare for the rigorous curriculum at the graduate level, students are required to complete the following three courses:

- Introduction to Financial Accounting, Basic concepts of accounting; interpreting and using financial statements; understanding accounting principles
- Introduction to Managerial Accounting, Product costing; using accounting information for decision making; planning and performance evaluation
- Business Law, General principles of business law in the areas of contracts, business organization, real property, uniform commercial code, sales, commercial paper, employment relations, and creditor-debtor against a background of the history and functioning of our present legal system

Students are expected to complete prerequisites before beginning the MPAc program; any deficiencies must be completed prior to enrollment. Transfer credits from other institutions cannot be substituted for the MPAc curriculum, although such classes can be used to fulfill the aforementioned prerequisites.

The MPAc program welcomes applicants from all undergraduate disciplines and backgrounds. Women and minorities are encouraged to apply.

Applying For Admission

Application deadlines are in December, February, March and June, each year. For current information, see http://gsm.ucdavis.edu/master-professional-accountancy.

To obtain application materials or apply online, see http://gsm.ucdavis.edu/mpac-admissions. Application deadlines are typically four times each year. For current information, see http://gsm.ucdavis.edu/master-professional-accountancy.

Supporting documents include:
- Transcripts from all colleges or universities attended
- Scores from either the Graduate Management Admission Test (GMAT) or the Graduate Record Examination (GRE) taken within the last five years
- Two letters of recommendation
- International students who have not earned an undergraduate degree in an English-speaking institution must take the Test of English as a Foreign Language (TOEFL), the Pearson Test of English (PTE), or the International English Language Testing System (IELTS) exam. For more information, see http://toefl.org, http://pearsonpte.com, or http://ielts.org
- International students must demonstrate proof of financial support for one academic year, including fees and living expenses.

Interviews are by invitation only.

Admission Criteria

The goal of the Admissions Committee is to select those applicants whose academic background, intellectual capability, communication skills, and professional promise meet the demands of the MPAc program.

Consideration of an applicant’s undergraduate performance includes a review of trends in scholastic performance and areas of strength as well as an assessment of overall grade point averages. Admissions standards and grading policies of the schools attended are also considered. Verbal, quantitative and analytical scores on the GMAT or GRE are used to evaluate general aptitude for the MPAc course of study. Recommendations and the applicant’s essays are factors in the committee’s evaluation.

Program of Study

The MPAc program is “lock-step” meaning there are no electives and students complete courses as a unified cohort. The curriculum, which begins in the fall quarter and finishes the following spring quarter, is designed to establish a foundation in financial reporting and analysis, financial management, taxation and tax analysis, auditing and attestation, professional communication, managerial controls, and accounting ethics.

Students must pass a capstone examination which is taken after advancing to candidacy and at the end of coursework at the culmination of spring quarter to receive the degree.

For more information, call the Graduate School of Management at 530-752-7658, or see http://gsm.ucdavis.edu/master-professional-accountancy.
SCHOOL OF MEDICINE

School of Medicine
http://www.ucdmc.ucdavis.edu/medschool/

The Doctor of Medicine degree requires the satisfactory completion of a four-year course of study composed of 13 consecutive quarters. Course work is conducted on the Sacramento campus, at the UC Davis Medical Center and in nearby affiliated hospitals.

PREPARING FOR THE STUDY OF MEDICINE

When you apply to the School of Medicine, you must submit the results from the Medical College Admission Test (MCAT), so it is recommended that you take the MCAT by the spring before application. Information can be obtained at your undergraduate institution or directly from MCAT Program, Box 4056, Iowa City, IA 52243; 319-337-1357. To be acceptable for the fall entering class, the MCAT must be taken no later than the previous fall. No scores older than three years from June of the year you apply will be accepted. Applicants must also meet the following academic requirements.

A. Completed at least three years of study in an accredited college or university in the United States. A minimum of 90 semester hours or 135 quarter units of college-level work is required. Courses in highly specialized fields are acceptable only at the discretion of the medical school.

B. Physicians should have a broad college level education in the natural, social, and behavioral sciences and the humanities. We require the MCAT and three years (90 semester hours or 135 quarter hours) in an accredited college or university that include the specific requirements listed below.

C. Required college-level courses (verified by AMCAS):
   - Biological Sciences: 1 year
   - Chemistry, general and organic sequence: 2 years
   - Physics: 1 year
   Technical, Non-Academic Standards are also required. For more information, see http://www.ucdmc.ucdavis.edu/mdprogram/admissions/requirements.html.

For additional information, contact the School of Medicine Admissions Office at 916-734-4800.

ADMISSIONS PROCESS

The UC Davis School of Medicine admissions cycle starts in July and ends the following July. Upon applying through AMCAS, you receive information on how to enter and use the Applicant Portal. All communications and updates related to your application are managed through the Applicant Portal. For your convenience, please communicate through the Message Center, which is checked regularly. The UCDSOM admissions process consists of four major steps:

STEP 1: Complete your AMCAS Application

June 1 is the first day students may submit applications to the American Medical College Application Service. It is a good idea to submit your AMCAS application no later than August 1. October 1 is our deadline to submit all application materials to AMCAS. Extensions will not be considered.

STEP 2: Secondary Application (by invitation only)

After applying, your application is reviewed and qualified applicants are invited to complete our UC Davis School of Medicine secondary application. The secondary application consists of:
   - Supplementary activities and essays including possible interest in special Programs in Medical Education (PRIME) tracks and research pathways
   - Letters of recommendation (3-6 LORs allowed)
   - Complete pre-requisite information
   - Non-refundable application fee: $80

Completed secondary applications are forwarded to the admissions committee who perform a holistic review of applications and invite select applicants for an interview. Interview invitations are on a rolling basis-July through January.

STEP 3: Interview Day (by invitation only)

Our interviews are always held on Fridays starting in mid-August and ending in February.

STEP 4: Acceptance Decision

Upon completion of your interview, your application is forwarded to Admissions Committee. Acceptance decisions are made on a rolling basis starting on October 15 through July 15 the following year. Decisions are made within 30-45 days post-interview after review of your entire application packet. Categories of decision are:
   - Acceptance: Starting October 15 and through July 15
   - Wait list: Applicant informed of wait list status with final decision staring May 15 through July 15
   - Not Accepted

ADMISSIONS CRITERIA

The UC Davis School of Medicine Admissions Committee reviews each applicant’s experiences, attributes, and metrics as related to our core student physician competencies:
   - Patient care
   - Knowledge
   - Interpersonal and communications skills
   - Professionalism
   - System-based practice (working within the health care system to enhance care)
   - Life-long learning

The Admissions Committee determines whether the applicant will be granted a secondary application, interview, and ultimately acceptance to the UC Davis School of Medicine. Committee members attempt to do a holistic assessment of each applicant that includes, but is not limited to, the following experiences, attributes, and metrics (in no particular order of importance):

Experiences
   - Healthcare experience
   - Research experience
   - Leadership experience
   - Community service
   - Educational background
   - Experience working in inter-professional teams
• Life experiences (e.g. obstacles overcome)

Attributes
• Geographic origin (e.g. rural or medically underserved area)
• Resilience
• Motivation for a medical career
• Intellectual curiosity
• Communication skills, including listening and empathy
• Languages spoken, particularly by underserved patient populations
• Critical thinking skills including problem solving
• Professional responsibility and accountability
• Values and ethical beliefs
• Self-assessment and improvement skills
• Altruism and compassion
• Appreciation for diverse perspectives
• Ability to work in inter-professional teams
• Honesty and integrity

Metrics
• Undergraduate grades, grade trends, and course load
• Medical College Admissions Test (MCAT) score
• Performance in a post-baccalaureate and/or graduate degree program

Western Interstate Commission for Higher Education (WICHE) and residents of participating states will be considered as residents for the purposes of admission. For more information submit inquiries to WICHE at http://wiche.edu/askWICHE/submit or call 303-541-0200.

Transfer with Advanced Standing
We do not accept transfer students.

PROGRAM OF STUDY

Doctor of Medicine. The curriculum for the M.D. degree is normally a four-year program that provides comprehensive training for the practice of medicine and provides a blend of basic sciences training and clinical experience. The emphasis during the first two years is on the basic-science foundations of medicine. Medical students are introduced to patient care during their very first quarter of study, reflecting the school's commitment to the training of highly skilled clinicians. Several volunteer clinics, largely staffed by UC Davis medical students, provide an ideal setting for hands-on clinical experience.

Tailored Clinical Tracks. We offer tailored clinical training for students interested in providing care for rural communities, urban underserved communities, and communities in the San Joaquin Valley: Our newest track, offered in collaboration with Kaiser Permanente Northern California, is a three-year pathway through medical school for students committed to Primary Care careers.

Combined Degree Program. In addition to the Doctor of Medicine degree, the School of Medicine at UC Davis offers a variety of dual-degree programs through coordination with other graduate groups and divisions. These advanced degrees can couple the M.D. degree with the M.P.H., Ph.D., and M.B.A. that train physicians to meet, respond to and solve the broad diversity of problems and dilemmas facing current and future health care.

Meeting this challenge requires those capable of advancing our biological sciences knowledge base and others who can recognize and solve the ethical, political and humanitarian issues that confront the broad delivery of health care to all. Hence, the field for the Ph.D. in the joint degree program at UC Davis can be any graduate program offered on the UC Davis campus, extending beyond the traditional biological sciences boundaries, and strongly encouraging candidates to seek degrees in social sciences and humanities. All requirements for both degrees are met in a course of study that usually lasts seven years. To be admitted, and be concurrently enrolled in both degree programs, students must apply for separate admission to both the M.D. and Ph.D. programs and obtain permission of the School of Medicine M.D./Ph.D. Advisory Committee. Funding for two competitive fellowships is awarded annually to students enrolled in the M.D./Ph.D. program.

Advisory Committee. Inquiries about admission to graduate education should be directed to the Dean of Graduate Studies, University of California, One Shields Avenue, Davis, CA 95616. For more information concerning the combined-degree programs, contact Joanna Garcia, Office of Admissions, School of Medicine, University of California, 4610 X Street, Sacramento, CA 95817.

Master of Public Health (MPH) Degree. The Department of Public Health Sciences (PHS) offers the MPH degree. The MPH degree is accredited by the Council on Education for Public Health. Students apply for admission through the Office of Graduate Studies. The MPH program is designed for people interested in disease prevention and community health. The program includes instruction in epidemiology, biostatistics, environmental and occupational health, health services and administration, and social and behavioral science, and prepares students for an expanding range of professional opportunities and roles in public health and medicine. The MPH program runs on the main campus quarter system. The majority of courses are taught on the Davis campus. For more information, see http://mph.ucdavis.edu/.

ACADEMIC CALENDAR

The School of Medicine operates on a different schedule from the rest of the UC Davis campus. The program is a continuous four-year academic experience. The first year curriculum commences in mid-summer and extends through mid-spring of the following year. There is a six week break between the first and second year for electives, research, and remediation. The second year curriculum begins in early summer and extends through mid-spring of the following year. This is followed by a six-week academic period for preparation for USMLE Step 1. The third year clinical clerkships start in the spring and extend for 48 weeks. The fourth year curriculum begins immediately thereafter and extends through spring of the following year, with graduation in May.
BETTY IRENE MOORE SCHOOL OF NURSING AT UC DAVIS

Education Building, Sacramento campus
UC Davis Health System
916-734-2145; http://nursing.ucdavis.edu

The Betty Irene Moore School of Nursing at UC Davis advances health and ignites leadership through innovative education, transformative research and bold system change.

The school cultivates academic excellence through immersive, interprofessional and interdisciplinary education and research in partnerships with the communities it serves. Faculty, staff and students discover and disseminate knowledge to advance health, improve quality of care and shape policy.

The school was launched through a $100 million commitment from the Gordon and Betty Moore Foundation, the nation’s largest grant for nursing education. The Betty Irene Moore School of Nursing cultivates academic excellence and addresses urgent societal needs through:

- Leadership development—build capacity for advocacy and action at all levels
- Interprofessional/interdisciplinary education—health professionals learn multiple perspectives to work and communicate as teams
- Transformative research—apply the science of nursing to improve health and reshape health systems with emphasis on aging, rural health and diverse communities
- Cultural inclusiveness—teach culturally-appropriate approaches to care and involve communities to design and conduct relevant research
- Innovative technology—use technology to create an engaged and interactive approach to nursing education, research and practice

Through the Nursing Science and Health-Care Leadership Graduate Degree Program, the school welcomed its first classes for the Master of Science—Leadership and the Doctor of Philosophy degree programs in fall 2010 and for the Master of Science—Physician Assistant Studies Degree Program in summer 2013.

Graduates of the Betty Irene Moore School of Nursing are prime candidates for formal leadership positions. Graduates exercise leadership through scientific approaches, vision, initiative, cultural inclusiveness, teamwork, and a commitment to assuring health care is highly effective, compassionate and accessible. Students with experience or interest in leading the transformation of health care through nursing education and research are sought for the Nursing Science and Health-Care Leadership Doctor of Philosophy program. Ideal students want to focus on important societal health issues through the work of advancing health and improving the systems that provide health services.

Graduates of the Betty Irene Moore School of Nursing are prime candidates for formal leadership positions. Graduates exercise leadership through scientific approaches, vision, initiative, cultural inclusiveness, teamwork, and a commitment to assuring health care is highly effective, compassionate and accessible. The full-time, academic doctoral program prepares graduates as leaders in health care, health policy and education and research at the university level to:

- Conduct transformative research
- Educate health professionals and researchers
- Effect system change
- Influence and implement policy
- Advance health from multiple settings

Master of Health Services—Physician Assistant

The Master of Health Services—Physician Assistant Studies Degree Program prepares graduates to deliver care as physician assistants. In alignment with the school’s vision to advance health, a primary goal of the physician assistant program is to improve the availability of culturally relevant primary care to underserved populations and educate clinicians to deliver care as a member of a health-care team.

Physician assistants are health-care professionals licensed to practice medicine with physician supervision. As part of their comprehensive responsibilities, physician assistants conduct physical exams, diagnose and treat illnesses, order and interpret tests, counsel on preventive health care, assist in surgery and write prescriptions.
Within the physician-physician assistant relationship, the physician assistant exercises autonomy in medical decision making and provides a broad range of diagnostic and therapeutic services.

A physician assistant’s practice may also include education, research and administrative services.

The Master of Health Services—Physician Assistant Degree Program graduates are prepared to work as leaders of health-care teams and learn methods to continually critique and improve their care, provide care that is evidence-based, and to establish systems of care to address population health. All students must take core academic courses and complete a thesis as well as 1,630 hours of supervised clinical practice.

**Master of Science—Leadership**

Master’s degree leadership students are those with experience or interest in transforming health care through nursing education and research. They want to focus on important societal health issues through the work of advancing health and improving the systems that provide health services.

Graduates of the Nursing Science and Health-Care Leadership Graduate Degree Program are prepared for academic and leadership positions. Graduates exercise leadership through scientific thinking, responsibility, initiative, cultural inclusiveness, knowledge of organizations and system change, teamwork, and a commitment to healthy communities.

The full-time, professional master's degree leadership program prepares graduates for health-care leadership roles in a variety of organizations and as nurse faculty at the community college-level.

Some examples include:

- Leaders of health organizations and agencies—such as community clinics, trade associations, advocacy groups—improving quality of care and work environments, and advancing outcomes and health-care effectiveness and efficiency
- Community college and other prelicensure nursing faculty—teaching the next generation of nurses
- Legislative and governmental agency staff and leadership developing, influencing and implementing policy to improve access and outcomes (not limited to health agencies but other organizations that provide public infrastructure such as transportation, planning or parks and recreation)
- Careers across the health-care sector, such as insurance, pharmaceutical, hospital, home health, aging support services, adoption services, chronic illness support services and medical equipment industries fostering the integration of excellence in clinical care, management, policy, education and research
- Students who wish to enroll in this track must first be accepted into the M.S.—Nurse Practitioner program. Once accepted, the student works in conjunction with his or her adviser to determine dual-track eligibility.

**Master of Science—Nurse Practitioner and Physician Assistant Dual-Track Program**

Nurse practitioner students at the Betty Irene Moore School of Nursing can simultaneously prepare for both the nurse practitioner and physician assistant professions through the unique Master of Science—Nurse Practitioner and Physician Assistant Dual-Track Program.

This dual-track program is the only one in the nation where nurses are prepared to work as both nurse practitioners and physician assistants.

Students who wish to enroll in this track must first be accepted into the M.S.—Nurse Practitioner program. Once accepted, the student works in conjunction with his or her adviser to determine dual-track eligibility.

Students in the dual-track program must complete additional coursework and supervised clinical hours to meet both the nurse practitioner and physician assistant education requirements. The dual-track program is nine quarters in length. Upon completion of the dual-track program, students earn a Master of Science—Nurse Practitioner Track Degree in Nursing Science and Health-Care Leadership and are then eligible to complete the certification exam for the nurse practitioner and the licensing exam for the physician assistant.

**Preparation for the Study of Nursing**

The Nursing Science and Health-Care Leadership Graduate Degree Program is ideal for students who:

- See problems in health care and think of solutions
- Want to improve health systems and advance health
- Find value in diversity of thought, belief, language and culture
APPLYING FOR ADMISSION

Betty Irene Moore School of Nursing students are admitted during fall term only for the Master of Science—Leadership Track and Doctor of Philosophy programs and summer term only for the Master of Science—Nurse Practitioner and Master of Health Services—Physician Assistant programs. Students applying for the physician assistant or nurse practitioner programs must complete a Centralized Application System for Physician Assistants (CASPA) application and meet selection criteria. Following that process, a select pool of qualified applicants is invited to apply for UC Davis graduate admissions. All invited applicants must meet UC Davis graduate admissions requirements. Online applications are available through the Office of Graduate Studies website at http://gradstudies.ucdavis.edu.

Application deadlines and requirements vary by program and year. For more information, please see the School of Nursing website at http://nursing.ucdavis.edu or contact the School of Nursing at 916-734-2145.

DOCTOR OF PHILOSOPHY

Admission Requirements

• A bachelor's degree in nursing or a related field
• A minimum undergraduate G.P.A. of 3.000
• Three (3) letters of recommendation
• A statement of purpose and personal-history statement, including research interests and future goals
• The application process may require an interview
• G.R.E. is not required

Degree Program Requirements

Required courses for the doctoral program include a combination of core courses and electives. Students work with their advisers to select electives appropriate to their areas of interest.

• Full-time enrollment (12 units per quarter) is required
• Required courses for the doctoral-degree program include a combination of core and elective courses. A series of courses in research methods is also required
• Doctoral students are required to pass an oral qualifying examination. The intent of the oral qualifying examination is to determine whether the student is adequately prepared and sufficiently intellectually independent to conduct doctoral-level research. The exam may include both an oral component as well as the student's proposal for the dissertation research
• A doctoral dissertation is required. Students will enroll in dissertation units as full-time students after the qualifying exam until the dissertation is complete
• Ph.D. students are expected to complete the program in four years

MASTER OF HEALTH SERVICES—PHYSICIAN ASSISTANT STUDIES DEGREE PROGRAM

Admission Requirements

• A bachelor's degree in a health-related field
• A minimum undergraduate G.P.A. of 3.000
• A minimum 2,700 G.P.A. in all science prerequisite coursework
• A minimum of 1,000 hours of paid or volunteer experience in a clinical environment with direct patient exposure
• Statement of purpose, personal-history statement, research interests and future goals
• The application process may require an interview
• G.R.E. is not required

Degree Program Requirements

• Full-time enrollment (12 units per quarter) is required.
• Required courses for the master's degree program include a combination of core courses and electives. Six graduate-level core courses—Health Status and Care Systems, Implementation Science, Leadership in Health Care, Quantitative Skills for Change, Community Connections and an Informatics course—and the Master's Degree Seminar are required courses for the master's-degree program
• A master's thesis is required
• Physician assistant students are expected to complete the program in 27 months

MASTER OF HEALTH SERVICES—LEADERSHIP TRACK DEGREE PROGRAM

Admission Requirements

• Current registered nurse (R.N.) licensure
• A bachelor's degree in nursing or a related field
• A minimum undergraduate G.P.A. of 3.000
• A statement of purpose and personal-history statement, including research interests and future goals
• Three (3) letters of recommendation
• The application process may require an interview
• G.R.E. is not required

Degree Program Requirements

• Full-time enrollment (12 units per quarter) is required.
• Required courses for the master's-degree leadership program include a combination of core courses and electives. Six graduate-level core courses—Health Status and Care Systems, Implementation Science, Leadership in Health Care, Quantitative Skills for Change, Community Connections and an Informatics course—and the Master's Degree Seminar are required courses for the master's-degree program
• Students work with their advisers to select electives appropriate to their areas of interest
• A master's thesis is required
• M.S.—Leadership Track students are expected to complete the program in five quarters. A sixth quarter option is available if needed
MASTER OF HEALTH SERVICES—NURSE PRACTITIONER TRACK DEGREE PROGRAM

Admission Requirements

- Current registered nurse (R.N.) licensure
- A bachelor’s degree in nursing or a related field
- A minimum undergraduate G.P.A. of 3.000
- A minimum 2.700 G.P.A. in all science prerequisite coursework
- A statement of purpose and personal-history statement, including research interests and future goals
- The application process may require an interview
- G.R.E. is not required

Degree Program Requirements

- Full-time enrollment (12 units per quarter) is required.
- Required courses for the master’s-degree program include a combination of core courses and electives
- A master’s thesis is required
- Nurse practitioner track students are expected to complete the program in 24 months

MASTER OF HEALTH SERVICES—NURSE PRACTITIONER AND PHYSICIAN ASSISTANT DUAL-TRACK PROGRAM

Nurse practitioner students at the Betty Irene Moore School of Nursing can simultaneously prepare for both the nurse practitioner and physician assistant professions through the unique Master of Science—Nurse Practitioner and Physician Assistant Dual-Track program. This dual-track program is the only one in the nation where nurses are prepared to work as both nurse practitioners and physician assistants.

Students who wish to enroll in this track must first be accepted into the M.S.—Nurse Practitioner Program. Once accepted, the student works in conjunction with his or her adviser to determine dual-track eligibility. Students in the dual-track program must complete additional coursework and supervised clinical hours to meet both the nurse practitioner and physician assistant education requirements.

ACADEMIC CALENDAR

The School of Nursing operates on the traditional UC Davis campus quarter system. The Doctor of Philosophy program is a four-year academic program and requires full-time enrollment. Core courses are offered fall, winter and spring quarters (not summer).

The Master of Health Services—Physician Assistant Studies Degree Program is a full-time, 27-month program. Core courses are offered summer, fall, winter and spring quarters.

The Master of Science—Leadership Degree Program is a full-time, professional degree five-quarter program. Core nursing courses are offered in fall, winter and spring quarters only (not summer).

The Master of Science—Nurse Practitioner Degree Program is a full-time, 24-month program. Core courses are offered summer, fall, winter and spring quarters.
The mission of the School of Veterinary Medicine is to advance the health of animals, people and the environment through teaching, research and public service. Students are offered a rigorous four-year program of study that prepares them for diverse career opportunities in veterinary medicine.
UNDERGRADUATE COURSES

Lower Division Courses

These courses, numbered 1–99, are open to all students for lower division credit, but are designed primarily for freshmen and sophomores.

Upper Division Courses

These courses, numbered 100–199, are open to all students who have met the necessary prerequisites as indicated in the General Catalog course description. Preparation should generally include completion of one lower division course in the given subject or completion of two years of college work.

VARIABLE-UNIT COURSES

Subject to approval by the department chair, an instructor may arrange to give a special study course (numbers 90X, 92, 97T, 97TC, 98, 99, 190X, 192, 194H, 197T, 197TC, 198, 199) to interested students. These courses may be offered any fall, winter, or spring quarter as determined by the department.

• 90X/190X (Seminar) are seminar courses for in-depth examination of a special topic within the subject area.
• 92/192 (Internship) courses enable individual students to obtain practical experience to complement their educational goals or to explore potential career interests and opportunities. Students must have completed 84 units before enrolling in course 192.
• 97T/197T (Tutoring) and 97TC/197TC (Tutoring in the Community) are courses for students who want to tutor in a subject in which they are proficient—generally in their major field—while enrolled as an undergraduate.
• 98/198 (Directed Group Study) courses are set up on a one-time basis for a group of students in a subject for which no regular courses have been established.
• 99 (Special Study for Undergraduates) is a course arranged for an individual student who shares, with an instructor, an academic interest that cannot be accommodated within the formal course structure.
• 194H (Special Study for Honors Students) courses are for individual students with honor status, as determined by the department offering the course and who have completed 84 units.
• 199 (Special Study for Advanced Undergraduates) courses are the upper division counterparts of course 99 and involve supervised independent study and research requiring adequate background in the subject proposed for study as well as prior completion of 84 units.

Credit in courses 99, 194H and 199 is limited to a total of 5 units per term.

Autotutorial Courses are courses in which students instruct themselves at their own pace. These courses can be identified by the letters AT at the end of their course numbers, e.g., 13AT, 141AT.

Virtual Courses are courses in which instruction is delivered on the Internet. These courses can be identified by the letter V at the end of their course numbers, e.g., 10V, 162V.

Research Conference Courses are courses in which advanced undergraduate students may participate in critical discussions of staff research activities. These one-unit courses are numbered 190C and are graded on a Passed/Not Passed basis.

GRADUATE COURSES

Courses numbered 200–299 are open to graduate students and to undergraduates who have completed 18 units of upper division work basic to the subject matter of the course. However, admission is subject to the approval of the instructor in charge of the course. Grading in 290C courses and most variable-unit 299 or 299D courses is Satisfactory/Unsatisfactory. Check the course description for grading information.

PROFESSIONAL COURSES FOR TEACHERS AND NURSE PRACTITIONERS

Courses numbered 300–399 are teacher-training courses in the School of Education and in other departments and are especially intended for teachers or prospective teachers. Courses designed to provide instruction to teaching assistants are included. Courses for certification of family nurse practitioners and physician assistants are also included. These courses are open only to students enrolled in those programs.

OTHER PROFESSIONAL COURSES

Courses numbered 400–499 are professional training courses. Graduate students should consult their faculty adviser or contact the Graduate Studies Office before registering in 400 series courses to determine if graduate credit may be awarded for the course in question.

PREREQUISITES

Prerequisites for courses should be noted carefully; the responsibility for meeting these requirements rests on the student. If you can demonstrate that your preparation is equivalent to that specified by the prerequisites, the instructor may waive these requirements for you. However, the prerequisite that requires that you complete 84 units before registering in the course may not be waived. The instructor in charge of a course may request that the Registrar drop from the course any student who has enrolled without completing the published prerequisites if, in the judgment of the instructor, failure to have completed that work seriously reduces the probability that the student will successfully complete the course. An instructor who intends to exclude a student for this reason must notify the student before taking action.
COURSE DESCRIPTIONS

Below is a sample of how a course is listed in this catalog.

190. Proseminar in Nutrition (1)
Seminar—1 hour. Prerequisite: senior standing; course 111. Discussion of human nutrition problems. Each term will involve a different emphasis among experimental, clinical, and dietetic problems of community, national and international scope. May be repeated twice for credit with consent of instructor.—I, II, III. (I, II, III.) Zidenberg-Cherr

Top line is course number; title; units.
Paragraph following is course instructional format; prerequisite; course description; grading, if other than letter grading; GE attributes, if any; quarter offered 2014–15; quarter offered 2015–16 (in parentheses); instructor (if specified).

Quarters offered is the quarter in which a course is intended to be given is shown as follows:
• I. Fall Quarter (September to December) or Fall Semester (August to December), School of Law
• II. Winter Quarter (January to March) or Spring Semester (January to May), School of Law
• III. Spring Quarter (April to June)
• IV. Summer Quarter (July to September)
The quarter a course is offered is subject to change. For more information, consult the department.

Alternate Year Designation

Some course descriptions will include the phrase “Offered in alternate years.” If the course will be offered in the 2014–15 academic year, the quarter designation immediately follows the description. If the course will be offered in the 2015–16 academic year, the quarter designation is inside parentheses.

Multi-Quarter Courses

A series of course numbers followed by two or three letters (for example, Physics 110A-110B-110C) is continued through three successive quarters, ordinarily from September to June. The first quarter course listed this way is a prerequisite to the second and the second is prerequisite to the third. On the other hand, where A and B portions of a course are listed separately (for example, Economics 160A and 160B), the A course is not a prerequisite to B, unless it is specifically mentioned in the list of prerequisites.

Expanded Course Descriptions

Because of space limitations, you may find that the descriptions in the General Catalog do not include all the information you would like about a course. The faculty has responded to this need by writing the “Expanded Course Descriptions,” giving more detailed explanations about each course offering. These descriptions are available each quarter to assist students in selecting their courses. They contain such information as texts used, preparation required of students, basis for grading, course format, special assignments (papers, field trips, etc.) and a topical outline of the material to be covered.

Copies of the “Expanded Course Descriptions” are available for on-campus use at the College dean's offices or the Biology Academic Success Center, advisers' offices, advising centers, and departmental offices.

The course offerings and instructors listed in this catalog are subject to change without notice. For the most current offerings and instructors, refer to the General Catalog Supplement at http://catalog.ucdavis.edu/.

The Major Program
African American and African Studies is an interdisciplinary field of study in the humanities, arts, and social sciences. This major introduces students to the social cultural, historical and artistic dimensions of global African Diaspora and Black communities in the United States, Africa, Europe, Asia, Caribbean, Latin America and Pacific regions of the world. The instructors are creative, accessible and highly qualified, with specializations across a range of disciplines. Students are exposed to and trained to think critically about the conditions and demands of global societies. Students may choose to enrich their education studying for a summer, a quarter, or a year in Africa, or by studying for a quarter in the Caribbean. Majors and Minors are also encouraged to take advantage of relevant internship opportunities.

The Program
The purpose of this program is to give African American students a sense of the individual characteristics and common concerns of Black communities in Africa, the United States, and in the wider Diaspora. The African American emphasis includes courses on history, culture, and the impact of developments in politics and the economy on the social organization of Black people in the United States. The African Diaspora emphasis enables students to study the way Black people outside Africa and the United States have dealt with questions of race and ethnicity. It also considers how they have defined their identity in the political arena as well as by religion, art, dance, literature and film. The African emphasis allows students to focus on Africa’s recent history, social issues, and contemporary culture.

Career Alternatives
Students majoring in African American and African Studies gain knowledge and strong critical thinking and analytical skills, problem-solving skills and communication skills, all suited for advanced studies in the social sciences, low, education and professional schools. Graduates in the major have pursued careers in education, the private and public sectors, the non-profit sector, international organizations and in human service. The interdisciplinary nature of African American and African Studies is excellent preparation for professional organizations as the Urban League, NAACP and the Office of Economic Opportunity.

A.B. Major Requirements:
The major program must be developed in consultation with the African American and African Studies Adviser, and approved by the program’s Faculty Adviser.

Preparatory Subject Matter .......................... 28
One course from: African American and African Studies 10, 12 .......................... 4
One course from: African American and African Studies 15, 17, 18, 50, 51, 52, 80 .......................... 4
One course from: Anthropology 2; Economics 1A, 1B; Geography 2; Sociology 1; Political Science 1, 2; Psychology 1 .......................... 4
One course from: Chicana/o Studies 10; Native American Studies 1, 10; Women & Gender Studies 50; American Studies 10; Asian American Studies 1, 2 .......................... 4
Two courses from: History 135, 17A, 178 .......................... 8
A coordinated program of upper division courses, selected and approved in consultation with the major adviser and chosen to reflect the student’s major emphasis .......................... 24

Depth Subject Matter .......................... 36
One course from: Africana Studies 111, 123, 130, 133, 141, 145A, 145B, 156, 162, 163, 165, 172, 176, 177 .......................... 8
A coordinated program of upper division courses, selected and approved in consultation with the major adviser and chosen to reflect the student’s major emphasis .......................... 24

Possible areas of emphasis include the following: Creative arts in the black community worldwide, social and political trends in the global black community, African American society and culture, African Diasporas. These areas of emphasis allow majors to develop research and writing courses for students in the major. They are not the only areas of emphasis that students may choose for the major.

Related Upper Division Courses
The following courses are offered by faculty members in other disciplines and focus on African American studies, African diaspora studies, or African studies.

Total Units for the Major .......................... 64
Major Adviser, Contact Program office.

Minor Program Requirements:

Minor African American and African Studies ... 24
Select one course from: African American and African Studies 10, 12, 15, 17, 18, or 80 .......................... 4
Select any five upper division courses offered in African American and African Studies, but not including African American and African Studies 154.

Note: Although a course may be listed more than once, such a course may satisfy only one requirement.

American History and Institutions.
This University requirement may be satisfied by completion of African American Studies 100; see also under University Requirements, on page 96.

Courses in African American and African Studies (AAS)

Lower Division

African American Culture and Society (4)
Lecture—3 hours; discussion—1 hour. Critical examination of the historical, political, social, and economic factors that have affected the development and status of African-American people in contemporary society. GE credit: SocSci, Div | ACGH, DD, SS, WE—I. (II.) Harrison

Introduction to African Studies (4)
Lecture/discussion—4 hours. Introduction to African Studies which will focus on the various disciplinary perspectives through which African society and culture are generally studied. A survey of methods, resources and conceptual tools for the study of Africa. GE credit: ArtHum or SocSci, Div, Wrt | AH or SS, WC, WE—II. (II.) Adebanwi, Adejunmobi

Introduction to African American Humanities (4)
Lecture—3 hours; discussion—1 hour. Introduction to the humanist tradition developed by writers, philosophers, and artists of African descent in the West. Attention also given to African sources, as well as European, Caribbean, Latin-American, and North American variations on this tradition. Class size limited to 165 students. GE credit: Wrt | ACGH, AH, DD—II. (II.) Harrison

Verbal and Performance Arts in Africa (4)
Lecture-discussion—4 hours. African verbal arts; oral texts from different African cultures. Types of critical response to oral texts, role of oral artists, context and esthetics of oral performance in Africa. GE credit: ArtHum, Div, Wrt | AH, VL, WC.—II. (II.) Adejunmobi

Women in African Societies (4)
Lecture/discussion—4 hours. Gender relations in traditional and contemporary African society. Involvement of African women in politics, religion, the economy, the arts. African responses to feminist theory. Images of women in African literature. GE credit: SocSci, Div, Wrt | SS, WC, WE—III. (III.) Adebanwi

Introduction to Caribbean Studies (4)
Lecture—3 hours; discussion—1 hour. Introduction to the contemporary culture, peoples, politics, and societies of the Caribbean. Topics include movements of people, goods and ideas across the Atlantic world and creative productions within the Caribbean. GE credit: ArtHum or SocSci | AH or SS, WC—II. (II.) Ng‘weno

Black Popular Culture (4)
Lecture—3 hours; discussion—1 hour. Survey of the African American images in popular culture (film, television, comedy, sports and music). GE credit: AH or SS, WC—III. (III.) Harrison

History of Afro American Dance (4)
Lecture—3 hours; discussion—1 hour. Evolution of African-American dance, tracing its history and development, from West and Central Africa to the United States. Investi...
gates the social and cultural relevance of African American dance and its artistic merits through contributions from its choreographers and performers. GE credit: ArtHum | AH, DD, VL.—III. (III.) Osumare

52. African Traditional Religion (4)
Lecture—2 hours; discussion—2 hours. Introduction to traditional religions of the sub-Saharan African peoples, emphasizing oral arts, rituals and symbols in West, East, Central and South African indigenous religions. Examines themes: sacred kingship, divination system, women, prophecy, conversion and adaptation, religious pluralism. GE credit: ArtHum, Div, Wrt | AH, WC.—II. (II.)

80. Introduction to Black Politics (4)
Lecture—4 hours. Introduction to the analysis of African politics, using conceptual frameworks from political science and other social sciences. GE credit: SocSci, Div, Wrt.—III. (III.) Harrison

99. Special Study for Undergraduates (1-5)
Prerequisite: consent of instructor. (P/NP grading only)

Upper Division

100. Survey of Ethnicity in the U.S. (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: upper division standing or consent of instructor. Limited enrollment. Ethnographic and historical analysis of the experience, culture, and relations of and between groups considered racial and/or ethnic minorities in the United States. GE credit: ArtHum | ACGH, AH, DD.—II. (II.) Harrison, Osumare

101. Introduction to Research in the Afro-American Community (4)
Lecture—4 hours. Prerequisite: course 10 or consent of instructor. Introductory survey of Afro-American Studies methods and techniques; problems and methodology in Afro-American Studies.—III. (III.) Harrison, White

107A. African Descent Communities and Culture in the Caribbean and Latin America (4)
Lecture/discussion—4 hours. Prerequisite: upper division standing. Origin and development of African descent communities and cultures in the Caribbean, and Latin America. The similarities and differences among African descent communities and cultures in terms of religious practices, music, and national identity. GE credit: ArtHum, Div, Wrt | WC.—I. (I.) Lambert, Ng’weno

107B. African Descent Communities and Culture in North America (4)
Lecture—2 hours; discussion—1 hour; term paper. Prerequisite: upper division standing. Origin and development of African descent communities and culture in the U.S., Canada, and Mexico from the African slave trade to contemporary urban society. Offered in alternate years. GE credit: ArtHum, Div, Wrt.—II. (II.)

107C. African Descent Communities and Culture in Europe and Asia (4)
Lecture/discussion—4 hours. Prerequisite: upper division standing. The study of the origin and development of African descent communities and cultures in Europe and Asia. Offered in alternate years. GE credit: ArtHum or SocSci, Div, Wrt | AH or SS, WC.—II. (II.) Adebawuni, Adejumobi

110. West African Social Organization (4)

111. Cultural Politics in Contemporary Africa (4)
Lecture/discussion—4 hours. Prerequisite: upper division standing. Themes and style of new cultural forms in Africa as displayed in art, music, film and writing, especially in regard to blending of indigenous and foreign influences. Social and political forces shaping contemporary cultural expression. Offered in alternate years. GE credit: ArtHum or SocSci, Div, Wrt | AH or SS, WC.—II. (II.) Adebanwi, Adejumobi

123. Black Female Experience in Contemporary Society (4)
Lecture—4 hours. Prerequisite: upper division standing or consent of instructor. Black female social, intellectual, and political development. Black women’s contributions in history, literature, and social science; life experiences of Black women and philosophical underpinnings of the feminist movement.—Offered in alternate years. GE credit: ArtHum or SocSci, Div | ACGH, DD, SS.—III. (III.) Lambert

130. Education in the African Community (4)
Lecture—2 hours; discussion—1 hour; fieldwork—3 hours. Prerequisite: upper course 100, completion of the subject A requirement. Examination of the history of the education of African Americans in the United States. Examination and critique of contemporary theories concerning the schooling of African Americans. Offered irregularly. (Former course 140.) GE credit: SocSci | DD, SS.—I. (I.)

133. The Black Family in America (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: upper division standing or consent of instructor. Analysis of social science research to examine relationships between black (African-descent) family structures, patterns of functioning, and political, economic, and social development in the U.S. Offered in alternate years. GE credit: SocSci, Div | ACGH, DD, SS.—III. (III., IV, III.) Harrison

141. Psychology of the African American Experience (3)
Lecture—2 hours; discussion—1 hour. Prerequisite: course 10 or consent of instructor. Introduction to the psychological issues faced by African Americans. Analysis of issues from European/Western and Afro-centric frame of reference. Emphasis on Optimality Theory, a psychological theory based on an Afro-centric world view.—III. (III.) Haggins

145A. Black Social and Political Thought (4)
Lecture—4 hours. Prerequisite: course 10 or 80, or consent of instructor. Exploration and analysis of Black social and political thought in the Americas. Offered in alternate years. GE credit: SocSci, Div | DD, SS.—III. (III.) Harrison

145B. Black Intellectuals (4)
Lecture—4 hours. Prerequisite: course 10, 80, 145A, or consent of instructor. Exploitation and critical analysis of selected theoretical writings of Black intellectuals, and especially political and social thinkers, in the American and African Diaspora. GE credit: SocSci, Div | DD, SS, WE.—(III.) Harrison, Lambert, Osumare

150A. Afro-American Visual Arts Tradition: A Historical and Cultural Study (4)
Lecture—4 hours; discussion—4 hours. Prerequisite: upper division standing. Afro-American visual arts tradition, folk and formal, in historical and cultural context, from 1600 through Reconstruction. GE credit: ArtHum, Div.—I. (I.)

150B. Afro-American Visual Arts Tradition: A Historical and Cultural Study (4)
Lecture—4 hours. Prerequisite: upper division standing. Afro-American visual arts tradition, folk and formal, in historical and cultural context, from 1600 through Reconstruction. GE credit: ArtHum, Div.—II. (II.)

151. Afro-American Vernacular Music and Verbal Arts (4)
Lecture—2 hours; discussion—2 hours. Socio-political dimensions of African-American musical forms like spiritual, work song, minstrelsy blues, rhythm and blues, jazz, gospel, soul and contemporary pop, and related verbal arts like preaching, toasting, rapping.—III. (III.)

152. Major Voices in Black World Literature (4)
Lecture—2 hours; discussion—1 hour; term paper. Prerequisite: upper division standing, completion of course 10, or course 12, or course 18. Recurrence of cultural tropes in the works of major black world authors and formation of an African-oriented canon. Prerequisites: activities include critical reading and discovery of literature as a cultural resource. Offered in alternate years. GE credit: ArtHum, Div, Wrt | AH, DD, WC, WE.—(II.) Adejumobi

153. African Literature (4)
Lecture—3 hours; term paper. Prerequisite: completion of Entry Level Writing Requirement (ELWR). Colonial and post-colonial sub-Saharan African literature and the African oral traditions from which it emerged. Genres and themes of African literature from the nineteenth century to the present. Offered in alternate years. [Same course as Comparative Literature 154.] GE credit: ArtHum, Div, Wrt | AH, WC, WE.—III. (III.) Adejumobi

155A. African-American Dance and Culture in the United States, Brazil and the Caribbean (4)
Lecture/discussion—4 hours. Comparative study of the cultural contributions of African-Americans in the U.S.A., Brazil, Haiti, Cuba, Jamaica, Barbados, and Trinidad. Examination of ritual, folk, and popular dance forms and the socio/historical factors that have influenced these forms. [Same course as Dramatic Art 155A.] GE credit: ArtHum | AH, VL, WC.—II. (II.) Osumare

156. Language and Identity in Africa and the African Diaspora (4)
Lecture/discussion—4 hours. Prerequisite: upper division standing or course 12. Relationship between language and identity in literature from Africa and the African Diaspora. Use of pidgins, creoles, translation from African languages, and impact of language policies. Offered irregularly. GE credit: ArtHum, Div | AH, DD, WC.—III. (III.) Adejumobi

157. Literature and Society in South Africa (4)
Lecture/discussion—4 hours. Prerequisite: upper division standing. Political and social developments in 20th-century South Africa as illustrated by a range of South African writing. Response of different writers to race relations, impact of government policy on types and context of writing. Offered in alternate years. GE credit: ArtHum, Div, Wrt | AH, WC, WE.—II. (II.) Adejumobi

160. African-American Folklore (4)
Lecture—2 hours; discussion—1 hour; fieldwork—3 hours. Prerequisite: course 10. Theory and history of African American folklore and folk life, including music, material culture, oral history, proverbs and humor. African and Caribbean cultural influences on New World folk genres will be probed. GE credit: ArtHum, Div.—III. (III.)

162. Islam in Africa and the Americas (4)
Lecture/discussion—4 hours. Prerequisite: Introduction to Afro-American Studies 60 or course 12 or course 110. Comparative and historical survey of Islam in the regional and cultural settings of Sub-Saharan Africa and the Americas. Offered irregularly. GE credit: ArtHum, Div, Wrt | AH, WC, WE.—III. (III.)

163. African Religions in the Americas (4)
Lecture—2 hours; discussion—2 hours. Prerequisite: course 10; course 15 or consent of instructor. Comparative study of African religious traditions and belief systems in the Americas: Jamaica, Trinidad, Cuba, U.S.A., Haiti, and Brazil. Emphasis on the origins and development of Candomble, Santeria, Shango, Vodun, and Rastafariism in the New World. [Former course 153.] GE credit: ArtHum, Div, Wrt | AH, WC, WE.—III. (III.)

165. Afro-Christianity and the Black Church (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: upper division standing; course 10, 15 or consent of instructor. Examination of the historical role of Christian belief and practice as well as the institution of the Black Church in the experience of African Americans, from slavery to the present. Offered in alternate years. GE credit—SocSci, Div | ACGH, DD, SS.—III. (III.) Harrison
168. Black Documentary: History and Theory (4)
Lecture—3 hours; laboratory—5 hours. Prerequisite: Film Studies 1, course 170; course 50 recommended; consent of instructor. Study of Black documentary history and methodology. Fundamentals of documentary practice and the role of documentary films and modern technology in the history of African American life. GE credit: ArtHum, Div | AH, DD, VL, W, WC.—(II.) Lambert, White

170. African-American Film and Video (4)
Lecture—3 hours; film viewing—3 hours. Prerequisite: Film Studies 1, course 50 recommended. Comparative analysis of the African American experience in film and video. Overview of African American cinema and its impact on American society. Role of African Americans in actively shaping their representation. GE credit: ArtHum, Div | AH, DD, VL, WE.—II. White

171. Black African and Black European Film and Video (4)
Lecture—discussion—3 hours; film viewing—3 hours; term paper. Prerequisite: one of course TS, 50, or English 160 or 162, or consent of instructor. Comparative analysis of the African American experience in film and video. Overview of African American cinema and its impact on American society. Role of African Americans in actively shaping their representation. GE credit: ArtHum, Div, Wrt | AH, DD, VL, WE.—II. (II.) Lambert, White

172. Diaspora and New Black Identities (4)
Lecture—discussion—3 hours; term paper. Critical analysis of what it means to be Black/African American in the United States today. Topics include old and new diasporas, immigration, national origin, language, religion, class, education, politics, identity and culture, and heritage. GE credit: SocSci, Div, Wrt | AGCH, DD, SS, WE.—II. (II.) Lambert

175A. Black Documentary: History and Theory (4)
Lecture—3 hours; film viewing—3 hours. Prerequisite: Film Studies 1, course 170; course 50 recommended. Black documentaries and documentary theory. Use of black documentaries for political purposes. Offered in alternate years. GE credit: ArtHum, Div | AH, DD, VL, WE.—II. (II.) Lambert

175B. Black Documentary Practicum (4)
Lecture—2 hours; laboratory—6 hours. Prerequisite: course 175A and consent of instructor. Creation of documentary projects, with students working in production crews. Offered in alternate years. GE credit: ArtHum | AH, DD.—II, III

176. The Politics of Resources (4)
Lecture/discussion—4 hours. Prerequisite: course 12 or 110; limited enrollment. Examination of the ways in which the processes of the extraction, purification, and use of natural resources and the complex regimes of valuation and commodification they (re)produce lead to cooperation and conflict in contemporary American society. GE credit: SocSci | SS, WC.—III. (III.) Adebanwi

177. Politics of Life in Africa (4)
Lecture—discussion—4 hours. Existing income capacities in the structures of state and society in Africa for people to live well. Topics include institutions and practices that define state and civil society encounters in Africa; democracy, ethnicity, economic crisis, religion, citizenship, etc. Offered in alternate years. GE credit: ArtHum or SocSci | AH or SS, WC.—II. Adebanwi

180. Race and Ethnicity in Latin America (4)
Lecture/discussion—4 hours. The social and political effects of racial and ethnic categorization in Latin America, including issues of economic production, citizenship, national belonging, and access to resources. Emphasis is on peoples of African, Indigeneous, and African descent. GE credit: ArtHum or SocSci, Div | SS, WC, WE.—II. (II.) Ngweno

181. Hip Hop in Urban America (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: upper division standing or consent of instructor. Must have Junior or Senior level standing. History, aesthetics, urban and economic impacts of hip hop in the US, and its globalization. Hip hop’s four artistic elements—rap, deejaying, breakdancing, and aero-sol art—allow the examination of issues of race, ethnicity, and gender in youth culture and American society. GE credit: ArtHum | AH, DD, VL.—III. (III.) Osumare

182. Hip Hop Culture & Globalization (4)
Lecture—2 hours; discussion—1 hour. Prerequisite: course 181 preferable, not required. Investigation of hip-hop youth cultures outside the United States using globalization and Cultural Studies theories. Analysis of international hip-hop sites in Africa, Asia, Europe, South America, and elsewhere. Through reading, discussion, and visiting virtual sites. Offered in alternate years. GE credit: ArtHum, Div | AH, WL.—III. (III.) Lambert

185. Topics in African-American Film (4)
Lecture—3 hours; film viewing—3 hours. Prerequisite: course 170; course 50 recommended. Intensive study of special topics in African American film. May be repeated one time for credit. GE credit: ArtHum, Div, Wrt | AH, DD VL.—II. (II.) Lambert, White

190. Topics in African and African-Diaspora Studies (4)
Lecture/discussion—3 hours; term paper. Prerequisite: upper division standing in African American and African Studies or consent of instructor. Intensive treatment of a special topic or problem in African or African Diaspora Studies. May be repeated one time for credit when topic differs.—III. Lambert

192. Internship in African and African Studies (1-8)
Internship—3-24 hours. Prerequisite: upper division standing, completion of 12 units of upper division study in African American and African Studies courses and consent of instructor. Enrollment limited to African American and African Studies majors and minors. Supervised internship in community, government, or private institutions, in all subject areas offered by the African American and African Studies Program. May be repeated for credit for a total of 12 units. (P/NP grading only.)

1975. Tutoring in Afro-American Studies (1-5)
Tutoring—1-5 hours. Prerequisite: consent of major committee, upper division standing in major in Afro-American Studies. Leading of small voluntary discussion groups affiliated with one of the department’s regular discussion groups. May be repeated for credit for a total of six units. (P/NP grading only.)

198. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only)

199. Special Study for Advanced Undergraduates (1-5)
Prerequisite: consent of instructor. (P/NP grading only)

Graduate 201. Critical Foundations in African American Studies (4)
Seminar—3 hours. Prerequisite: graduate standing. Introduction to history of African American Studies. Topics include: research agendas, policy implications, debates, crises, and institutional frameworks. Offered in alternate years.—(I.) Harrison, Osumare

Seminar—3 hours; term paper. Prerequisite: graduate standing. Introduces students to the history and current organization of African Studies as area of intellectual investigation. Offers students an opportunity to review research agendas and policy implications, debates, crises, and institutional frameworks surrounding the production of knowledge about Africa. Offered in alternate years.—III. Adebanwi, Adejumobi

203. Critical Foundations in African Diaspora Studies (4)
Seminar—3 hours; term paper. Integrative conceptual framework includes History, Geography, Political Economy, Culture, and as tools to investigate the African Diaspora. Students engage African Diaspora theories within their research projects understanding issues developing from the movement of Africans to the rest of the world.—III. Lambert, White

204. Methodologies in African American and African Studies (4)
Seminar—3 hours; term paper. The relationship between theory and methodology, with emphasis on identifying relevant Methodological approaches and constructing theoretically informed research projects for studying the experience of people of African descent whether on the African continent or in the rest of the world.—I. Harrison, Ngweno

298A. Directed Group Study in African American and African Diaspora Studies (1-5)
Prerequisite: graduate standing. May be repeated for credit up to three times. (S/U grading only.)

298B. Directed Group Study in African Studies (1-5)
May be repeated for credit up to three times. (S/U grading only.)

299. Directed Group Study in African Studies (1-12)
(S/U grading only.)
Agricultural and Environmental Education

(College of Agricultural and Environmental Sciences and School of Education)

The Major Program

The major serves those interested in teaching agricultural and environmental sciences in schools or in non-formal settings such as nature preserves, environmental camps, or other venues. This major prepares graduates to direct programs in the agricultural and environmental sciences as well as provides them with a skill set necessary to work within social science careers related to these fields. This program of study meets state and federal requirements for entry into teacher preparation in agriculture and science, as well as requirements in Career Technical Education (CTE).

The Program

The program is designed to provide students with a broad background in various agricultural and environmental science disciplines, e.g., animal science, environmental science, plant and soil science, agricultural engineering, business management, agroecology, and horticulture. The program also focuses on the social sciences related to human resource development. The program provides students with practical experiences through fieldwork, school, and non-formal learning sites placements, or placement in sites related to a student’s focus of study. Through this major students will have the opportunity to explore and then incorporate agricultural and environmental issues into educational and development settings.

Career Alternatives

The need for scientists, technicians and educators to assist in domestic and international agricultural and environmental programs has created a continued demand for qualified instructors and supervisory personnel. This major also provides general preparation which is appropriate for work in banking, sales and service, rural recreation and related agricultural and environmental sectors. Students interested in obtaining breadth in both agricultural and environmental sciences will appreciate the scope and flexibility the major provides.

A minimum of eight (8) units is required in each area of Animal Science, Agricultural Business and Economics, Applied Biological Systems Technology, Environmental Horticulture, Environmental Science and Natural Resources, and Plant and Soil Science. A maximum of eight (8) units can be selected from the following areas of study:

- Animal Science 1, 2, 21, 22
- Applied Biological Systems Technology 1, 52, 49, 101
- Agricultural & Resource Economics 15 and either Economics 1A or 1B
- Environmental Horticulture 1, 6
- Plant Sciences 5
- Environmental Science and Policy 10
- Environmental Toxicology 10, Hydrologic Sciences 10, 47
- Plant Sciences 1, 2, 15, 49
- Viticulture and Enology 2, 3

Science/Math Preparatory ................. 42-44

- Biological Sciences 2A & 2B
- Chemistry 2A & 2B
- Geology 1, 20
- Soil Science 10
- Mathematics 16A & 16B, or 17A&B
- Physics 7A & 7B

Agricultural and Computing Information Systems

See Applied Computing and Information Systems, on page 165.
Upper Division

100. Concepts in Agricultural and Environmental Education (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: upper division standing. Philosophy and nature of formal and non-formal agricultural and environmental education programs. Emphasis on understanding the role of the teacher and observing a variety of programs. GE credit: SocSci, Wrt.—II. (II.) Martin
dale
160. Vocational Education (3)
Lecture—3 hours. Philosophy and organization of vocational education, with particular reference to educational principles for agriculture commerce, home economics, and industry. GE credit: SocSci, Wrt.—II. (II.)
171. Audiovisual Communications (2)
Lecture—1 hour; laboratory—3 hours. Prerequisite: upper division standing. Theory and principles of audiovisual communications. Comparison of audiovisual materials such as transparencies, slides, computer-generated graphics, and videos. Operation and use of audiovisual equipment is stressed.
172. Multimedia Productions (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: course 171 recommended. Design and production of educational, technical, and professional multimedia presentations. Instructional or professional presentations using a variety of media, including slides, video, transparencies, and computer-generated graphics. Offered in alternate years. GE credit: SocSci, Wrt.
190. Seminar in Agricultural Education (2)
Seminar—2 hours. Discussion of selected critical issues in agricultural education. May be repeated for credit with consent of instructor. (P/NP grading only)—II. (II.)
192. Internship (1-12)
Internship—3-36 hours. Prerequisite: upper division standing, consent of instructor. Supervised internship off and on campus in areas of agricultural education. (P/NP grading only)
198. Directed Group Study (1-5)
(P/NP grading only)
199. Special Study for Advanced Undergraduates (1-5)
(P/NP grading only)

Professional

300. Directed Field Experience in Teaching (2)
Discussion—1 hour; field experience—3 hours. Prerequisite: course 100. Experience as teaching assistant in agriculture or home economics programs in public schools. May be repeated one time for credit. (S/U grading only)
301. Planning for Instructional Programs (3)
Lecture—3 hours. Prerequisite: course 100; course 300 (may be taken concurrently). Major paradigms in program planning and development. Emphasis on key steps in curriculum development, including selection and organization of educational objectives, learning experiences and teaching materials and resources. —III. (III.) Trel
er
302. Teaching Methods in Agricultural Education (2)
Lecture—2 hours; laboratory—2 hours. Prerequisite: course 100, course 300 (may be taken concurrently). Development of teaching strategies with special emphasis on the designing of learning experiences, instructional execution, and use of teaching aids in agricultural education.
306A. Field Experience with Future Farmers of America and Supervised Experience Programs (4)
Lecture/discussion—2 hours; field work—6 hours. Prerequisite: acceptance into a teacher education program; course 306B (concurrently). Develop an understanding of the Future Farmers of America and supervised occupational experience programs through planning, conducting, and evaluating actual programs.
306B. Field Experience in Teaching Agriculture (5-18)
Student teaching (corresponds with public school session). Prerequisite: acceptance into a teacher education program; course 306A (concurrently); courses 100, 300, 301, 302. Directed teaching including supervision of occupational experience programs and youth activities in secondary schools or community colleges. May be repeated for credit up to a maximum of 18 units.
323. Resource Development: Agricultural Education (3)
Discussion/lab—4 hours. Prerequisite: acceptance into a teacher education program and courses 306A, 306B. Selection and implementation of community resources in teaching.
390. Seminar: Issues in Agricultural Education (2)
Discussion/lab—4 hours. Prerequisite: selection of a topic relating to agricultural education. May be repeated for credit.

Agricultural Management and Rangeland Resources

(College of Agricultural and Environmental Sciences)
This major was discontinued as of Fall 2008; see Ecological Management and Restoration, on page 229.
Faculty. See Plant Sciences, on page 476. Courses. See Plant Sciences, on page 476.

Agricultural and Managerial Economics

See Managerial Economics, on page 386.

Agricultural and Resource Economics

Quarter Offered: I—Fall, II—Winter, III—Spring, IV—Summer; 2015-2016 offering in parentheses
Pre-Fall 2011 General Education (GE): ArtHum—Arts and Humanities; SciEng—Science and Engineering; SocSci—Social Sciences; DivDom—Domestic Diversity; Wrt—Writing Experience
Fall 2011 and on Revised General Education (GE): ArtHum—Arts and Humanities; SciEng—Science and Engineering; SocSci—Social Sciences; ACGH—American Cultures; DD—Domestic Diversity; OL—Oral Skills; QL—Quantitative; SL—Scientific; VL—Visual; WC—World Cultures; WRT—Writing Experience
1. Economic Basis of the Agricultural Industry (4)

Lecture—4 hours. Agriculture and man; the agricultural industry in U.S. and world economies; production and supply, marketing and demand; agricultural land, capital labor, and social problems of agriculture in an urban and industrialized economy emphasizing California. GE credit: SocSci | SS.

15. Economic Basis of the Agricultural Industry (4)

Lecture—4 hours. Agriculture and man; the agricultural industry in Australia and world economies; production and supply, marketing and demand; agricultural land, capital labor, and social problems of agriculture in an urban and industrialized economy emphasizing Australia. Taught in Australia under the supervision of a UC Davis faculty member. Not open for credit to students who have completed course 1. GE credit: SocSci | SS, WC.

15. Population, Environment and World Agriculture (4)

Lecture—3 hours; discussion—1 hour. Economic analysis of interactions among population, environment, natural resources and development of world agriculture. Introduces students to economic thinking about population growth, its causes and consequences for world food demand, and environmental and technological limits to increasing food supplies. GE credit: SocSci, Div, Wrt | SS, WC, WE—II. (II)

18. Business Law (4)

Lecture—4 hours. Prerequisite: sophomore standing. General principles of business law in the areas of contracts, business organization, real property, uniform commercial code, sales, commercial paper, employment relations, and creditor-debtor against a background of the history and functioning of our present legal system. GE credit: SocSci | SS—I, III, IV, (I, II, III, IV)

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. Restricted to lower division students. (P/NP grading only.) GE credit: SS.

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.) GE credit: SS.

Upper Division

100A. Intermediate Microeconomics: Theory of Production and Consumption (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Economics 1A, 1B; Mathematics 16B. Theory of individual consumer and market demand; theory of production and supply of agricultural products, with particular reference to the individual firm; pricing, output determination, and employment of resources under pure competition. Not open for credit to students who have completed Economics 100 or the equivalent; however, Economics 100 will not serve as prerequisite to course 100B. GE credit: SocSci | QL, SS—I, II, III, IV, (I, II, III, IV)

100B. Intermediate Microeconomics: Imperfect Competition, Markets and Welfare Economics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100A. Pricing, output determination, and employment of resources under conditions of monopolistic competition and monopolopoly. GE credit: SocSci | QL, SS—I, II, III, IV, (I, II, III, IV)

106. Econometric Theory and Applications (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100A, Statistics 103. Pass one open to managerial economics majors; pass two open to majors in the College of Agricultural and Environmental Sciences. Mathematical methods for analyzing data to solve problems in managerial economics. Topics include the linear regression model, methods to resolve data problems, and the economic interpretation of results. Not open for credit to students who have enrolled in or completed course 100B. GE credit: SocSci | QL, SS—I, II, III, IV, (I, II, III, IV)

112. Fundamentals of Organization Management (4)

Lecture—4 hours. Prerequisite: upper division standing or consent of instructor. Pass one open to majors in the College of Agricultural and Environmental Sciences. Role of organizational design and behavior in business and public agencies. Principles of planning, decision behavior, management, leadership, informal groups, conflict and change in the organization. GE credit: SocSci | SS—I, II, III, IV, (I, II, III, IV)

113. Fundamentals of Marketing Management (4)

Lecture—4 hours. Prerequisite: Economics 1A. For non-majors only. Nature of product marketing by the business firm. Customer relationship pricing, and demand; marketing policies and marketing strategy; promotion and advertising; product life cycles; the distribution system; manufacturing, wholesaling, retailing. Government regulation and restraints. (Not open for credit to students who have completed course 136.) GE credit: SocSci | SS.

115A. Economic Development (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Economics 1A and 1B. Major issues encountered in emerging from international poverty, problems of growth and structural change in populations, food supply and demand, urban and industrialized economy emphasizing Australia. Taught in Australia under the supervision of a UC Davis faculty member. Not open for credit to students who have completed course 1. GE credit: SocSci, Div | SS, WC—II, III, (I, II, III)

115B. Economic Development (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Economics 1A and 1B. Macroeconomic issues of developing countries. Issues include problems of generating capital, conduct of monetary and fiscal policies, foreign aid and investment. Important issues of policy concerning international trade and industrialization. Same as course as Economics 115B.A. GE credit: SocSci, Div | SS, WC—II, III, (I, II, III, IV)

118. Tax Accounting (4)

Lecture—4 hours. Prerequisite: Management 11A, 1B; course 18 recommended. Development and application of a framework to understand the tax effects of typical management decisions on both entities and their owners. Impacts that different methods of taxation have on business with emphasis on tax planning, using income and deduction strategies, retirement plans, and choice of business entity for tax minimization.

119. Intermediate Managerial Accounting (4)

Lecture—4 hours; extensive problem solving—8 hours. Prerequisite: Management 11A and 11B. Pass one open to majors in the College of Agricultural and Environmental Sciences. Use of accounting information by managers in decision making, planning, directing and controlling operations. Focuses on managerial/cost accounting theory and practice. Covers costing systems, budgeting, decision making, statement analysis. GE credit: SocSci | SS—I. (I)

120. Agricultural Policy (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100A or the equivalent. Analytical treatment of historical and current economic problems and governmental policies influencing American agriculture. Uses of economic theory to develop historical and conceptual understanding of the economics of agriculture; how public policies influence the nature and performance of American agriculture. GE credit: SocSci | ACGH, SS—I, III. (III)

1205. Agricultural Policy (4)

Lecture—4 hours. Prerequisite: course 100A or consent of instructor. Analytical treatment of historical and current economic problems and governmental policies influencing agriculture. Uses of economic theory to develop historical and conceptual understanding of the economics of agriculture; how public policy influences the nature and performance of agriculture. Taught in Australia under the supervision of a UC Davis faculty member. Not open for credit to students who have completed course 120. GE credit: SocSci | SS, WC

121. Economics of Agricultural Sustainability (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Physics 1 and/or Mathematics 12. Topics include: food production and distribution; environmental sustainability; soils and water; sustainability issues. Case studies include biodiversity, genetically modified foods and geographically differentiated products. GE credit: SocSci | SS, WC

130. Agricultural Markets (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100A. The nature, function, organization structure, and operation of agricultural markets;
prices, costs, and margins; market information, regulation, and controls; cooperative marketing. GE credit: SocSci | SS.—I, II.

132. Cooperative Business Enterprises (3)
Lecture—3 hours. Prerequisite: Economics 1A. Study of cooperative business enterprise in the United States and elsewhere; economic theories of behavior, production, finance, decision-making, and taxation. GE credit: SocSci | SS.—II, III.

135. Agribusiness Marketing Plan Development (2)
Lecture/discussion—2 hours. Prerequisite: upper division standing. Fundamental components required to develop a marketing plan. Appreciation of the concept of a marketing plan, appropriate research required, including the use of library and Internet, survey and interview instruments, government documents, market analysis, business proposition, action planning, financial evaluation and monitoring. (P/NP grading only.) GE credit: SS.

136. Managerial Marketing (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100A and 100B; Economics 100. Pass One open to majors in the College of Agricultural and Environmental Sciences. Basic nature and scope of international trade in agricultural commodities, agricultural inputs, and natural resources. Market dimensions and policy institutions. Case studies to illustrate import and export problems associated with different regions and commodities. GE credit: SocSci | SS.—II, III, IV. (II, III)

139. Futures and Options Markets (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 100A; Statistics 103. Pass One open to majors in the College of Agricultural and Environmental Sciences. History, mechanics, and economic functions of futures and options markets; hedging; theory of inter-temporal price formation and behavior of futures and options prices; price forecasting, futures and options as policy tools. GE credit: SocSci | SS.—II, III, IV. (II, III, IV)

140. Farm Management (5)
Lecture—5 hours. Prerequisite: Economics 1A. Farm organization and resources; economic and technological principles in decision-making; analytical techniques and management control; problems in organizing for managing the farm business. GE credit: SocSci | SS.

142. Personal Finance (3)

143. Investments (3)
Lecture—3 hours. Prerequisite: course 142 or consent of instructor. Survey of investment institutions, sources of investment information, and portfolio theory. Analysis of the stock, bond and real estate markets for evaluation of the prospective of the investor. GE credit: SocSci | SS.—III, IV.

144. Real Estate Economics (3)
Lecture—3 hours. Prerequisite: course 100A. The economic theory, analysis, and institutions of real estate markets and related financial markets. Case studies drawn from the raw land, single family, multi-family, industrial and office real estate markets. GE credit: SocSci | SS.—III. (III)

145. Farm and Rural Resources Appraisal (4)

146. Business, Government Regulation, and Society (3)
Lecture—3 hours. Prerequisite: course 100A or the equivalent. Pass one open to majors in the College of Agricultural and Environmental Sciences. Variety, nature and impact of government regulation: anti-trust laws and economic and social regulation. Nature of the legislative process, promulgation of regulations, and their impact, especially as analyzed by economists. GE credit: SocSci | ACGH, SS.—I, II.

147. Resource and Environmental Policy Analysis (3)
Lecture—3 hours. Prerequisite: Economics 1A; enrollment open to non-majors only. Natural resource use problems with emphasis on past and current policies and institutions affecting resource use; determinants, principles, and patterns of natural resource use; property rights, conservation, private and public resource use problems; and public issues. (Students who have had or are taking course 100A, Economics 100, or the equivalent, may receive only 2 units of credit.) GE credit: SocSci | SS.—II.

147M. Resource and Environmental Policy Analysis (2)
Lecture—3 hours. Prerequisite: Economics 1A; enrollment open to non-majors only. Natural resource use problems with emphasis on past and current policies and institutions affecting resource use; determinants, principles, and patterns of natural resource use; property rights, conservation, private and public resource use problems; and public issues. (Students who have had or are taking course 100A, Economics 100, or the equivalent, must enroll in this course for 2 units rather than course 147.) GE credit: SocSci | SS.—II.

150. Agricultural Labor (3)
Lecture—3 hours; discussion—1 hour. Importance of family and hired labor in agriculture; farm labor market; unions and collective bargaining in California agriculture; effects bargaining exercise, effects of unions on farm wages and earnings. GE credit: SocSci, Div, Wtr | ACGH, DD, SS, WE,—III, (III)

155. Operations Research and Management Science (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 100A; Statistics 103. Pass One open to Management Economists majors; Pass Two open to majors in the College of Agricultural and Environmental Sciences. Introduction to quantitative methods used to analyze business and economic processes: decision analysis for management, mathematical programming, competitive analysis, and other methods. GE credit: SocSci | SS, QL—II, III, IV. (I, II, III, IV)

156. Introduction to Mathematical Economics (4)
Lecture—4 hours. Prerequisite: courses 100A and 155; Mathematics 16C or 21C recommended (students should note that the formal mathematical content of this course is higher than other courses in the curriculum). Linear algebra for economics; necessary and sufficient emphasis on static optimization problems; implicit function theorem; economic methodology and mathematics; comparative statics; envelope theorem; Le Chatelier principle; applications to production and consumer models. GE credit: SocSci | QL, SS.

157. Analysis for Operations and Production Management (4)
Lecture—4 hours. Prerequisite: course 100A; Statistics 103. Pass One open to majors in the College of Agricultural and Environmental Sciences; Pass Two open to all majors. Application of economic theory and quantitative methods to analyze operations and production management problems, including process strategy, quality management, layout and plant layout, and inventory management. GE credit: SocSci | SS.—I, II, III, IV.

171A. Financial Management of the Firm (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 106; Management 11A/11B. Financial analysis at the firm level: methods of depreciation; influence of the tax structure; inventory, cash, and accounts receivable management; sources of short-term and long-term financing, and financial problem solving using a computer spreadsheet program. Not open for credit to students who have completed Economics 134. GE credit: SocSci | QL, SS.—II, III, IV. (I, II, IV)

171B. Financial Management of the Firm (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 171A. Financial analysis at the firm level: methods of capital budgeting; calculating the cost of capital; dividend policies; mergers and acquisitions; and special current topics. GE credit: SocSci | QL, SS.—I, II, III, IV. (I, II, III, IV)

175. Natural Resource Economics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 100B or Economics 100 or the equivalent. Economic concepts and issues associated with natural resources, renewable resources, (ground water, forests, fisheries, and wildlife populations) and non-renewable resources (minerals and energy resources, soil) (same course as Environmental Science and Policy 175). GE credit: SocSci | SS.—II, III.

176. Environmental Economics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 100B or Economics 100. Role of the environment in economic activity and methods for protecting and enhancing environmental quality; implications of market failures for public policy; design of environmental policy; theory of welfare measurement; measuring the benefits of environmental improvement. GE credit: SocSci | SS.—II, III.

190. Topics in Managerial Economics (3)
Lecture—3 hours. Prerequisite: passing grades in course 100A and 100B; consent of instructor. Selected topics in managerial economics, focusing on current research. May be repeated four times for credit when topic differs. Offered irregularly. GE credit: SocSci | SS.

192. Internship (1-6)
Internship—3-18 hours. Internship experience off campus and on campus in all subject areas offered in the Department of Agricultural and Resource Economics. Internships are supervised by a member of the staff. (P/NP grading only.) GE credit: SS.

194HA-194HB. Special Study for Honors Students (4-4)
Independent study—3-18 hours; seminar—1 hour. Prerequisite: Minimum GPA of 3.500; course 100B, courses 106 and 155 (may be taken concurrently); major in Agricultural and Managerial Economics or Managerial Economics; senior standing. A program of research culminating in the writing of a senior honors thesis under the direction of a faculty adviser. (Deferred grading only; pending completion of sequence.) GE credit: SocSci | QL, SS, WE.

197T. Tutoring in Managerial Economics (1-3)
Prerequisite: senior standing in Managerial Economics and consent of Department Chairperson. Undergraduates assist the instructor by tutoring students in one of the department's regularly scheduled courses. (P/NP grading only.) GE credit: SS.
Lecture—4 hours; discussion—1 hour. Prerequisite: course 200A or 204A; course 240A recommended. Agricultural development theory, with a focus on microeconomics. Agricultural household behavior with and without property rights and uncertainty. Analysis of land, labor, credit and insurance markets, institutions, and contracts. (Same course as Economics 215A.)—I. (II.)

215B. Microeconomics of Development
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 200A or 204A; 200D or 205, and 214 or 215A. Models and policy approaches regarding trade, monetary and fiscal issues, capital flows and debt are discussed. The microeconomics of development of an open developing country. The basic analytical focus is real exchange rate and its impact on sectoral allocation of resources. (Same course as Economics 215B.)—II. (III.)

215C. Microdevelopment Theory and Methods II (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 215A. Extension of development theory and microeconomic methods to developing countries using growth and technological change; poverty and income inequality; multilateral, including village and regional models. Computable general equilibrium methods and applications. (Same course as Economics 215C.)—III. (III.)

215D. Environment and Economic Development (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 200A. Extension of development theory and microeconomic methods to developing countries using growth and technological changes; poverty and income inequality; multilateral, including village and regional models. Computable general equilibrium methods and applications. (Same course as Economics 215D.)—III. (III.)

222. International Agricultural Trade and Policy (3)
Lecture—3 hours. Prerequisite: course 100B or 204A; Economics 160A or the equivalent. Analysis of country interdependence through world agricultural markets. Partial equilibrium analysis is used to study the impacts of national intervention on world markets, national policy choice in an open economy and multinational policy issues.—I. (II.)

231. Supply and Demand for Agricultural Products (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 200A, 202A, and 240A or consent of instructor. Analysis of supply and demand for agricultural commodities emphasizing the effective use of microeconomic theory with econometric methods, and other empirical procedures, in conducting applied analysis of supply and demand at the firm and industry level.—I. (II.)

232. Agricultural Commodity Markets (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 200A, 202A, and 240A or consent of instructor. Analysis of agricultural industries that produce, market, transport, store, and process basic commodities. Analysis of market equilibrium under perfect and imperfect competition, with and without government intervention.—II. (II.)

233. Agricultural Policy (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 200A, 202A, and 240A or consent of instructor. Nature, formation, evolution, and institutions of agricultural policy applied to food, agricultural, and rural issues. Examples for detailed discussions include commodity, security, commodity issues, and trade policy. Analytical approaches include static and dynamic welfare analysis, policy design, and political-economic analysis.—III. (III.)

239. Economic Foundations (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: one course in undergraduate-level econometrics. The course will prepare students for econometric theory and empirical work by examining the statistical foundations of econometrics. Special attention is paid to problems specific to nonexperimental data common to social sciences. Topics from probability theory are also covered. (Same course as Economics 239.)—I. (II.)

240A. Econometric Methods (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Statistics 133A and a course in linear algebra or the equivalent. Least squares, instrumental variables, and maximum likelihood estimation and inference for single equation linear regression model; linear restrictions; heteroskedasticity; and fixed and lagged dependent variables. (Same course as Economics 240A.)—II. (III.)

240B. Econometric Methods (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 204A. Topics include asymptotic theory and instrumental variables, pooled time-series cross-section estimation, seemingly unrelated regression, classical hypothesis tests, identification and estimation of simultaneous equation models, cointegration, error-correction models, and qualitative and limited dependent variable models. (Same course as Economics 240B.)—III. (III.)

240C. Time Series Econometrics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 240B. Probability theory, estimation, inference and forecasting of time series models; trends and non-standard asymptotic theory; vector time series methods and cointegration; and time series models for higher order moments and transition data; state-space modeling; the Kalman filter. (Same course as Economics 240C.)—I. (II.)

240D. Cross Section Econometrics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 240B. Estimation and inference for non-linear regression models for cross-section data; models for discrete data and for limited dependent variables; models for panel data; additional topics such as bootstrap and semiparametric regression. (Same course as Economics 240D.)—I. (II.)

240E. Topics in Time Series Econometrics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 240A, 240B and 240D. Modern econometric techniques for cross-section time series data. Expand on topics covered in Economics 240A, 240B and 240C. Contents may vary from year to year. (Same course as Economics 240E.)—III. (III.)

240F. Topics in Cross Section Econometrics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 240A, 240B and 240D. Modern econometric techniques for cross-section time series data. Expand on topics covered in Economics 240A, 240B and 240C. Contents may vary from year to year. (Same course as Economics 240F.)—III. (III.)

252. Applied Linear Programming (4)
Lecture—3 hours; discussion—1 hour. Applied linear programming methods emphasizing uses for business decisions: production, diet, blending, network and related problems.—II. (II.)

253. Optimization Techniques with Economic Applications (4)
Lecture—3 hours; discussion—1 hour. Microeconomic topics in the framework of mathematical programming.—II. (II.)

254. Dynamic Optimization Techniques with Economic Applications (4)
Lecture—4 hours. Prerequisite: course 253 and elementary knowledge of ordinary differential equations. Necessary and sufficient conditions in the calculus of variations and optimal control, economic interpretations, the dynamic envelope theorem and transversality conditions, infinite horizon problems and phase diagrams, local stability and comparative statics of the steady state, comparative dynamics.—I. (I.)

255. Applied Dynamic Structural Econometric Modeling (4)
Lecture—4 hours. Prerequisite: course 254. Course covers structural econometric models of static games of incomplete information, single-agent dynamic
optimization problems and multi-agent dynamic games, with a focus on applications to issues relevant to the environment, natural resources, agriculture, and development.—II. (II.)

256A. Applied Econometrics I (4)
Lecture—4 hours. Prerequisite: course 106 or Economics 140; or consent of instructor. First of two courses in the Masters-level econometrics sequence. The linear regression model and generalizations are applied to topics in agricultural and resource economics. Tools for empirical research for problems requiring more sophisticated tools than standard regression models are emphasized.—I. (I.)

256B. Applied Econometrics II (4)
Lecture—4 hours. Prerequisite: course 256A or consent of instructor. Second of two courses in the Masters-level econometrics sequence. The linear regression model and generalizations are applied to topics in agricultural and resource economics. Tools for empirical research for problems requiring more sophisticated tools than standard regression models are emphasized.—II. (II.)

258. Demand and Market Analysis (4)
Lecture—4 hours. Prerequisite: courses 204B and 256 or consent of instructor. Application of theoretical material covered in 204A/B, with particular focus on production theory/factor demand and imperfect competition/market power. Use of theoretical models as a foundation for empirical economic analysis, and empirical exercises. Independent research on chosen topics, with empirical application.—III. (III.)

275. Economic Analysis of Resource and Environmental Policies (4)
Lecture/discussion—4 hours. Prerequisite: course 204A. Development of externality theory, market failure concepts, welfare economics, theory of renewable and non-renewable resource use, and political economic models. Applications to policy issues regarding the agricultural/environment interface and managing resources in the public domain. (Same course as Environmental Science and Policy 275.)—II. (II.)

276. Environmental Economics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 204A or consent of instructor. Applications of externality theory to the design of efficient environmental policies. Evaluation of pollution control policy instruments in light of information limitations and market imperfections. Methods for nonmarket valuation of the benefits of environmental improvement.

277. Natural Resource Economics (4)
Lecture—4 hours. Prerequisite: course 254 or consent of instructor. Application of capital theory and dynamic methods to issues of optimal use of renewable and nonrenewable resources. Examination of policy issues associated with forests, fisheries, groundwater, energy resources, watersheds, soil, global climate, and wildlife.—III. (III.)

290. Topics in Agricultural and Resource Economics (3)
Lecture—3 hours. Selected topics in agricultural and resource economics, focusing on current research. May be repeated 4 times for credit. Offered irregularly.

293. Analysis of California Agriculture and Resource Economics (3)
Lecture—1.5 hours; fieldwork—45 hours total, including one 5-day summer field trip. Review and analysis of production, marketing, and resource issues facing agricultural firms in California. Application of economic theory and measurement to individual firm and industry decisions in an applied setting. (S/U grading only.)—I. (I.)

298. Directed Group Study (1-5)
Advanced study through special seminars, informal group studies, or group research on problems for analysis and experimentation. Sections: (1) Managerial Economics; (2) Agricultural Policy; (3) Community and Regional Development; (4) Natural Resources; (5) Human Resources; (6) Research Methods and Quantitative Analysis; and (7) Dissertation Research Prospectus. (S/U grading only.)

299. Individual Study (1-12)
Sections: (1) Managerial Economics; (2) Agricultural Policy; (3) Community and Regional Development; (4) Natural Resources; (5) Human Resources; (6) Research Methods and Quantitative Analysis; and (7) Dissertation Research Prospectus. (S/U grading only.)

299D. Special Study for Doctoral Dissertation (1-12)
(S/U grading only.)

Professional

396. Teaching Assistant Training Practicum (1-4)
Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)

Agricultural Systems and Environment

(College of Agricultural and Environmental Science)

Minor Program Requirements:

UNITS

Agricultural Systems and Environment ........................................... 18-19

Preparatory material: Course in statistics such as Statistics 13, 32, 100, Plant Sciences 120, Sociology 42B or equivalent. Course in plant science such as Plant Sciences 2A, Biological Sciences 1C, or equivalent; completion of Biological Sciences 2A and 2B and 2C also fulfills this requirement. Select one of the following tracks:

Sustainable Agriculture track
- Plant Sciences 142 or 150 ................. 4
- Soil Science 100 .......................... 5
- Plant Sciences 105 or 176 or
- Entomology 110 ......................... 3-5
- Minimum of six units from the following:

Range and Natural Resources track
- Plant Sciences 130 .......................... 3
- Minimum of 15 units from the following:
- Plant Sciences 112, 131, 135, 150, Environmental Science and Policy 123,
- 172, Wildlife, Fish and Conservation
- Minor Advisers: T. Gradziel (Plant Sciences)
- Advising Center is located in 1220A Plant and Environmental Sciences 330-752-1715.

Agronomy

See Plant Sciences, on page 476.

Agronomy and Range Science

See Plant Sciences, on page 476.

Michael L. Smith, Ph.D., Senior Lecturer Emeritus
David Scaife Wilson, Ph.D., Senior Lecturer Emeritus

The Major Program
American Studies explores the cultures of the United States, as well as their transnational exchanges and impact. The discipline’s practitioners seek to understand the historical origins of particular cultures and practices held by individuals and groups within the United States and how those values and beliefs shape social and political realities within and beyond U.S. borders. The approach that American Studies takes is interdisciplinary, meaning that in American Studies we answer these questions using tools developed by numerous disciplines including history, sociology, anthropology, literary criticism, folklore, media and science and technology studies. American Studies takes as its subject American cultures and provides an excellent, broad education in the liberal arts. Our aim is to make each student a culture critic, a person capable of bringing a thoughtful and humane approach to bear upon our understanding of the varieties of American experiences. Making connections is the way we like to characterize our work in American Studies. American Studies majors are good critical thinkers, develop excellent writing skills, and most importantly “learn how to learn,” that is, you learn to figure out what intellectual tools and specialized knowledge you will need to perform a task or solve a problem. These intellectual and communication skills will prepare majors for a broad array of careers.

The Program
American Studies majors take five upper division courses devoted to close study of major issues crucial to the practice of American Studies. Advanced work in at least two other departments or programs allows each student to tailor his or her own individual education goals. Sample emphases include: Cultural Consumption, Youth Education, Social Identities, Nature, Culture and Environment, Marketing, Advertising and Business, and Food and Health, for example. Students have the option of writing a senior thesis within this emphasis.

Career Alternatives
As an interdisciplinary program, American Studies provides a good liberal arts and sciences undergraduate education. American Studies maximizes a student’s exposure to a variety of subject matter and approaches. Graduates have moved into a broad range of career settings, including journalism, law, teaching, marketing, non-profit and community organizations, government, social work, environmental planning, library science, and...

Faculty Advisers: C. Billekoff, C. Kaplan, E. Smoookin, J. Sze, G. Wang

Courses in American Studies (AMS)

Lower Division

| 1A. Science and American Culture (4) | Lecture—3 hours; discussion | 1 hour. American science as a cultural system. Mutual influence and interaction of that system with other cultural systems including religion, social thought, art, architecture, literature, music, and visual sense. GE credit: ArtHum or SocSci, Div, Wrt | 1 ACHG, AH or SS, DD, WE. |
| 1B. Religion in American Lives (4) | Lecture—5 hours; discussion | 1 hour. Religions and spiritual practices in the United States, and their interrelationships with other aspects of U.S. history, society and culture; indigenous and imported faiths, and the impact of immigration, colonization and culture contact on them. GE credit: ArtHum or SocSci, Div, Wrt | 1 ACHG, AH or SS, DD, WE. |

1C. American Lives Through Autobiography (4)

Lecture—3 hours; discussion | 1 hour. American culture as understood through the individual life stories told by Americans, with attention to the roles of gender, race, ethnicity, social class, and sexual orientation in the individual's life cycle. GE credit: ArtHum or SocSci, Div, Wrt | ACHG, AH or SS, DD, WE. |

1E. Nature and Culture in America (4)

Lecture—3 hours; discussion | 1 hour. Uses and abuses of nature in America; patterns of inhabitation, exploitation, and neglect; attention to California; emphasis on metaphor as a key to understanding the natural world, attention to manipulation of its healing powers, ecology, the “right” movement. Offered in alternate years. GE credit: ArtHum or SocSci, Div, Wrt | ACHG, AH, SS, DD, WE. |

4. Freshman Seminar (2)

Seminar—2 hours. Prerequisite: open only to students who have completed fewer than 40 quarter units. Investigation of a special topic in American Studies through shared readings, discussions, written assignments, and special activities (such as fieldwork, site visits). Emphasis on student participation in learning. Limited enrollment—II, III, (III.) |

5. Technology in American Lives (4)

Lecture—2 hours; discussion | 2 hours. Prerequisite: completion of Subject A requirement. Technology as both a material cultural force and a symbol in American culture; the lives of engineers at work and play; images of the engineer and technology in popular culture; social political and ethical issues raised by technology. GE credit: ArtHum or SocSci, Div, Wrt | SS, WW. |

95. Careers and Identity in American Culture (2)

Lecture—1 hour; discussion | 1 hour. Defining one's identity through the career. The life course, preparation, and choices. Personality and career. Ethics. Gender, ethnicity, sexuality, and social class in the workplace. The transnational workplace. Conflict between the career and other social roles—II, III, IV., (I, IV, III.) |

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

99. Individual Study for Undergraduates (1-5)

(P/NP grading only.)

Upper Division

100. Methods in American Studies (4)

Lecture/discussion | 3 hours; term paper. Design and implementation of interdisciplinary research, analysis and writing for American Studies and other cultural studies fields. Library research, research skills, project/problem definition, methods for study of texts, individuals, communities. Hand-on, skill-building, focused reading, discussion. |

101A-H. Special Topics (4)

Seminar—3 hours, intensive reading, writing, and special projects. Interdisciplinary group study of special topics in American Culture Studies, designed for non-majors as well as majors. Content will vary according to the instructor and will be announced in the following titles: (A) Popular Culture Studies; (B) Women's Studies; (C) Material Aspects of American Culture; (D) American National Character; (E) American Lives Through Autobiography; (F) The Interrelationship Between Arts and Ideas; (G) New Directions in American Culture Studies; (H) Problems in Cross-Cultural American Studies. May be repeated for credit in different subject area only. —II, III, (IV, III.) |

110. A Decade in American Civilization (4)

Lecture—2 hours; discussion | 2 hours. Prerequisite: one of courses 1A, 1B, 1C, 1D, 1E or 1F. Close examination of a single decade in American civilization; the connections between the history, literature, arts, customs, and ideas of Americans living in the decade. Issues and representations of race, class, gender, age, and sexuality in the decade. May be repeated for credit if decades studied are different. GE credit: ArtHum or SocSci, Div, Wrt | ACHG, AH or SS, DD, WE. |

120. American Folklore and Folklife (4)

Lecture—3 hours; fieldwork | 1 hour. Theory and method of the study of American folk traditions, including oral lore, customs, music, and material folk culture; the uses and meanings of those traditions in diverse groups, communities, including families, ethnic institutions, voluntary organizations, and occupational groups. GE credit: ArtHum or SocSci, Div, Wrt | ACHG, AH or SS, DD, WE. |

Quarter Offered: I-Fall, II-Winter, III-Spring, IV-Summer; 2015-2016 offering in parentheses
of cultural diversity upon corporate cultures, both from within and in contact with foreign corporations.

130. American Popular Culture (4) Lecture/discussion—3 hours; fieldwork—1 hour. Prerequisite: course 1 or upper division standing. American popular expression and experience as a cultural system and its relationship to American and elite culture and folk traditions. Exploration of theorists and methods for discovering and interpreting patterns of meaning in American popular culture. GE credit: ArtHum or SocSci, Div, Writ | ACCH, AH or SS, DD, WE.—II. (III) Smooldin

139. Feminist Cultural Studies (4) Lecture/discussion—4 hours. Prerequisite: one course in Women's Studies or American Studies. The histories, theories, and practices of feminist traditions within cultural studies. (Same course as Women's Studies 139.) GE credit: SocSci, Div, Writ | ACCH, AH, DD, SS, VI, WE.—II. (III)

151. American Landscapes and Places (4) Lecture—2 hours; fieldwork—1 hour. Prerequisite: consent of instructor. Course in American and elite culture and folk traditions. GE credit: ArtHum or SocSci, Div, Writ | ACCH, AH or SS, DD, WE.—II. (III)

152. The Lives of Children in America (4) Lecture—2 hours; discussion—2 hours. Experience of childhood and adolescence in American culture, as understood through literature, art, and social scientific approaches. GE credit: ArtHum or SocSci, Div, Writ | ACCH, AH or SS, DD, WE.—II. (III) Smooldin

153. The Individual and Community in America (4) Lecture—2 hours; discussion—2 hours. Interdisciplinary examination of past and present tensions between the individual and the community in American experience, as those tensions are expressed in other cultural systems as folklore, popular ritual, popular entertainment, literature, fine arts, architecture, and social thought. GE credit: ArtHum or SocSci, Div, Writ | ACCH, AH or SS, DD, WE.—II. (III) Sze

154. The Lives of Men in America (4) Lecture—2 hours; discussion—2 hours. Interdisciplinary examination of the lives of boys and men in America, toward understanding cultural definitions of masculinity, the ways individuals have accepted or resisted these definitions, and the broader consequences of the struggle over the social construction of gender. GE credit: ArtHum or SocSci, Div, Writ | ACCH, AH or SS, DD, WE.—II. (III) Sze

155. Eating in America (4) Lecture—3 hours, discussion—1 hour. The analysis of the relationship between human bodies and technologies in modern society. Dominant and eccentric examples of how human bodies and technologies influence one another and reveal underlying cultural assumptions. (Same course as Technocultural Studies 158.) GE credit: GE credit: ArtHum | ACCH, AH, WE.—II. (III)

160. Undergraduate Seminar in American Studies (4) Seminar—3 hours; term paper. Prerequisite: open to junior and senior American Studies majors only. Intensive reading, discussion, research, and writing by small groups in selected topics of American Studies scholarship, emphasizing on its contribution to American material. Limited enrollment. May be repeated one time for credit when content differs.—II, III. (I, II, III)

190B. Senior Thesis (4) Independent study—12 hours. Prerequisite: senior standing in American Studies major and course 190A. In consultation with advisor, student writes an extended research paper on a topic proposed in course 190A.—I, II, III. (II, III)

192. Internship in American Institutions (1-12) Internship—1-12 hours. Prerequisite: enrollment dependent on availability of intern positions, with priority to American Studies majors. Supervised internship and study within and about key organizations in American civilization at archives, libraries, museums, schools, historical societies, governmental and social agencies, with attention to the techniques of participant observation and the collection of ethnographical data. May be repeated for credit for a total of 12 units. (P/NP grading only.)

197T. Tutoring in American Studies (1-5) Tutorial—1-5 hours. Prerequisite: consent of Chairperson of American Studies Program. Tutoring in lower division American Studies courses, usually in small discussion groups. Periodic meetings with the instructor in charge, reports and readings. May be repeated for credit when the tutoring is for a different course. (P/NP grading only.)

198. Directed Group Study (1-5) Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5) Prerequisite: consent of instructor and chairperson of American Studies Program. (P/NP grading only.)

Graduate

220. American Folklore and Folklife (4) Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Theory and methods for the study of the folklore and the folk customs of American behavior; contributions of folklore studies to scholarship in humanities and social science disciplines.—III. (III) Turner

250. Cultural Study of Masculinities (4) Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Interdisciplinary approaches to understanding the social and cultural construction of masculinities; attention to the effects of biology, gender, race, class, sexual and national identities; criticism of oral, printed, visual, and mass mediated texts, and of social relations and structures. (Same course as Women's Studies 250.)—II
Animal Biology

There is an application deadline of Dec 15 for fall quarter.

Preparation. Appropriate preparation is a bache- lor’s or master’s degree in a discipline relevant to the biology of behavior. In addition, at least one course from each of the following areas must be taken before admission into the program or before the end of the first year in the program.

Ecology: e.g., Evolution and Ecology 101, Environmental Science and Policy 100
Genetics: e.g., Biological Sciences 101
Statistics: e.g., Statistics 102 or Psychology 103
Evolution: e.g., Evolution and Ecology 100
Animal behavior: Neurobiology, Physiology, and Behavior 102
Physiology: e.g., Neurobiology, Physiology, and Behavior 101

Core Requirements. Students take two “breadth” courses, at least one course in statistics, a methodology and grant writing course, and a graduate seminar. Required courses:

Methodology and Grant Writing: Animal Behavior 201
Advanced Statistics: Psychology 204A, 204B, 204C, or 204D
Graduate Seminars: Animal Behavior 290

Core courses in the major include courses in animal behavior, ecology, evolution, and behavior 102, Evolution and Ecology 100, or the equivalent. Development of an empirical or theoretical interdisciplinary approach to research on a current topic in animal behavior.

207. Research Conference in Behavioral Ecology (1)
Conference—1 hour. Prerequisite: graduate standing and consent of instructor. Critical presentation and evaluation of current literature and ongoing research in behavioral ecology and enrollment. May be repeated for credit. (S/U grading only.)

287. Advanced Animal Behavior (2)
Seminar—2 hours. Prerequisite: graduate standing and consent of instructor, courses in animal behavior [Neurobiology, Physiology, and Behavior 102 or the equivalent], and either evolution (Evolution and Ecology 100 or the equivalent) or evolution (Evolution and Ecology 101 or the equivalent). Reading, reports and discussion on current topics in animal behavior, a focus on topics that lie at the interface between animal behavior, ecology and evolution. (Same course as Population Biology 287.) May be repeated two times for credit.

290. Seminar in Animal Behavior (1-3)
Seminar—1-3 hours. Prerequisite: consent of instructor. Selected topics in animal behavior. (S/U grading only.)—I, II, III, (I, II, III.)

294. Seminar in Behavioral Ecology of Predators and Prey (3)
Seminar—2 hours. Prerequisite: graduate standing. Preparation and analysis of research papers on social and foraging behavior of predatory animals, antipredator strategies to co-evolution of predators and prey, and ecology of predator prey interactions. May be repeated two times for credit. (Same course as Wildlife, Fish, and Conservation Biology 294.) Offered in alternate years.—II, Caro

298. Group Study (1-5)
Prerequisite: graduate standing and consent of instructor.

299. Research (1-12)
Prerequisite: and consent of instructor. Critical presentation and evaluation of current literature and ongoing research in behavioral ecology and enrollment. May be repeated for credit. (S/U grading only.)

Professional

396. Teaching Assistant Training Practicum (1-4)
Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)

Animal Biology

(College of Agricultural and Environmental Sciences)
Department of Entomology and Nematology

Faculty
Edward P. Caswell-Chen, Ph.D. Professor
Joanna Chiu, Ph.D., Assistant Professor
Brian R. Johnson, Ph.D., Assistant Professor
Neal M. Williams, Ph.D., Associate Professor
Robert Kimsey, Ph.D., Lecturer

The Major Program

The Animal Biology major offers students training in the biological and natural sciences as they apply to animals. The major covers the basic biological sciences that explain animal evolution, systematic, ecology, physiology and molecular biology. Students in the Animal Biology major are encouraged to think beyond particular groups of animals in which they are interested and to consider science as a process and a way of advancing society. Emphasis is on bio- logical principles that can be used in research or in solving societal problems associated with animals in agriculture, urban areas, or natural environments.

The Program. The Animal Biology major consists of core courses in the biological sciences that build an understanding of animal biology from the molecu- lar to the ecological and evolutionary levels of orga- nization. After completing these core courses, students have the option of specializing in various interdisciplinary aspects of animal biology, and plan their chosen emphasis of study part of a required discussion course and in consultation with their advisor. The Animal Biology major emphasizes courses on biological principles as opposed to courses on animal care and husbandry. This pro- gram includes a senior thesis, which each student designs to bridge the disciplines of the major.

Internships and Career Alternatives. The pro- gram and interests of each student in solving societal problems guides him or her to logical internship and career choices. On- and off-campus internship opportunities are available in research laboratories, in field situations, with governmental agencies, with private industry, and in international programs. A degree in Animal Biology prepares students for careers in research, teaching, governmental regula- tion, health or agriculture as each relates to the inte- grative biology or ecology of animals. Careers in veterinary medicine, animal husbandry and animal management are open to Animal Biology majors, however, other preparation may be required. Stud- ents in the major gain research experience and may choose to continue their training at the gradu- ate or professional level in a variety of biological disciplines.

B.S. Major Requirements:

Preparatory Subject Matter......... 68-74
Biological Sciences 2A, 2B, and 2C .... 14
Chemistry 2A-2B-2C, and 8A-8B or 118A-
118B ........................................ 21-23
Mathematics 137A-137B-137C or 147A-
147B-147C ................................. 48-53
Physics 1A-1B-1C .......................... 48-51
One course from: Statistics 130 or 130C
or Agricultural Management and Rangeland
Resources 120 .................................... 4
Animal Biology 50A, 50B, 50C ........... 8

Depth Subject Matter ............. 29-38
Biological Sciences 101, 102, and 103 .... 23
One course from: Animal Biology 102
Animal Biology 102 and 103 or Biological
Sciences 102 and 103 .......................... 6-10
One course from: Neurobiology, Physiology,
and Behavior 101, 117; Entomology 102;
Wildlife, Fish, and Conservation
Biology 121 ........................................ 3-5
One course from: Anatomy, Physiology and
Cell Biology 100; Entomology 101;
187. Animal Biology Seminar (2)  
Seminar—1 hour; discussion—1 hour. Prerequisite: junior standing, course 50A, 50B, 50C, and 187; course 190D concurrently. (P/NP grading only.)—I, II, III, (I, II, III.)

189. Senior Practicum (2)  
Independent study—6 hours. Prerequisite: junior standing, courses 50A, 50B, 50C, and 187; course 190D concurrently. (P/NP grading only.)—I, II, III, (I, II, III.)

92. Internship in Animal Biology (1-12)  
Internship—3-36 hours. Prerequisite: completion of 84 units and consent of instructor. Office, laboratory or fieldwork off or on campus in research, governmental regulation, policy making, and private enterprise dealing with animal related issues of production, welfare, pest management, biodiversity and the environment. All requirements of Internship Approval Request form must be met. (P/NP grading only.)

98. Directed Group Study (1-5)  
(P/NP grading only.)

99. Special Study for Advanced Undergraduates (1-5)  
(P/NP grading only.)

Animal Biology (A Graduate Group)
Courses in Animal Biology (ABG)
Graduate
200A. Integrated Animal Biology I (3)
Lecture/discussion—3 hours. Prerequisite: graduate standing; Biological Sciences 101 or the equivalent or consent of the instructor. Natural history, management, historical and current uses, and specialized disciplinary features of model and novel animal systems used in research. Development of conceptual approaches in organismal biology to improve experimental design and interpretation of interdisciplinary research studies. Limited enrollment; first pass restricted to Animal Biology Graduate Group students.—I. (I) DefPeters

200B. Integrated Animal Biology II (3)
Lecture/discussion—3 hours. Prerequisite: course 200A. Natural history, management, historical and current uses, and specialized disciplinary features of model and novel animal systems used in research. Development of conceptual approaches in organismal biology to improve experimental design and interpretation of interdisciplinary research studies. Limited enrollment; first pass restricted to Animal Biology Graduate Group students.—II. (II) Conley, Murray

202. Grant Procurement and Administration (2)
Lecture—1 hour; discussion/laboratory—1 hour. Prerequisite: course 200B. Pass I restricted to Animal Biology Graduate Group students. Topics include: structure of grants, attention to specifications, concise persuasive writing, and grant budgeting. Identify grants appropriate to a persuasive research grant proposal, and administer grants. Limited enrollment.—I. (I)

250. Mathematical Modeling in Biological Systems (4)
Lecture/discussion—4 hours. Prerequisite: graduate standing; Mathematics 161A, 163, or equivalents required; Mathematics 16C or equivalent recommended; Statistics 100 or equivalent required; more than one course in statistics recommended; Animal Biology 102 or Biological Sciences 102 recommended or equivalent course in biochemistry. Limited enrollment. Model development and evaluation including sensitivity analyses using R. Four principle modeling methodologies included: algebraic functions of biological processes, physiological-based compartmental models, linear programming and meta-analysis. Fundamental background and understanding of mathematical modeling principles in biological systems.—II. (II) Fadel, Kreebra

255. Physiology of the Stress Response (2)
Lecture/discussion—2 hours. Prerequisite: graduate student; definition of Stress; Physiological mechanisms of adaptaton to stress; Hormonal control of the systemic stress response; Mechanisms of the cellular stress response; Discussion of current trends in stress physiology and current methods for studying the stress response. (Same course as Molecular, Cellular, and Integrative Physiology 255.)—III. (III) Kuekutz

290C. Research Conference (1)
Discussion—1 hour. Prerequisite: graduate standing and consent of instructor. Student presentations of research in Animal Biology and discussions among participating students and Animal Biology faculty. May be repeated for credit. (S/U grading only.)—I, II, III, IV, (I, II, III, IV)

298. Group Study in Animal Biology (1-5)
Prerequisite: graduate standing.

299. Research (1-11)
Prerequisite: graduate standing and consent of instructor. Research with a faculty member in Animal Biology Graduate Group. May be repeated for credit. (S/U grading only.)—I, II, III, IV (I, II, III, IV)

Professional
300. Methods in Teaching Animal Biology (2)
Lecture/discussion—2 hours. Prerequisite: graduate standing and consent of instructor. Practical experience in the methods and problems of teaching animal biology. Includes analysis of laboratory exercises, discussion of teaching techniques, grading scientific essays, preparing for and conducting discussion or laboratory sections, formulating quiz and exam questions under instructor supervision. May be repeated up to three times for credit. (S/U grading only.)—I, II, (I, II) Famula, Oberbauer

396. Teaching Assistant Training Practicum (1-4)
Variable—3-12 hours. Prerequisite: graduate standing and consent of instructor. May be repeated for credit. (S/U grading only.)—I, II, III, (I, II, III)

Animal Genetics

(Quantitative) genetics based on the unity of mammalian genetics and making breeding decisions based on fundamental genetic concepts. GE credit: SciEng | SE, SL.—III. (III) Famula

107. Genetics and Animal Breeding (5)
Lecture—4 hours; laboratory—3 hours. Prerequisite: Biological Sciences 101. Principles of quantitative genetics applied to improvement of livestock and poultry. Effects of mating systems and selection methods are emphasized with illustration from current breeding practices. GE credit: SciEng | SE.—I. (I) Medrano

111. Molecular Biology Laboratory Techniques (4)
Lecture—2 hours; laboratory—6 hours. Prerequisite: Biological Sciences 1C, 101, 102, 103. Introduction to the concepts and techniques used in molecular biology; the role of this technology in both basic and applied animal research, and participation in laboratories using some of the most common techniques in molecular biology. GE credit: SciEng | SE, SL—WE—I. (I) Kuetz, Murray

198. Directed Group Study (1-5)
Prerequisite: consent of instructor. Selected topics relating to animal genetics. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)
Prerequisite: consent of instructor. (P/NP grading only.)

Graduate
204. Theory of Quantitative Genetics (3)
Lecture—3 hours. Prerequisite: course 107 or the equivalent. Theoretical basis of quantitative genetics and the consequences of Mendelian inheritance. Concepts used to estimate quantitative genetic differences and basis for partitioning the phenotypic variance. Offered irregularly.

206. Advanced Domestic Animal Breeding (3)
Lecture—3 hours. Prerequisite: course 107 and Animal Science 202; course 204 recommended. Procedures for the genetic evaluation of individuals to include selection indices and mixed model evaluation for single and multiple traits. Methods of estimating genetic trends. Offered in alternate years.—Famula

208. Estimation of Genetic Parameters (3)
Lecture—3 hours. Prerequisite: course 107 and Animal Science 205; courses 204 and 108 recommended. General methods for the estimation of components of variance and covariance and their application to the estimation of heritability, repeatability and genetic correlations are considered. Specific emphasis is given to procedures applicable to livestock populations under selection. Offered irregularly.—Famula

211. Genetic Engineering of Animals (2)
Lecture—1 hour; lecture/discussion—1 hour. Review of techniques for the genetic engineering of animals and their limitations and applications. Student led discussions of recent papers in the field and possible future applications of genetically engineered animals in basic research and applied agricultural and medical research. Offered in alternate years. (S/U grading only.)

212. Sequence Analysis in Molecular Genetics (2)
Lecture/laboratory—2 hours. Prerequisite: Biological Sciences 101 or the equivalent; graduate standing or consent of instructor. Use of computer algorithms and online databases to analyze nucleic acid and protein sequences in molecular genetics research. Offered in alternate years.—II.

298. Group Study (1-5)
Prerequisite: consent of instructor. Lectures and discussions of advanced topics in animal genetics. (S/U grading only.)

299. Research in Animal Genetics (1-12)
Prerequisite: consent of instructor. (S/U grading only.)
Animal Physiology

See Animal Biology, on page 150; Animal Science, on page 153; Neurobiology, Physiology, and Behavior, on page 443; Philosophy, on page 460; and Molecular, Cellular, and Integrative Physiology (A Graduate Group), on page 433.

Animal Science

C. Christopher Calvert, Ph.D., Professor, Academic Senate Distinguished Teaching Award
Ernest S. Chang, Ph.D., Professor, (Biological Sciences, Bodega Marine Laboratory)
Mary E. Delany, Ph.D., Professor and Associate Dean in CA&ES
Edward J. DePeters, Ph.D., Professor, Academic Senate Distinguished Teaching Award, UC Davis Prize for Undergraduate Teaching and Scholarly Achievement
Sergei D. Doroshov, Ph.D., Professor, (Wildlife, Fish & Conservation Biology; Animal Science)

James G. Fadel, Ph.D., Professor
Thomas R. Farnsworth, Ph.D., Professor, Academic Senate Distinguished Teaching Award
Ruth J. Hovey, Ph.D., Professor
Sillas S. O. Hung, Ph.D., Professor
Erima Kabreba, Ph.D., Professor
Annie J. King, Ph.D., Professor
Kirk C. Klausing, Ph.D., Professor
Juan F. Medrano, Ph.D., Professor
Joy A. Mench, Ph.D., Vice Chairperson, Professor
Michael R. Miller, Ph.D., Assistant Professor
Frank M. Mitloehner, Ph.D., Professor and Specialist in Cooperative Extension

James D. Murray, Ph.D., Professor
Anita M. Oberbauer, Ph.D., Professor, Academic Senate Distinguished Teaching Award
Janet E. Roper, Ph.D., Professor
Pablo J. Ross, Ph.D., Assistant Professor
Ricardo D. Sainz, Ph.D., Professor
Anne Toddgham, Ph.D., Assistant Professor
Cassandra B. Tucker, Ph.D., Associate Professor
Barry W. Wilson, Ph.D., Professor
Huajun Zhou, Ph.D., Associate Professor
Richard A. Zinn, Ph.D., Professor

Emeriti Faculty

Hans Abplanalp, Ph.D., Professor Emeritus
Thomas E. Adams, Ph.D., Professor Emeritus
Academic Senate Distinguished Teaching Award

Gary B. Anderson, Ph.D., Distinguished Professor Emeritus, Distinguished Teaching Award
Graduate/Professional UC Davis Prize for Undergraduate Teaching and Scholarly Achievement, Academic Senate Distinguished Teaching Award
C. Robert Ashton, Ph.D., Professor Emeritus
Wallis H. Clark, Jr., Ph.D., Professor Emeritus
Douglas E. Conklin, Ph.D., Professor Emeritus
Graham A. E. Goll, Ph.D., Professor Emeritus
William N. Garrett, Ph.D., Professor Emeritus
Yu-Bang Lee, Ph.D., Professor Emeritus
James R. Millam, Ph.D., Professor Emeritus
Edward O. Price, Ph.D., Professor Emeritus
Kathryn Ralke, Ph.D., Professor Emeritus
Wesley W. Weathers, Ph.D., Professor Emeritus
Barry W. Wilson, Ph.D., Professor Emeritus

Affiliated Faculty

Fred S. Conte, Ph.D., Specialist in Cooperative Extension and Lecturer
Joshua Hull, Ph.D., Assistant Adjunct Professor
Elizabeth A. Lamb, Ph.D., and Lecturer
Bernard P. May, Ph.D., Adjunct Professor
Deanne Meyer, Ph.D., Specialist in Cooperative Extension and Lecturer
James W. Oljen, Ph.D., Specialist in Cooperative Extension and Lecturer
Peter H. Robinson, Ph.D., Specialist in Cooperative Extension and Lecturer
Alison L. Van Eenennaam, Ph.D., Specialist in Cooperative Extension and Lecturer
Dana B. Van Liew, M.Ed., Continuing Lecturer

Academic Senate Prize for Excellence in Teaching Award

The Major Program

The Animal Science major is devoted to the sciences central to understanding biological function of domestic and captive animals, their care, management, and utilization by people for food, fiber, companionship and recreation. Advances in science and technology, and an ever growing human population, have increased the complexity of issues surrounding the care and management of animals. Specializations within the major allow students to develop a scientific appreciation of animals and their relationship to their environment. Graduates in Animal Science are able to advance the science and technology of animal care and management in an objective and effective manner for the betterment of animals and society.

The Program. The curriculum provides depth in the biological and physiological sciences and allows students to specialize within the broad field of applied animal sciences. Study begins with introductory courses in animal science, biology, chemistry, mathematics, and statistics. Students undertake advanced courses in animal behavior, biochemistry, genetics, nutrition, and physiology and the integration of these sciences to animal function, growth, reproduction, and lactation. Students complete the curriculum by choosing a specialization in either an animal science discipline (behavior, biochemistry, genetics, nutrition, or physiology) or in the sciences particular to a class of animals (aquatic, avian, companion and captive, equine, laboratory, livestock and dairy, or poultry).

Career Alternatives. A wide range of career opportunities are available to graduates. The primary goal of the major is to prepare students for graduate study leading to the M.S. and Ph.D. degrees; for continued study in a professional school such as veterinary medicine, human medicine, or dentistry; for careers in research, agricultural production, farm and ranch management, or positions in business, sales, financial services, health care, agricultural extension, consulting services, teaching, journalism, or laboratory technology.

B.S. Major Requirements: 

| Units | 
| Preparatory Subject Matter | 53-57 |
| Animal Science 1, 2, 41, 41L | 12 |
| Biological Sciences 2A, 2B, 2C | 15 |

Quarter Offered: I-Fall, II-Winter, III-Spring, IV-Summer; 2013-16 offering in parentheses

Pre-Fall 2011 General Education (GE): AH=Arts and Humanities; Sci=Science and Engineering; SocSci=Social Sciences; Div=Dominant Diversity; Writ=Writing Experience

Fall 2011 and on Revised General Education (GE): AH=Arts and Humanities; Sci=Science and Engineering; SocSci=Social Sciences; Div=Dominant Diversity; Writ=Writing Experience

A=AGCH-Agricultural Cultures, DD=DDominant Diversity, OL=Oral Skills, QL=Quantitative, SS=Scientific, VL=Visual, WC=World Cultures, WRE=Writing Experience

Chemistry 2A, 2B and 8A, 8B or 118A, 118B | 16-18 |
Mathematics 1A, UC Davis Core or 2A, 2B | 21B |
Plant Sciences 120 or Statistics 100 | 4 |
Note: Some professional and graduate schools may require additional preparatory subject matter. Please consult the advising center.

Depth Subject Matter | 39-43 |
Biological Sciences 101; Animal Genetics 107; Animal Biology 102, 103; Neurobiology, Physiology, and Behavior 101 | 24 |
Integral Animal Biology: Animal Science 122, 124, and Neurobiology, Physiology, and Behavior 121 and 121L | 23 |
Laboratory: Select one from the following: Animal Genetics 111; Animal Science 106, and 136, 137; Microbiology 1021; Molecular and Cellular Biology 120L, or 1601; Neurobiology, Physiology, and Behavior 101L or 104L; Pathology, Microbiology, and Immunology 126L | 2-6 |

Area of Specialization | 20-23 |
Choose one area of specialization below; the program of study must be approved in advance by your faculty adviser. Courses must be taken for a letter grade.

Animal Science with a Disciplinary Focus | 20 |
Select 20 upper division units, with approval from your faculty adviser, to form a coherent series of courses in one of the following disciplines: animal behavior, biochemistry, genetics, nutrition, or physiology.

Aquatic Animals | 20 |
Animal Science 123 and 131; Nutrition 124; Animal Science 118 or 119. Select additional upper division units from any Animal Genetics or Animal Science course, or other courses approved by your faculty adviser. Students in this specialization must take Animal Science 136 and 137 to meet their Laboratory Depth Subject Matter requirement. Students in this specialization may elect to substitute any of Biological Sciences 104, Evolution and Ecology 112, or Wildlife, Fish, and Conservation Biology 120 and 121 for the 12-unit requirement under Integrative Animal Biology, with approval of your faculty adviser.

Avian Science | 20 |
Avian Sciences 13, 100, 150; Nutrition 123, 123L. Select additional upper division units from any Animal Genetics, Animal Science, or Avian Sciences courses or other courses approved by your adviser. Students in this specialization must substitute Avian Sciences 103, 121, and Neurobiology, Physiology, and Behavior 117 for the Animal Science 124 and Neurobiology, Physiology, and Behavior 121 and 121L requirement under Integrative Animal Biology.

Companion and Captive Animals | 20 |
Animal Science 42, 142; Nutrition 115 or 122 or 123 and 123L, Animal Science 170. Select additional upper division units from any Animal Genetics, Animal Science or Avian Sciences course, or from Nutrition 115, 122, 123, 123L or other courses.

Equine Science | 20 |
Animal Science 15, 115, 141 and one of Animal Science 125, 126 or 127. Select additional upper division units from any Animal Genetics or Animal Science course, or from Nutrition 115, 122, 123, 123L or other courses approved by your faculty adviser.

### Minor Advisor

- E.J. DePeters

### Graduate Study

- The Animal Biology Graduate Group offers a program of study and research leading to the M.S. or Ph.D. degree in Animal Biology. See Animal Biology (A Graduate Group), on page 151; see also Graduate Studies, on page 111.

### Courses in Animal Science (ANS)

#### Lower Division

**1. Domestic Animals and People (4)**
- Lecture—3 hours; laboratory—3 hours. Animal domestication and factors affecting their characteristics and distribution. Animal use for food, fiber, work, drugs, research and recreation; present and future roles in society. Laboratory exercises with beef and dairy cattle, poultry, sheep, swine, laboratory animals, fish, horses, meat and dairy products. GE credit: SciEng, Writ | SE, WE | I, II, III. (I, II) Famula

**2. Introductory Animal Science (4)**
- Lecture—3 hours; laboratory—3 hours. Prerequisite: course 1 and Biological Sciences 1A recommended. Growth, reproduction, lactation, inheritance, nutrition, and disease control in domesticated animals and species used in culture; the application of sciences to animal production. GE credit: SciEng, Writ | SE, SL, VL, WE | I, II, III. (I, II, III) Murray

**12. Animal Science: Basic Principles and Application (3)**

**15. Introductory Horse Husbandry (3)**
- Lecture—3 hours. Prerequisite: course 2 recommended. Instruction to care and use of light horses emphasizing the basic principles for selection of horses, responsible horse ownership, nutrition, and raising of foals. GE credit: SciEng, Writ | QL, SE, VL, WE | I, II, III. (I, II, III) Roser

**17. Canine Behavior: Learning and Cognition (3)**
- Lecture—3 hours. Domestic dog behavior from basic principles of learning to complex cognitive behaviors; interaction between learning and cognition including how these processes contribute to interactions with humans; the genetic correlates of learning and cognition. —IV. (IV) Raser

**18. Introductory Aquaculture (4)**

**21. Livestock and Dairy Cattle Judging (2)**
- Lecture—6 hours. Prerequisite: course 1 or 2 recommended. Evaluation of type as presently applied to light horses, meat animals and dairy cattle. Relationship between form and function, form and carcass quality, and form and milk production. GE credit: SciEng | OL, SE | I, II, III. (I, II, III) Van Liew

**22A. Animal Evaluation (2)**
- Laboratory—3 hours; fieldwork—30 hours (total). Prerequisite: course 22A or the equivalent. Attendance at 3 one-day weekend field trips required. Domestic livestock species with emphasis on visual appraisal, carcass evaluation, and application of performance information. Emphasis on accuracy written and oral descriptions of evaluations. Prerequisite to intercollegiate judging competition. Offered in alternate years. (P/NP grading only.) GE credit: OL, SE | I, II, III. Van Liew

**22B. Animal Evaluation (2)**
- Laboratory—3 hours; fieldwork—30 hours (total). Prerequisite: course 22A or the equivalent. Attraction at 3 one-day weekend field trips required. Continuation of course 22A with emphasis on specific species: swine, beef cattle, and sheep. Application of animal science principles to selection and management problem-solving scenarios. Prerequisite to intercollegiate judging competition. Offered in alternate years. (P/NP grading only.) GE credit: OL, SE | I, II, III. Van Liew

### 41. Animal Domestic Production (2)

- Lecture—2 hours. Principles of farm animal management, including dairy and beef cattle, sheep, and swine. Industry trends, care and management, nutrition, and reproduction. GE credit: SciEng | SE | I, II. (I) Miller

### 41L. Animal Domestic Production Laboratory (2)

- Discussion—1 hour; laboratory—3 hours. Prerequisite: course 41 (may be taken concurrently). Animal production principles and practices, including five field trips to dairy cattle, beef cattle, sheep, and swine operations and campus labs. (P/NP grading only.) GE credit: QL, SL, VL, WE | I, II, III. (I, II, III) Miller

### 42. Introductory Companion Animal Biology (4)

### 49A-K. Animal Management Practices (2)

- Discussion—1 hour; laboratory—3 hours. The application of the principles of elementary biology to the management of a specific animal species. Among the topics offered: (A) Aquaculture, (B) Beef, (C) Dairy, (D) Goats, (E) Horses, (F) Laboratory Animals, (G) Meats, (H) Poultry, (I) Sheep, (J) Swine, (K) Captive and Companion Avian. Up to 4 different topics may be offered. GE credit: SciEng, Writ | QL, SL, VL, WE | I, II, III. (I, II, III) Miller

### 90C. Research Group Conference (1)

- Discussion—1 hour. Prerequisite: lower division standing, consent of instructor. Weekly conference on research problems, progress and techniques in the animal sciences. May be repeated for credit. (P/NC grading only.)—I, II, III. (I, II, III) Miller

### 90E. Internship in Animal Science (1-12)

- Internship—9-12 hours. Prerequisite: consent of instructor. Internship off and on campus in dairy, live stock, and aquaculture production, research and management; or in a business, industry, or agency associated with these or other animal enterprises. All requirements of Internship Approval form must be met. (P/NC grading only.)—I, II, III. (I, II, III) Miller
104. Principles and Applications of Domestic Animal Behavior (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or Biological Sciences 28. Basic principles of animal behavior as applied to domesticated species. Emphasis placed on application of the principles of animal behavior. GE credit: ScEng | SE.—II. (II.) Tucker

106. Domestic Animal Behavior Laboratory (2)
Laboratory—6 hours. Prerequisite: course 104 or the equivalent. Research with laboratory animals, focusing on the behavior of large domestic animals. Experimental design, methods of data collection and analysis, and reporting of experimental results. GE credit: ScEng, Wrt | SE.—II. (II.) Tucker

112. Sustainable Animal Agriculture (3)
Lecture/discussion—3 hours. Prerequisite: Biological Sciences 28 or course 1; Statistics 100 or Plant Sciences 120 recommended. Current applications of sustainable animal agriculture including the challenges of animal production, animal welfare, and the protection of the environment and resources for future food supply systems. Various scenarios for meeting sustainability objectives are evaluated using computing modeling. GE credit: ScEng or SoSci | Ol, QL, SE, or SL.—III. (III.) Kelebrew

118. Fish Production (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Wildlife, Fish, and Conservation Biology 120 and 121. Current practices in fish production; relationship between the physiological aspects of a species and the production systems, husbandry, management, and marketing practices utilized. Emphasis on species currently reared in California. GE credit: ScEng | QL, SE, SL, WE.—I. (I.) Ross

119. Invertebrate Aquaculture (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Biological Sciences 18. Management, breeding and feeding of aquatic invertebrates; application of basic principles of physiology, reproduction, and nutrition to production of mollusks and crustaceans for human food; emphasis on interaction of species biology and management techniques on production efficiency and aquaculture outcomes; existing regulations, sample analyses, interpretation and utilization of data, evaluation of alternative practices, and policy development. GE credit: ScEng | SE, SL.—II. Meyer

120. Principles of Meat Science (3)
Lecture—3 hours. Prerequisite: Biological Sciences 1A. Anatomical, physiological, developmental, and biochemical aspects of muscle underlying the conversion of muscle to meat. Includes meat processing, preservation, microbiology, and public health issues associated with meat products. [Some course as Food Science and Technology 120] GE credit: ScEng, Wrt | SE.—II. (II.) Doroshov

120L. Meat Science Laboratory (2)
Discussion—1 hour; laboratory—3 hours. Prerequisite: Biological Sciences 1A; course 120 may be taken concurrently. Laboratory exercises and student participation in transformation of livestock to carcass and meat, structural and biochemical changes related to meat quality, chemical and sensory evaluation of meat, and field trips to packing plant and processing plant as course Food Science and Technology 120L GE credit: ScEng | SE.

123. Animal Growth and Development (4)
Lecture—3 hours; lecture/discussion—1 hour. Prerequisite: Animal Biology 103 or Biological Sciences 103. Growth and development of animals from conception to maturity, viewed from practical and biological perspectives; includes genetic, metabolic, nutritional control of cell and organism function. GE credit: ScEng | OL, QL, SL, WE, WE.—III. (III.) Ross

124. Lactation (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: Neurobiology, Physiology, and Behavior 101; Animal Biology 102 or the equivalent or consent of instructor. The application of principles of animal behavior to domestic animals. GE credit: ScEng | Sl, SE.—II. (II.) Hovey

125. Equine Exercise Physiology (3)
Lecture—3 hours. Prerequisite: Neurobiology, Physiology, and Behavior 101 or 102 and Animal Biology 102 or the equivalent physiology of the exercising horse. Includes physiological systems, gait analysis, lameness, pharmacology, sports medicine, sport horse performance evaluation and conditioning. Offered in alternate years. GE credit: ScEng | Sl.—III.

126. Equine Nutrition (3)
Lecture—3 hours. Prerequisite: course 15; Nutrition 115. Equine digestion, digestive physiology, diet development and evaluation, and the relationship of the topics to recommended feeding practices and nutritional portfolios. Offered in alternate years. GE credit: ScEng | SE.—III.

127. Advanced Equine Reproduction (3)
Lecture—3 hours. Prerequisite: upper division physiology courses (Animal Physiology, Physiology, and Behavior 101) and an advanced horse production and management course (e.g., course 115). Reproductive physiology, endocrinology of the mare and stallion. Emphasis on structure/function relationships as they are related to improving equine reproductive management and efficiency. GE credit: ScEng | SE.—III.

128. Agricultural Applications of Linear Programming (4)
Lecture—2 hours; laboratory—2 hours; discussion—1 hour. Prerequisite: upper division standing and Agricultural Systems and Environment 21 or the equivalent. Applications of linear programming in agriculture, emphasizing resource allocation problems and decision making. Problems include crop production, labor allocation, and problem management. Hands-on experience in developing linear programming and interpreting the results. GE credit: ScEng | OL, SE, SL.—II. (II.) Fodell

129. Environmental Stewardship in Animal Production Systems (3)
Lecture—3 hours. Prerequisite: Biological Sciences 10 and 1A. Biotechnology 2A, 2B, 8A, BB. Management principles of environmental stewardship for grazing livestock, and the consideration of environmental, social, and economic factors related to environmental quality, nutrition, and environmental and policy related to reproduction. Offered in alternate years. GE credit: ScEng | SE, Sl.—II. Meyer

131. Reproduction and Early Development in Aquatic Animals (4)
Lecture—3 hours; laboratory—2 hours. Prerequisite: Molecular and Cellular Biology 150; Wildlife, Fish, and Conservation Biology 120, 121; or consent of instructor. Physiological and developmental functions related to reproduction, breeding efficiency and fertility of animals commonly used in aquaculture. GE credit: ScEng | SE, WE.—III. (III.) Doroshov

136A. Techniques and Practices of Fish Culture (2)
Lecture—1 hour; laboratory—3 hours. Prerequisite: course 2. Daily care and maintenance of fish in residential aquariums, research and commercial facilities. Biological and environmental factors important to sound management of fish. Laboratories focus on fish culture and include specific training for credit to students who have completed course 136. GE credit: ScEng | QL, SL, VL, WE.—I. (I.) Hung

136E. Techniques and Practices of Avian Culture (2)
Lecture—1 hour; laboratory—3 hours. Prerequisite: course 2. Daily care and maintenance of birds for research, commercial production, and companion or hobby uses. Biological and environmental factors important to sound management of birds. Laboratories focus on bird husbandry, management and care, and include growth trials. GE credit: ScEng | OL, QL, SL, VL, WE.—I. (I.) Hung

137. Animal Biochemistry Laboratory (2)
Lecture—1 hour; laboratory—3 hours. Prerequisite: Animal Biology 102 or Biological Sciences 102 or the equivalent. Chemical and biochemical methods, and instruments commonly used in animal science. Wet chemical methods, UV/visible and atomic absorption spectrophotometry, thin-layer and gas-liquid chromatography, commercial chemical kits. Attention to safety. GE credit: ScEng | QL, SL, WE.—II. (II., III.) Hung

140. Management of Laboratory Animals (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: Neurobiology, Physiology, and Behavior 101. Laboratory animal management procedures in view of animal physiology, health and welfare, government regulations, and experimental needs. Clinical techniques using rodents and rabbits as models. GE credit: ScEng | SE.—I. (I.)

141. Equine Enterprise Management (4)
Lecture/discussion—4 hours. Prerequisite: course 15; Economics 1A, 1B recommended. Examination of the concepts and principles involved in the operation of an equine enterprise. Essential aspects of equine enterprise management, including equine law, marketing, cash flow analysis, and impact of state and federal regulations. GE credit: SoSci, Wrt | SS.—II.

142. Companion Animal Care and Management (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 42; Biological Sciences 101, Neurobiology, Physiology, and Behavior 101; Animal Biology 102 and 103 recommended. Management and production of companion animals. Integration of the disciplinary principles of behavioral, nutritional, and physiological and related to the care of companion animals. GE credit: ScEng | QL, QL, SE, SL, VL, WE.—I. (I.) Oberbauer

143. Pig and Poultry Care and Management (4)
Lecture—3 hours; laboratory—3 hours; Saturday field trips. Prerequisite: Nutrition 115; Neurobiology, Physiology, and Behavior 101. Care and management of swine, broilers and turkeys as related to sound management of these species. GE credit: ScEng | Ol, QL, SE, SL, VL, WE.—I. (I.) Doroshov

144. Beef Cattle and Sheep Production (4)
Lecture—3 hours; laboratory—3 hours; one or two Saturday field trips. Prerequisite: course 41; Animal Genetics 107, Nutrition 115, or consent of instruc-
145. Meat Processing and Marketing (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: consent of instructor. Distribution, processing, and marketing of meat and meat products. May be repeated for credit. GE credit: SciEng | SL, VL, WE. —III. (III.) Zinn

146. Dairy Cattle Production (5)
Lecture—3 hours; laboratory—3 hours; fieldwork—1 hour; discussion—1 hour. Prerequisite: consent of instructor. Dairy Animal Genetics 107, and Nutrition 115, or consent of instructor. Scientific principles from genetics, nutrition, physiology, and related fields applied to conversion of animal feed to human food through dairy animals. Management and economic decisions are related to animal biology considering the environment and animal wellbeing. Mandatory Saturday fieldtrip. GE credit: SciEng | Wrt | VL, WE. —III. (III.) DePeters

147. Dairy Processing and Marketing (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: course 146 or consent of instructor. Examination of distribution systems, processing practices, product quality, impact of government policy (domestic and foreign), marketing alternatives, and product development. GE credit: SciEng | SE

148. Enterprise Analysis in Animal Industries (4)
Lecture/discussion—4 hours. Prerequisite: course 141 or 145 or 147 or consent of instructor. Examination and application of decision making and problem solving in the production enterprise. The areas of production analysis, problem solving, risk analysis and cost-benefit analysis will be examined in terms of the total enterprise. GE credit: SocSci, Wrt | OL, QL, SL, WE. —III. (III.) Kabreab

149. Farrier Science (3)
Lecture—3 hours. Prerequisite: course 115. Distance learning class broadcast from California Polytechnic State University San Luis Obispo, California Polytechnic State University Pomona, and California State University Fresno. In-depth examination of the structure-function relationships of the equine hoof and how it relates to conformation, injury, and performance. GE credit: SciEng | SE

149L. Farrier Science Laboratory (1)
Laboratory—3 hours. Prerequisite: course 149 [may be taken concurrently] or consent of instructor. The art and science of shoeing/hoeing in equine related fields. Proper use of the tools, materials and techniques in the fabrication of shoes and safe preparation of the hoof for application of shoes. (P/NP grading only.)

170. Ethics of Animal Use (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: any basic course in composition or speech. Ethical issues related to animal use in contemporary society. Integration of philosophical theories with scientific evidence on animal behavior, mentality, and welfare. Uses of animals in agriculture, research, and as companions. Ethical responsibilities regarding wildlife and the environment. GE credit: Ethic | OL, QL, SL, WE. —III. (III.) Bren

190C. Research Group Conference (1)
Discussion—1 hour. Prerequisite: advanced standing; consent of instructor. Weekly conference on research problems, progress and techniques in the animal sciences. May be repeated for credit. (P/NP grading only.)

192. Internship in Animal Science (1-12)
Internship—3-36 hours. Prerequisite: completion of 84 units and consent of instructor. Internship off and on campus in dairy, livestock and aquaculture production, research and management; or in a business, industry, or agency associated with these or other animal enterprises. All requirements of Internship Approval Form must be met. (P/NP grading only.) —I, II, III. (I, II, III)

194. Research in Animal Science (3)
Laboratory—6 hours; discussion—1 hour. Prerequisite: upper division standing, course 193, one laboratory course in animal biology and consent of instructor. Research with a faculty mentor. Weekly discussion and laboratory on specific research topic. May include a seminar to research group. Choose from sections: (1) Animal Behavior; (2) Animal Genetics; (3) Animal Nutrition; (4) Animal Physiology. May be repeated for credit for a total of four times. —I, II, III. (I, II, III.)

194HA. Undergraduate Honors Thesis in Animal Science (4)
Lecture—1 hour; laboratory—9 hours. Prerequisite: Neurobiology, Physiology, and Behavior 101, Animal Biology 103, minimum cumulative GPA of 3.200 and selection by the Honors Selection Committee. Students will carry out a research project [chosen from faculty-suggested or approved proposals] during the academic year under the guidance of a faculty member. Upon completion, student will write a thesis and present a public seminar describing his/her research. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | OL, SE

194HB. Undergraduate Honors Thesis in Animal Science (4)
Lecture—1 hour; laboratory—9 hours. Prerequisite: Neurobiology, Physiology, and Behavior 101, Animal Biology 103, minimum cumulative GPA of 3.200 and selection by the Honors Selection Committee. Students will carry out a research project [chosen from faculty-suggested or approved proposals] during the academic year under the guidance of a faculty member. Upon completion, student will write a thesis and present a public seminar describing his/her research. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | SE, VL

194HC. Undergraduate Honors Thesis in Animal Science (4)
Lecture—1 hour; laboratory—9 hours. Prerequisite: Neurobiology, Physiology, and Behavior 101, Animal Biology 103, minimum cumulative GPA of 3.200 and selection by the Honors Selection Committee. Students will carry out a research project [chosen from faculty-suggested or approved proposals] during the academic year under the guidance of a faculty member. Upon completion, student will write a thesis and present a public seminar describing his/her research. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | SE, WE

197T. Tutoring in Animal Science (1-2)
Tutoring—1-2 hours. Prerequisite: Animal Science or related major, advanced standing, consent of instructor. Tutoring of students in lower division animal science courses; weekly conference with instructor in charge of course; written critiques of teaching procedures. May be repeated for credit. (P/NP grading only.)

198. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)
Prerequisite: consent of instructor. (P/NP grading only.)

Graduate

200. Strategies in Animal Production (4)
Lecture/discussion—4 hours. Prerequisite: consent of instructor. Examines the forces and issues in animal agriculture through the strategic management process.

206. Models in Agriculture and Nutrition (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: Mathematics 168; Statistics 100B. Application of regression techniques and models. Techniques and models for non-linear experimental designs and management models are presented. Qualitative analysis and evaluation of linear and non-linear equations used in agriculture and nutrition.

259. Literature in Animal Science (1)
Seminar—1 hour. Prerequisite: graduate standing. Critical presentation and analysis of recent journal articles in animal science. May be repeated for credit up to nine times. (S/U grading only.)

290. Seminar (1)
Seminar—1 hour. Reports and discussions of topics of interest in genetics, nutrition, and physiology as they apply to animal science. (S/U grading only.) —I, II, III. (I, II, III.)

290C. Research Group Conference (1)
Discussion—1 hour. Prerequisite: graduate standing. Weekly conference on research problems, progress and techniques in the animal sciences. May be repeated for credit. (S/U grading only.) —I, II, III. (I, II, III.)

291. Current Research in Animal Science (1)
Seminar—1 hour. Prerequisite: graduate standing. Current research in animal science explored at weekly seminars presented by guest lecturers. Discussion of research presented. May be repeated for credit. (S/U grading only.) —I, II, III. (I, II, III.)

297. Supervised Teaching in Animal Science (2)
Supervised teaching—6 hours. Prerequisite: consent of instructor. Practical experience in teaching Animal Science at the University level, curriculum design and evaluation; preparation and presentation of material. Assistance in laboratories, discussion sections, and evaluation of student work. An evaluation letter sent to the Graduate Adviser with a copy to the student. (S/U grading only.) —I, II, III. (I, II, III.)

298. Group Study (1-5)
Prerequisite: consent of instructor. (Sect. 1, 2, 3—letter grading; from Sect. 4 on—S/U grading only.)

299. Research (1-12)
(S/U grading only.)

Animal Science and Management

[College of Agricultural and Environmental Sciences]

Master Adviser. J.G. Fadel

Advising Center for the major (including peer advising) is located in 1202 Meyer Hall 530-754-7915. Each student will be assigned a faculty adviser through this office upon entering the major. http://acag.ucdavis.edu

The Major Program

The Animal Science and Management major combines a thorough education in the basic biology of domestic animal species with a strong background in agricultural economics. Graduates of this interdisciplinary major will be well positioned to adjust to our rapidly changing world and job market.

The Program. The interdisciplinary program in Animal Science and Management combines a fundamental background in the natural sciences (chemistry, biology, physiology, nutrition, genetics, mathematics, and behavior), with an understanding

Quarter Offered: Fall, Winter, Spring, Summer. 2015-2016 offering in parentheses

Pre-Fall 2011 General Education (GE): AHum—Arts and Humanities; SciEng—Science and Engineering; SocSci—Social Sciences; DivDom—Domestic Diversity; Write—Writing Experience

Fall 2011 and on Revised General Education (GE): AH—Arts and Humanities; SE—Science and Engineering; SS—Social Sciences; AC—American Cultures; DD—Domestic Diversity; OL—Oral Skills; QL—Quantitative; SL—Scientific; VL—Visual; WC—World Cultures; WE—Writing Experience

156 Animal Science and Management
of economics and humanities. After completing preparatory courses, students focus on both the animal species that interest them (for example, companion animals, goats, fish, crustaceans or mollusks, among others) and principles of managerial economics (marketing, finance, business organization or systems analysis). Students preparing for medical or veterinary school can meet professional entrance requirements with those of this major if they plan ahead.

Career Alternatives. Job opportunities for successful graduates are plentiful and include positions with banking and financial institutions, agribusiness, Peace Corps, and farms of all scales. Most Animal Science and Management graduates are well prepared for professional study (medical, law, veterinary, and graduate business schools) as well as graduate research programs leading to the M.S. or Ph.D. degrees. Advanced degrees open doors to work as extension specialists, farm advisers, and teachers, and prepare students for international service.

B.S. Major Requirements:

Written and Oral Expression.................................. 8

Preparatory Subject Matter........................................ 69-72
Animal Science 1 and 2 ........................................... 8
Biological Sciences 2A, 2B, and 2C.......................... 13-15
Chemistry 2A, 2B, 8A, 8B ...................................... 16
Plant Sciences 21 or Computer Science Engineering 15 .................................................. 8
Economics 1A, 1B, Management 1IA, 1IB .................. 16
Mathematics 16A, 16B, and 16C or 17A-B-C or 21A-B-C ............... 9-12
Plant Sciences 120, Statistics 100 or 103, or other courses in quantitative skills with prior approval of the Master Adviser. 8

Depth Subject Matter............................................ 27-30
Biological Sciences 101 ........................................ 4
Nutrition 115 ................................................... 4
Neurobiology, Physiology, and Behavior 101 ............... 4
Business Management 141-17
Agricultural and Resource Economics 100A,
One course from: Agricultural and Resource Economics 113, 130, 136, 138,
One course from: Agricultural and Resource Economics 120, 132, 140, 145, 157;
Plus one course from: Animal Science 128
At Agricultural and Resource Economics 155.

Area of Specializations............................................ 14-16
Choose one area of specialization below:
Aquatic Animals .................................................. 16
Animal Science 18, 118 or 119, 131, and 148.
Companion Animals ............................................. 16
Animal Science 42, 140, 142, and 148
Data Analysis: Include an introductory course in
Animal Science 41, 411, 146, 147, and 148.
Equine ................................................................... 15
Animal Science 15, 115, 141, and 148
Livestock .................................................................. 16
Animal Science 41, 411, 143 or 144, 145, and 148.
Poultry ..................................................................... 15
Avian Sciences 11, Animal Science 143, 145, and 148.
Individualized ......................................................... 14-16
Students may, with prior approval from their advisor and the Master Adviser, design their own individualized specialization within the major. The specialization will consist of 4 to 6 courses with one of the courses being Animal Science 148. The other courses are determined by introduction, care and management, and processing and/or marketing aspects of the animal of interest.

Restricted Electives...................................................... 8-10
Aavian Sciences 100, 103, 115, 121, 123, 149, 150; Animal Genetics 101, 105, 107, 111; Nutrition 122, 123, 123L, 124, Animal Biology 102 [strongly recommended], 103; Computer Science Engineering 124; Management 100; Neurobiology, Physiology, and Behavior 117, 121, 121L, 130; Wildlife, Fish, and Conservation Biology 120, 120L, 130.

Total Units for the Major ........................................... 126-136

The Major Program
Anthropology is the systematic study of human beings. The student of anthropology learns about human biology, ecology, and social life—past and present—and gains a broad understanding of humans and societies. It is a diverse field, and the courses, faculty, and degree programs at UC Davis are subdivided into two wings—Evolutionary and Sociocultural.

Evolutionary. Evolutionary anthropologists are united by their common application of science to understand the behavior, ecology, and evolutionary history of human beings. The B.A. degree in evolutionary anthropology uses DNA to study the genetic relationships among different populations and the adaptive significance of specific genetic traits. Paleoanthropology uses comparisons among fossilized remains to help understand what biological changes occurred during the course of human evolution. Biogeography investigates the biology behind the geographic distribution of species, and the evolution of humans and non-human primates. Molecular anthropology studies the patterns of loss of biological diversity—in this department, it focuses on threatened non-human primates and the conservation of natural resources by a rapidly growing population. Primatology is the study of behavior, ecology and morphology of primates to address questions about the evolution and function of behavioral and morphological patterns in non-human primates and to test models of the origins of human morphology and behavior.

Sociocultural. Sociocultural anthropologists study the varied ways in which people around the world organize their lives and interpret the circumstances in which they operate. Their main method is extended field research, which combines attention to global issues with the close study of human relations and culture. Among the department's undergraduate courses are globalization and transnationalism; human ecology and environmental change; cultures of healing, health and medicine, the global spread of media and technology; migration, multiculturalism and urban life; colonialism and neocolonial development and post-development; race, class and gender; politics and the political; cultures of everyday life; language use and discourse; and self, identity and family. The track in sociocultural anthropology thus offers a rich set of resources for understanding and engaging pressing issues in a globalizing world characterized by new forms of international culture and community as well as by increasing material inequality and political volatility.

The Program. The Bachelor of Arts program is divided into two tracks, Sociocultural and Evolutionary, which parallel the two wings described above. Students interested in the study of recent and contemporary human languages and societies should follow the Sociocultural Track. A.B. degree in sociocultural anthropology, each student is required to complete courses that provide (1) foundational skills, (2) language and cultural skills, (3) comprehensive skills, and (4) specialized skills. Students interested in the study of archaeology; primate studies; or human biology, ecology or origins should follow the Evolutionary Track. The B.A. degree offered by the Evolutionary Track provides a unique perspective in anthropology from an evolutionary perspective. The Evolutionary Track also offers a B.S. degree that requires more rigorous lower division coursework in...
math and science than the A.B. degree and upper division coursework in biological anthropology and closely related disciplines.

Students in both tracks are encouraged to gain practical experience through courses taken while studying abroad (under the administration of the UC Davis Study Abroad) and through internships performed for credit (under the administration of the Internship and Career Center). Students showing exceptional ability are welcome to seek permission from instructors to participate in graduate seminars offered by the department in order to have these courses count toward the fulfillment of upper division requirements for the major.

Career Alternatives. A Bachelor of Arts degree in Anthropology is suited for students seeking a solid liberal arts education. With its broad goal to facilitate understanding across lines of cultural difference, sociocultural anthropology prepares students for lives that are influenced by increasingly pervasive cultural exchange, as well as cultural conflicts around the world. The program serves as excellent preparation for careers in which intercultural skills are increasingly needed, including social and environmental activism, business, diplomacy and social administration, journalism, law, education and international relations. Students that focus on evolutionary processes will be well prepared to enter fields such as medical or health anthropology, museum studies, cultural resource management and wildlife conservation. A Bachelor of Science degree in Anthropology provides suitable pre-medical, pre-dental, and pre-professional training, and the educational background for further training in the health professions, biological/evolutionary sciences and forensic investigation. The A.B. or B.S. degree in anthropology prepares candidates for education in good preparation for high school teaching in social, biological and natural sciences. An anthropology degree also provides the foundation for advanced study leading to careers in college-level teaching and research.

Honors Program. Candidates for high or highest honors in Anthropology must write a senior thesis under the direction of a faculty member. The thesis project will have a minimum duration of two quarters. Honors candidates must take at least six units of Anthropology 174A. Only students who, at the end of their junior year (132 units), have a cumulative grade point average of 3.500 in Anthropology courses will be eligible for the honors program. The quality of the thesis work will be the primary determinant for designating high or highest honors at graduation.

Teaching Credential Subject Representative: see the Teaching Credential/M.A. Program on page 115.

Graduate Study. The Department offers a program of study leading to the M.A. and Ph.D. degrees in Anthropology. Further information regarding graduate study may be obtained at the Department office and at Graduate Studies.

Courses in Anthropology (ANT)

Lower Division

1. Human Evolutionary Biology (4)
   Lecture—2 hours; discussion—1 hour. Processes and course of human evolution, primatology, biological and social diversity within humans; paleoanthropology. GE credit: SciEng, Div Wrt | Sl | Si, WE.
11Y. Human Evolutionary Biology (4)
Web seminar—4 hours; discussion—1 hour. Evolutionary theory and mechanisms of evolution; basic population and quantitative genetics; primateology; biological and cultural diversity within Homo sapiens; paleoanthropology and evolution of human societies. Course 54 or consent of instructor. GE credit: Div | Se, Sl.

26. Mummies of the Ancient World (2)
Lecture—2 hours. Archaeological approaches for studying mummies and the process of mumification in the ancient world. Topics include environmental factors promoting mumification, and archaeological conservation of mumified bodies. Offered in alternate years. GE credit: SS, Wt | WL, L, T, E.

30. Sexualities (4)
Lecture/discussion—4 hours. Introduction to the study of sexuality, particularly to the meanings and social organization of same-sex sexual behavior across cultural time. Biological and cultural approaches will be compared, and current North American issues placed in a wider comparative context. GE credit: ArtHum or SoSci, Div | ACCH, AH or SS, DD, Wt.

32. Drugs, Science and Culture (4)
Lecture—3 hours; discussion—1 hour. Drugs, politics, science, society in a cultural perspective: emphasis on roles of science, government and the media in shifting attitudes toward alcohol, marijuana, Prozac and other pharmaceuticals; drug laws, war on drugs and global trade in sugar, opium, cocaine. [Same course as Science and Technology Studies 40 or consent of instructor. GE credit: SoSci, Div | SS, Wt | Wt | SL, VL, Wt, Wt.

34. Cultures of Consumerism (4)

50. Evolution and Human Nature (4)

98. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only)

99. Special Study for Lower Division Students (1-5)
Prerequisite: consent of instructor. (P/NP grading only)

Upper Division
100. Theory in Social-Cultural Anthropology (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Discussion of the theoretical and philosophical developments in cultural anthropology from the 19th century to the present. Not open for credit to students who have completed course 137. GE credit: SoSci, Div | SS, Wt.

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or 2 or Environmental Science and Policy 30 or Evolution and Ecology 100 or Biological Sciences 101. Interdisciplinary study of diversity and change in human societies, using frameworks from anthropology, evolutionary ecology, history, archaeology, psychology, geography, and other fields. Topics include population dynamics, subsistence transitions, family organization, disease, economics, warfare, politics, and resource conservation. [Same course as Environmental Science & Policy 101.] GE credit: SoSci, Div | SS, Wt, Wt.

103. Indigenous Peoples and Natural Resource Conservation (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Political economy of environmental struggles. Relationship between social inequality (based on race, class, and/or gender) and ecological degradation. Articulation of local peoples, national political, and global environmental global economy in the contestation over the use of environmental resources. Not open for credit to students who have completed course 121N. (Former course 134N.) GE credit: SoSci, Div | ACCH, DD, OL, SS, Wt, Wt.

104N. Cultural Politics of the Environment (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Political economy of environmental struggles. Relationship between social inequality (based on race, class, and/or gender) and ecological degradation. Articulation of local peoples, national political, and global environmental global economy in the contestation over the use of environmental resources. Not open for credit to students who have completed course 134N. (Former course 134N.) GE credit: SoSci, Div | ACCH, DD, OL, SS, Wt, Wt.

105. Evolution of Societies and Cultures (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or 2 or Environmental Science and Policy 30 or Evolution and Ecology 100 or Biological Sciences 101. Interdisciplinary study of social and cultural evolution in humans. Culture as a system of inheritance, psychology of cultural learning, culture as an adaptive system, evolution of maladaptations, evolution of technology and institutions, evolutionary transitions in human history, coevolution of genetic and cultural variation. Only two units of credit to students who have completed course 134N. (Former course 134N.) GE credit: SoSci, Wt | SS, Wt, Wt.

110. Language and Sociocultural Anthropology (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. The role of language analysis and linguistic theory in the development of sociocultural anthropology. Language, culture, and thought; the linguistic accomplishment of social action; language ideology; language and social power. Language as a cultural mediator of political processes. GE credit: SoSci, Div | SS, Wt, Wt.

117. Language and Society (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 4, or Linguistics 1 and course 2. Consideration of language in its social context. Methods of data collection and analysis; identification of socially significant linguistic variables. Contributions of the study of contextualized speech to linguistic theory. GE credit: SoSci, Wt | SL, SS, Wt, Wt.

120. Language and Culture (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2, or courses 2 and Linguistics 1. Culture, cognition, meaning, and interpretation; language and the classification of experience; communication and learning in crosscultural perspective. GE credit: SoSci, Div | ACCH, DD, OL, SS, Wt.
121. Special Topics in Medical Anthropology (4)
Lecture/discussion—4 hours. Prerequisite: course 2 or Science and Technology Studies 1. Introduction to critical medical anthropology. Topics include anthropological analysis of biomedicine, psychiatry, systems of knowledge and healing, the body, emotions, and clinical encounters in a cross-cultural perspective. [Same course as Science and Technology Studies 121.] GE credit: SocSci, Div, Wrt | SS, WC, WE.

122A. Economic Anthropology (4)
Lecture—3 hours; discussion—1 hour. Varieties of production, exchange, and consumption behavior in precapitalist economies, their interaction with culture and social-political organization, and the theories that account for these phenomena. The effects of capitalism on precapitalist societies. Not open for credit to students who have completed course 122. [Former course 122.D.] GE credit: SocSci, Div, Wrt | ACCH, DD, SS, WC, WE.

122B. Anthropology and Political Economy (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Survey of anthropological approaches to the study of political organizations; inter-relationships among political institutions, economic infrastructures and cultural complexity. Not open for credit to students who have completed course 122A. [Former course 122.] GE credit: SocSci, Div, Wrt | SS, WC, WE.

123AN. Resistance, Rebellion, and Popular Movements (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Analysis of popular protest in Third World and indigenous societies ranging from covert resistance to national revolts. Comparative case studies and theories of peasant rebellions, millenarian movements, social bands. Indian "wars," ethnic and regional conflicts, gender and class conflicts. Not open for credit to students who have completed course 123AS. [Former course 123A.] GE credit: SocSci | SS, WC, WE.

124. Religion in Society and Culture (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Discussion of anthropological theories of religion with emphasis on non-literate societies. Survey of shamanism, magic and witchcraft, rituals and symbols, and religious movements. Extensive discussion of ethnographic examples and analysis of social functions of religious institutions. GE credit: ArtHum or SocSci, Div, Wrt | AH or SS, WC, WE.

125A. Structuralism and Symbolism (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Survey of anthropological approaches to understanding the logic of structuralism and symbolism in non-literate societies. Analysis of how anthropological and symbolic interpretations relate to cultural and linguistic universals and to the philosophical basis of relativism in the social sciences. [Former course 125.] GE credit: SocSci, Div, Wrt | SS, WC, WE.

125B. Postmodernism and Culture (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. "The U.S.-European postmodern condition. "Modernity" as an incomplete project for subordinated groups and postcolonial and political conditions leading to postmodern aesthetics, in comparison with postcolonialism, feminism and minority discourse. GE credit: SocSci, Div, Wrt | SS, WC, WE.

126A. Anthropology of Development (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Theories of development and current critiques. Colonial legacies and postcolonial political and social changes; development paradigms; and international organization and politics. Case studies emphasizing non-industrial societies. Not open for credit to students who have completed course 126. [Former course 126.] GE credit: SocSci, Div, Wrt | SS, WC, WE.

126B. Women and Development (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Current Third World and Western issues concerning women in agriculture, industry, international division of labor, political movements, revolutions, politics of health, education, family and reproduction. Impact of colonialism, the international political economy, and international feminism on women and development. Not open for credit to students who have completed course 123B. [Former course 123.] GE credit: SocSci, Div, Wrt | SS, SS, WC, WE.

127. Urban Anthropology (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Survey of approaches to urban living: political structures, organization of labor, class relations, world views. The evolution of urban life and its contemporary dilemmas. Cross-cultural comparisons discussed through case studies. GE credit: SocSci, Div, Wrt | SS, WC, WE.

128A. Kinship and Social Organization (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Comparative examination of personal kinship, descent, marriage, household and family organization, the theories that account for variation, and recent advances in the treatment of these data. Not open for credit to students who have completed course 128. [Former course 128.] GE credit: SocSci, Div, Wrt | SS, WC, WE.

128B. Self, Identity, and Family (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Comparative examination of personal kinship, descent, family and identity systems. Cross-cultural comparisons discussed through case studies. GE credit: SocSci, Div, Wrt | SS, WC, WE.

129. Health and Medicine in a Global Context (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 2 or Science and Technology Studies 1. Recent works in medical anthropology and the scientific study of medicine dealing with social and cultural aspects of global health issues such as AIDS, pandemics, clinical trials, cultural differences in illnesses, diabetes, organ trafficking, medical technologies, illness narratives, and others. [Same course as Science and Technology Studies 129.] GE credit: SocSci, Div, Wrt | SS, WC, WE.

130A. Cultural Dimensions of Globalization (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. The cultural dimensions of recent economic and political changes, the process called "globalization." GE credit: SocSci, Wrt | SS, WC, WE.

130BN. Migration and the Politics of Place and Identity (4)
Lecture/discussion—4 hours. Prerequisite: course 2 or consent of instructor. Internal and international migration from an anthropological perspective, including causes, processes, and political, economic, and cultural effects of spatial mobility and displacement. Categories of identity, place, and power in diverse cultural and historical contexts. Not open for credit to students who have completed course 123D. [Former course 123D.] GE credit: SocSci, Div, Wrt | SS, WC, WE.

131. Ecology and Politics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Analysis of the complex interactions between ecological dynamics and political processes employing the emerging conceptual approach of political ecology. Study of environmental degradation (e.g., desertification, logging, mineral extraction, petroleum, water) from various cultural and geographic regions. GE credit: SocSci, Div.

132. Psychological Anthropology (4)
Lecture—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 2 or Science and Technology Studies 1. History of and relationship between anthropology and psychoanalysis. Exploration of anthropological emotions, colonial psychology, contemporary ethnopsychiatry, studies on personhood, perception, magic, altered states of consciousness, and definitions of the normal and the pathological in different contexts and cultures. GE credit: SocSci, Div, Wrt | SS, WC, WE.

134. Buddhism in Global Culture (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: one lower division course in Anthropology, Sociology, History, or Religious Studies. Buddhist meditation and ritual as a cultural system that adapts to global and local forces of change. Anthropological theory and method in understanding global culture transmission, including Buddhist reform movements in Asia and Buddhist practice in the West. Limited enrollment. Offered irregularly.

135. Anthropology of the Family (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or completion of course 121. Lectures covering the anthropology of family, focusing on family processes and structures in a variety of cultural and geographic regions. GE credit: SocSci, Div, Wrt | SS, VL, WC, WE.

136. Ethnic and Religious Studies (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Overview of the field of religious studies in anthropology, including causes, processes, and political, economic, and cultural effects of spatial mobility and displacement. Categories of identity, place, and power in diverse cultural and historical contexts. Not open for credit to students who have completed course 128. [Former course 128.] GE credit: SocSci, Div, Wrt | ACCH, DD, SS, WC, WE.

137. Migration and Culture (4)
Lecture/discussion—3 hours; discussion—1 hour. Prerequisite: course 2. Explorations of the role of migration in postmodern societies and its advantages and limitations in comparison to written ethnographic descriptions. Essential features of ethnographic films. Film production in anthropological research and problems encountered in producing films in the field. GE credit: SocSci, Wrt | SS, VL, WC, WE.

138. Ethnographic Research Methods in Anthropology (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 2 and 137. Basic concepts and approaches to ethnographic field research. Problem formulation, research design, qualitative and quantitative data collection procedures, and techniques for organizing, retrieving, and analyzing information. Ethnographic description and constructed inference. Students will organize and conduct individual research projects. GE credit: SocSci | SS, WC, WE.

139A. Race, Class, and Gender (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Comparative analysis of class/race/gender inequality, concentrating on the ways in which beliefs about descent, "blood," and biological differences interact with property systems to affect the distribution of power in society. Not open for credit to students who have completed course 139. [Former course 139.] GE credit: SocSci, Div, Wrt | ACCH, DD, SS, WC, WE.

139BN. Gender and Sexuality (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Gender and sexual identity in foraging bands, horticultural and pastoral tribes, small-scale agricultural and industrial communities. Relations of family and gender to cultural evolution and distribution of gender hierarchies. Impact of politics, economics, religion, social practices, women’s movements on gender and sexuality. Culture, nature, and sexuality. Not open for credit to students who have completed course 139. [Former course 139.] GE credit: SocSci, Div, Wrt | ACCH, DD, SS, WC, WE.

140A. Cultures and Societies of West and Central Africa (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Ethnographic survey of West Africa and Congo Basin with analyses of representative societal issues which illustrate problems of general theoretical concern. Major consideration will be the continuities and discontinuities between periods prior to European contact and the present. GE credit: SocSci, Div, Wrt | SS, WC, WE.
148A. Culture and Political Economy in Contemporary China (4)
Lecture/discussion—4 hours. Prerequisite: course 2 or consent of instructor. The reading contemporary Chinese culture and political economy through reading ethnographic studies on recent transformations in rural and urban Chinese society. Special attention is given to state and its popular culture, spatial mobility, city, space, and gender. GE credit: SocSci, Div, Wrt | SS, WC, WE.

149A. Traditional Japanese Society (4)
Lecture—2 hours; discussion—1 hour. Prerequisite: course 2. Family, social organization from prehistoric to early twentieth-century Japan. Origins, prehistory, and traditional religious and political systems, marriage and kinship, language and culture. Challenges and traditional and contemporary Japanese culture are addressed. GE credit: SocSci, Div, Wrt | SS, WC, WE.

149B. Contemporary Japanese Society (4)
Lecture—3 hours; discussion—1 hour. Introduction to contemporary Japanese social structure, social organization, and patterns of culture. Analysis of rural-urban cultural continuities and contrasts, class relations, political and economic systems, kinship, sex/gender systems, religious beliefs and behavior, conflict, consensus, and cultural stereotypes. GE credit: SocSci, Div, Wrt | SS, WC, WE. —Shibamoto-Smith

151. Primates Evolution (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or Biological Sciences 1B. Origin and relationships of the prosimians, monkeys, and apes. GE credit: SciEng, Wrt | SE, WE.

152. Human Evolution (5)
Lecture—3 hours; discussion—1 hour; term paper. Prerequisite: course 1 or Biological Sciences 1B. Nature and results of the evolutionary processes involved in the formation and differentiation of humankind. GE credit: SciEng, Wrt | SE, WE.—D. G. Smith.

153. Human Biological Variation (5)
Lecture—3 hours; discussion—1 hour; term paper. Prerequisite: course 1 or Biological Sciences 1B. Origins, adaptive significance and methods of analysis of genetic differences among populations. Special attention given to racial differences such as those in blood groups, plasma proteins, red cell enzymes, physiology, morphology, pigmentation and dermatoglyphics. GE credit: SciEng, Wrt | QL, SE, WE.—D. G. Smith.

154A. The Evolution of Primate Behavior (5)
Lecture—3 hours; discussion—1 hour; term paper. Prerequisite: course 1 or introductory course in evolutionary biology or ecology. Examination of the ecology of primates within an evolutionary framework. Theoretical concepts in individual, population, and community ecology, illustrated with primate (and other mammal) examples. Includes topics in primate and rainforest conservation. GE credit: SciEng, Wrt | QL, SE, VL, WE.

154BN. Primate Evolutionary Ecology (5)
Lecture—3 hours; lecture/discussion—1 hour; term paper. Prerequisite: course 1 or introductory course in evolutionary biology or ecology. Examination of the ecology of primates within an evolutionary framework. Theoretical concepts in individual, population, and community ecology, illustrated with primate (and other mammal) examples. Includes topics in primate and rainforest conservation. GE credit: SciEng, Wrt | QL, SE, VL, WE.

154C. Behavior and Ecology of Primates (2)
Lecture/discussion—2 hours. Prerequisite: course 54, 154A, or 154BN; Statistics 13 or its equivalent. Scientific methods of studying, describing and analyzing the behavior and ecology of primates. Offered in alternate years. (P/NP grading only.) GE credit: SciEng, Wrt | SE.—C. Golden.

154CL. Laboratory in Primate Behavior (4)
Laboratory—6 hours; term paper. Prerequisite: course 54, 154A, or 154BN; Statistics 13 or its equivalent. Design and conduct of scientific field studies of the behavior of groups of primates at the California National Primate Research Center. Offered in alternate years. GE credit: SciEng | OL, SE, WE.—Crockett, Ibelings.

156A. Human Osteology (4)
Lecture—2 hours; laboratory—4 hours. Prerequisite: course 1 or equivalent. Human skeleton from archaeological, forensic, and paleontological perspectives, including anatomical variation with sex and age, function, evolution, growth, and development of bones and teeth. Hands-on study and identification of human skeletal remains. Cannot be taken by students who have previously completed course 156. GE credit: SciEng | SE.

156B. Advanced Human Osteology (4)
Lecture—2 hours; laboratory—4 hours. Prerequisite: course 156A or equivalent. Human skeletons from archaeological, forensic, and paleontological contexts. Bone and tooth structure, growth, and development; measurement, statistics, and biomechanics; assessment of age, sex, weight, height, and ancestry; and indicators of injuries, diet, and activities. Offered in alternate years. GE credit: SciEng | SE.

157. Anthropological Genetics (3)
Lecture—3 hours. Prerequisite: course 1 or Biological Sciences 1A, and either Genetics 100 or enrollment in course 157 (concurrently or following). Methods for identifying genetic variation in human blood group antigens, serum proteins and red cell enzymes (hemaglutination), general electrophoresis on starch, cellulose acetate and polyacrylamide, immunodiffusion and immunoelectrophoresis on agarose. (P/NP grading only.) GE credit: QL, SE.

158. The Evolution of Females and Males: Biological Perspective (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1. Current theoretical frameworks for explaining the evolution of sex differences and for understanding the interrelationship between biological processes and cultural consequences of gender roles. GE credit: SciEng, Wrt | OL, WE.—D. G. Smith.

159. Molecular Anthropology of Native America (4)
Seminar—3 hours; term paper. Prerequisite: course 1 or Biological Sciences 1B or consent of instructor. Use of DNA and other genetic polymorphisms to test hypotheses regarding genetic relationships among different Native American tribal groups and about prehistoric population replacements and migrations to and within the Americas. Integration with cranio-metric, archaeological, paleoenvironmental, linguis- tic and ethnohistorical evidence. GE credit: SciEng, QL, SE.—D. G. Smith.

160. Neandertals and Modern Human Origins (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or equivalent. Origins, evolution, and disappearance of Neandertals, and the relationship of humans like us in both anatomy and behavior. Interpretation of the fossil and archaeological records of Europe and Africa. Genetics of living and fossil humans. Offered in alternate years. GE credit: SciEng | SE.—Weaver.

170. Archeological Theory and Method (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1 and 3. Introduction to history and development of archeological theory and method, with particular emphasis on the basic dependence of the latter on the former. Stress is on historical development of archeology in the New World. GE credit: SocSci, Div, Wrt | SS, WE.—Bettiger.
172. New World Prehistory: The First Arrivals (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 3 or consent of instructor. Survey of the prehistory of North America. Offered in alternate years. GE credit: SocSci, Div, Wrt | SS, WC, WE. —Darwent

173. New World Prehistory: Archaic Adaptations (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 3 or consent of instructor. Survey of the prehistory of North America with particular emphasis on the East, Southeast, Midwest, Plains, Southwest, and Northwest. Offered in alternate years. GE credit: SocSci, Div, Wrt | SS, WE. —Darwent

174. European Prehistory (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 3 or consent of instructor. Survey of the prehistory of Europe from its earliest human inhabitants, to the Neandertal and first modern humans, and through early agricultural and complex societies. Analysis and interpretation of the European archaeological record for understanding human dispersals into Europe. Offered in alternate years. GE credit: SocSci | SS, WC, WE. —Eerkens

175. Andean Prehistory: Archaeology of the Incas and their Ancestors (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 3. Prehistory of the Andean region, especially Peru, from the earliest hunting and gathering societies through the use of agricultural technology and archaeological data to reconstruct ancient human adaptations to the varied Andean environments. Offered in alternate years. GE credit: SocSci | SS, WC, WE. —Eerkens

176. Prehistory of California and the Great Basin (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 3 or consent of instructor. Description and analysis of the prehistoric peoples of California and the Great Basin from earliest times to European contact. Offered in alternate years. GE credit: SocSci, Div, Wrt | ACGH, DD, SS, WE. —Eerkens

177. African Prehistory (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 3 or consent of instructor. Survey of the prehistory of Africa from early human ancestors, through modern human origins, and into early agricultural and complex societies in the context of the Bantu expansion. Analysis and interpretation of the African archaeological record, incorporating human paleontology and genetics. Offered in alternate years. GE credit: SocSci | SS, WC, WE. —Eerkens

178. Hunter-Gatherers (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 3 or consent of instructor. Survey of prehistory of Africa from early human ancestors, through modern human origins, and into early agricultural and complex societies in the context of the Bantu expansion. Analysis and interpretation of the African archaeological record, incorporating human paleontology and genetics. Offered in alternate years. GE credit: SocSci | SS, WC, WE. —Eerkens

179. Asian Prehistory (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 3 or consent of instructor. Survey of the prehistory of Asia from the earliest human occupations with primitive technologies and without benefit of modern lifeway in which peoples support themselves with agriculture on the island of Madagascar. Offered in alternate years. GE credit: SocSci. —Zwanyi

180. Zooarchaeology (4)
Lecture—2 hours; discussion/laboratory—3 hours. Prerequisite: course 1 and 3 or consent of instructor. Theoretical and practical study of identifying animal skeletal remains from archaeological sites. Identification and quantification of zooarchaeological material, cultural and natural processes affecting animal bones from both prehistoric and posthistoric times. Use of faunal remains for determining past human diets and past environments. Offered in alternate years. GE credit: SciEng | SE. —Darwent, Steele

181. Field Course in Archaeological Method (9)
Lecture—6 hours; daily field investigation. Prerequisite: course 3. On-site course in archaeological methods and techniques held at a field location in the western United States, generally California or Nevada. Introduces basic methods of archaeological survey, mapping, and excavation. GE credit: SciEng | SE—IV.

182. Archaeometry (4)
Lecture—3 hours; discussion/laboratory—1 hour. Prerequisite: course 3; Statistics 13 or the equivalent recommended. Course aimed at the study of the chemical and physical properties of archaeologically relevant materials. Types of anthropological questions that can be addressed with different methods. Preparation and analysis of archaeological materials. GE credit: SciEng | GL, SE, VL, WE. Offered in alternate years. —Eerkens

183. Laboratory in Archaeological Analysis (4)
Lecture—2 hours; laboratory—6 hours. Prerequisite: course 181 or consent of instructor. Museum preparation, advanced field investigation, and guidance in preparation of museum material for publication. May be repeated for credit with consent of instructor. Limited enrollment. GE credit: SciEng, Wrt | GL, QL, SE, WE.

184. Prehistoric Technology: The Material Aspects of Prehistoric Adaptation (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or 3. Examination of the role of lithic, ceramic, textile and wooden implements as elements in prehistoric survival and development. Emphasis is descriptive, but the significance of material resources as factors in prehistoric adaptation, settlement patterns, and culture change are discussed. Offered in alternate years. GE credit: SocSci | SS, WC, WE. —Eerkens

191. Topics in Anthropology (4)
Lecture/discussion—3 hours; term paper. Prerequisite: junior or senior standing in anthropology. Intensive treatment of a special anthropological topic or problem. May be repeated one time for credit when topic differs.

192. Internship in Anthropology (1-12)
Internship—3-36 hours. Prerequisite: Upper division standing, consent of instructor. Work experience off and on in campus or off-campus sites in anthropology. GE credit: P/NP grading only.

194H. Special Study for Honors Students (1-5)
Special study. Prerequisite: open only to majors of senior standing who qualify for honors program. Independent study of an anthropological problem involving the writing of an honors thesis. May be repeated for a total of 12 units including 192H courses taken in other departments. [P/NP grading only.]

197T. Tutoring in Anthropology (1-5)
Tutoring—1-5 hours. Prerequisite: upper division standing with major in Anthropology and consent of Department Chairperson. Leading of small voluntary study groups affiliated with one of the department's regular courses. May be repeated for credit. [P/NP grading only.]

198. Directed Group Study (1-5)
Tutorial—1-5 hours. Prerequisite: upper division standing with major in Anthropology and consent of Department Chairperson. Leading of small voluntary discussion groups affiliated with one of the department’s regular courses. May be repeated for credit. [P/NP grading only.]

207. Ethnographic Writing (4)
Lecture—3 hours; term paper. Prerequisite: courses 137, 201, or the equivalent. Relationship between conducting participant observation of others and writing it up, emphasizing the processual rift between the reality of fieldwork and its written representation. Study of various literary genres and textual strategies used in cultural anthropology. May be repeated for credit.

210. Aspects of Culture Structure (4)
Lecture—3 hours; term paper. Analysis of various phases of culture, such as religion, economics, law, and folklore. May be repeated for credit when topic differs. —I, II, III. [I, II, III.]

211. Advanced Topics in Cultural Ecology (4)
Lecture/discussion—3 hours; term paper. Prerequisite: Environmental Science and Policy/Anthropology 133, graduate standing in Anthropology or Ecology. Topics of current analytical and methodological importance in cultural ecology. Examination of general issues in cultural ecology through study of human response to and influence on climate. [Same course as Ecology 211.]

212. Political Ecology (4)
Lecture/discussion—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Interdisciplinary seminar evaluating contributions from ecological anthropology, political economy, cultural constructivism, postmodernism, and feminism towards development of theories of political ecology. Historical relationships between local/global power...
216. Problems in Archeological Method (4)
Seminar—3 hours; term paper. Techniques for analyzing archeological data; application to various prehistoric cultures. May be repeated for credit with consent of instructor. —Warren, Stolt, Eerkens

217. Quantitative Modeling in Archaeology (4)
Lecture/discussion—3 hours; term paper. Examination of the nature of archeological data with a focus on the quantitative and statistical techniques available to model, analyze, display, and make sense of such data. Offered in alternate years. —Ill. Eerkens

218. Topics in New World Prehistory (4)
Seminar—3 hours; term paper. Advanced study on current problems in New World Prehistory and archaeology. May be repeated for credit only if material is unique for that student and with consent of instructor. May be repeated for credit. Offered irregularly.

219. Topics in Old World Prehistory (4)
Seminar—3 hours; term paper. Advanced study on current problems in Old World prehistory and archaeology. May be repeated for credit only if material is unique for that student and with consent of instructor. May be repeated for credit. Offered irregularly.

220. Field Course in Linguistics (4)
Seminar—2 hours to 2 hours. Prerequisite: courses 110, 111. Techniques of eliciting, recording, and analyzing; work with a native speaker.

221. Rural Transformation in Postcolonial Societies (4)
Seminar—3 hours; term paper. Prerequisite: courses 223, 265, or consent of instructor. Problems of rural transformation arising out of political and economic interaction between national elites and rural regions and their implications under varying conditions of induced change in postcolonial societies. Attention will be given to the implications of this interaction for rapid economic growth. May be repeated for credit.

222. Cities and Citizenship (4)
Seminar—3 hours; term paper. Prerequisite: courses and consent of instructor. Problems of rural transformation arising out of political and economic interaction between national elites and rural regions and their implications under varying conditions of induced change in postcolonial societies. Attention will be given to the implications of this interaction for rapid economic growth. May be repeated for credit.

223. Economic Anthropology (4)
Seminar—3 hours; term paper. Prerequisite: course 122 or consent of instructor. Selected current methodological and theoretical problems in the analysis of modern economic systems.

224. Problems in Comparative Religion (4)
Seminar—3 hours; term paper. Advanced study on current problems in the anthropological study of religion.

225. State and Nation in the Modern World (4)
Seminar—3 hours; term paper. A presentation of current anthropological theories of the origins and nature of the modern nation-state in both the First and Third Worlds and special reference to state ideology (nationalism) and forms of control.

226. Consciousness and Resistance (4)
Seminar—3 hours; term paper. Prerequisite: completion of first-year graduate work or consent of instructor. Consideration of approaches to the study of social inequality, and responses of subordinated groups. Emphasis on situating approaches to contemporary social theory, concrete research problems, and political strategies. Topics: formulations of consciousness and identity; collective action, accommodation to frontal resistance.

228. Culture and Power (4)
Seminar—3 hours; extensive writing. Prerequisite: graduate standing or consent of instructor. Exploration of one of the core paradigms within contemporary anthropological inquiry, “culture and power.” Focus on how distant theoretical perspectives—Marxism, feminism, poststructuralism, and feminism—have examined the mutually constitutive nature of culture and power. —II. (II.) Sawyer

229. Gender, Identity, and Self (4)
Seminar—3 hours; term paper. Intersections of gender, identity, and selfhood cross-culturally and historically. How the self is feminized and masculinized, and with interfaces with sexual, race, class, work, national, minority, and majority identities under different historical, cultural, and social structural conditions. May be repeated for credit when topic differs. —II. (II.) Joseph

Lecture—1.5 hours; seminar—1.5 hours; term paper. Prerequisite: graduate standing in one of the social sciences including History. Comparative examination of family and kinship concepts, context, and of reproductive behaviors and strategies. A major theme is how family-system norms specify the relative desirability of differently configured off-spring sets. Cases are drawn from Western Europe and South and East Asia.

232. Political Movements (4)
Seminar—3 hours; term paper. Prerequisite: completion of first-year graduate work recommended. An interdisciplinary approach to political movements of protest, reform, and revolution emphasizing historical comparison and evaluation of major theoretical approaches including world systems, resource mobilization, state/culture, structural choice, moral economy, social class and gender.

239. Problems in African Society and Culture (4)
Seminar—3 hours; term paper. Prerequisite: courses and consent of instructor. Problems of rural transformation arising out of political and economic interaction between national elites and rural regions and their implications under varying conditions of induced change in postcolonial societies. Attention will be given to the implications of this interaction for rapid economic growth. May be repeated for credit.

245. Ethnology of Northern and Central Asia (4)
Seminar—3 hours; term paper. Prerequisite: a reading knowledge of German, Russian, Chinese, or Japanese. Lectures on the culture aboriginally found north of the Caucasus-Korea line. Supervised study of the primary and secondary sources. Work with informants when available.

246. Ethnology of Europe (4)
Seminar—3 hours; term paper. Prerequisite: a reading knowledge of a European language other than English. Supervised study of the primary and secondary sources dealing with the ethnography and culture history of Europe. Emphasis upon folk, peasant, and minority groups.

248. Topics in Chinese Culture and Society (4)
Seminar—3 hours; term paper. Prerequisite: graduate standing in one of the social sciences. May be repeated for credit with consent of instructor.

250. Behavioral Ecology of Primates (4)
Seminar—3 hours; term paper. Prerequisite: course 154A (may be taken concurrently) or the equivalent. Analysis of primate behavior, with particular emphasis on adaptation for field studies. May be repeated for credit when topic differs.

251. Anthropology Colloquium Seminar (1)
Seminar—1 hour. Reports and discussions of recent advances in the subfields of anthropology. To be presented by guest speakers. May be repeated twice for credit. (S/U grading only.) —I, II, III, IV.
16. Metal Properties and Fabrication (2)
Lecture—1 hour; laboratory—3 hours. Study of metal properties and of techniques for fabricating in metal. Physical properties considerations, effects of techniques on quality and appearance, and evaluation procedures. Experience in working with metal. (P/NP grading only.) GE credit: QL, SE, VL—II. (I.) Shafii

17. Plastic Properties and Fabrication (2)
Lecture—1 hour; laboratory—3 hours. Study of the properties of plastic materials and the fundamentals of fabrication techniques. Experience in working with common plastics, with applications to biological systems. (P/NP grading only.) GE credit: QL, SE, VL—II. (I.) Shafii

49. Field Equipment Operation (2)
Lecture—1 hour; laboratory—3 hours. Operation, adjustment, and troubleshooting of farm tractors and field equipment. Principles of operation, equipment terminology and uses of tillage, cultivating, thinning, and planting equipment. Typical sequences in cropping practices. (P/NP grading only.) GE credit: QL, SE, VL—II. (I.) Shafii

52. Field Equipment Welding (2)
Lecture—1 hour; laboratory—3 hours. Prerequisite: course 16 or consent of instructor. Intermediate welding to include hardfacing and use of welding. Class projects on repair and fabrication by welding. Troubleshooting and major repair of field equipment. (P/NP grading only.) GE credit: QL, SE, VL—II. (I.) Shafii

98. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only.) GE credit: SE

99. Special Study for Lower Division Students (1-5)
(P/NP grading only) GE credit: SE

Upper Division

101. Engine Technology (3)
Lecture—2 hours; laboratory—5 hours. Prerequisite: upper division standing or consent of instructor. Principles of 2-stroke cycle, 4-stroke cycle gasoline and 4-stroke cycle diesel engine construction and operation. Engine systems, performance, troubleshooting and overhaul. GE credit: SciEng | QL, SE, VL—II. (I.) Rosa

110L Experiments in Food Engineering (2)
Laboratory—6 hours. Prerequisite: Food Science and Technology 110B (may be taken concurrently). Use of temperature sensors; measurement of thermal conductivity and heat transfer in foods; refrigeration, freezing, concentration and dehydration of foods. GE credit: SciEng | QL, SE, VL—I. (I.) Singular

121. Animal Housing and Environment Management (2)
Lecture—2 hours. Prerequisite: Animal Science 1 or 2. Optimal structures and environments for animal growth and comfort; heat and moisture transfer principles; heating, cooling, ventilating principles and equipment; animal housing design; environmental regulations and waste management practices. Offered in alternate years. GE credit: SciEng | SE—II. (I.) Zhang

142. Equipment and Technology for Small Farms (2)
Lecture—1 hour; laboratory—3 hours. Types and characteristics of farm equipment and technology appropriate for small commercial farming. Adjustment and calibration of equipment. Selection of and budgeting for equipment. (Same course as International Agricultural Development 142.) GE credit: SciEng | QL, SE, VL—II. (II.) Perkins

150. Introduction to Geographic Information Systems (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: Plant Sciences 21 or equivalent with consent of instructor. Priority given to College of Agricultural and Environmental Science majors. Basic concepts, principles and methods of GIS are presented. Data structures, database design, GIS data creation, GIS and spatial analysis techniques are emphasized. Lab topics include: online data sources, aerial photogrammetry, GPS data input, suitability analysis, cartographic design and graphics. Not open for credit to students who have completed Applied Biological Systems Technology 180/Plant Sciences 180 or Applied Biological Systems Technology 181N. GE credit: SciEng | QL, SE, VL—II. (I.) Greco, Upadhyay

161. Water Quality Management for Aquaculture (3)
Lecture—3 hours. Prerequisite: Biological Sciences 18, Mathematics 16B, Chemistry 2B. Basic principles of water chemistry and water treatment processes as they relate to aquacultural systems. Offered in alternate years. GE credit: SciEng | QL, SE, VL—I. (I.) Piedrahita

163. Aquaculture Systems Engineering (3)
Lecture—3 hours. Prerequisite: course 161. Design of aquatic systems: design methodology, principles and design, site selection and facility planning, management operations, computer modeling. Offered in alternate years. GE credit: SciEng | QL, SE, VL, WE—II. (II.) Delwiche, Grismer

181N. Concepts and Methods in Geographic Information Systems (4)
Lecture—4 hours, laboratory/discussion—3 hours. Prerequisite: Agricultural Management and Rangeland Resources 21 or equivalent familiarity with computers, Agricultural Management and Rangeland Resources 120 or the equivalent, Mathematics 16A. Management and analysis of georeferenced data. Spatial database management and modeling. Applications to agriculture, biological resource management and social sciences. Cartographic modeling. Vector and raster-based geographic information systems. Not open for credit to students who have completed Agricultural Management and Rangeland Resources 132. (Same course as Plant Sciences 180.) GE credit: SciEng | QL, SE, VL—I. (II.) Plant

181N. Concepts and Methods in Geographic Information Systems (4)
Lecture/laboratory—5 hours. Prerequisite: course 180 or Agricultural Management and Rangeland Resources 180 or Landscape Architecture 50 or consent of instructor. Data representation and analysis in geographic information systems (GIS). Creation of spatial data sets from analog and digital sources such as aerial photography and maps; data structures, data management, database design, georeferencing, geostatistics, serverless models, analysis, and spatial data visualization. Offered in alternate years. GE credit: SciEng | SE, SL, VL—II. (II.) Zang

182. Environmental Analysis using GIS (4)
Lecture—2 hours; laboratory—4 hours. Prerequisite: course 180 or equivalent GIS experience and skills; general biology and/or ecology courses recommended. Ecosystem and landscape modeling with emphasis on hydrology and solute transport. Spatial analysis of environmental risk including eco- logical risk assessment, natural resource management. Spatial database structures, scripting, data models, and error analysis in GIS. Offered in alternate years. (Same course as Hydrologic Science 182.) GE credit: SciEng | QL, SE, SL, VL—III. (III.) Zhang

190C. Research Conference for Advanced Undergraduates (1)
Discussion—1 hour. Prerequisite: consent of instructor. Research conferences for specialized study in applied biological systems technology. May be repeated for credit. (P/NP grading only.) GE credit: SE—II. (II.)
192. Internship in Applied Biological Systems Technology (1-5)
Internship—3-15 hours. Prerequisite: upper division standing; approval of project prior to period of internship. Supervised internship in applied biological systems technology. May be repeated for credit. (P/NP grading only.) GE credit: SE.

197T. Tutoring in Applied Biological Systems Technology (1-5)
Tutorial. Tutoring individual students, leading small voluntary discussion groups, or assisting the instructor in laboratories affiliated with one of the departments. Regular courses, or may be repeated for credit if topic differs. (P/NP grading only.) GE credit: SE.

198. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only.) GE credit: SE.

199. Special Study for Advanced Undergraduates (1-5)
(P/NP grading only.) GE credit: SE.

Graduate

233. Pest Control Practices (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: graduate standing or consent of instructor. Practical and theoretical considerations of pest control systems and techniques. Design, selection, and use of mechanical systems for field, orchard, greenhouse, and vector control use. Biological, legal, and environmental considerations in pest control and pesticide application.—II. Giles

290C. Graduate Research Conference (1)
Discussion—1 hour. Prerequisite: consent of instructor. Research problems, progress, and techniques in applied biological systems technology. May be repeated for credit. (S/U grading only) GE credit: SE.

298. Group Study (1-5)
299. Research (1-12)
(S/U grading only)

Professional

317. Teaching Agricultural Mechanics (2)
Lecture—1 hour; laboratory—3 hours. Prerequisite: a course in physics; 6 units related to agricultural mechanics; enrolled in Agricultural Education Teacher Credential Program. Preparation of the teacher to plan, organize, and conduct an agricultural mechanics program in secondary schools. Development of and presentation of lesson plans and teaching aids. Review of subject matter in metal fabrication, power and machinery and architectural structures areas.—I (1). Perkins

Applied Mathematics (A Graduate Group)

Group Office. 1130 Mathematical Sciences Bldg. 530-752-8130
studentservices@math.ucdavis.edu; http://math.ucdavis.edu/grad/ggam

Faculty. The Group includes approximately 90 faculty members, of whom about one-third are in the Department of Mathematics. Membership comprises chemists, biologists, physicists, geologists, statisticians, computer scientists, and engineers. Research interests include biology, atmospheric sciences, mechanics, solid and fluid dynamics, optimization and control, theoretical chemistry, computer and engineering sciences, mathematical physics, signal and image processing, harmonic analysis, numerical analysis and nonlinear partial differential equations. A complete list of faculty and their research areas are available at http://math.ucdavis.edu/grad/ggam/faculty.

Graduate Study. Students prepare for careers where mathematics is applied to problems in the physical and life sciences, engineering, and management. The degree requirements consist of rigorous training in applied mathematics, including course work and a research dissertation under the direction of a member of the Graduate Group in Applied Mathematics. The M.S. degree provides preparation for further study in applied mathematics or an application area, or for a career in industry or public service. The Ph.D. degree provides preparation for a career in research and/or teaching, or in industrial or rational research laboratories. For further information, please contact studentservices@math.ucdavis.edu or 530-752-8130.

New applicants are admitted to the fall quarter only.

Preparation. The program admits qualified students with a bachelor’s degree in mathematics, physics, chemistry, engineering, economics, the life sciences and related fields. General and advanced mathematics GRE scores are required, and applicants should display evidence of strong quantitative skills. Undergraduate courses should include calculus (including vector calculus), linear algebra, and ordinary differential equations. Advanced calculus (introduction to real analysis) is strongly recommended. Additional background in probability, partial differential equations, and/or numerical analysis is also required. The ability to program in a high-level computer programming language (e.g., C, Fortran, MATLAB, Python, R, etc.) is assumed.

Graduate Advisers. Contact the Student Services Office at 530-752-8130 or by email at studentservices@math.ucdavis.edu.

Courses. For a list of the courses in applied mathematics and mathematics, see Mathematics, on page 390.

Applied Computing and Information Systems

Courses. See Physics, on page 466.

Aquaculture

Courses. See Animal Biology, on page 150; Animal Science, on page 153; Applied Biological Systems Technology, on page 164; and Wildlife, Fish, and Conservation Biology, on page 544.

Arabic

Courses. See Classics, on page 198.

Art History

Courses. See ART, on page 382.

Biology

Courses. See BIOL, on page 363.

Chemistry

Courses. See CHEM, on page 372.

Computation and Information Systems

Courses. See COMS, on page 110.

Departmental Honors

Courses. See Honors, on page 497.

Economics

Courses. See ECON, on page 386.

Engineering

Courses. See ENGR, on page 376.

Environmental Science

Courses. See ENVS, on page 296.

French

Courses. See FREN, on page 380.

Geological and Planetary Sciences

Courses. See GEOL, on page 398.

Geophysics, Planetary Geology, and Fluvial Geomorphology

Courses. See GEOP, on page 376.

Geophysics, Planetary Geology, and Fluvial Geomorphology (Graduate Pathway)

Courses. See GEOP, on page 376.

German

Courses. See GER, on page 384.

History

Courses. See HIST, on page 384.

History of Art

Courses. See ART, on page 382.

Humanities

Courses. See HUM, on page 414.

Integrative Biology

Courses. See IB, on page 43.

Japanese

Courses. See JAP, on page 382.

Japanese Literature

Courses. See JAP, on page 382.

Japanese History

Courses. See JAP, on page 382.

Latin

Courses. See LAT, on page 382.

Legal Studies

Courses. See LS, on page 386.

Management

Courses. See MGMT, on page 394.

Mathematics

Courses. For a list of the courses in applied mathematics and mathematics, see Mathematics, on page 390.
Art History

galleries, historic preservation, art libraries, publishing, journalism, advertising, art conservation, and art investment. As the world becomes increasingly flooded with images, the critical visual literacy gained through the study of art history becomes more important for a wide variety of careers.

A.B. Major Requirements:

Preparatory Subject Matter .......................... 20
Any four of the following courses: Art History 1A, 1B, 1C, 1DV, 1E, 5, and 25. 16
Any lower division Art Studio course except Art 10 or 30 ................................................. 4

Depth Subject Matter .................................. 40
Four courses, one each in four of the following six areas. Two courses must be from areas a, b, or c. The two courses must be from areas d, e, or f. ...................................................... 16
(a) Ancient Mediterranean Art: Art History 172A, 172B, 173, 175
(b) East Asian Art: Art History 163A, 163B, 163C, 163D, 164
(c) Islamic Art: Art History 155, 156
(d) European Art before 1700: Art History 110, 120A, 176A, 176B, 176C, 178B, 178C, 179B
(e) Western Art 1700-1900: Art History 110, 118B, 121A, 130A, 138B, 138C, 188A, 188B 188C
(f) Art after 1900: Art History 110, 148, 163D, 183C, 184, 185, 186, 187, 189

Seminar or Undergraduate Seminar Art History 190A-L .................................................. 4
Electives .................................................................. 20
Five additional upper-division Art History courses to be chosen in consultation with the major adviser. Appropriate course substitutions may be made with the permission of the major adviser. Art History 401 and 402 may be counted among the elective units.

Total Units for the Major .................................. 60

Emphasis in Architectural History

Emphasis in Architectural History follows the same requirements as for the Art History major above, applying at least six of the following courses to their respective required areas or as electives: Art History 25, 110, 120A, 155, 156, 163A, 163B, 163C, 163D, 164
(c) Islamic Art: Art History 120A, 155, 156
(d) European Art before 1700: Art History 110, 120A, 176, 178B, 178C, 179B
(e) Western Art 1700-1900: Art History 110, 148, 163D, 183C, 184, 185, 186, 187, 189

Fulfilling the undergraduate seminar requirement (Art History 190A-H) through an architectural topic is highly recommended.

Minor Program Requirements:

Minor Art History ............................................. 20
Three courses chosen from three of the following six areas with at least one course in area a, b, or c, and one course in area d, e, or f. ............................................................. 12
(a) Ancient Mediterranean Art: Art History 172A, 172B, 173, 175
(b) East Asian Art: Art History 163A, 163B, 163C, 163D, 164
(c) Islamic Art: Art History 120A, 155, 156
(d) European Art before 1700: Art History 110, 206, 178B, 178C, 179B
(e) Western Art 1700-1900: Art History 110, 148, 163D, 183C, 184, 185, 186, 189

Two additional Art History courses which may be included in the undergraduate Seminar, Art History 190AH strongly recommended ....................................................... 8
One lower division course may be substituted for upper-division study in any of these areas. Other appropriate substitutions may be made for the course options listed above with the prior consent of the major adviser.

Honor Program. The Honor Program is encouraged for Art History majors who are considering attending graduate school. To be eligible for the program, a student must maintain a grade point average of 3.700 in the major or the consent of the major adviser. In addition to meeting the standard major requirements, the Honor students complete one undergraduate seminar (Art History 190A-L), and write an Honors thesis (course 194H) after completing Art History 100 or equivalent, and after satisfactorily preparing a preliminary thesis draft through a preparatory special study (Art History 199), supervised by the prospective thesis adviser. Students participating in this Program are candidates for Departmental recommendation for graduation with High or Highest Honors. See the Academic Information chapter, Letters and Science honors section, of this catalog and consult the department website for more information.

Teaching Credential Subject Representative. Department Chairperson; see the Teaching Education Program.

Graduate Study. The Program in Art History offers studies leading to the Master of Arts degree in History of Art as preparation for further graduate study or professional work. For more information, contact the Graduate Staff Adviser at 530-752-8710, or see http://arthistory.ucdavis.edu.

Courses in Art History (AHI)

Lower Division

1A. Ancient Mediterranean Art (4)

Lecture—3 hours; discussion—1 hour. Introduction to the art and architecture of the ancient Mediterranean world, including Mesopotamia, Egypt, Greece, and Rome. GE credit: AHI 100 or 190A-L. II. (I.) Roller

1B. Medieval and Renaissance Art (4)

Lecture—3 hours; discussion—1 hour. Christian, Barbian, Moslem, and Classical traditions in European Art from the fourth through the sixteenth centuries. GE credit: AHI 100 or 190A-L. III. (II.) Burnett

1C. Baroque to Modern Art (4)

Lecture—3 hours; discussion—1 hour. Survey of developments in western art and visual culture from 1600-present. Major artists and movements, theories of visuality, focusing on interpretations of class, gender, sexuality, and ethnicity from the Baroque period through modernism to the present. May be repeated for credit. GE credit: AHI 100 or 190A-L. Div | ACGH, AHI, VL, WC, WE. II, IV. (II, IV.)

1D. Arts of Asia (4)

Lecture—3 hours; discussion—1 hour. Introduction to major forms and trends in the arts and material culture of Asia from the Neolithic to the contemporary emphasizing the visual manifestations of secular and religious ideas and ideals. Not open for credit to students who have completed course 194D. GE credit: AHI 174D. Div | AHI, VL, WC, WE. III. (II.)

1DY. Arts of Asia (5)

Web virtual lecture—2.5 hours; discussion—1 hour; lecture/discussion—1.5 hours. Introduction to major forms and trends in the arts and material culture of Asia from the Neolithic to the contemporary, emphasizing the visual manifestations of secular and religious ideas and ideals. Not open for credit to students who have completed course 194D. GE credit: AHI 174D. Div | AHI, VL, WC, WE. III. (II.)

1E. Islamic Art and Architecture (4)

Lecture—3 hours; discussion—1 hour. Introduction to the art and architecture of the Islamic world including the Middle East, Africa, Europe, and South Asia, from the 7th century CE to the 20th century. GE credit: AHI 174E. Div | AHI, VL, WE. I. (I.) Watenpaugh

5. Introduction to Visual Culture (4)

Lecture—2 hours; film discussion—2 hours; discussion—1 hour. Development of visual literacy for an increasingly visual world. Critical analyses focus on a wide variety of visual media—art, television, film, advertising, the Internet—intended for a diverse spectrum of audiences. GE credit: AHI 401, Div, WR. II, III.

10. Twenty Monuments (4)

Lecture—3 hours; lecture/discussion—1 hour. Demonstration of the breadth and depth of art/historical interpretation through the consideration of the meaning and significance of world-historical monuments from prehistory to the present. GE credit: AHI 100 or 190A-L. Div | AHI, VL, WE. II. (II.)

25. Introduction to Architectural History (4)

Lecture—3 hours; discussion—1 hour. Formal and social history of architecture examining design principles, major traditions, and concepts of architectural history with a focus on issues in Western architecture. Emphasis on nineteenth and twentieth centuries. GE credit: AHI 100 or 190A-L. VL, WC, WE. II. (II.)

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. Restricted to lower division students. [P/NP grading only.]

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor. [P/NP grading only.]

Upper Division

100. Methods of Art History (4)

Extensive writing or discussion—3 hours; term paper. Prerequisite: two upper-division Art History courses; intended primarily for junior and senior students in Art History. Methods of art historical research and analysis, and the general issues in critical thought. Writing skills appropriate to a range of art/historical exposition. Offered irregularly. GE credit: AHI 174D. Div | AHI, VL, WE. II. Ruda

110. Cultural Histories of Museums (4)

Lecture/discussion—3 hours; term paper. Evolution of museums in the western world from the “cabinet of curiosities” of sixteenth-century Europe to the modern “art center.” The changing motives behind collecting, exhibiting, and interpretation of objects. Attention to museums’ historical legacies and continuing philosophical dilemmas. Offered in alternate years. GE credit: AHI 174D. Div | AHI, VL, WE. III. Strazdes

120A. Art, Architecture, and Human Rights (4)

Lecture/discussion—4 hours. Study of human rights as they relate to art, architecture, and cultural heritage. Examines museums, art collections, and cultural heritage management, their relation to the cultural prerogatives of communities and indigenous groups, and protection of cultural heritage during war and conflict. [Same course as 120A offered in alternate years.] GE credit: AHI 174D, Div | AHI, VL, WC, WE. II—IV. (II, IV.)

148. Theory and Criticism: Painting & Sculpture (4)

Lecture—3 hours; term paper. Prerequisite: Art Studio 5 or 7 recommended. Study of forms and symbols in historic and contemporary masterpieces. [Same course as Art Studio 148 offered in alternate years.] GE credit: AHI 174D, Div | AHI, VL, WE. II—III. Hearne, Pardee

150. Arts of Sub-Saharan Africa (4)

Lecture—3 hours; term paper or gallery studies and review. Traditional arts and crafts of sub-Saharan Africa; particular attention to relationships between sculpture and culture in West and Central Africa. GE credit: AHI 174D, Div | AHI, VL, WC.
151. Arts of the Indians of the Americas (4) 
Lecture—3 hours; term paper or gallery studies and review. Development of art in North America, emphasizing artistic output in Mexico. South American relationships and parallels. Recent and contemporary Indian arts and crafts from Alaska to Chile. GE credit: ArtHum, Div | AH, VL, WC.

152. Arts of Oceania and Prehistoric Europe (4) 
Lecture—3 hours; term paper. Traditional arts of Aboriginal Australia, Melanesia, Polynesia, and Micronesia, as seen in their cultural contexts. Prehistoric Europe and the Near East. GE credit: ArtHum, Div | AH, VL, WC.

155. The Islamic City (4) 
Lecture—3 hours; term paper. Prerequisite: course 1E recommended. Introduction to the urban history of the Islamic world. Includes critical study of the city-landscape of the Islamic city, development of urban form, institutions and rituals, and analysis of selected themes. GE credit: ArtHum, Div, Wrt.—II. (II.) Wattenpouh

156. Arts of the Islamic Book (4) 

163A. Chinese Art (4) 
Lecture—3 hours; term paper or gallery studies and review. A survey from the beginning to the twelfth century focusing on the major art forms that are traditionally known as well as newly discovered through archaeology in China. GE credit: ArtHum, Div, Wrt | AH, VL, WC, WE.—II. (II.) Burnett

163B. Chinese Painting (4) 
Lecture—3 hours; term paper or gallery studies and review. The unique expression of ink painting, with or without colors, depicting human and animal figures, flowers-and-birds, and landscape—the favorite and enduring theme of the Chinese scholar-painter. GE credit: ArtHum, Div, Wrt | AH, VL, WC, WE.—Burnett

163C. Painting in the People's Republic of China (4) 
Lecture—3 hours; term paper. Prerequisite: course 1D or upper division standing. Analysis of the interaction between art and politics in the emergence of China into the modern world. Integration of Western influence, implementation of Mao Zedong's thought on art and development of contemporary Chinese painting. GE credit: ArtHum, Div, Wrt | AH, VL, WC, WE.—Burnett

163D. Visual Arts of Early Modern China (4) 
Lecture—3 hours; term paper. Prerequisite: course 1E3B or consent of instructor. Variable topics in Chinese art history during the 17th-19th centuries, considering artists' statements (visual and textual) within their historical contexts, asking what was at stake in the creation of new art forms. May be repeated for credit with consent of instructor. GE credit: ArtHum, Wrt | AH, VL, WC, WE.—II. Burnett

164. The Arts of Japan (4) 
Lecture—3 hours; term paper, and/or gallery studies and review (determined by instructor each quarter course offered). Study of the significant achievements in architecture, painting, sculpture, and decorative arts from prehistoric age to nineteenth century. GE credit: ArtHum, Div, Wrt | AH, VL, WC, WE.

168. Great Cities (4) 
Lecture—3 hours; term paper. Transformation in architecture and urban form in Paris, London, and Vienna in the context of varying social, political, and economic systems as well as very different cultural traditions, concentrating on the years 1830-1914. Offered in alternate years. GE credit: ArtHum, Wrt | AH, VL, WC.—Sailer

172A. Early Greek Art and Architecture (4) 
Lecture—3 hours; term paper. Examination of the origin and development of the major monuments of Greece from the prehistoric era to the mid-fifth century B.C. Not open for credit to students who have completed course 154A. (Same course as Classics 172A.) Offered in alternate years. GE credit: ArtHum, Wrt | AH, VL, WC, WE.—II. Roller

172B. Later Greek Art and Architecture (4) 
Lecture—3 hours; term paper. Study of the art and architecture of later Classical and Hellenistic Greece, from the first centruy B.C. Not open for credit to students who have completed Art History 154B. (Same course as Art History 172B.) Offered in alternate years. GE credit: ArtHum, Wrt | AH, VL, WC, WE.—II. (II) Roller

173. Roman Art and Architecture (4) 
Lecture—3 hours; term paper. Art and architecture of Rome and the Roman Empire, from the founding of Rome through the fourth century C.E. (Same course as Classics 173.) Offered in alternate years. GE credit: ArtHum, Wrt | AH, VL, WC, WE.—III. Roller

175. Architecture and Urbanism in Mediterranean Antiquity (4) 
Lecture—3 hours; extensive writing. Prerequisite: a lower division course (except 30, 31), course 1A recommended. Architecture and urban development in the ancient Near East, Greece, and Rome. Special emphasis on the social structure of the ancient city as expressed in its architecture, and on the interaction between local traditions and the impact of Greek-Roman urbanism. (Same course as Classics 175.) Offered in alternate years. GE credit: ArtHum, Div, Wrt | AH, VL, WC, WE.—(II) Roller

176A. Art of the Middle Ages: Early Christian and Byzantine Art (4) 
Lecture—3 hours; term paper or gallery studies and review. Painting, sculpture and architecture of the early Christian era and Byzantine Empire: through the later Roman Empire in the West and to the final capture of Constantinople in the East. GE credit: ArtHum, Wrt | AH, VL, WC, WE.

176B. Art of the Middle Ages: Early Medieval and Romanesque Art (4) 
Lecture—3 hours; term paper or gallery studies and review. Painting, sculpture and architecture of western Europe in the early medieval era: from the rise of the barbarian kingdoms through the twelfth century. GE credit: ArtHum, Wrt | AH, VL, WC, WE.

176C. Art of the Middle Ages: Gothic (4) 
Lecture—3 hours; term paper or gallery studies and review. Painting, sculpture and architecture in northern European regions of the fifteenth centuries. GE credit: ArtHum | AH, VL, WC, WE.

177A. Northern European Art (4) 
Lecture—3 hours; term paper or gallery studies and review. Painting and sculpture of the fifteenth century in Austria, Germany, France and the Lowlands, including such artists as Jan van Eyck and Hieronymus Bosch. GE credit: ArtHum, Wrt | AH, VL, WC, WE.

177B. Italian Renaissance Art (4) 
Lecture—3 hours; term paper or gallery studies and review. Early Renaissance in Florence, fifteenth-century artists from Donatello and Masaccio through Botticelli, in their artistic and cultural setting. GE credit: ArtHum, Wrt | AH, VL, WC, WE.

178C. Italian Renaissance Art (4) 

179B. Baroque Art (4) 
Lecture—3 hours; term paper or gallery studies and review. Seventeenth-century painting, including such artists as Caravaggio, Rubens, Rembrandt, and Velázquez. Offered in alternate years. GE credit: ArtHum, Wrt | AH, VL, WC, WE.—(II) Roller

182. British Art and Culture, 1750–1800 (4) 
Lecture—3 hours; term paper. Prerequisite: course 1C recommended. British painting in relation to the position of women in society in the mid- to late-class art market. Topics include Hogarth and popular culture, Queen Victoria and the female gate, and Pre-Raphaelite artists and collectors. Offered irregularly. GE credit: ArtHum, Wrt | AH, VL, WC, WE.—II.

183A. Art in the Age of Revolution, 1750–1850 (4) 
Lecture—3 hours; term paper. Prerequisite: course 1C recommended. Emergence of modernism in Europe from the late 18th century to the mid-19th century. Major artistic events viewed against the revolutionary backdrop of changing attitudes toward identity, race, and gender. Offered irregularly. GE credit: ArtHum | AH, VL, WC, WE.—II.

183B. Impressionism and Post-Impressionism: Manet to 1900 (4) 
Lecture—3 hours; discussion—I hour. Prerequisite: course 1C recommended. Innovations of Impressionists, Post-Impressionists, and Symbolists in relation to social changes. Assessment of role of dealers and critics, myth of the artist-genius, and gender relations in French art and culture of the late 1800s. GE credit: ArtHum, Div, Wrt | AH, VL, WC, WE.—II. (II.)

183C. Modernism in France, 1880–1940 (4) 
Lecture—10 hours; discussion—3 hours; fieldwork—11 hours. Course will take place as a 3-week summer course in France. A survey of gender and patronage in the development of modern art in France. Post-Impressionism and Surrealism are considered in relation to the intervention of dealers and women collectors in the formulation of modernism. GE credit: ArtHum, Div, Wrt | AH, VL, WC, WE.—Sailer

184. Twentieth Century Architecture (4) 
Lecture—3 hours; term paper. Prerequisite: course 25 recommended. Major movements in architecture of the twentieth century in Europe and America. Formal innovations are examined within the social, political, and economic circumstances in which they emerged. GE credit: ArtHum, Wrt | AH, VL, WE.—Sailer

Lecture/discussion—4 hours. Prerequisite: one course in art history, or upper division standing and a major or minor in the arts or humanities recommended. Social, cultural, and political development for artists and their audiences in the context of larger issues like the Mexican, Russian and German revolutions, WWI, the Depression, WWII, etc., and a critical approach to questions of modernism, modernity, and avant-gardism. Offered in alternate years. GE credit: ArtHum, Div, Wrt | AH, VL, WC.

186. Art After Modernism, 1948–Present (4) 
Lecture/discussion—4 hours. Prerequisite: one course in art history, or upper division standing and a major or minor in the arts or humanities recommended. Social, cultural, and political development for artists and their audiences in the context of larger issues like McCarthyism, the New Left, free love, feminism, Reaganiomics, globalization, etc., and a critical approach to questions of neomodernism, postmodernism, and postmodernity. Offered in alternate years. Not open for credit to students who have completed course 183E. GE credit: ArtHum, Div, Wrt | ACGH, AH, VL, WE.—I. Stimson

187. Contemporary Architecture (4) 
Lecture—3 hours; term paper. Prerequisite: course 25 and/or course 184 recommended. Introduction to world architecture and design since circa 1930. Relation of influential styles, buildings, and architects to postmodern debates and to cultural,
188A. The American Home (4)
Offered in alternate years. GE credit: ArtHum, Div, Wrt | AH, VL, III. (I, II, III."

188B. Architecture of the United States (4)
Lecture—3 hours; discussion—1 hour. Major movements from colonial times to the present. The role of buildings in a changing society, the interplay of styles with technologies of construction, the relationship between American and European developments, and developments of the architectural profession. GE credit: ArtHum, Wrt | AH. —I, II. Cogdell

188C. American Art to 1910 (4)
Lecture/discussion—4 hours; term paper. Major movements in American art from the 17th-century English speaking colonies to the onset of World War I. Offered in alternate years. GE credit: ArtHum | ACGH, AH, VL, WE. —I, II, III. Strazdes

188D. American Painting and Sculpture to the Civil War (4)
Lecture/discussion—3 hours; term paper. Prerequisite: one lower division Art History course or junior standing. Major movements in American painting and sculpture to 1865. Colonial portraiture, development of genre painting, and the Hudson River School of landscape painting. Emphasis on European cultural currents and their effects. GE credit: ArtHum, Wrt | AH. —II. Strazdes

189. Photography in History (4)
Lecture/discussion—4 hours. Prerequisite: one course in art history, or upper division standing and a major or minor in the arts or humanities recommended. Social, cultural, aesthetic and technical developments in the history of photography including patronage and reception, commercial, scientific, political and artistic applications, and a critical theoretical inquiry into photography's impact on the social category "art" and the history of subjectivity. Offered in alternate years. GE credit: ArtHum, Div, Wrt | AH, VL. —III. (I.) Simson

190A-L. Undergraduate Proseminar in Art History (4)
Lecture/discussion—3 hours; term paper. Prerequisite: Art History major, minor, or other significant training in Art History recommended. Study of a broad problem or theoretical issue. Intensive reading, discussions, research, writing. Topics (A) Mediterranean Antiquity; (B) Medieval; (C) Renaissance; (D) American Art; (E) Gendering of Culture; (F) Chinese Art and Material Culture, GE credit: ArtHum | AH, OL, VL, WC, WE; (G) Japanese Art and Material Culture; (H) Late Modern Art and Theory, GE credit: ArtHum | ACGH, AH, DD, OL, VL, WC, WE. May be repeated once for credit when topic differs. —I. (II, III."

192. Internship (2-12)
Internship—term paper or catalogue. Supervised program of internships at professional art institutions such as museums, galleries, and art archives including collections of slides and photographs. May be repeated once for credit. (P/NP grading only.)

194H. Special Study for Honor Students (4)
Independent study—12 hours. Prerequisite: course 190 or the equivalent, as determined by the major adviser. Open only to students in the Art History Honors Program. Independent study of an art historical problem culminating in the writing of an honors thesis under the supervision of a faculty guidance committee.

198. Directed Group Study (1-5)
(P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)
(P/NP grading only.)

Graduate

200A. Visual Theory and Interpretive Methods (4)
Discussion—3 hours; extensive writing. Close study of selected recent developments in interpretive methodologies used by art historians and other analysts of visual culture and the place of those developments within art history's history and in the larger field of social, cultural and historical analysis. May be repeated one time for credit. —I. (II.) Roller, Watten-paugh

200B. Research and Writing Methods in Art History (4)
Discussion—3 hours; term paper. Restricted to graduate students in art history. Development of the research, writing, and editing skills necessary for producing publishable work. Focus on reference tools used by art historians and the mechanics of scholarship, from question framing and organization of ideas to writing clear, effective prose. —II. (II.) Burnett, Strazdes

200C. Thesis Writing Colloquium (1)
Discussion—1.5 hour, tutorial. Prerequisite: course 200B, taken by all Art History M.A. students in their first year. Restricted to graduate students in Art History. Meeting concurrently with Art History M.A. students in their first year. Restricted to graduate students in Art History. Meeting concurrently with Art History M.A. students in their first year.

250. Problems in Art Historical Research (4)
Seminar—3 hours; term paper. Major topics in art historical research, emphasizing special methods of investigation, and of historical and critical analysis. May be repeated for credit. —II.

251. Seminar in Tribal Arts (4)
Seminar—3 hours; term paper. Selected topics in the art and aesthetics of small scale societies. May be repeated for credit when topic differs and with consent of instructor.

254. Seminar in Classical Art (4)
Seminar—3 hours; term paper. Selected areas of special study in classical art of the Greek and Roman tradition. Course may be repeated for credit with consent of instructor. —Roller

263. Seminar in Chinese Art (4)
Seminar—3 hours; term paper. Selected areas of special study in Chinese art. May be repeated for credit with consent of instructor. —II. Burnett

276. Seminar in Medieval Art (4)
Seminar—3 hours; term paper. Selected areas of special study in medieval art from Early Christian to late Gothic. May be repeated for credit with consent of instructor.

278. Seminar in Italian Renaissance Art (4)
Seminar—3 hours; term paper. Selected areas of special study in Italian art from the fourteenth to the sixteenth century. May be repeated for credit with consent of instructor. —III.

283. Seminar in Visual Culture and Gender (4)
Seminar—3 hours; term paper. Selected areas of special study in the relationship between visual culture and gender in Europe and America from 1750 to present. May be repeated for credit with consent of instructor. Offered in alternate years. —I.

288. Seminar in European and American Architecture (4)
Seminar—3 hours; term paper. Exploration of selected topics in European and American architectural history with concentration on the Modern Period. May be repeated for credit with consent of instructor. —II. Cogdell, Sadler, Strazdes

290. Special Topics in Art History (4)
Seminar—3 hours; term paper. Special research seminar in the theory or methods of Art History, or in a period of Art History. Topic will vary depending on the interests of the instructor or students. May be repeated for credit when topic differs and with consent of instructor. Offered irregularly. —I, II, III.

292. Internship (1-6)
Internship—3-12 hours. Prerequisite: graduate student; consent of instructor. Supervised internship at professional art or cultural institution including museums, galleries, archives, government offices, visual resources libraries, etc. May be repeated up to eight units for credit. Graduate students in Art History only. Offered irregularly. Limited enrollment. (S/U grading only)

298. Directed Group Study (1-5)
(S/U grading only)

299. Individual Study (1-6)
(S/U grading only)

Professional

Note: Various of the below courses are not offered each year.

390. Introduction to Teaching Art History for Teaching Assistants (1)
Discussion—1 hour. Designed for teaching assistants with emphasis on problems of pedagogy and professional art or cultural institution including museums, galleries, archives, government offices, visual resources libraries, etc. May be repeated up to eight units for credit. Graduate students in Art History only. Offered irregularly. Limited enrollment. (S/U grading only)

396. Teaching Assistant Training Practicum (4)
Seminar—2 hours; Practice—10 hours. Prerequisite: graduate standing. Principles and techniques of the effective teaching of undergraduate courses in the history of art. May be repeated for credit as often as the student is awarded a TAship. (S/U grading only) —I, II, III. (II, III.)

401. Museum Training: Curatorial Principles (4)

402. Museum Training: Exhibition Methods (4)
Seminar—3 hours; exhibition. Approved for graduate degree credit. History of exhibition methods in private and public collections. Comparisons of different types of museums and their exhibition problems. Lighting and techniques of display with emphasis on actual design. Experimentation with unusual presentation forms. —II.

The Major Program
The Studio Art Major provides the studio experience necessary for a broad understanding of the practice and interpretation of the visual arts.

The Program. The Art Studio program is designed to deliver a broad range of hands-on studio practices to the art major. Areas of focus include painting, sculpture, drawing, photography, ceramics, printmaking, and time-based media. Course choices/sequences are determined by the student according to major distribution requirements. Students are encouraged to explore a broad range of disciplines and are expected to take advantage of beginning classes which provide a critical introduction to the research possibilities within the major, across disciplines. In addition to studio classes, students are encouraged to participate in a distinguished visiting artist lecture series, professional practice seminars, student exhibitions/competitions, internships, and opportunities to exposure to cultural events and exhibitions in Davis, Sacramento, and the Greater Bay Area.

Portfolios. While portfolios are not required for admission to the art major, students at all levels are expected to maintain current portfolios of completed work in order to qualify and compete for the numerous internships, fellowships, grants, awards, and exhibitions the program has to offer, as well as to better prepare the graduates of graduate school and/or an independent studio practice.

Career Options. Graduates of the Studio Art Program attend prestigious post-baccalaureate and graduate programs in studio art. Alumni often go on to develop professional studio practices. Commitment to the development of one’s studio work leads to exhibition opportunities as well as accomplishments in the realm of fellowships, commissions, collaboration, and a host of other professional projects and opportunities. For the student wishing to explore additional arts-related trajectories, in the private or public sector, a studio arts education provides a strong foundation for careers and/or graduate study in K-12 art education, art therapy, arts administration, curatorial studies, set design, architecture, culinary arts, design, film, animation, art criticism/journalism among others.

Graduate Study. The Department of Art offers programs of study and research leading to the M.F.A. degree in the practice of art. For more information contact the Graduate Staff Adviser at 530-752-8710 or at http://art.ucdavis.edu.

Courses in Art Studio (ART)

Lower Division

2. Beginning Drawing (4)

Studio—6 hours. Introduction to drawing using various black and white media. Drawing techniques covered are contour line, ink bleeds, rendering, “blind” drawing, and self portrait.—I, II, III, IV, I, II, III, IV.—Henderson, Hollowell, Pardee, Puls, Werfel

5. Beginning Sculpture (4)

Studio—6 hours. Basic sculpture techniques using a variety of media. Form in space using cardboard, plaster, and other media.—I, II, III, I, II, III.—Hills, Hill, Puls

7. Beginning Painting (4)

Studio—6 hours. Introduction to techniques and concepts in the practice of painting.—Henderson, Hollowell, Werfel

8. Beginning Ceramic Sculpture (4)

Studio—6 hours. Introduction to ceramic sculpture construction and processes.—Rosen

9. Beginning Photography (4)

Studio—6 hours. Introduction to the fundamental technical, aesthetic aspects of photography. Camera skills, film developing and printing in the black and white darkroom.—Suh

10. Introduction to Art Appreciation (3)

Lecture—3 hours. The understanding and appreciation of painting, sculpture, architecture and industrial art. Illustrated lectures. Intended for non-majors. GE credit: ArtHum | AH, VL.

11. Beginning Printmaking (4)

Studio—6 hours. Introduction to printmaking techniques such as monotype, relief, and intaglio. Investigation of personal imagery through use of these techniques.

12. Beginning Video (4)

Studio—6 hours. Production techniques of video shooting, editing, lighting, sound and effects. A conceptual framework for video-art techniques.—Martin

24. Introduction to Experimental Video and Film (4)

Lecture—3 hours; discussion—1 hour; term paper. Evolution of moving image technologies. Shifts within avant-garde artistic practices. Conceptual and historical differences between film and video. Offered in alternate years. GE credit: ArtHum | AH, VL, WE—(I.) Martin

30. Introduction to Contemporary Visual Culture (4)

Lecture—3 hours; discussion/labatory—1 hour. Establishing visual literacy across the media of fine art, photography, advertising, television and film, media culture; focus on critical decoding of contemporary visual culture. GE credit: ArtHum, Div. Wrt | AH, VL—II, II.

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. Restricted to lower division students. (P/NP grading only)

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only)

Upper Division

Pre-enrollment in upper division courses is restricted to art majors.

101. Intermediate Painting (4)

Studio—6 hours. Prerequisite: courses 2, 7. Individualized projects exploring and specializing in a variety of subject matter and approaches. Builds on basic skills and concepts from beginning drawing and painting courses. Study of historical and contemporary art in relation to studio practice. GE credit: ArtHum | AH, VL—I, II, III, I, II, III.—Pardee, Werfel

102A. Advanced Painting: Studio Projects (4)

Studio—6 hours. Prerequisite: course 101. Sustained development of painting for advanced students. Approaches will vary according to the instructor. Pass 1 restricted to Art Studio majors. May be repeated for credit only. GE credit: ArtHum | AH, VL—Pardee, Werfel

102B. Advanced Painting: Figure (4)

Studio—6 hours. Prerequisite: course 101. Advanced painting using the human figure as subject. Pass 1 restricted to Art Studio majors. May be repeated for credit only. GE credit: ArtHum | AH, VL—Pardee, Werfel

102C. Advanced Painting: Special Topics (4)

Studio—6 hours. Prerequisite: courses 2, 7, 101, course 102A or 102B. Special topics in painting for upper division students. Emphasis on development of a personal practice of painting informed by awareness of contemporary issues in painting and their historical background. Topics will vary with instructor. Pass 1 restricted Art Studio majors. May be repeated for credit only. GE credit: ArtHum | AH, VL—Pardee, Werfel

103A. Intermediate Drawing: Black and White (4)

Studio—6 hours. Prerequisite: courses 2. Advanced study of drawing composition using black and white media. Pass 1 restricted Art Studio majors. GE credit: ArtHum | AH, VL—Pardee, Werfel

103B. Intermediate Drawing: Color (4)

Studio—6 hours. Prerequisite: courses 2. Study of drawing composition in color media. Pass 1 restricted Art Studio majors. GE credit: ArtHum | AH, VL—Pardee, Werfel

105A. Advanced Drawing: Studio Projects (4)

Studio—6 hours. Prerequisite: courses 2; course 103A or 103B. Exploration of composition and process in drawing. Emphasis on the role of drawing in contemporary art and on drawing as an interdiscipli
Art Studio

110A. Advanced Photography: Digital Imaging (4)

110B. Intermediate Photography: Digital Imaging (4)
Studio—6 hours. Prerequisite: course 12 or Techno-cultural Studies 100. Use of video to expand performance art production. Exploration of improvisation, direction, projection, and image processing in real time. May be repeated for credit one time. Pass 1 restricted Art Studio majors. GE credit: ArtHum | AH, VL — Martin

114C. Intermediate Video: Performance Strategies (4)
Studio—6 hours. Prerequisite: course 12 or Techno-cultural Studies 100. Study of space and light, and visual projects. May be repeated for credit one time. GE credit: ArtHum | AH, VL — Martin

117. Advanced Video and Electronic Arts (4)
Studio—6 hours. Prerequisite: course 12 or Techno-cultural Studies 100; one of course 112, 114A, 114B, or 114C; upper division standing Art Studio Majors. Independently driven video, digital, and/or performance projects. Further development in the electronic arts ranging from video installation to performance. May be repeated for credit one time. Pass 1 restricted Art Studio majors. GE credit: ArtHum | AH, VL — Martin

121. Interdisciplinary Studio—6 hours. Prerequisite: courses 2, 7, 19. Interpretation of landscape through painting, drawing, and related media. Emphasis on the integration of historical, cultural, natural, and artistic contexts. May be repeated for credit one time. Pass 1 restricted Art Studio majors. GE credit: ArtHum | AH, VL — Martin

125A. Intermediate Printmaking: Relief (4)
Studio—6 hours. Prerequisite: course 11. Woodcut linocut, metal-plate, relief, and experimental uses of other materials for printmaking. Additive and subtractive relief techniques. May be repeated for credit one time. Pass 1 restricted Art Studio majors. GE credit: ArtHum | AH, VL — Martin

125B. Intermediate Printmaking: Intaglio (4)
Studio—6 hours. Prerequisite: course 11. Woodcut linocut, metal-plate, relief, and experimental uses of other materials for printmaking. Additive and subtractive relief techniques. May be repeated for credit one time. Pass 1 restricted Art Studio majors. GE credit: ArtHum | AH, VL — Martin

147. Theory and Criticism of Photography (4)
Lecture—3 hours; term paper. Prerequisite: course 9. Development of camera vision, ideas, and aesthetics and their relationship to the fine arts from 1839 to the present. Offered in alternate years. GE credit: ArtHum, Wrt | AH, VL — II, Geiger, Suh

149. Introduction to Critical Theory (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: of two of Art History 1B, 1C, or 183F. An overview of 20th century critical theories of culture and their relation to visual art and mass media culture. GE credit: ArtHum, Div | AH, VL — II, Pardee

150. Theory and Criticism of Electronic Media (4)
Lecture—3 hours; term paper. Prerequisite: course 24 recommended. Study of electronic media, focusing on critique, application, and relationships to art practice. Analysis of the conceptual basis of electronic media as an artistic mode of expression. Offered in alternate years. GE credit: ArtHum, Wrt | AH, VL — II, Pardee

151. Intermediate Sculpture (4)
Studio—6 hours. Prerequisite: course 5. Individualized explorations through multiple projects in a variety of sculpture media and techniques. Builds upon technical skills and concepts covered in course 3. May be repeated two times for credit when topic differs. GE credit: ArtHum | AH, VL — I, II, III, (I, II, III), Bills, Hill, Puls

152A. Advanced Sculpture: Studio Projects (4)
Studio—6 hours. Prerequisite: courses 5, 151. Sculpture for advanced students. Emphasis on concept, idea development and honing technical skills. Approaches and projects will vary according to the instructor. May be repeated for credit one time when topic differs. Pass 1 restricted Art Studio majors. GE credit: ArtHum | AH, VL — Bills, Hill, Puls

152B. Advanced Sculpture: Material Explorations (4)
Studio—6 hours. Prerequisite: courses 5, 151. Primary application and exploration of a single sculpture material chosen by the student. Examination of its properties, qualities, and characteristics. May be repeated for credit one time. Pass 1 restricted Art Studio majors. GE credit: ArtHum | AH, VL — Puls

The Major Program
The Asian American Program offers an interdisciplinary major that examines the experiences of various Asian American groups in the United States.

Pertinent to these experiences are the historical, cultural, legal, political, social-psychological, class, racial, and gender contexts for Asian Americans.

The Program. Majors take a prescribed set of lower division and upper division courses in Asian American Studies. These courses offer diverse theoretical and methodological tools to develop and encourage student critical thinking, creative initiative, and independent research about a complex, multiethnic and racialized society in the United States and in a global world.

Career Alternatives. Asian American Studies prepares students for a variety of careers. Given the multicultural nature of society and the increasing relations with different societies, many occupations seek individuals with background and expertise in ethnic relations and cultural issues. Graduates often enter the fields of teaching, research, government service, law, social services, etc., as well as graduate schools for advanced degrees in various disciplines.

A.B. Major Requirements: Preparatory Subject Matter ........................................16 At least two lower division courses from the following departments or programs:
Asian American and African Studies (AAS), Chicana/o Studies (CHI), Middle East and South Asia Studies (ME/SA), Native American Studies (NAS), Women and Gender Studies (WGS) (all lower division courses of at least 4 units are acceptable except those numbered 92, 97T, 98, and 99)..............................8 Methodologies: At least two courses from any of the following methods courses:
Asian American and African Studies 101; American Studies 120; History 104; Art History 5, 100 Art Studio 10; 30; Chicana/o Studies 23; English 42, 110A, 110B; History 101; Human Development 120; Native American Studies 46; Philosophy 5; Political Science 51; Psychology 41; Sociology 46A, 46B; Statistics 13; Women and Gender Studies 104.

Depth Subject Matter ........................................36 Asian American Studies 192 Community Internship (required) ....................................4 Major Emphasis
As part of the depth subject matter requirement, all Asian American Studies majors must develop a major emphasis by choosing either a disciplinary or thematic specialization in consultation with the Student Affairs Officer (SAO) and/or faculty advisors. The major emphasis must include six Asian American Studies upper-division courses and two upper-division elective courses from other departments or programs.
Up to six units in Asian American Studies 198 and or Asian American Studies 199 can be used to satisfy the Asian American Studies upper division course requirements.
At least two upper-division elective courses from other departments or programs that relate to chosen emphasis.........................8 Two courses (of up to eight units) from Study Abroad can be substituted for major

Pre-Fall 2011 and on Revised General Education (GE): AH—Arts and Humanities; SE—Science and Engineering; SS—Social Sciences; ACGH—American Cultures; DD—Domestic Diversity; OL—Oral Skills; QL—Quantitative; SL—Scientific; VL—Visual; WC—World Cultures; WE—Writing Experience

Quarter Offered: I-Fall, II-Winter, III-Spring, IV-Summer; 2015-2016 offering in parentheses
Asia Minor Adviser, Brit Sumida, Student Affairs Office (SAO), 530-752-4447 or bsumida@ucdavis.edu

Substitutions for disciplinary track courses will be considered by the Program Director on a case-by-case basis. Likewise, any substitutions of Major/Minor criteria will be considered by the Program Director.

Minor Program Requirements:

- **UNITS**
- **Asian American Studies** 28
- Two courses from Asian American Studies 1, 2, 3, or 4 8
- Five courses from:
  - Asian American Studies 100, 102, 112, 113, 114, 115, 116, 121, 130, 131, 132, 140, 141, 150, 158B, 150C, 150D, 150E, 150F, 158A, 158B, 158C, 180A, 180B, 180C, 189D, 189E, 189F, 192, 198, and 199 (no more than 4 units of 192, 198, and 199 may be counted toward this total) 20

Minor Adviser, Brit Sumida, 530-752-4447 or bsumida@ucdavis.edu

American History and Institutions. This university requirement can be satisfied by one of the following courses in Asian American Studies: 1, 2; see also under University Requirements.

Courses in Asian American Studies (ASA)

(ASA) Direct questions pertaining to the following courses to the instructor or to Asian American Studies Department in 3102 Hart Hall 530-723-9767.

**Lower Division**

1. **Historical Experience of Asian Americans (4)**
   - Lecture—3 hours; discussion—1 hour. Introduction to Asian American Studies through an overview of the history of Asians in America from the 1840s to the present within the context of the development of the United States. GE credit: ArtHum or SocSci, Div, Wrt | ACGH, AH or SS, DD, VL, WC, WE.—I, II, III.

2. **Contemporary Issues of Asian Americans (4)**
   - Lecture—2 hours; discussion—1 hour. Prerequisite: course 1. Introduction to Asian American Studies through the critical analysis of the impact of race, racism, ethnicity, imperialism, militarism, and immigration since post-World War II on Asian Americans. Topics may include: sexuality, criminality, class, hate crimes, and inter-ethnic relations. GE credit: ArtHum or SocSci, Div, Wrt | ACGH, AH or SS, DD, VL, WC, WE.—I, II, III.

3. **Social and Psychological Perspectives of Asian Americans (4)**
   - Lecture—3 hours; discussion—1 hour. Major psycho-societal issues of Asian Americans. Theories and empirical research that address cultural values, behavior, class, race, ethnic stereotypes, racism, acculturation, ethnic identity development, family communication, stressors and social support systems, academic achievement, interpersonal effectiveness, and psychopathology. GE credit: SocSci, Div, Wrt | ACGH, DD, SS.—II, III.

4. **Asian American Cultural Studies (4)**
   - Lecture—3 hours; discussion—1 hour. This interdisciplinary course examines the multiple ways in which race, class, sex and gender, as well as the recent turn to transnationalism and postcolonial theory, have changed the ways we read Asian American literature and see theater, and film. GE credit: ArtHum, Div, Wrt | ACGH, AH, DD, OL, VL, WE.—I, II, III.

5. **Asian American Communities (4)**
   - Lecture/discussion—4 hours. Prerequisite: course 1, 2, or 3, or consent of instructor. Survey and analysis of Asian American communities within both historical and contemporary perspectives. Prerequisite: GE credit: SocSci, Div | ACGH, AH or SS, DD, VL, WE.—II. Kim, Maira

6. **Theoretical Perspective in Asian American Studies (4)**
   - Lecture/discussion—4 hours. Prerequisite: course 1, 2, 3, or 4 or consent of instructor. Explores major theories of race and its intersections with class, gender, and sexuality from an interdisciplinary perspective. GE credit: SocSci, Div, Wrt | ACGH, AH or SS, DD, VL, WE.—I, III. Kim, Maira

**Upper Division**

5. **Asian American Communities (4)**
   - Lecture/discussion—4 hours. Prerequisite: course 1, 2, or 3, or consent of instructor. Survey and analysis of Asian American communities within both historical and contemporary perspectives. Prerequisite: GE credit: SocSci, Div | ACGH, AH or SS, DD, VL, WE.—II. Kim, Maira

6. **Theoretical Perspective in Asian American Studies (4)**
   - Lecture/discussion—4 hours. Prerequisite: course 1, 2, 3, or 4 or consent of instructor. Explores major theories of race and its intersections with class, gender, and sexuality from an interdisciplinary perspective. GE credit: SocSci, Div, Wrt | ACGH, AH or SS, DD, VL, WE.—I, II, III. Kim, Maira

7. **Asian American Women (4)**
   - Lecture/discussion—4 hours. Prerequisite: course 1, 2, or 3, or consent of instructor. Experiences of Asian American women from major ethnic subgroups comparatively examined in their social, economic and historical contexts using historical and contemporary contexts. GE credit: ArtHum or SocSci, Div, Wrt | ACGH, AH or SS, DD, VL, WC, WE.—I, II, III.

8. **Asian American Sexuality (4)**
   - Lecture/discussion—4 hours. Prerequisite: course 1, 2, or 3, or consent of instructor. Surveys of Asian American sexual identities comparatively examined in their social, economic and historical contexts using historical and contemporary contexts. GE credit: ArtHum or SocSci, Div, Wrt | ACGH, AH or SS, DD, VL, WC, WE.—I, II, III.

9. **Asian Diasporas (4)**
   - Lecture—4 hours. Prerequisite: course 1 or 2; upper division status or consent of instructor. Asian diasporic communities and the experiences of its members in the United States and internationally. GE credit: ArtHum or SocSci, Div, Wrt | ACGH, AH or SS, DD, VL, WC, WE.—I, II, III.

10. **Asian American Performance (4)**
    - Lecture—4 hours. Prerequisite: course 1 or 2; upper division status or consent of instructor. Asian diasporic communities and the experiences of its members in the United States and internationally. GE credit: ArtHum or SocSci, Div, Wrt | ACGH, AH or SS, DD, VL, WC, WE.—I, II, III.

11. **Asian American Youth (4)**
    - Lecture—3 hours; term paper. Prerequisite: course 1, 2, or 3. Social experiences of diverse groups of Asian American youth. Ways in which youth themselves actively create cultural expressions and political interventions. GE credit: ArtHum or SocSci, Div, Wrt | ACGH, AH or SS, DD, OL, WE.—II, III.

12. **Asian American Performance (4)**
    - Lecture/discussion—4 hours. Prerequisite: course 1, 2, or 3, or consent of instructor. Survey and analysis of Asian American communities within both historical and contemporary perspectives. Prerequisite: GE credit: SocSci, Div, Wrt | ACGH, AH or SS, DD, OL, WE.—II.

13. **Asian American Literature (4)**
    - Lecture/discussion—4 hours. Prerequisite: course 1, 2, or 3 or consent of instructor. Works of Asian American literature by writers from the major ethnic subgroups comparatively examined in their social, economic and historical contexts. GE credit: ArtHum, Div | ACGH, AH, DD, OL, WE.—II. Ho, Min

14. **Ethnicity, Culture, and the Self (4)**
    - Lecture—3 hours; discussion—1 hour. Prerequisite: course 1, 2, or 3. Cultural and psychological influences on Asian Americans focusing on the individual. GE credit: SocSci, Div | ACGH, DD, SS.—Zane

15. **Ethnicity, Culture, and the Self (4)**
    - Lecture—3 hours; discussion—1 hour. Prerequisite: course 1, 2, or 3. Cultural and psychological influences on Asian Americans focusing on the individual. GE credit: SocSci, Div | ACGH, DD, SS.—Zane

16. **Health Issues Confronting Asian Americans and Pacific Islanders (4)**
    - Lecture/discussion—4 hours. Health issues confronting Asian Americans and Pacific Islanders. (Same course as Public Health Sciences 132.) GE credit: SocSci | SS—II.

17. **Asian Americans and Media (4)**
    - Lecture—4 hours; term paper; project. Prerequisite: course 1; course 2, 3, or 4 or consent of instructor. Historical, cultural and sociopolitical development of fashion in Asia and the U.S. as it relates to the Asian Diasporas. GE credit: ArtHum, SocSci, Div, Wrt.—II. (I.) Hamamoto, Maira

18. **Asian Americans and the Political Culture of Fashion in the U.S. and Asia (4)**
    - Lecture—4 hours; term paper; project. Prerequisite: course 1 or 2. Examination of the relationship between the Filipino-American community, the Philippine home community and the larger American society through an interdisciplinary perspective. GE credit: ArtHum, SocSci, Div, Wrt.—II. (II.) Hamamoto

19. **Filipino American Experience (4)**
    - Lecture/discussion—4 hours. Prerequisite: course 1 or 2. Examination of the relationship between the Filipino-American community, the Philippine home community and the larger American society through an interdisciplinary perspective. GE credit: ArtHum, SocSci, Div, Wrt.—II. (II.) Hamamoto

20. **Japanese American Experience (4)**
    - Lecture—3 hours; term paper. Prerequisite: course 1 and upper division status or consent of instructor. Analytical approaches to understanding Japanese American history, culture and politics by members of the Japanese American community. GE credit: ArtHum, SocSci, Div, Wrt | ACGH, AH or SS, DD, VL, WE.—II, III. Rodriguez

21. **Chinese American Experience (4)**
    - Lecture/discussion—4 hours. Prerequisite: course 1, 2, or 3, or consent of instructor. Survey and analysis of Chinese American communities within both historical and contemporary perspectives of Chinese in the United States, starting with the gold rush era and concluding with the present day. Prerequisite: GE credit: ArtHum or SocSci, Div, Wrt | ACGH, AH or SS, DD, VL, WE.—II, III. Rodriguez

Quarter Offered: F=Fall; W=Winter; S=Spring; V=Summer; 2015-2016 offering in parentheses

Fall 2011 and on Revised General Education (GE): AH—Arts and Humanities; SE—Science and Engineering, SS—Social Sciences; ACGH—American Cultures, DD—Domestic Diversity, OL—Oral Skills, QL—Quantitative, SL—Scientific, VL—Visual, WC—World Cultures; WE—Writing Experience
Asian Studies

Asian Studies

See Physics, on page 466.

Atmospheric Science

(College of Agricultural and Environmental Sciences)

Faculty. See under Department of Land, Air and Water Resources, on page 364.

The Major Program

Atmospheric science is the study of the air that surrounds the planet. It includes all weather phenomena and climate including the chemistry of trace constituents and cloud and particle formation, as well as quantitative studies of severe weather events such as hurricanes and tornadoes. It includes the study of the impacts of human and other biotic activity on the quality of the air we breathe. Changes in regional and global climate are also central to this field of study.

The Program. Modern meteorology is a quantitative science that is becoming increasingly computer dependent. In addition to the study of daily weather events, the program deals with fundamental dynamical and physical processes that involve the general circulation of the atmosphere, turbulent mass and energy transfer at the planetary surface as well as within the free atmosphere, and local and terrestrial radiation throughout the atmosphere; atmospheric interaction with the biosphere; climate variations; and developments in remote sensing using satellites with modern meteorological instrumentation. In addition, the program has significant expertise in the areas of air quality and its related atmospheric chemistry. As well as providing a broad background in meteorology, the major includes an informal minor area to be chosen from mathematics, computer science, environmental studies, resource management or a physical or biological science.

Internships and Career Alternatives. Atmospheric science students have participated in internships with the California Air Resources Board, various county Air Pollution Control Districts, and the National Weather Service. Job opportunities include: national weather service forecasting for broadcast media or private forecasting firms, environmental consulting firms (such as environmental impact reports, wind farm siting), government agencies at all levels from local to national (e.g., planning departments, etc.) to State (Air Resources Board) to national (NOAA), and companies whose operations are impacted by weather (such as airlines, futures markets). About half of our graduates continue their education by seeking the M.S. or Ph.D. degree in atmospheric science or related areas.

B.S. Major Requirements:

**UNITS**

Written Expression, Also counts toward College English Proficiency Requirement.................................3-4

University Writing Program 101 or one course from 102 or 104 sequences or course selected with adviser's approval

Preparatory Subject Matter.........................59-60

Plant Sciences 2......................................4

Chemistry 2A, 2B..................................10

Computer Science Engineering 30 or course selected with adviser's approval ....4

Atmospheric Science 60................................4

Physics 9A, 9B, 9C..................................12

Statistics 10...........................................3

Depth Subject Matter..........................41

Atmospheric Science 110, 111, 111L, 120, 121A, 121B, 124, 128.................................28

Internship-Airflow Science 192 or 199 .................................................................2

Two upper division Atmospheric Science courses selected with adviser's approval, not including courses 192 and 199............7

Engineering 6, Atmospheric Science 150, Civil and Environmental Engineering 152A, or course selected with adviser's approval ....4

Restricted Electives.................................15

Coordinated group of courses (minor area) to be chosen with adviser's approval from mathematics, computer science, environmental studies, communication, resource management, or a physical or biological science (at least 10 upper division units)

Total Units for the Major......................118-120

Major Adviser. Shu-Hua Chen

Advising Center is major, is located in 1150 Plant and Environmental Sciences Building in Land,
Air and Water Resources Teaching Center 530-752-1603; lawravisng@ucdavis.edu.

Note. Alternative options for students who are inter-ested in atmospheric science are to minor in AS or to major in ESM choosing climate change and air pollution track. However, both the ATM minor and the ESM climate change and air quality track do not meet the federal civil service requirements for meteorologists.

Minor Program Requirements:

Minor Program. The minor in Atmospheric Sci-ence provides a broad treatment of weather and cli-mate, with the option to focus on such topics as climate change, meteorological instrumentation, and satellite remote sensing. Students undertaking the minor could have the equivalent of a minimum preparatory work in calculus and physics (Mathematics 16A-6B, Physics 5A or 7A). Some upper division courses in Atmospheric Science have the Mathematics 21 and 22 series and the Physics 9 series as pre-requisites.

UNITs

Atmospheric Science: 20-24

Atmospheric Science 60, 110…………………8
Four courses selected with the approval of the minor program adviser from upper division Atmospheric Science courses (excluding 192 or 199) or Environmental Science and Management 131 …………………… 12-16

Minor Adviser. Shu-Hua Chen

Graduate Study. You can specialize in particular areas of atmospheric science through graduate study and research leading to the M.S. and Ph.D. degrees. For details, see the Atmospheric Science [A Graduate Group], on page 175, and see Graduate Studies, on page 177.

Related Courses. See Environmental Science and Policy 150A; Physics 104A, 104B; Environmental Science and Management 131.

Courses in Atmospheric Science (ATM)
Questions pertaining to the following courses should be directed to the instructor or to the Land, Air and Water Resources Teaching Center in 1150 Plant & Environmental Sciences Building 530-752-1603.

Lower Division

5. Global Climate Change (3)

10. Severe and Unusual Weather (3)
Lecture—2 hours; discussion—1 hour. Prerequisite: high school physics. Introduction to selected topics in atmospheric science, such as: meteorological aspects of air pollution, use of computer models in weather forecasting, theories of global climate change, impact of satellites on meteorology, and modern meteorological instrumentation. (P/NP grading only.) GE credit: ScEn| SE, SL—1. (I.) Anastasio

60. Introduction to Atmospheric Science (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 16A or 21A and Physics 5A, 7A or 9A. Fundamental principles of the physics, chemis-try, and fluid dynamics underlying weather and cli-mate. Solar radiation, the greenhouse effect, and the thermal budget of the Earth. Clouds and their forma-tion, convection, precipitation, mid-latitude storm sys-tems. GE credit: ScEn| QL, SE, VL.—1. (I) Falona

92. Atmospheric Science Internship (1-12)
Internship—3-36 hours. Prerequisite: lower division standing and consent of instructor. Internship off and on campus in atmospheric science. Internship supervised by a member of the faculty. (P/NP grading only)—I, II, III. (I, II, III.) Falona

98. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only)—I, II, III, IV, V, VI. (I, II, III, IV, V, VI.)

99. Special Study for Undergraduates (1-5)
(P/NP grading only)—I, II, III, IV, V, VI. (I, II, III, IV, V, VI.)

Upper Division

110. Weather Observation and Analysis (4)
Lecture—3 hours, laboratory—3 hours. Prerequisite: course 60. Acquisition, distribution and analysis of meteorological data. Vertical sounding analysis, sta-bility indices, probability of local severe weather, weather map analysis. Laboratory—Weather map analysis. (Casted system, including various weather forecast models. GE credit: ScEn| QL, QL, SE, VL.—II. (II.) Nathan

111. Weather Analysis and Prediction (3)
Lecture—3 hours. Prerequisite: courses 110, 121B, 111L (concurrently). Knowledge of a programming language. Tools for analyzing observed properties of mid-latitude weather systems. The analysis-prediction sys-tem, including various weather forecast models. General structure and properties of mid-latitude weather systems. Offered in alternate years. GE credit: ScEn| QL, QL, SE, VL.—II. (II.) Nathan

111L. Weather Analysis and Prediction Laboratory (2)
Laboratory—2 hours, web virtual lecture—4 hours. Prerequisite: course 111 (concurrently). Subjective and objective analysis of weather data. Web-based learning of the analysis-prediction system and various weather forecasting situations. Weather map inter-pretation and forecast discussions. (P/NP grading only) Offered in alternate years. GE credit: ScEn| QL, QL, SE, VL.—II. (II.) Nathan

112. Weather Forecasting Practice (2)
Discussion—2 hours; laboratory—1 hour. Prerequi-site: course 110. Formal practice in preparing local weather forecasts. Analysis of current weather condi-tions and recent model performance. Verification and discussion of prior forecast. Interpretation of cur-rent forecast model guidance. Posting of forecast. May be repeated for credit up to three times. (P/NP grading only)—I. (I.) Nathan

115. Hydroclimatology (3)
Lecture—3 hours. Prerequisite: course 60. Examina-tion of climate as the forcing function for the hydra-logic system. Emphasis on the role of climatic conditions and variations in the relationship between precipitation and evapotranspiration for meso-scale areas. Watershed modeling of floods and drought for evaluating the effects of cli-matic change. GE credit: ScEn| SE, SL—II. (II.) Nathan

116. Climate Change (4)
Lecture—3 hours; extensive writing. Prerequisite: University Writing Program 1; consent of instructor. Climate trends and variability over the past and the future. Emphasis on natural processes that produce climate variations and human influence on these processes. Evidence of climate change and the role of global climate models in understanding cli-mate variability. GE credit: ScEn| QL, SE, WE.—III. (III.) Nathan

120. Atmospheric Thermodynamics and Cloud Physics (4)
Lecture—3 hours, extensive problem solving. Prereq-uisite: Mathematics 21C, Physics 9B, course 60 (may be taken concurrently). Composi-tion and structure, thermodynamics of atmospheric gases, thermal properties of dry and moist air, atmo-spheric stability; cloud nucleation, cloud growth by condensation and collision, droplet coalescence. GE credit: ScEn| QL, SE, VL.—I. (I.) Falona

121A. Atmospheric Dynamics (4)
Lecture—3 hours, extensive problem solving. Prereq-uisite: course 120, Mathematics 21D, Physics 9B. Fundamental forces, the isentropic flow, potential vorticity, reference frames; development of the equations of motion for rotating stratified atmospheres; isobaric and natural coordinate systems; geostrophic flow; thermal wind; circulation and vorticity. GE credit: ScEn| QL, SE.—II. (II.) Nathan

121B. Atmospheric Dynamics (4)
Lecture—3 hours, extensive problem solving. Prereq-uisite: course 121A. Dynamics of fluid motion in geophysical systems; quasi-geostrophic theory, funda-mentals of wave propagation in fluids; Rossby waves; gravity waves; fundamentals of hydrodynam-ic instability; two-level model; baroclinic instabil-ity and cyclogenesis. GE credit: ScEn| QL, SE.—III. (III.) Nathan

124. Meteorological Instruments and Observations (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: course 60, Physics 5C. Meteorological instruments and their use in meteorological observa-tions and measurements. Both standard and micro-meterological instruments are included. Offered in alternate years. GE credit: ScEn| QL, SE, SL, VL—II. (II.) Nathan

128. Radiation and Satellite Meteorology (4)
Laboratory-discussion—3 hours; extensive problem solving—1 hour. Prerequisite: course 60, Physics 9B, Mathematics 22B, 21D. Concepts of atmospheric radiation and the use of satellites in remote sensing. Emphasis on the modification of solar and infrared radiation by the atmosphere. Emphasis on satellite data of atmospheric variables such as tempera-tures and cloudiness. GE credit: ScEn| QL, SE, VL—II. (II.) Nathan

133. Biometeorology (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: one course in a biological discipline and Mathemat-ics 16B or consent of instructor. Atmospheric and biologi-cal interactions. Physical and biological basis for weather, carbon dioxide and energy exchange of the exchange associated with plants and animals, including humans. Microclimate of plant canopies and microclimatic modifications such as frost protection and windshield. GE credit: ScEn| QL, SE, SL, VL—II. (II.) Nathan

149. Air Pollution (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 21D, 228, Chemistry 2B, Atmospheric Science 121A or Engineering 103. Physical and technical aspects of air pollution. Emphasis on geo-physical processes and air pollution meteorology as well as physical and chemical properties of pollut-ants. (Same course as Civil and Environmental Engi-neering 149) GE credit: ScEn| QL, SE, VL.—I. (I.) Cappa

150. Introduction to Computer Methods in Physical Sciences (4)
Lecture—3 hours; lecture/discussion—2 hours. Prerequisite: Mathematics 228, Physics 9B, and a com-puter programming course such as Engineering Computer Science 30. Additional courses in fluid dynamics (course 121A or Engineering 103) and digital Fourier transforms (Mathematics 118C or Physics 104A) are helpful, but not required. Computational techniques used in physical sciences. Integral and differen-tial equation numerical solution: mainly finite

Quarter Offered: I=Fall, II=Winter, III=Spring, IV=Summer; 2015-2016 offering in parentheses

Pre-Fall 2011 General Education (GE): Art/Hum: A+Arts and Humanities; SciEng:Science and Engineering, SocSci:Social Sciences; Div=Dominant Diversity; Wrt=Writing Experience

Fall 2011 and on Revised General Education (GE): AH=Arts and Humanities; SE=Science and Engineering, SS=Social Sciences; ACGH=American Cultures, DD=Dominant Diversity, OL=Oral Skills, QL=Quantitative, SL=Scientific, VL=Visual, WC=World Cultures; Wrt=Writing Experience
231. Advanced Air Pollution Meteorology (3)
Lecture—2 hours. Prerequisites: Course 149A, 160 and one course in fluid dynamics. Processes determine transport and dispersion of primary and secondary pollutants. Models of chemical transformation in the atmospheric boundary layer and of mesoscale wind fields, as applicable to pollutant dispersion problems. Offered in alternate years. —(I)

232. Advanced Biometeorology (3)
Lecture/discussion—2 hours. Prerequisite: course 153 or consent of instructor. Current topics in biometeorology. Physical and biological basis for water vapor, other gases, and energy exchange with the atmosphere. Topics include modeling and measuring turbulent transport in the atmosphere, concept of surface temperature and energy budgets, bio-aerosol physics and aerobiology. Offered in alternate years. —(II)

240. General Circulation of the Atmosphere (4)
Lecture/discussion—4 hours. Prerequisite: course 121B. Large-scale, observed atmospheric properties. Radiation, momentum, and energy balances derived and compared with observations. Lectures and homework synthesize observations and theories, then apply them to understand the large-scale circulation. Offered in alternate years. —(I)

241. Climate Dynamics (3)
Lecture/discussion—3 hours. Prerequisite: course 121B. Dynamics of large-scale climatic variations over time periods from weeks to centuries. Description of the appropriate methods of analysis of atmospheric and oceanic systems. Conservation of mass, energy and momentum. Introduction to the range of climate simulations. Offered in alternate years. —(I)

250. Meso-Scale Meteorology (3)
Lecture—2 hours; laboratory —6 hours. Prerequisite: course 121B. Conditions for instability in stratified atmospheres; baroclinic instability, forced topographic Rossby Waves; wave-mean flow interaction theory; tropical dynamics; stratospheric dynamics. Offered in alternate years. —(II)

255. Numerical Modeling of the Atmosphere (4)
Lecture—2 hours; laboratory—6 hours. Prerequisite: course 121B and Engineering 5; course 150 recommended. Principles of numerical modeling of the dynamic, thermodynamic and physical processes of the atmosphere. Hands-on experiments on model development using the shallow water equations and the primitive equations. Operational forecast model experiments. Offered in alternate years. —(I)

260. Atmospheric Chemistry (3)
Lecture—3 hours. Prerequisite: course 160. Chemistry and photochemistry in tropospheric condensed phases (fog, cloud, and rain drops and aerosol particles). Gas-phase and gas-particle partitioning of compounds and effects of reactions in condensed phases on the fates and transformations of tropospheric chemical species. Offered in alternate years. —(II)

270A-G. Topics in Atmospheric Science (1-3)
Discussion—1-3 hours. Applications and concepts in (A) Meteorological Statistics; (B) Computer Modeling of the Atmosphere; (C) Design of Experiments and Field Studies in Meteorology; (D) Solar and Infrared Radiation in the Atmosphere; (E) Aerosol and Cloud Physics; (F) Atmospheric Chemistry; (G) General Meteorology. —(I, II, III)

280A. Air Quality Policy in the Real World (4)
Project. Prerequisite: consent of instructor. Atmospheric Science 149 or Engineering: Civil and Environmental 145A. (I) Air quality policies and regulations and enforcement. Civil and Environmental 242 or equivalent. In-depth investigation of an air quality problem with a team and mentor from government or industry. Science, engineering and policy will be involved. Findings will be presented orally and in writing. Offered irregularly. (Deferred grading only, pending completion of sequence.) —II, III, (II, III)

280B. Air Quality Policy in the Real World (4)
Project. Prerequisite: course 280A; consent of instructor. In-depth investigation of an air quality problem with a team and mentor from government or industry. Science, engineering and policy will be involved. Findings will be presented orally and in writing. (Deferred grading only, pending completion of sequence.) Offered irregularly. —II, III, (II, III)

290. Seminar (1)
Seminar—1 hour. Prerequisite: graduate standing in Atmospheric Science or related field. Current developments in selected areas of atmospheric research. Topics will vary according to student and faculty interests. (S/U grading only.) —I, II, III. —(I, II, III)

291A-F. Research Conference in Atmospheric Science (1-3)
Lecture/discussion—1-3 hours. Prerequisite: consent of instructor. Review and discussion of current literature and research in: (A) Air Quality Meteorology; (B) Biometeorology; (C) Boundary Layer Meteorology; (D) Climate Change; (E) General Meteorology; (F) Atmospheric Chemistry. May be repeated up to a total of 6 units per segment. (S/U grading only.) —I, II, III. —(I, II, III)

298. Group Study (1-5)
Prerequisite: graduate standing and consent of instructor. (S/U grading only.) —I, II, III. —(I, II, III)

299. Research (1-12)
Prerequisite: graduate standing and consent of instructor. (S/U grading only.) —I, II, III. —(I, II, III)

Professional

393. Teaching Assistant Training Practicum (1-4)
Prerequisite: graduate standing. May be repeated for credit. (P/NP grading only.) —I, II, III. —(I, II, III)

396. Teaching Assistant Training Practicum (1-4)
Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.) —I, II, III. —(I, II, III)

Atmospheric Science (A Graduate Group)

Zhang, Qi, Assistant Professor (Environmental Toxicology)
Avian Sciences

This major has been discontinued as of Fall 2011; see Animal Science, on page 153.

Graduate Study. The Avian Sciences Graduate Group offers a program of study and research leading to the M.S. and Ph.D. degree in Avian Sciences. The M.S. degree is offered in Avian Sciences. For details, see Graduate Studies, on page 111.

Related Courses. See Agricultural and Resource Economics 130; Animal Science 143, Food Science and Technology 120L, 121L; Molecular and Cellular Biology 150, 150L; Nutrition 123, 123L.

Courses in Avian Sciences (AVS)

Lower Division

11. Introduction to Poultry Science (3) Lecture—3 hours. The mosaic of events that have tied poultry science to other scientific disciplines and poultry to humans. Poultry science techniques and production methods from the time of domestication to the present. One field trip required. GE credit: SciEng. Wrt | I | SE

13. Birds, Humans and the Environment (3) Lecture—2 hours; discussion—1 hour. Interrelationships of the worlds of birds and humans. Lectures, discussions, field trips and projects focus on ecology, avian evolution, physiology, reproduction, flight, behavior, folklore, identification, ecotoxicology and conservation. Current environmental issues are emphasized. Half-day field trip. GE credit: SciEng, Wrt | I | SE, SL — I (I.) King

14L. Management of Captive Birds (2) Fieldwork—3 hours; lecture/discussion—1 hour. Prerequisite: consent of instructor. One weekly discussion and field trip to study practical captive management (housing, handling, equipment, marketing, diseases). Visit facilities rearing birds such as commercial parrots, hobbyist exotics, ostrich, raptors, waterfowl, game birds, poultry and pigeons. GE credit: SciEng | SE, SL

15L. Captive Raptor Management (2) Laboratory—3 hours; independent study—3 hours; one field trip; Hands-on experience handling birds of prey. Students are taught all of the skills required to handle and care for raptors, including their husbandry, biology, habitat requirements, cage design, veterinary care, rehabilitation methods, research potential and long-term care requirements. GE credit: SciEng | SE, SL

16LA-16LB-16LC. Raptor Migration and Population Fluctuations (2-2-2) Fieldwork—3 hours; discussion—1 hour; one Saturday field trip. Prerequisite: consent of instructor. Identify raptors; study effects of weather, crops, agricultural practices on fluctuations in raptor species and numbers. Familiarize with literature; design a project; survey study sites; collect, computerize, analyze data; compare with previous years. Species, observations, emphasis are different each quarter. GE credit: SciEng | SE — I, II, III (I, II, III)

99. Special Study for Undergraduates (1-5) Prerequisite: consent of instructor. (P/NP grading only.) May be repeated for credit with consent of instructor. GE credit: SciEng | SE — I, II, III (I, II, III)

103. Avian Development and Genomics (3) Lecture—3 hours. Prerequisite: Biological Sciences 1A and 1B, or Biological Sciences 2A, B, C. Unique features of avian development: Incubation; Staging; Egg Structure/Function; Fertilization; Pre-oviposition, Oviposition, Cold Torpor; Post-oviposition Development; Organogenesis; Growth; Sex Differentiation; Extramembranous Metabotypes; Mortality/Hatching; Genome Organization; Comparative Avian Genomics; Telomere Biology; Sex Chromosomes/Sex Determination; Advanced Technologies; Genome Manipulation; Mutations. GE credit: SciEng | SE — I. (I.) Delany

115. Raptor Biology (3) Lecture—2 hours. Prerequisite: Biological Sciences 1A, B, C. Captive propagation of birds, including reproduction, genetics, medicine, nutrition, environmental concerns, conservation, legal considerations, rehabilitation, and falconry. Includes two Saturday field trips. GE credit: SciEng | SE

121. Avian Reproduction (2) Lecture—2 hours. Prerequisite: Biological Sciences 1A, B, C. Captive breeding cycles and reproductive strategies, egg and sperm formation and development, imprinting, hormonal control of reproductive behavior and song. Species coverage includes wild and captive birds. Course has a physiological orientation. Offered in alternate years. GE credit: SciEng | SE, SL — II.

123. Management of Birds (3) Lecture—2 hours. Prerequisite: Biological Sciences 1A, B, C. Captive propagation of birds, including reproduction, genetics, medicine, nutrition, artificial incubation, artificial insemination, and related legal aspects, including trade and smuggling, Emphasis on exotic species and the role of captive propagation in conservation. Offered in alternate years. GE credit: SciEng | SE, SL, WE — II.

149. Egg Production Management (2) Lecture—2 hours. Prerequisite: course 11 or the equivalent, or consent of instructor. Management of commercial table egg flocks as related to environment, nutrition, disease control, economics, housing, equipment, egg processing and raising replacement pullets. One Saturday field trip required. Offered in alternate years. GE credit: SciEng | SE

150. Nutrition of Birds (1) Lecture—1 hour. Prerequisite: Animal Biology 103 (may be taken concurrently). Principles of nutrition specific to avian species, including feeding, artificial incubation, artificial insemination, and nutritional support of egg production and growth. Use of computer for feed formulation to support production. Offered in alternate years. GE credit: QL, SciEng | SE — III (I) Klassing

160. Designing and Performing Experiments in Avian Sciences (2) Laboratory—3 hours; 6 hours. Prerequisite: course 100 or Wildlife, Fish, and Conservation Biology 111 or Evolution and Ecology 137 or consent of instructor. Experiments in current problems in avian biology. Introduction to experimental design. Students choose a project; design a protocol; perform an experiment and report their findings. May be repeated for credit with consent of instructor. GE credit: SciEng | SE — I, II, III (I, II, III)

170. Advanced Avian Biology (4) Lecture/discussion—3 hours; project—1 hour. Prerequisite: course 100 or Evolution and Ecology 137 or Wildlife, Fish, and Conservation Biology 111. Ecology, behavior, functional morphology and life-history evaluation of birds. Emphasis on the importance of body size as a principle determinant of most aspects of avian performance from lifespan to reproduction and species abundance. Analytical synthesis and critical thinking are emphasized. Offered in alternate years. GE credit: SciEng | SE

Emeriti Faculty

Thomas A. Cahill, Ph.D., Professor Emeritus
Robert Florence, Ph.D., Professor Emeritus (Crocker Nuclear Laboratory)
Ruth Rock, Ph. D., Professor Emeritus
Bryan Weare, Ph. D., Professor Emeritus

Affiliated Faculty

Lowell Ashbaugh, Ph.D., Associate Researcher
Bob Flocchini, Ph.D., Professor Emeritus (Applied Science)
Ann Dillner, Ph.D., Assistant Researcher
Richard L. Snyder, Ph.D., Biometeorology Specialist
Richard Anthony VanCuren, Ph.D., Professor Emeritus (Air Pollution Research Center)

Graduate Study. The Graduate Group in Atmospheric Sciences offers both the M.S. and Ph.D. degree programs. A student may place emphasis on graduate work in one or more of the following fields: air quality, meteorology, atmospheric chemistry, bio-meteorology, micrometeorology, numerical weather prediction, remote sensing, climate dynamics, large scale dynamics, and meso-scale meteorology. The diverse and extensive backgrounds of the faculty allow opportunities for interdisciplinary training and research.

Preparation. The Graduate Group welcomes applications from students with backgrounds in the physical or natural sciences. Basic qualifications for students entering the Atmospheric Sciences graduate program include mathematics at the level of vector calculus and differential equations, and one year of college-level physics. Flexibility may be allowed for students with high academic potential, but it is expected that deficiencies in preparatory material and in key undergraduate atmospheric science courses be completed within the first year of graduate study.

Graduate Adviser. Terrence North Ph.D.
Graduate Admissions Officer. Christopher Cappa, Ph.D.

Avian Sciences

This major has been discontinued as of Fall 2011; see Animal Science, on page 153.

(College of Agricultural and Environmental Sciences) Faculty. See under Animal Science, on page 153.

Master Adviser. A. J. King

Advising Center for the minor and course offers including peer advising, is located in the Animal Science Advising Center in 1202 Meyer Hall 530-754-7915, http://asac.ucdavis.edu/
190. Seminar in Avian Sciences (1)
Seminar—1 hour. Prerequisite: upper division standing in Avian Sciences and consent of instructor. May be repeated three times for credit. (P/NP grading only.)—I, II, III

192. Internship in Avian Sciences (1-12)
Internship—3-36 hours. Prerequisite: completion of a minimum of 84 units, consent of instructor. Internship on and off campus in poultry, game birds or exotic bird production, management and research; or in a business, industry, or agency concerned with these entities. Compliance with Internship Approval form essential. (P/NP grading only.)

195. Topics in Current Research (1-3)
Lecture/discussion—1-3 hours. Prerequisite: consent of instructor. Discussion of topics of current interest in avian sciences. May be repeated three times for credit.—I, II, III

197. Tutoring in Avian Sciences (1-3)
Tutorial—1-3 hours. Prerequisite: Avian Sciences or related major, advanced standing, consent of instructor. Tutoring of students in lower division avian sciences courses; weekly conference with instructors in charge of courses; written critiques of teaching procedures. (P/NP grading only.)

198. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)
Prerequisite: consent of instructor. (P/NP grading only.)

Graduate

203. Advanced Avian Development and Genomics (1)
Discussion—1 hour. Prerequisite: graduate standing; concurrent enrollment in course 103. In consultation with the instructor, students develop a lecture and associated instructional materials, i.e., lesson plan, including justification, reading and presentation and evaluation aids. The topic must complement a topic covered in Avian Sciences 103 (Avian Development and Genomics).—I, II

209. Seminar (1)
Seminar—1 hour. Reports and discussions of recent advances and selected topics of current interest in avian genetics, physiology, nutrition, and poultry technology.—I, II

209C. Research Conference (1)
Discussion—1 hour. Prerequisite: graduate standing and consent of instructor. Major professors lead research discussions with their graduate students. Research papers are reviewed and project proposals presented and evaluated. Format will combine seminar and discussion. (S/U grading only.)—I, II, III

297T. Supervised Teaching in Avian Sciences (1-4)
Prerequisite: graduate standing and consent of instructor. Tutoring of students in lower, upper division, and graduate courses in Avian Sciences; weekly conference with instructor in charge of course; written critiques of teaching methods in lectures and laboratories. (S/U grading only.)

298. Group Study (1-5)
Prerequisite: consent of instructor.

299. Research (1-12)
Prerequisite: consent of instructor. (S/U grading only.)

Avian Sciences

Barry W. Wilson, Ph.D., Professor Emeritus

Graduate Study. The Graduate Group in Avian Sciences offers the M.S. degree program to students who wish to pursue specialized advanced work on avian species. Specializations students may choose include behavior, nutrition, physiology, reproduction, pathology, immunology, toxicology, food chemistry, management, ecology, genetics, comparative incubation, environmental physiology, and cellular and developmental studies using wild and domestic birds as experimental animals. Both master’s degree plans, theses or comprehensive examination, are available.

Preparation. Applicants should have undergraduate preparation in a field appropriate to the course of study selected, including courses in most of the following subjects: general biology, general and organic chemistry, biochemistry, avian biology, genetics, nutrition, physiology, and statistics.

Biochemistry and Molecular Biology
See Biochemistry, Molecular, Cellular and Developmental Biology, on page 177; Molecular and Cellular Biology, on page 430

Biochemistry and Molecular Biology
(A Graduate Group)
The Biochemistry and Molecular Biology program has merged with the Cell and Developmental Biology program to form Biochemistry, Molecular, Cellular, and Developmental Biology (BMCDB); see Biochemistry, Molecular, Cellular and Developmental Biology, on page 177.

Graduate

290. Seminar (1) Seminar—1 hour. Prerequisite: consent of instructor and/or graduate standing. Presentation and discussion of faculty and graduate-student research. [S/U grading only]—I, II, III (I, II, III)

298. Group Study (1-5) Prerequisite: consent of instructor. [S/U grading only]—I, II, III (I, II, III)

299. Research (1-12) Prerequisite: consent of instructor. [S/U grading only]—I, II, III (I, II, III)

Biological Sciences

(Biology Academic Success Center (BASC), 1023 Sciences Laboratory Building; 530-752-0410; http://www.biosci.ucdavis.edu/BASC)

Faculty

The Biological Science major and the Bodega Marine Laboratory Spring Quarter Program are offered jointly by the departments of the college. The faculty in the college are members of the Departments of Evolution and Ecology; Microbiology; Molecular and Cellular Biology; Neurobiology, Physiology, and Behavior; Plant Biology. See each department for a list of their faculty.

The Biological Sciences Major

(Departments of Evolution and Ecology; Microbiology; Molecular and Cellular Biology; Neurobiology, Physiology, and Behavior; and Plant Biology) See each department for a list of their faculty.

The Program.
The Biological Sciences major is broad in concept, spanning the numerous core disciplines of biology for the Bachelor of Science (B.S.) program includes mathematics, general and organic chemistry, physics, and biology. While emphasizing breadth, the B.S. degree program also features an area of emphasis requirement that provides concentrated attention on one facet of biology at the upper division level. Each area of emphasis coincides with one of the departments of the college. The Bachelor of Arts (A.B.) program emphasizes biological diversity, evolution, and ecology, all built on a foundation of general and organic chemistry, physics and biology. Research and internships are encouraged in both programs.

Career Alternatives.
Both degree programs prepare students for admission to graduate schools or professional schools, leading to either a variety of professional health careers or further study in basic and applied biological sciences. They provide suitable preparation for careers in teaching, biological and biotechnological research with various governmental agencies or private companies, government regulatory agencies, environmental consulting, biological illustration and writing, pharmaceutical sales, biological/environmental law, and biomedical engineering.

The A.B. degree program is also appropriate for students interested in health careers or further study in basic biological sciences to achieve a total of 38 or more units; see "Approved Biology Electives" list below. Additional upper division course work in biological sciences to achieve a total of 38 or more units; see "Approved Biology Electives" list below. Upper division course work must include a total of two units or a total of six hours/week of fieldwork or laboratory work.

B.S. Major Requirements:

Preparatory Subject Matter

Pre-requisite requirements for specific Biological Sciences courses are indicated. Students must complete the General Education and Major Program requirements with a cumulative grade point average of 2.0 or higher and a grade of C- or better in the following courses:

A.B. Major Requirements:

Preparatory Subject Matter

Biological Sciences 2A-2B-2C .................................. 14
Chemistry 2A-2B ............................................. 10
Chemistry 8A-8B or 118A-118B-118C .................. 6-12
Physics 1A-1B or 7A-7B-7C .......................... 6-12
Statistics 13, 32, 100, or 102 ............................ 3-4
Recommended: Chemistry 2C and Mathematics 17A-17B or 21A-21B.

Depth Subject Matter

Biological Sciences 101 ......................................... 4
Biological Sciences 102 or 105 .............................. 3
Evolution: One from Evolution and Ecology 100; Evolution and Ecology 101; Plant Biology 117; Plant Biology 119; Plant Biology 101, 112 ......... 3-5
Ecology: One from Environmental Science and Policy 100; Evolution and Ecology 101; Plant Biology 117; Plant Biology 119; Plant Biology 101, 112 ......... 3-5
Philosophy of Biological Science: One from Animal Science 170, Nature and Culture 100, 120; 140; Philosophy 108, Science and Technology Studies 130A, 130B, 131; Veterinary Medicine 170; 4
Physiology: One from Environmental Horticulture 102; Entomology 101, 102; Neurobiology, Physiology, and Behavior 101; Plant Biology 111, 112 ............. 3-5
One course each in animal, microbial and plant diversity ........................................ 1-2
One from Animal Diversity: Entomology 100, 107; Evolution and Ecology 105, 112 and 112s, 134; Nematology 110; Wildlife, Fish, and Conservation Biology 110, 111, 120; Microbial Diversity: Microbiology 101, 162; Pathology, Microbiology, and Immunology 117, 128, Plant Biology 148, Plant Pathology 148; Soil Science 113; Plant Biology: Evolution and Ecology 108, 119, 140; Plant Biology 102, 108, 116, 119, 147
Additional upper division course work in biological sciences to achieve a total of 38 or more units; see "Approved Biology Electives" list below.

Total units for the major ........................................... 74-94

B.S. Major Requirements:

Preparatory Subject Matter

Biological Sciences 2A-2B-2C .................................. 14
Chemistry 2A-2B ............................................. 15
Chemistry 8A-8B or 118A-118B-118C .................. 6-12
Mathematics 17A-17B-17C or 21A-21B .......................... 9-12
Physics 7A-7B-7C ............................................. 12

Depth Subject Matter ........................................... 49
Biological Sciences 101, 105 (or 102+103) .............. 10
"Students in the Molecular and Cellular Biology Area of Emphasis must complete Biological Sciences 102+103. All other students may choose between completing Biological Sciences 105 or 102+103.
Statistics 100 .................................................. 4
Field Requirement, Area of Emphasis Requirement, and additional units (if necessary) to achieve a total of 49 units or more ........................................ 32-35

Note: Although a course may be listed in more than one category, that course may satisfy only one requirement.

Quarter Offered: I, II, III.

Fall 2011 and on Revised General Education (GE): AH–Arts and Humanities; SE–Science and Engineering; SS–Social Sciences; AGCH–American Cultures; DD–Diverse; OR–Oral Skills; VL–Visual Literacy; WC–World Cultures; WE–Writing Experience
Field Requirement: Breadth in biology is achieved by completing one course from each field (a) through (f) below. You must take one course in each field regardless of your area of emphasis. If you plan an area of emphasis in Evolution, Ecology, and Biodiversity; Marine Biology; or Microbiology, please see your emphasis before choosing field requirement classes as specific, designated field courses are required. The required courses are listed under that area of emphasis. Although a course may be listed in more than one category (including the area of emphasis requirements), that course may be used only once and may satisfy only one requirement.

Field Course Lists

(a) Evolution: Anthropology 151, 152, 154A; Evolution and Ecology 100; Geology 107. Plant Biology to satisfy 3-5.
(b) Ecology: Anthropology 154B; Biological Sciences 122; Entomology 104, 156; Environmental Science and Policy 100, 121; Evolution and Ecology 101; Microbiology 120; Wildlife, Fish, and Conservation Biology 151 3-5.
(c) Microbiology: Food Science and Technology 104, Microbiology 101, 104, 140, 150, 162, Pathology, Microbiology, and Immunology 127, 128; Soil Science 111 3-5.
(d) Neurobiology, Physiology, and Behavior: Anthropology 154A, Entomology 102, 104, Neurobiology, Physiology, and Behavior 100, 101, 102, 141 3-5.

Area of Emphasis Requirements: Depth in one area of biology is achieved by completing all requirements for one of the six areas of emphasis listed below. It will consist of a total of two units or a total of six hours/week of fieldwork or laboratory work designated in the area of emphasis. Although a course may be listed in more than one category (including the field requirements), that course may be used only once and may satisfy only one requirement.

Evolution, Ecology and Biodiversity emphasis 12

Students choose to complete Biological Sciences 105 or 102+103 for this emphasis.

Field requirement: Students must take Evolution and Ecology 100 to satisfy Field requirement (a), and Evolution and Ecology 101 to satisfy Field requirement (b).

(1) At least 12 units including at least one course from each of the following two groups 12
   (a) Biodiversity: Entomology 103; Evolution and Ecology 105, 106, 108, 112, 112, 134, 134A, 140; Microbiology 105, 105L, Nematology 110; Plant Biology 116, 147, 148; Wildlife, Fish, and Conservation Biology 110, 110L, 111, 111L, 120, 120L.

(2) Laboratory/Fieldwork Requirement: Included in the above 12 units, complete a total of two units or a total of six hours/week of fieldwork or laboratory work. Courses chosen to satisfy this requirement are: One course from: Evolution and Ecology 105, 106, 108, 112L, 134L; Microbiology 105L; Plant Biology 116, 148; Wildlife, Fish, and Conservation Biology 110L, 111L or two courses from: Evolution and Ecology 117, 119, 134F, 140, 180A, 180B; Plant Biology 147; Wildlife, Fish, and Conservation Biology 120L.

Marine Biology emphasis 12-19

Students choose to complete Biological Sciences 105 or 102+103 for this emphasis.

Field requirement: Students must take Evolution and Ecology 100 to satisfy Field requirement (a), Field requirement (c), and Evolution and Ecology 101 to satisfy Field requirement (b), and Neurobiology, Physiology, and Behavior 102 or 141 to satisfy Field requirement (d).

(1) Ocean Processes: At least three units from Biological Sciences 122, Environmental Sciences and Policy 124, 125, Environmental Science and Policy/Geology 116N, 150A, 150B, 150C; Evolution and Ecology 115; Wildlife, Fish, and Conservation Biology 157 3-4.
(2) Marine Organism: At least three units from Animal Science 119, 131; Evolution and Ecology 106, 110, 112L, 114; Neurobiology, Physiology, and Behavior 141; Plant Biology 118; Wildlife, Fish, and Conservation Biology 120 and 126, 121 3-5.
(3) Immersion Requirement: Complete one of four options listed below, offered in spring quarter or summer sessions at Bodega Marine laboratory, or equivalent. Require residence at Bodega Marine Laboratory 10-11.
   Option 1 (summer session 1): 7
   Select one course from: Environmental Science and Policy 124; Evolution and Ecology 106, 110, 114 3...

Microbiology emphasis 16-20

Students must complete four options listed below or complete an individual option with approval from your faculty adviser.

(1) Microbial Physiology and Molecular Genetics option: 15-18
   Students must complete Microbiology 104 to satisfy Field requirement (c) 9
   Select one course from: Microbiology 170; Molecular and Cellular Biology 121 3
   Select one course from: Microbiology 105 and 105L, 155L, 180L, Pathology, Microbiology, and Immunology 127 3.6
   (2) Microbial Diversity and Ecology option: 15-17
   Students must complete Microbiology 104 to satisfy Field requirement (c) 9
   Select one course from: Microbiology 104L, 105L, 120L 12
   Select one course from: Food Science and Technology 104, Microbiology 140, 150, 162, 170; Pathology, Microbiology, and Immunology 127, 128; Plant Biology 148; Plant Pathology 148; Soil Science 111 3-5
   (3) Biotechnology and Applied Microbiology option: 16-19
   Students must complete Microbiology 104 to satisfy Field requirement (c) 9
   Select two courses from: Microbiology 140, 150, 170 6
   Select one course from: Food Science and Technology 102A, 104 3.4
   Select one course from: Microbiology 155L, Molecular and Cellular Biology 120, 160, 160L 4.6
   (4) Medical Microbiology option 12-20
   Students may choose to complete the Field requirement and the laboratory requirement for this option from: Microbiology 101, or Microbiology 104 and 104L. Students are encouraged to complete Microbiology 101 to satisfy Field and this option’s laboratory requirement simultaneously.

Molecular and Cellular Biology emphasis 12-17

Students must complete Biological Sciences 102+103 for this emphasis.

(1) Molecular Biology and Gene Expression: Molecular and Cellular Biology 121 3
(2) Laboratory Experience: One or more laboratory courses from: Biological Sciences 120P, 180L, Molecular and Cellular Biology 120L, 140L, 160L; or other laboratory course to total 3 units (9 hours of laboratory work) that emphasizes cellular or molecular biology with approval of your faculty adviser 3.6
(3) Restriction Electives 6
   Select two or more courses from: Biological Sciences 10, 11B, 120, 181, 183; Molecular and Cellular Biology 123, 124, 126, 143, 144, 145, 150, 162, 163, 164, 182; Neurobiology, Physiology, and Behavior 103; Pathology, Microbiology, and Immunology 126; Plant Biology 113, 126; or other courses with faculty adviser’s approval.

Neurobiology, Physiology, and Behavior emphasis 12-15

Students choose to complete Biological Sciences 105 or 102+103 for this emphasis.

Although a course may be listed in more than one category (including the field requirements) that course may be used only once and may satisfy only one requirement.

Select courses from at least two of the following three areas and include one laboratory from Neurobiology, Physiology, and Behavior 101, 104, 141P, or 160L 15
(2) Physiology: Anatomy, Physiology, and Cell Biology 100; Entomology 102, Exercise Biology 101, 110, 111, 125; Neurobiology, Physiology, and Behavior 101, 101L, 103, 104L, 105, 106, 111C, 111L, 113, 114, 117, 122, 123, 127, 128, 130, 132, 139, 140, 141, 141P, 152; Pathology, Microbiology, and Immunology 126, Wildlife, Fish, and Conservation Biology 120L.
(3) Behavior: Anthropology 154A, 154C; Entomology 104; Neurobiology,
Biological Sciences

Other Upper Division Courses

There is a limitation on variable-unit courses that may be counted toward the major. Of these courses, up to four units may be counted, and no units of 192 or 197T courses may be counted.

Minor Program Requirements:

UNITS

Biological Sciences ........................................... 18

Complete at least three units from each of the five numbered groups to total at least 18 units. Appropriate alternative courses may be selected with approval of an adviser.

(1) Cell and Molecular Biology: Biological Sciences 101, 102, 105 ............................................. 3-4

(2) Animal Biology: Anthropology 151, Anatomy, Physiology, and Cell Biology 100/Neurobiology, Physiology, and Behavior 123; Entomology 100; Evolution and Ecology 105, 112 and 112L, 134; Nematology 100, 110; Neurobiology, Physiology, and Behavior 100, 101, 102, 112, 117; Wildlife, Fish, and Conservation Biology 110, 111, 120 ............................................. 2-5

(3) Microbiology: Microbiology 101, 102, 162; Pathology, Microbiology, and Immunology 128; Plant Biology/Plant Pathology 148 .................................................. 3-5

(4) Plant Biology: Environmental and Resource Sciences/Plant Sciences 144; Plant Biology 105, 111, 112, 116, 126; Plant Biology/Plant Pathology 148; Plant Sciences 141 ............................................. 171 ............................................. 3-5

Additional courses (if necessary) from above numbered groups to reach 18 units.

Advisers and Advising.

Information on the Biological Sciences major or minor can be obtained at the Biological Academic Success Center (BASC) in 1023 Sciences Laboratory Building; 530-752-0410; http://basc.engineering.ucdavis.edu.

Citation for Outstanding Performance.

The College of Biological Sciences confers Citations for Outstanding Performance on undergraduates majoring in Biological Sciences who have demonstrated superior academic performance and individual achievement in research. Students who wish to be considered for a citation must first meet or exceed a specified grade point average and participate in an appropriate research project.

Teaching Credential Subject Representative.

Associated Director of Teacher Education (School of Education); see the Teaching Credential/M.A. Program on page 115.

Bodega Marine Laboratory Program

See also Biological Sciences, Bodega Marine Laboratory Program, on page 186.

http://bml.ucdavis.edu

A full quarter of undergraduate course work in marine biology is available each spring quarter at the Bodega Marine Laboratory, located in Bodega Bay, California. Course offerings include lecture and laboratory instruction in the developmental biology and physiological adaptation of marine organisms, population biology and ecology, a weekly colloquium, and an intensive individual research experience under the direction of laboratory faculty. (Biological Sciences courses 122, 122B, 125, 123; Neurobiology, Physiology, and Behavior 141, 141P). This is a 15-unit program and course offerings and instructors may vary from year to year. The program is residential, with students housed on the laboratory grounds. Participants are assessed a room and board fee in addition to standard campus registration fees. An application is required. Obtain forms from the Bodega Marine Laboratory website listed above. Applications are due January 31 for spring quarter. Additionally, additional information on the Bodega Marine Laboratory Program is available at the Biological Academic Success Center (BASC) in 1023 Sciences Laboratory Building, or directly from Bodega Marine Laboratory, P.O. Box 247, Bodega Bay, CA 94923 707-875-2211.

Courses in Biological Sciences (BIS)

Lower Division

2A. Introduction to Biology: Essentials of Life on Earth (5)

Lecture—3 hours; discussion—2 hours. Essentials of life including sources and use of energy, information storage, responsiveness to natural selection and cellular origin of life and influence of living things on the chemistry of the Earth. Not open for credit to students who have completed course 1A with a grade of C- or better. GE credit: SciEng | SE—I, II, III, IV, V, VI, VII, VIII, IX, X, XI, XII, XIII

2B. Introduction to Basic Principles of Ecology and Evolution (5)

Lecture—3 hours; discussion—1 hour; laboratory—3 hours. Prerequisite: grade of C- in course 1A or 2A. Introduction to basic principles of ecology and evolution biology, focusing on fundamental mechanisms that generate and maintain biological diversity across scales ranging from molecules and genes to global processes and patterns. Not open for credit to students who have completed Biological Sciences 1B with a grade of C- or better. GE credit: SciEng | QL, SE, SL, VL—I, II, III, IV, V, VI, VII, VIII, IX, X, XI, XII, XIII

2C. Introduction to Biology: Biodiversity and the Tree of Life (5)

Lecture—4 hours, laboratory—3 hours. Prerequisite: course 1B or 2B completed with a C- or better. Introduction to organismal diversity, using the phylogenetic tree of life as an organizing theme. Lectures and laboratories cover methods of phylogenetic reconstruction, current knowledge of the tree of life, and the evolution of life’s most important and interesting innovations. Not open for credit to students who have completed course 1C with a grade of C- or better. GE credit: SciEng | QL, QL, SE, SL, VL—I, II, III, IV, V, VI, VII, VIII, IX, X, XI, XII, XIII

10. General Biology (4)

Lecture/discussion—4 hours. Concepts and issues in biology. Emphasis on composition and structure of organisms, regulation and signaling, heredity, evolution and the interaction and interdependence among life forms and their environments. Designed for students not specializing in biology. Not open for credit to students who have completed course 1A, 2A or 10V. GE credit: SciEng | SE—II, III

10V. General Biology (4)

Web virtual lecture—3 hours; web electronic discussion—1 hour. Concepts and issues in biology. Emphasis on composition and structure of organisms, regulation and signaling, heredity, evolution and the interaction and interdependence among life forms and their environments. Significant writing is required. Designed for students not specializing in biology. Not open for credit to students who have completed course 1A, 2C, 10V, 10V. GE credit: SciEng | SE—II, III

11. Issues in Life Sciences (4)

Lecture—1 hour; discussion—1 hour. Prerequisite: enrollment limited to BUSP students, consent of instructor. The range of subjects and approaches in the field of biology, including both basic and applied research topics. (I, II)

11L. Basic Life Sciences Laboratory (2)

Laboratory—6 hours. Prerequisite: enrollment limited to BUSP students, consent of instructor. Basic laboratory skills in life sciences research, including microbiology, molecular biology, and genetics. (IV, V)
122. Population Biology and Ecology (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: courses 1A, 1B, and 2A, or 2B, 2C; residence at Bodega Marine Laboratory required. Physical and biological processes affecting plant and animal populations in the rich array of habitats at the Bodega Marine Laboratory. Emphasis on field experience, with complementing lectures to address population and community processes. See Bodega Marine Laboratory Program. GE credit: SciEng | OL, QL, SE, VL, WE.—II. (III.) Morgan

122P. Population Biology and Ecology/Advanced Laboratory Topics (5)
Laboratory—12 hours; discussion—1 hour. Prerequisite: course 122 concurrently. Residence at Bodega Marine Laboratory. Seminar in scientific research, from hypothesis testing to publication, including methods of library research. Research related to topic covered in course 122. Final presentation both oral and written. (See Bodega Marine Laboratory Program.) GE credit: SciEng | SE, VL, WE.—III. (III.) Chang, Chen, Morgan

123. Undergraduate Colloquium in Marine Science (1)
Discussion—1 hour. Prerequisite: course 101 concurrently. Discussion of topics that draw on the expertise of several faculty. Emphasis on understanding models, their application both oral and written. (See Bodega Marine Laboratory Program.) GE credit: SciEng | OL, QL, SE, SL.—I. (I.) Brady, Chan, Draper, Dvorak, Engebret, Heyer, Kliebenstein, Langley, O'Neill, Rodriguez, Sanders, Turrelli

101D. Genes and Gene Expression Discussion (1)
Discussion—1 hour. Prerequisite: course 101 concurrently. Discussion of topics that draw on the expertise of several faculty. Emphasis on understanding models, their application both oral and written. (See Bodega Marine Laboratory Program.) GE credit: SciEng | OL, QL, SE, SL.—I. (I.) Brady, Chan, Draper, Dvorak, Engebret, Heyer, Kliebenstein, Langley, O'Neill, Rodriguez, Sanders, Turrelli

102Q. Quantitative Biomolecule Concepts (1)
Project—1 hour; autotutorial. Prerequisite: course 102 (may be taken concurrently). Study of the quantitative concepts and mathematical models fundamental to biochemistry. Offered irregularly. GE credit: SciEng | OL, SE.—II. (II.) Hayl, Thopp

103. Bioenergetics and Metabolism (3)
Lecture—3 hours. Prerequisite: course 102. Fundamentals of the carbon, nitrogen, and sulfur cycles in nature, including key reactions of biomolecules such as carbohydrates, amino acids, lipids, and nucleotides, and of energy production and use in different types of organisms. Principles of metabolic regulation. 1.5 units of credit for students who have completed Animal Biology 102 & 1.5 units of credit for students who have completed Biological Science 105. GE credit: SciEng | OL, SE.—II. (II.) Cheng, Etzler, Gasser, Hilt, Leary

121. Introduction to Dynamic Models in Modern Biology (4)
Lecture—3 hours; laboratory—2 hours. Prerequisite: Mathematics 16C, Statistics 13, 1 other lower division course in biology, or the equivalents. Dynamic modeling in the biological sciences, including matrix models, difference equations, differential equations, and complex dynamics. Examples include classic models in ecology, cell biology, physiology, and neurosciences. Emphasis on understanding models, their assumptions, and implications for modern biology. GE credit: SciEng | OL, QL, SE, VL, WE.—IV. (IV.) Gaylord, Hill, largier, Morgan, Sanford

132. Collaborative Studies in Mathematical Biology (3)
Lecture/discussion—3 hours. Prerequisite: Mathematics 16ABC or the equivalent, one course from course 1A, 1B, 2A, 2B, 2C, 3A, 3B, or 10 or the equivalent in biology, consent of instructor. Interdisciplinary research and training that uses mathematics and computation to solve current problems in biology. May be repeated twice for credit. Offered irregularly. GE credit: SciEng | OL, QL, SE, SL, VL, WE.

133. Collaborative Studies in Mathematical Biology (3)
Lecture—3 hours. Prerequisite: courses 1A, 1B, and 1C, or 2A, 2B, and 2C. Chemistry 88B or 118B or 128B. Fundamentals of biochemical processes, with emphasis on protein structure and activity; energy metabolism; catalysis of sugars, amino acids, and lipids; and global regulation. GE credit: SciEng | SE, QL—I, II, III, (I, II, III) Fiehn, Hill, Murphy, Thye

182. Systems Biology: From Biological Circuits to Biological Systems (2)
Lecture/discussion—2 hours; term paper. Prerequisite: course 101 and one course from Molecular and Cellular Biology 121, 161 or Plant Biology 113, Mathematics 16ABC or 17ABC, or consent of instructor. Applying systems theory to understand the properties of biological networks in a variety of model organisms. Emphasis on both local biological circuits, and genome-scale biological networks. Topics include network motifs, robustness, modeling, emergent properties and interactions in networks. GE credit: SciEng | OL, QL, SE, VL.—Brady

180L. Genomics Laboratory (5)
Lecture—2 hours; laboratory—6 hours; discussion—1 hour. Prerequisite: course 181. Course 183 may be taken concurrently. Molecular and Cellular Biology 182. Computational approaches to model and analyze biological information about genomes, transcriptomes, and proteomes. Topics include genome assembly and annotation, RNA profiling, proteomics, protein-DNA and protein-protein interaction networks, network analysis, and comparative genomics. Computer programming experience not required. Students who have received credit for taking Computer Science Engineering 124 or Biotechnology 130 will receive 3 units for completing course 180L. GE credit: SciEng | QL, SE, VL.—II. (III.) Brady, Dawson, Dinesh, Kumar, Harada, Korf, Maloof

181. Comparative Genomics (3)
Lecture—3 hours. Prerequisite: course 101. Comparison of genomes at the population and species level. Genomic techniques for mapping disease (and other) genes, reconstruction of evolutionary history and migration patterns, determination of gene function, prediction of novel protein function, and meta-genomics: determination of community composition and function. GE credit: SciEng | OL, SE, SL—I. (I.) Dawson, Maloof

183. Functional Genomics (3)
Lecture—3 hours. Prerequisite: course 101, course 102 or 105 recommended. Overview of genomic methodologies and key biological findings obtained using genome-wide analyses. RNA profiling, small RNA profiling, epigenomics, chromatin immunoprecipitation, proteomics, protein-DNA interactions, proteomics, and network analysis. GE credit: SciEng | OL, QL, SE, VL.—III. (III.) Brady, Maloof

192. Internship in Biological Sciences (1-12)
Internship—3-36 hours. Prerequisite: upper division standing and consent of instructor. (P/NP grading only)

194H. Research Honors (2)
Independent study—6 hours. Prerequisite: senior standing. Students majoring in Biological Sciences who have completed two quarters (2-3 units per quarter) of 199 and who qualify for the honors program as defined by the current catalog. Opportunity for Biological Sciences majors to pursue intensive research culminating in the writing of a senior thesis with the guidance of faculty advisers. (P/NP grading only) GE credit: SciEng | WE, WE.

195A. Science Teaching Internship Program (4)
Lecture/discussion—2 hours; internship—6 hours. Prerequisite: upper division standing in a science major or consent of instructor. Basic teaching techniques including lesson planning, classroom management, and presentation skills. Interns spend time in K-12 science classrooms working with a master teacher observing, assisting with labs and activities, managing students, and teaching lessons. (P/NP grading only)

195B. Science Teaching Internship (1-5)
Internship—2-15 hours. Prerequisite: course 195A. Reinforcement of teaching techniques learned in 195A with additional classroom experiences in K-12 science classrooms working with a master teacher observing, assisting with labs and activities, managing students, and teaching lessons. May be repeated one time for credit with consent of instructor. (P/NP grading only)
197T. Tutoring in Biological Sciences (1-5)
Discussion—2.6 hours. Prerequisite: upper division standing and consent of instructor. Assisting the
instructor by tutoring students in one of the Biological Sciences’ regular courses. May be repeated for
credit. (P/NP grading only.) —I, II, III. (I, II, III)

198. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study in Biological Sciences (1-5)
Prerequisite: upper division standing and consent of instructor. (P/NP grading only)

(Mechanical and Aerospace Engineering, Biomedical Engineering)

Graduate Study. The Graduate Group in Biomedical Engineering offers programs of study and research leading to the M.S. and Ph.D. degrees. The programs of study prepare students for professional work in the effective integration of engineering with medical and biological sciences. Research strengths lie in the areas of imaging, tissue engineering and regenerative medicine, sensor and MEMs systems, cellular and molecular mechanics, computational modeling, targeted therapeutics, orthopedic biomechanics, biofluids and transport, and human movement. This broad interdisciplinary program is best suited for students who are capable of and comfortable with considerable independence. Each student, together with an advisor, defines a specific course of study suited to individual needs.

Preparation. The Group regards strong competence in mathematics and engineering as necessary for successful completion of study. Prior course work in these areas is emphasized in the evaluation of applications. Some undergraduate training can be acquired after admission to the Group, but it may require an additional year of study.

Courses. See Engineering, Biomedical, on page 250.

Jianling Wang, Ph.D., Professor (Statistics)
Keith Widaman, Ph.D., Professor (Psychology)
Graduate Study. Biostatistics is a field of science that uses quantitative methods to study life sciences related problems that arise in a broad array of fields. The program provides students with, first, solid training in the biostatistical core disciplines and theory, second, with state-of-the-art knowledge and skills for biostatistical data analysis, third, substantial exposure to the biological and epidemiological sciences; and fourth, with a strong background in theoretical modeling, statistical techniques and quantitative as well as computational methods. Programs of study and research are offered leading to the M.S. and Ph.D. degrees. The program prepares students for interdisciplinary careers ranging from bioinformatics, environmental toxicology and stochastic modeling in biology and medicine to clinical trials, drug development, epidemiological and medical statistics. The program draws on the strengths of the Biostatistics faculty at UC Davis.

Preparation. Students should have one year of calculus, a course in linear algebra or one year of biological course work; facility with a programming language; and upper-division work in at least one of Mathematics, Statistics and Biology.

Graduate Adviser. Jie Peng (Statistics)

Courses in Biostatistics (BST)

Graduate

222. Biostatistics: Survival Analysis (4) Lecture—3 hours; discussion/laboratory—1 hour. Prerequisite: Statistics 131C. Incomplete data; life tables; nonparametric methods; parametric methods; accelerated failure time models; proportional hazards models; partial likelihood; advanced topics. (Same course as Statistics 222.)—II, III.

223. Biostatistics: Generalized Linear Models (4) Lecture—3 hours; discussion/laboratory—1 hour. Prerequisite: Statistics 131C. Likelihood and linear regression; generalized linear model; Binomial regression; cluster-randomized studies; dose-response and bioassay; Poisson regression; Gamma regression; quasi-likelihood models; estimating equations; multivariate GLMs. (Same course as Statistics 223.)—II.

224: Analysis of Longitudinal Data (4) Lecture—3 hours; discussion/laboratory—1 hour. Prerequisite: course/Statistics 222, 223, Statistics 232B or consent of instructor. Standard and advanced methodology, theory, algorithms, and applications relevant to the analysis of repeated measurements and longitudinal data in biostatistical and statistical settings. (Same course as Statistics 224.)—III.

225. Clinical Trials (4) Lecture—3 hours; discussion/laboratory—1 hour. Prerequisite: course/Statistics 223 or consent of instructor. Basic statistical principles of clinical designs, including bias, randomization, blocking, and masking. Practical applications of widely-used designs, including dose-finding, comparative and cluster randomization designs. Advanced statistical procedures for analysis of data collected in clinical trials. (Same course as Statistics 225.) Offered in alternate years. —III.

226. Statistical Methods for Bioinformatics (4) Lecture—3 hours; discussion/laboratory—1 hour. Prerequisite: course 131C or consent of instructor; data analysis experience recommended. Standard and advanced statistical methodology, theory, algorithms, and applications relevant to the analysis of omic data. (Same course as Statistics 226.) Offered in alternate years. —III.

252. Advanced Topics in Biostatistics (4) Lecture—3 hours; discussion/laboratory—1 hour. Prerequisite: course 222, 223. Biostatistical methods and applications focused on at least one of the following: genetics, bioinformatics and genomics; longitudinal or functional data; clinical trials and experimental design; analysis of environmental data; dose-response, nutrition and toxicology; survival analysis; observational studies and epidemiology; computer-intensive or Bayesian methods in biostatistics. May be repeated for credit with consent of adviser when topic differs. (Same course as Statistics 252.) Offered in alternate years. —III.

290. Seminar in Biostatistics (1) Seminar—1 hour. Seminar on advanced topics in the field of biostatistics. Presented by members of the Biostatistics Graduate Group and other guest speakers. May be repeated for up to 12 units of credit. (S/U grading only).—I, II, III.

298. Directed Group Study (1-5) Prerequisite: consent of instructor. (S/U grading only).

299. Special Study for Biostatistics (1) Prerequisite: consent of instructor. (S/U grading only).

299D. Dissertation Research (1-12) Prerequisite: advancement to Candidacy for Ph.D. and consent of instructor. Research in biostatistics under the supervision of major professor. (S/U grading only).

Biotechnology

[College of Agricultural and Environmental Sciences]

Faculty. Faculty includes members of the Department of Animal Science, on page 153; Engineering: Chemical Engineering and Materials Science, on page 255; Computer Science, on page 216; Engineering: Biological and Agricultural, on page 245; Food Science and Technology, on page 313; Land, Air and Water Resources, on page 364, Plant Pathology, on pages 476, Viticulture and Enology, on page 541; and the College of Biological Sciences, on page 179.

The Major Program

Every living organism, from the smallest and most primitive bacteria to every plant, insect, animal or human being, contains DNA as the primary genetic material. DNA directs all cellular processes, creating the incredible variety and diversity of living organisms in the biosphere. Biotechnology focuses on the mechanics of life processes and their application. Biotechnology means "life technology" and represents an integrated, multidisciplinary field, with a profound impact today on almost every aspect of human endeavor.

Preparatory Requirements. UC Davis students who wish to change their major to Biotechnology must complete the following courses (representing the subject areas of Biological Sciences, Chemistry, and Mathematics) with a grade point average of at least 2.50 in each subject area. All of these courses must be taken for a letter grade:

- Biological Sciences 2A, 2B, 2C, 15
- Chemistry 2A, 2B, 2C, 15
- Mathematics, one of the following groups: 6-8
  - Mathematics 16A, 16B
  - Mathematics 17A, 17B
  - Mathematics 21A, 21B

The Program. In the first two years, students develop a strong and general background in biological science with an emphasis on fundamental concepts and basic principles of genetics, molecular biology and cell biology. Four options, Animal Biotechnology, Plant Biotechnology, Fermentation, Microbial Biotechnology, and Bioinformatics, provide in-depth training and specialized knowledge in an aspect of biotechnology. Each option has a strong laboratory component to reinforce the theoretical concepts. Students also do an internship in a biotechnology company or university or government laboratory.

Internships and Career Opportunities. In the last decade, more industries are turning to biotechnology to solve problems and improve products, creating a growing job market for individuals trained in biotechnology in the agricultural, food and beverage, health care, chemical, pharmaceutical and bio-chemical, and environmental and bioremediation industries. Graduates trained in the technologies designed for biotechnology will find their training applicable to advanced research in molecular biology, genetics, biochemistry, and the plant and animal sciences.

B.S. Major Requirements:

Preparatory Subject Matter................. 57-69
- Biological Sciences 2A-2B-2C............. 15
- Chemistry 2A-2B-2C......................... 15
- Mathematics 16A, 16B, or 17A, 17B, or 21A, 21B............................................. 6-8
- Physics 7A-7B.................................. 8
- Plant Sciences 120 or Statistics 100........ 4
- Biotechnology................................. 4
- Select one course from: .............................
  - University Writing Program 101, 102A, 102B, 102C, 102D, 102E, 102F, 102G, 102H, 102I, 102J, 102K, 102L, 102M, 104A, 104B, 104C, 104D, 104E, 104F, 104I, 104T [may overlap with college composition requirement, may be waived by passing the upper division composition exam]

Depth Subject Matter......................... 16-20
- Biological Sciences 101................... 4
- Biological Sciences 104................... 4
- Molecular and Cellular Biology 121 or 161 4
- Biotechnology 187......................... 3
- Internship or independent research; course 192 or 199 or Biotechnology 189L........ 3
- Undergraduate research proposal:
  - Biotechnology 188 (optional).............. 3
  - Honors undergraduate thesis (optional) .. 1

Areas of Specialization (choose one)

- Fermentation/Microbiology Biotechnology Option............................................. 38-45
  - Microbiology 104; Biological Sciences 102 and 103; Animal Biology 102 and 103; Microbiology 104L or Food Science and Technology 104L; Molecular and Cellular Biology 160L or Biological Sciences 160L;/Biotechnology 104, 115; 120, 140, 150, 170, 180, 181, 182, 183, 188, 190; Molecular Biology 182........... 23-30
  - Restricted Electives......................... 15
  - Select from:

- Plant Biotechnology Option............... 38-45
  - Microbiology 101, Molecular and Cellular Biology 126, Plant Sciences 152, Biotechnology 160, 161A, 161B, Biochemistry: Biology 105; or Biological Sciences 102 and 103, or Animal Biology 102 and 103........ 28-35
  - Restricted Electives......................... 10
  - Select at least one course from each of the following areas:
    - (a) Pests, Pathogens and Production: Biological Sciences 181, 183, Biotechnology 150, 161L, Viticulture and Enology 130A, 130B, Engineering: Computer Science

Quarter Offered: I-Fall, II-Winter, III-Spring, IV-Summer: 2013-2016 offering in parentheses

Pre-Fall 2011 General Education (GE): ArtHum—Art and Humanities; SciEng—Science and Engineering; SocSci—Social Sciences; AchArt—American Cultures; DD—Diverse Domestic; Wrt—Writing Experience

Fall 2011 and on Revised General Education (GE): AH—Arts and Humanities; SE—Science and Engineering; SS—Social Sciences; ACGN—American Cultures; DD—Diverse Domestic; OL—Oral Skills; QL—Quantitative; SL—Scientific; VL—Visual; WC—World Cultures; WE—Writing Experience
Bodega Marine Laboratory Program

http://bml.ucdavis.edu/

See also Biological Sciences, Bodega Marine Laboratory Program, on page 181.

In the 2014-2015 meeting the B.S. in Marine and Coastal Science (MCS) major will major and the MCS field requirement can be fulfilled by any of the courses below.

Spring Quarter Program

A full quarter (15 units) of undergraduate course work in marine biology is available each spring quarter at the Bodega Marine Laboratory, located in Bodega Bay, California. Course offerings include lecture and laboratory instruction in the development of biology and physiological substrates of marine organisms, and population biology and ecology; a weekly colloquium; and an intensive individual research experience under the direction of laboratory faculty. Biological Sciences courses 120, 120P, 122, 122P, 123, 124, 141, and 141P. This is a 15 unit program and course offerings and instructors may vary from year to year. Applications are due January 31.

For more course detail, see full description under appropriate academic department listing or http://bml.ucdavis.edu/.

Summer Session Courses

This integrated program offers students a multidisciplinary understanding of coastal ecosystems through intensive, hands on lab and field courses taught at Bodega Marine Laboratory. The program offers students three sequences of instruction with up to 10 units each. Two sequences occur during the first Summer Session and one sequence in the second Summer Session. Applications are due April 15.

For more course detail, see full description under appropriate academic department listing or http://bml.ucdavis.edu/.

Sequences are:

1. Marine Organisms and Ecology of the California Peninsula
   Evolution and Ecology 106, 114, 111, 110; Biological Sciences 124
2. Effects of Coastal Pollution on Marine Organisms
   Environmental Toxicology
3. Oceanography: Environmental Science and Policy 152; Geology/Environmental Science and Policy 150C, Biological Sciences 124

Course offerings, sequence structure and instructors may vary from year to year.

Bodega Marine Laboratory spring and summer programs are residential, with students housed on the laboratory grounds. Participants are assessed a

Giulia Galli, Ph.D., Adjunct Professor

The Major Programs

Chemistry studies the composition of matter, its structure, and the means by which it is converted from one form to another.

The Program. The Department of Chemistry offers several degree programs leading to the Bachelor of Arts and the Bachelor of Science. The curriculum leading to the A.B. degree offers a substantive program in chemistry while allowing students the freedom to take more courses in other disciplines and pursue a broad liberal arts education. Students who have a deeper interest in chemistry normally elect one of the several programs leading to the B.S. degree. The standard B.S. program, the only chemistry program accredited by the American Chemical Society, is appropriate for students who are interested in chemistry as a profession. The B.S. in Chemical Physics, the B.S. in Pharmaceutical Chemistry, and the two B.S. Applied Chemistry emphases are slightly less intense in chemistry, and draw on significant course materials from areas relevant to their particular focus but outside of a classical chemistry degree. Students following the A.B. or one of the B.S. programs may consider taking advantage of the Education Abroad Program. Our major adviser can assist students in planning a curriculum while abroad that assures regular progress in the major. A minor program in chemistry is also available.

Career Alternatives. Chemistry graduates with bachelor’s degrees are employed extensively throughout various industries in quality control, research and development, production supervision, technical marketing, and other areas. The types of industries employing these graduates include chemical, energy, pharmaceutical, genetic engineering, biotechnology, food and beverage, petroleum and petrochemical, paper and textile, electronics and computer, and environmental and regulatory agencies. The bachelor’s programs also provide chemistry graduates with the rigorous preparation needed for an advanced degree in chemistry and various professional schools in the health sciences.

Chemistry

A.B. Major Requirements:

Preparatory Subject Matter..................36-42

Chemistry 2A-2B-2C or 2AH-2BH-2CH..15

Physics 7A-7B-7C or 9A-9B-9C............12-15

Mathematics 16A-16B-16C or 17A-17B-17C or 21A-21B-21C........................................9-12

Depth Subject Matter.......................43

At least 11 additional upper division units in chemistry (except Chemistry 107A or 107B) or related areas, including one course with formal lectures. Courses in related areas must be approved in advance by the major adviser. See Chemistry Major Adviser for details. At least 11

Total Units for the Major....................79-85

Chemistry

ACS Preparatory Program

B.S. Major Requirements:

Preparatory Subject Matter...............53

Chemistry 2A-2B-2C or 2AH-2BH-2CH..15

Physics 7A-7B-7C or 9A-9B-9C............12-15

Depth Subject Matter.......................54

Chemical Physics

At least seven additional upper division units in chemistry [except Chemistry 107A, 107B], including one course with formal lectures. 

Total Units for the Major 107

Recommended

Physics 9D

Chemistry

Applied Chemistry-Environmental Chemistry emphasis

B.S. Major Requirements:

Chemistry Placement Examination. Students who enroll in Chemistry 2A, 2AH or Workbench Chemistry 41C must achieve the appropriate score on the Chemistry Placement Exam. In addition to the Chemistry Placement Exam, students are also required to pass the Mathematics Placement Exam with a satisfactory score appropriate to the Chemistry class they have placed into. See the Department of Chemistry website (http://chemistry.ucdavis.edu/undergraduate/chemplacement.html) for additional information on placement requirements. 

Total Units for the Major 107

Chemical Physics

B.S. Major Requirements:

Preparatory Subject Matter

Chemistry 2A-2B-2C or 2AH-2B-2CH ....... 2

Mathematics 1A-1B-1C or 1B-1C-1C ....... 12

Physics 7A, 7B, 7C or 9A-9B-9C ....... 12

Preparatory Subject Matter

Physics 10A, 105A, 105B, 105C ....... 12

At least one course from: Physics 105B, 110B, 112, 115A, 140A ....... 4

At least two additional upper division units in chemistry [except Chemistry 107A, 107B] ....... 2

Total Units for the Major 110

Pharmaceutical Chemistry

B.S. Major Requirements:

Preparatory Subject Matter

Chemistry 2A-2B-2C or 2AH-2B-2CH ....... 3

Mathematics 1A-1B-1C or 1B-1C-1C ....... 12

Physics 7A, 7B, 7C or 9A-9B-9C ....... 12

Preparatory Subject Matter

Physics 10A, 105A, 105B, 105C ....... 12

At least one course from: Physics 105B, 110B, 112, 115A, 140A ....... 4

At least two additional upper division units in chemistry [except Chemistry 107A, 107B] ....... 2

Total Units for the Major 110

Lower Division

2A. General Chemistry (5)

Lecture — 3 hours, laboratory — discussion — 4 hours. Prerequisite: High school chemistry and physics or satisfactory score on diagnostic examinations. Periodic table, stoichiometry, chemical equations, physical or their equivalents. Stu. concept of the atomic theory of gases, atomic and molecular structure and chemical bonding. Laboratory experiments in stoichiometric relations, properties and collection of gases, atomic spectroscopy, and introductory qualitative analysis. Only 3 units of credit allowed to st. who have completed course 9. GE credit: SciEng | QL, SE — I, II, III, IV

2B. General Chemistry (5)

Lecture — 3 hours, laboratory — discussion — 4 hours. Prerequisite: High school chemistry and physics. Satisfactory score on diagnostic examinations. Mathe. 21A (may be taken concurrently) or consent of instructor. Limited enrollment with a more rigorous treatment of material covered in course 2A. Students completing course 2B can continue with course 2B8 or 2C. — I, II

2B8. Honors General Chemistry (5)

Lecture — 3 hours, laboratory — discussion — 4 hours. Prerequisite: course 2A or 2AH. Continuation of course 2A. Condensed phases and intermolecular forces, chemical thermodynamics, chemical equilibria, acids and bases, solution properties, laboratory experiments in thermoclinometry, equilibria, and quantitative analysis using volumetric methods. GE credit: SciEng | QL, SE — I, II, III, IV, V

2BH. Honors General Chemistry (5)

Lecture — 3 hours, laboratory — discussion — 4 hours. Prerequisite: course 2AH or consent of instructor or course 2AH with a grade of C or better; and Mathe. 21B (may be taken concurrently) or consent of instructor. Limited enrollment with a more rigorous treatment of material covered in course 2B. Students completing course 2BH can continue with course 2C or 2C — II, III, IV

2C. General Chemistry (5)

Lecture — 3 hours, laboratory — discussion — 4 hours. Prerequisite: course 2B or 2B8. Continuation of course 2B. Kinetics, electrochemistry, spectroscopy, structure and bonding in transition metal compound. Applications, principles and chemical reactions. Laboratory experiments in selected analytical methods and syntheses. GE credit: SciEng | QL, SE — I, II, III, IV, V

2CH. Honors General Chemistry (5)

Lecture — 3 hours, laboratory — discussion — 6 hours. Prerequisite: course 2C or 2CH with a grade of C or better; and Mathematics 21C (may be taken concurrently) or consent of instructor. Limited enrollment with a more rigorous treatment of material covered in course 2CH. — II, III, IV, V

8A. Organic Chemistry: Brief Course (2)

Lecture — 2 hours. Prerequisite: course 2B with a grade of C— or higher. With course 8B, an introduction to the nomenclature, structure, chemistry, and mechanisms of organic compounds. Intended for students majoring in areas other than organic chemistry. — III, IV, V

8B. Organic Chemistry: Brief Course (4)

Lecture — 3 hours, laboratory — 3 hours. Prerequisite: course 2B or 2CH. Continuation of course 2B. Laboratory concerned primarily with organic laboratory techniques and the chemistry of the common classes of organic compounds. — I, II, III, IV, V

10. Concepts of Chemistry (4)

Lecture — 4 hours. A survey of basic concepts and contemporary applications of chemistry. Designed for non-science majors and not as preparation for Chemistry 2A. Course Not open for credit to stu.
students who have had Chemistry 2A; but students with credit for course 10 may take Chemistry 2A for full credit. GE credit: SciEng | VL, SE, WE.—I, II, III. (I, II, III.)

98. Directed Group Study (1-5)
Prerequisite: consent of instructor. Primarily for lower division students. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)
Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division

100. Environmental Water Chemistry (3)
Lecture—3 hours. Prerequisite: course 2C. Practical aspects of water chemistry in the environment, including thermodynamic relations, coordination chemistry, solubility calculations, redox reactions and rate laws. Computer modeling of the evolution in water chemistry from contact with minerals and gases. —II. (II.) Casey

104. Forensic Applications of Analytical Chemistry (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: course 2C. Theory and application of standard methods of chemical analysis to evidentiary samples. Use and evaluation of results from screening tests, FTIR, GC and GCMS to various sample types encountered in practice. —I. (I.)

105. Analytical and Physical Chemical Methods (4)
Lecture—2 hours; laboratory—6 hours. Prerequisite: course 10OA (may be taken concurrently) or courses 107A or 107B. Fundamental theory and laboratory techniques in analytical and physical chemistry. Errors and data analysis methods. Basic electrical circuits in instruments. Advanced solution equilibria. Potentialometric, colorimetric, and polarographic separations. UV-visible spectroscopy. Lasers. GE credit: SciEng | QL, SE, WE.—I, II, III. (I, II, III.)

107A. Physical Chemistry for the Life Sciences (3)
Lecture—3 hours. Prerequisite: course 2C, Mathematics 16C or 21C, one year of college level physics. Physical chemistry intended for majors in the life science area. Introductory development of classical and statistical thermodynamics including equilibria processes and solutions of both non-electrolytes and electrolytes. The thermodynamic basis of electrochemistry and membrane potentials. —I. (I.)

107B. Physical Chemistry for the Life Sciences (3)
Lecture—3 hours. Prerequisite: course 107A. Continuation of course 107A. Kinetic theory of gases and transport processes in liquids. Chemical kinetics, enzymatic kinetics and theories of reaction rates. Introduction to quantum theory, atomic and molecular structure, and spectroscopy. Application to problems in the biological sciences. —II. (II.)

108. Molecular Biochemistry (3)
Lecture—3 hours. Prerequisite: course 128C. Pass One open to Chemistry majors. Chemical principles and experimental methods applied to the biological sciences to understand the molecular structure and function of proteins, nucleic acids, carbohydrates, and membrane lipids. —III. (III.)

110A. Physical Chemistry: Introduction to Quantum Mechanics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2C, Mathematics 16C or 21C, one year of college physics. Introduction to the postulates and general principles of quantum mechanics. Approximations based on variational method and time independent perturbation theory. Application to harmonic oscillator, rigid rotor, one-electron and many-electron atoms, and homo-and hetero-nuclear diatomic molecules. GE credit: SciEng | QL, SE.—I, II, III. (I, II, III.)

110B. Physical Chemistry: Properties of Atoms and Molecules (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 110A. Group theory. Application of quantum mechanics to polyatomic molecules and molecular spectroscopy. Intramolecular forces and the gas, liquid and solid states. Distributions, ensembles and partition function properties. —I, II, III. (I, II, III.)

110C. Physical Chemistry: Thermodynamics, Equilibria and Kinetics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 110B. Development and application of the general principles of thermodynamics and statistical thermodynamics. Chemical kinetics, rate laws for chemical reactions and reaction mechanisms. —II, III. (II, III.)

115. Instrumental Analysis (4)
Lecture—2 hours; laboratory—6 hours. Prerequisite: courses 105 and 110B (may be taken concurrently) or 107A or 107B. Intermediate theory and laboratory techniques in analytical and physical chemistry. Advanced data analysis methods and goodness-of-fit criteria. Fourier transform spectroscopic methods and instrumentation. Mass spectrometry. Electrochemistry. Liquid and gas chromatography and spectroscopy. GE credit: SciEng, Wrt | QL, SE, WE.—I, II, III. (I, II, III.)

118A. Organic Chemistry for Health and Life Sciences (4)
Lecture—3 hours; laboratory/discussion—1.5 hours. Prerequisite: course 110B with a grade of C– or higher. The 118A, 118B, 118C series is for students planning professional school studies in health and life sciences. A rigorous, in-depth presentation of basic principles with emphasis on stereochemistry and spectroscopy and preparations and reactions of nonaromatic hydrocarbons, haloaldehydes, alcohols and ethers. —I, II, III. (I, II, III.)

118B. Organic Chemistry for Health and Life Sciences (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 118A. Continuation of course 118A, with emphasis on spectroscopy and the preparation and reactions of aromatic hydrocarbons, organometallic compounds, aldehydes and ketones. —I, II, III. (I, II, III.)

118C. Organic Chemistry for Health and Life Sciences (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 118B. Continuation of course 118B, with emphasis on the preparation, reactions and identification of carboxylic acids and their derivatives, aldehyd and acyl amines, β-dicarbonyl compounds, and various classes of naturally occurring, biologically important compounds. —I, II, III. (I, II, III.)

121. Introduction to Molecular Structure and Spectra (4)
Lecture—4 hours. Prerequisite: course 110B. Modern theoretical and experimental methods used to study problems of molecular structure and bonding; emphasis on spectroscopic techniques. —III. (III.)

122. Chemistry of Nanoparticles (3)
Lecture—3 hours. Prerequisite: course 110C (may be taken concurrently). Chemical and physical aspects of inorganic nanoparticles. Topics include synthesis, structure, colloidal behavior, catalytic activity, size and shape dependency of physical properties, analytical methods and applications. —III. (III.) Osterloh

124A. Inorganic Chemistry: Fundamentals (3)
Lecture—3 hours. Prerequisite: course 2C. Symmetry, molecular geometry and structure, molecular orbital theory of bonding (polyatomic molecules and transition metals), solid state chemistry, energetics and spectroscopy of inorganic compounds. —I. (I.)

124B. Inorganic Chemistry: Main Group Elements (3)
Lecture—3 hours. Prerequisite: course 124A. Synthesis, structure and reactivity of inorganic and hetero-organic molecules containing the main group elements. —II. (II.)

124C. Inorganic Chemistry: d and f Block Elements (3)
Lecture—3 hours. Prerequisite: course 124A. Synthesis, structure and reactivity of transition metal complexes, organometallic and bioinorganic chemistry, the lanthanides and actinides. —III. (III.)

124L. Laboratory Methods in Inorganic Chemistry (2)
Laboratory—6 hours. Prerequisite: course 124B or 124C (may be taken concurrently). The preparation, purification and characterization of main group and transition metal inorganic and organometallic compounds. —III. (III.)

125. Advanced Methods in Physical Chemistry (4)
Lecture—2 hours; laboratory—6 hours. Prerequisite: course 110C (may be taken concurrently) and 115. Advanced theory and laboratory techniques in analytical and physical chemistry. Advanced spectroscopic methods. Thermodynamics. Kinetics. Chemical literature. Digital electronics and computer interfacing. Laboratory measurements and vacuum techniques. GE credit: SciEng; Wrt | QL, SE, WE.—II, III. (II, III.)

128A. Organic Chemistry (3)
Prerequisite: course 128B or consent of instructor, course 129A strongly recommended; chemistry majors should enroll in course 129A concurrently. Continuation of course 128A with emphasis on aromatic and aliphatic substitution reactions, elimination reactions, and the chemistry of carbonyl compounds. Introduction to the application of spectroscopic methods to organic chemistry. —II, III. (II, III.)

128B. Organic Chemistry (3)
Prerequisite: course 128B, chemistry majors should enroll in course 129C concurrently. Continuation of course 128B with emphasis on enolate condensations and the chemistry of amines, phenols, and sugars; selected biologically important compounds. —I, II, III. (I, II, III.)

129A. Organic Chemistry Laboratory (2)
Laboratory—1 hour; lecture—3 hours. Prerequisite: course 2C with a grade of C or higher; or course 129A concurrently. Continuation of course 129A with emphasis on enolate condensations and the chemistry of amines, phenols, and sugars; selected biologically important compounds. —I, II, III. (I, II, III.)

129B. Organic Chemistry Laboratory (2)
Laboratory—6 hours. Prerequisite: courses 128B (may be taken concurrently) and 129A. Continuation of course 129A. Emphasis is on methods used for synthesis and isolation of organic compounds. —II, III. (II, III.)

129C. Organic Chemistry Laboratory (2)
Laboratory—6 hours. Prerequisite: course 128C (may be taken concurrently) and 129B. Continuation of course 129B.—I, II, III. (I, II, III.)

130A. Pharmaceutical Chemistry (3)
Lecture—3 hours. Prerequisite: course 110C or 128C. Examination of the design principles and experimental methods used in pharmaceutical and medicinal chemistry. —II. (II.)

130B. Pharmaceutical Chemistry (3)
Lecture—2 hours; lecture/laboratory—1 hour. Prerequisite: course 130A. Continuation of course 130A with emphasis on case studies of various drugs and the use of computational methods in drug design. —III. (III.)

130C. Case Studies in Pharmaceutical Chemistry (1)
Seminar—2 hours; independent study. Prerequisite: courses 130A and 130B concurrently. Seminar. Exploration of medicinal and pharmaceutical chem-
Chemistry

131. Modern Methods of Organic Synthesis (3)
Lecture—3 hours. Prerequisite: course 128C. Introduction to modern synthetic methodology in organic chemistry with emphasis on stereoselective reactions and application to multistep syntheses of organic molecules containing functional groups. (P/NP grading only.—I. [III])

135. Advanced Bio-organic Chemistry Laboratory (3)
Lecture—1 hour; laboratory—6 hours. Prerequisite: course 118C or 129C. Separation, purification, identification and biological evaluation of organic compounds using modern methods of synthesis, computational chemistry and instrumentation. Emphasis on pharmaceutical and medicinal substances.—I. [II] [III]

150. Chemistry of Natural Products (3)
Lecture—3 hours. Prerequisite: course 128C. Chemistry of terpenes, steroids, acetogenins, and alkaloids: isolation, structure determination, biosynthesis, chemical transformation, and total synthesis. GE credit: SciEng, Wrt | SE, WE.—III. (II)

192. Internship in Chemistry (1-6)
Internship—3-18 hours. Prerequisite: upper division standing; project approval by faculty sponsor prior to enrollment. Supervised internship in chemistry requires a final written report. May be repeated for credit for a total of 6 units. (P/NP grading only.)

194HA-194HB-194HC. Undergraduate Honors Research (2-2-2)
Independent study.—2 hours. Prerequisite: open only to chemistry majors who have completed 135 units and who qualify for the honors program. Original research under the guidance of a faculty adviser, culminating in the writing of an extensive report. [Deferral grading only, pending completion of sequence.]

195. Careers in Chemistry (1)
Seminar—2 hours. Prerequisite: junior or senior standing in Chemistry. Designed to give Chemistry undergraduate students an indepth appreciation of career opportunities with a bachelors degree in chemistry. Professional chemists (and allied professionals) describe research and provide career insights. (P/NP grading only.)

197. Projects in Chemical Education (1-4)
Discussion and/or laboratory. Prerequisite: consent of instructor. Participation may include development of laboratory experiments, lecture demonstrations, autotutorial modules or assistance with laboratory sessions. May be repeated for credit for a total of 12 units. (P/NP grading only.)—I, II, III. (I, II, III)

198. Directed Group Study (1-5)
Prerequisite: consent of instructor based upon adequate preparation in chemistry, mathematics and physics. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)
Prerequisite: consent of instructor based upon adequate preparation in chemistry, mathematics and physics. (P/NP grading only.)

Graduate

201. Chemical Uses of Symmetry and Group Theory (3)
Lecture—3 hours. Prerequisite: course 124A and 110B, or consent of instructor. Symmetry elements and applications, point groups, representations of groups. Applications to molecular orbital theory, ligand field theory, molecular vibrations, and angular momentum. Crystallographic symmetry.—I. [I]

204. Mathematical Methods in Chemistry (3)

205. Symmetry, Spectroscopy, and Structure (3)
Lecture—3 hours. Prerequisite: course 201 or the equivalent. Vibrational and rotational spectra; electronic spectra and determination of electron spectroscopy; magnetic, electron spin and nuclear quadrupole resonance spectroscopy; nuclear magnetic resonance spectroscopy; other spectroscopic methods.—II. [III]

209. Special Topics in Physical Chemistry (3)
Lecture—3 hours. Prerequisite: courses 210A and 211A. Graduate standing in Chemistry. Advanced topics in physical chemistry or chemical physics chosen from areas of current research interest. May be repeated for credit.

210A. Quantum Chemistry: Introduction and Stationary-State Properties (3)
Lecture—3 hours. Prerequisite: courses 110B and 110C or consent of instructor. Stationary-state quantum chemistry: postulates of quantum mechanics, simple solutions, central field problems and angular momentum, hydrogen atom, perturbation theory, variational theory, atoms and molecules.—II. [III]

210B. Quantum Chemistry: Time-Dependent Systems (3)
Lecture—3 hours. Prerequisite: course 210A. Matrix mechanics and quantum chemistry: stationary quantum chemistry: matrix formulation of quantum mechanics, Heisenberg representation, time-dependent perturbation theory, selection rules, density matrices, and miscellaneous molecular properties.—I, III. [II]

210C. Quantum Chemistry: Molecular Spectroscopy (3)
Lecture—3 hours. Prerequisite: course 210B. Molecular spectroscopy: Born-Oppenheimer approximation, rotational, vibrational and electronic spectroscopy, spin systems, and molecular photophysics.—I. [I]

211A. Advanced Physical Chemistry: Statistical Thermodynamics (3)
Lecture—3 hours. Prerequisite: consent of instructor. Principles and applications of statistical mechanics; ensemble theory; statistical thermodynamics of gases, solids, liquids, electrolyte solutions and polymers; chemical equilibrium.—I. [I]

211B. Advanced Physical Chemistry (3)
Lecture—3 hours. Prerequisite: course 211A. Statistical mechanics of nonequilibrium systems, including the rigorous kinetic theory of gases, continuum mechanics transport in dense fluids, stochastic processes, bifurcations, and linear response theory. Offered in alternate years.—II.

212. Chemical Dynamics (3)
Lecture—3 hours. Prerequisite: consent of instructor. Introduction to modern concepts in chemical reaction dynamics. Emphasis will be placed on experimental techniques as well as emerging physical models for characterizing chemical reactivity at a microscopic level. Offered in alternate years.—II.

215. Theoretical and Computational Chemistry (3)
Lecture—3 hours. Prerequisite: courses 211A and 210B or consent of instructor. Mathematics of wide utility in chemistry as methods for guidance or alternative to experiment, and modern formulations of chemical theory. Emphasis will vary in successive years. May be repeated for credit when topic differs.—II, III. [II, III]

216. Magnetic Resonance Spectroscopy (3)
Lecture—3 hours. Prerequisite: courses 210A, 210B (may be taken concurrently). Quantum mechanics of spin and orbital angular momentum, nuclear magnetic resonance, theory of chemical shift and multiple structures, electron spin resonance, theory of g-tensor in organic and transition ions, spin Hamiltonians, nuclear quadrupolar resonance, spin relaxation processes. Offered in alternate years.—III. [III]

217. X-Ray Structure Determination (3)
Lecture—3 hours. Prerequisite: consent of instructor. Introduction to x-ray structure determination, crystals, symmetry, diffraction geometry, sample preparation and handling, diffraction apparatus and data collection, methods of structure solution and refinement, presentation of results, text, tables and graphics, crystallographic literature.—III. [III]

218. Macromolecules: Physical Principles (3)
Lecture—3 hours. Prerequisite: courses 110A, 110B, 110C or the equivalent. Relationship of higher order macromolecular structure to subunit composition; equilibrium properties and macromolecular dynamics; physical chemical determination of macromolecular structure. Offered in alternate years.—II.

219. Spectroscopy of Organic Compounds (4)
Lecture—3 hours; laboratory—2.5 hours. Prerequisite: course 128C or the equivalent. Identification of organic compounds and investigation of stereochemical and reaction mechanism phenomena using spectroscopic methods—principally NMR, IR and MS.—I, II. [III]

219L. Laboratory in Spectroscopy of Organic Compounds (1)
Laboratory—2.5 hours. Prerequisite: course 219 (may be taken concurrently). Restricted to Chemistry graduate students only (or consent of instructor). Practical application of NMR, IR and MS techniques for organic molecules.—II, III.

221A-H. Special Topics in Organic Chemistry (3)
Lecture—3 hours. Selected topics of current interest in organic chemistry. Topics will vary each time the course is offered, and it is open for credit to students the research interests of the staff member giving the course.—I. [I]

221B. Special Topics in Organic Chemistry (3)
Lecture—3 hours. Prerequisite: course 124A or the equivalent. Electronic structures, bonding, and reactivity of transition metal compounds. Offered every third year.—II.

221B. Special Topics in Organic Chemistry (3)
Lecture—3 hours. Prerequisite: course 124A or the equivalent. Electronic structures, bonding, and reactivity of transition metal compounds. Offered every third year.—II.

222. Principles of Transition Metal Chemistry (3)
Lecture—3 hours. Prerequisite: course 124A or the equivalent. Electronic structures, bonding, and reactivity of transition metal compounds. Offered every third year.—II.

228A. Bio-inorganic Chemistry (3)
Lecture—3 hours. Prerequisite: course 226 or consent of instructor. Defines role of inorganic chemistry in the functioning of biological systems. Emphasis is on principles from the current literature. Not open for credit to students who have taken course 122.—III. [I] Osterloh

226. Principles of Transition Metal Chemistry (3)
Lecture—3 hours. Prerequisite: course 124A or the equivalent. Electronic structures, bonding, and reactivity of transition metal compounds. Offered every third year.—II.

228B. Main Group Chemistry (3)
Lecture—3 hours. Prerequisite: course 226 or consent of instructor. Synthesis, physical properties, reactions and bonding of main group compounds. Discussions of concepts of electron deficiency, hyperconjugation, and non-classical bonding. Chemistry of the main group elements will be treated systematically. Offered every third year.—II.

228C. Solid-State Chemistry (3)
Lecture—3 hours. Prerequisite: courses 124A, 110B, 226, or the equivalent. Design and synthesis, structure and bonding of solid-state compounds; physical properties and characterization of solids, topics of current interest such as low-dimensional materials, inorganic polymers, materials for catalysis. Offered every third year.—II.

228D. Homogeneous Catalysis (3)
Lecture—3 hours. Prerequisite: course 226. Overview of homogeneous catalysis and related methods, with emphasis on kinetics, mechanisms, and applications for organic synthesis. The related meth-
oads may include cluster, colloid, phase transfer, enzymatic, heterogeneous and polymer-supported catalysts. Offered every third year.—II. (II.)

231A. Organic Synthesis: Methods and Strategies (4)
Lecture—3 hours; lecture/discussion—3 hours. Prerequisite: course 128C or equivalent. Current strategies and methods in synthetic organic chemistry. Focus on construction of carbon frameworks, control of relative and absolute stereochemistry and retro-synthetic strategies. Use of databases and molecular mechanics to design multipurpose strategies. Only one unit of credit for students who have completed course 131. Not open for credit to students who have taken course 231.—I, II, III.

231B. Advanced Organic Synthesis (3)
Lecture—3 hours. Prerequisite: course 231A. Current strategies and methods in synthetic organic chemistry. Continuation of course 231A. Organic synthesis of complex target molecules. Stereochemical considerations and asymmetric synthesis. Organometallics for selective transformations. Carbocyclic and heterocyclic ring formation. Not open for credit to students who have taken course 231.—I, II, III.

232. Physical-Organic Chemistry (3)
Lecture—3 hours. Prerequisite: courses 128A-128B-128C and 110A-110B-110C or the equivalent. Introduction to elementary concepts in physical-organic chemistry and the application of simple numerical techniques in characterizing and modeling organic reactions.—I. (I.)

233. Organometallic Chemistry in Organic Synthesis (3)
Lecture—3 hours. Prerequisite: course 128C. Current trends in use of organometallics for organic synthesis; preparations, properties, applications, and limitations of organometallic reagents derived from transition and/or main group metals. Offered in alternate years.—III.

236. Chemistry of Natural Products (3)
Lecture—3 hours. Prerequisite: course 128C or the equivalent. Advanced treatment of chemistry of naturally occurring complex molecules isolated from a variety of sources. Topics will include isolation, structure determination, chemical transformations, total synthesis, biological activity, and biosynthesis. Biosynthetic origin will be used as a unifying theme.—II. (II.)

237. Bio-organic Chemistry (3)
Lecture—3 hours. Prerequisite: course 128C or the equivalent. Structure and function of biomolecules; molecular recognition, enzyme reaction mechanisms, design of artifical enzymes and application of enzymes in organic synthesis. Offered in alternate years.—I.

238. Introduction to Chemical Biology (3)
Lecture—2 hours. Prerequisite: course 118C or 128C, or the equivalent; course 130A & B and Biological Sciences 102, 103, & 104, or the equivalents recommended. Synthesis of complex molecules in nature. Use of biosynthetic pathways in synthesis of new chemical entities. Applications of small molecules in chemical genetics and structural biology. Solving biological problems using synthetic biomolecules.—I, II, III.

240. Advanced Analytical Chemistry (3)
Lecture—3 hours. Prerequisite: courses 110A and 115 or the equivalent. Numerical treatment of experimental data; thermodynamics of electrolyte and nonelectrolyte solutions; complex equilibria; aqueous and nonaqueous solutions; potentiometry and specific ion electrodes; mass transfer in liquid solutions; fundamentals of separation science, including column, thin-layer, and liquid chromatography.—I, II, III.

241A. Surface Analytical Chemistry (3)
Lecture—3 hours. Prerequisite: course 110C or the equivalent. Concepts of surfaces and interfaces: physical properties, unique chemistry and electronic effects. Focus on gas-solid interfaces, with some discussion of liquid-solid interfaces. Offered in alternate years.—I.

241B. Laser and X-ray Spectroscopy (3)
Lecture—3 hours. Prerequisite: course 110B or the equivalent. Concepts and mechanisms of light-matter interactions. Chemical applications of modern spectroscopic methods, including multiphoton laser spectroscopy, time-resolved laser and x-ray photolysis, and phase-contrast x-ray imaging. Offered in alternate years.—I.

241C. Mass Spectrometry (3)
Lecture—3 hours. Prerequisite: course 110C and 115 or the equivalent. Mass spectrometry and related methods with emphasis on ionization methods, mass analyzers, and detectors. Related methods may include in-molecular dissociation of organic and bio-organic compounds, and applications in biological and environmental analysis. Offered in alternate years.—II.

241D. Electroanalytical Chemistry (3)
Lecture—3 hours. Prerequisite: course 110C and 115 or the equivalent. Electroanalytical chemistry with consideration of mass transfer and electrode kinetics for polarizable electrodes. Current-potential curves for a variety of conditions, including both potentiostatic and galvanostatic control, and their application in chemical analysis. Offered in alternate years.—II.

241E. Microscopy and Imaging Techniques (3)
Lecture—3 hours. Prerequisite: course 110C and 115 or the equivalent. Introduction to modern microscopic techniques: scanning tunneling, atomic force, far-field optical, fluorescence, scanning near-field optical, and scanning electron microscopy. Application to nanoscience and analytical and bioanalytical chemistry. Some laboratory demonstrations. Offered in alternate years.—II.

245. Mechanistic Enzymology (3)
Lecture—3 hours. Advanced topics in chemical kinetics relevant to enzymes, enzyme kinetics, theory of enzyme catalysis, and the analysis of a selection of organic enzyme reaction mechanisms by the tools introduced in the first part of the course.—I. (I.)

261. Current Topics in Chemical Research (2)
Lecture—2 hours. Prerequisite: graduate standing in Chemistry or consent of instructor. Designed to help chemistry graduate students develop and maintain familiarity with the literature in their immediate field of research and related areas. May be repeated for credit when topics differ.—I, II, III.

263. Introduction to Chemical Research Methodology (3)
Laboratory/discussion—9 hours. Prerequisite: course 293 and graduate student standing in Chemistry; consent of instructor. Introduction to identification, formulation, and solution of meaningful scientific problems including experimental design and/or theoretical analyses of new and prevailing techniques, theories and hypotheses. May be repeated for credit when topics differ. (S/U grading only)—I, II, III.

264. Advanced Chemical Research Methodology (6)
Laboratory/discussion—18 hours. Prerequisite: courses 263 or consent of instructor. Applications of the methodology developed in Chemistry 263 to experimental and theoretical studies. Advanced methods of interpretation of results are developed. Includes the preparation and presentation for publication. May be repeated for credit when topics differ. (S/U grading only)—I, II, III.

280. Seminar in Ethics for Scientists (2)
Seminar—2 hours. Prerequisite: graduate standing in any department of Science or Engineering. Studies of topical and historical issues in the ethics of science, possibly including issues such as proper authorship, peer review, fraud, plagiarism, responsible collaboration, and conflict of interest. Offered as needed. (Same course as course in Biological Chemistry and Materials Science 280 and Physics 280.) (S/U grading only)—III.

290. Seminar (2)
Seminar—2 hours. Prerequisite: consent of instructor. (S/U grading only)—I, II, III, IV.

293. Introduction to Chemistry Research (1)
Discussion—2 hours. Designed for incoming graduate students preparing for higher degrees in chemistry. Group and individual discussion of research activities in the Department and research topic selection. (S/U grading only)—I. (I.)

294. Presentation of Chemistry Research (1)
Seminar—2 hours. Prerequisite: graduate standing; restricted to graduate students in Chemistry who have not yet given their departmental presentation. Introduces first- and second-year Chemistry graduate students to the process of giving an effective research presentation. Advanced Ph.D. students give formal seminars describing the design and execution of their research projects. May be repeated three times for credit. (S/U grading only)—I, II, III.

295. Careers in Chemistry (1)
Seminar—2 hours. Prerequisite: graduate standing in Chemistry. Designed to give Chemistry graduate students an in-depth appreciation of career opportunities with a M.S. or Ph.D. degree in chemistry. Professional chemists (and allied professionals) give seminars describing both research and career insights. May be repeated for credit 3 times. (S/U grading only)—I.

296. Research in Pharmaceutical Chemistry (6)
Laboratory—18 hours. Prerequisite: courses 130A and 130B, 135, and 233 (may be taken concurrently). Restricted to students in the Integrated B.S./M.S. Program in Chemistry. The laboratory provides qualified graduate students with the opportunity to pursue original investigations in Pharmaceutical Chemistry and allied fields in order to fulfill the letter-graded research requirement of the Integrated B.S./M.S. Program in Chemistry (Pharmaceutical Chemistry Emphasis). May be repeated three times for credit.—I, II, III, IV, V, VI.

298. Group Study (1-5)
II. (III.)

299. Research (1-12)
The laboratory is open to qualified graduate students who wish to pursue original investigation. Students wishing to enroll should confer with the department well in advance of the quarter in which the work is to be undertaken. (S/U grading only.)

Professional

300. Methods of Teaching Chemistry (2)
Lecture—1 hour; discussion—1 hour. Prerequisite: graduate student standing in Chemistry and consent of instructor. Practical experience in methods and problems of teaching chemistry. Includes analyses of texts and supporting material, discussion of teaching techniques, preparing for and conducting of discussion sessions and student laboratories. Participation in the teaching program required for Ph.D. in Chemistry. May be repeated for credit. (S/U grading only)—I, II, III, IV, V, VI.

302. Advanced Methods of Teaching Chemistry (2)
Lecture—2 hours. Prerequisite: course 390. Advanced topics in teaching chemistry. Analysis and discussion of curricular design, curricula materials, teaching methods and evaluation. For students who are planning a career in teaching chemistry. (P/NP grading only)—III.

Quarter Offered: I-Fall; II-Winter; III-Spring; IV-Summer; 2015-2016 offering in parentheses
Pre-Fall 2011 General Education (GE): Art/Hum:Arts and Humanities; Sci/Eng:Science and Engineering; Soc/Sci:Social Sciences; Div:Domestic Diversity; Wrt:Writing Experience
Fall 2011 and on Revised General Education (GE): AH:Arts and Humanities; SE:Science and Engineering; SS:Social Sciences; AGCH-American Cultures; DD-Domestic Diversity; OL-Oral Skills; QL-Quantitative; SL-Scientific; VL-Visual; WC-World Cultures; WE-Writing Experience
Chicana/Chicano Studies

Majors and Minor Requirements:

Academic Year: 2011 Fall Quarter

Preparation for Majors and Minors:

1. Preparation for Majors and Minors:

   Preparatory Subject Matter: 16-31
      - Preparatory Subject Matter: 20-35

   Courses in Chicana/o Studies:
      - Spanish 1, 2, 3, or 28, 31, 32 or the equivalent: 0-15

   Depth Subject Matter: 40
      - One course from Chicana/o Studies 150, 181, History 165, 166B, 169A, 169B: 4
      - Two courses from Chicana/o Studies 100, 110, 111, 112, 130, 131, 132, 181: 8

   Comparative ethnicity, gender: two upper division courses selected from two of the following areas: African American and African Studies, Asian American Studies, Native American Studies, or Women's Studies: 8

2. Total Units for the Major: 56-71

Social/Policy Studies Emphasis:

Preparatory Subject Matter: 20-35

Chicana/o Studies 10, 50: 8

One course from Chicana/o Studies 60, 65, 70, or 73: 4

One course from Chicana/o Studies 23, 140A Sociology of Medicine, 41A: 4

Spanish 1, 2, 3, or 28, 31, 32 or the equivalent: 0-15

Depth Subject Matter: 40

One course from Chicana/o Studies 150, 181, History 165, 166B, 169A or 169B: 4

Two courses from Chicana/o Studies 154, 155, 156, 160, 165, 171, or 172: 8

Comparative ethnicity, gender: two upper division courses selected from two of the following areas: African American and African Studies, Asian American Studies, Native American Studies, or Women's Studies: 8

Total Units for the Major: 60-75

Minor Adviser: A. Martinez

Minor Program Requirements:

This minor provides a broad overview of the historical, social, political, and artistic expression of Chicana/os. It is intended for students with an interest in Chicana/o studies and several courses taught from a variety of disciplinary perspectives. Majors may specialize in one of two emphases for the A.B. degree. The Chicana/o Studies composition integrates Chicana/o Studies with Chicana/o and Chicano History. This minor is open to all students with an interest in Chicana/o Studies.

Total Units for the Major: 60-75

Chicana/o Studies: 24

Chicana/o Studies 10 or 50: 4

Chicana/o Studies 150 or 181 or History 165 or 169B: 4

Minor Adviser: A. Martinez

Courses in Chicana/o Studies (CHI)

Lower Division

10. Introduction to Chicana/o Studies (4)

Lecture—3 hours; discussion—1 hour. Analysis of the situation of the Chicana/o (Mexican-American) people, emphasis on American culture, political movements, education and related areas. GE credit: Div, Wrt | ACGH, AH or SS, DD, OL, WE.—I, II.
relationship to the emergence of U.S. Latino cinema. Emphasis on representation and social identity including gender, sexuality, class, race and ethnicity. GE credit: ArtHum, Div | AH, VL, WC, WE. — de la Mora

70. Survey of Chicana/o Art (4)
Lecture—4 hours. Survey of contemporary Chicana/o art in context of the social turmoil from which it springs. Includes political use of the poster and the mural, the influence of the Mexican mural and graphic movement, and social responsibility of the artist. GE credit: Div | ACGH, AH, DD, VL, WC, WE. — I. Jackson, M. Montoya

73. Chicana/o Art Expression Through Silk Screen (4)
Studio—8 hours; laboratory—4 hours. Introductory level studio course using silk screen and basic printing techniques to explore and develop images of Chicana/o cultural themes and expressions. Students will experiment with images and symbols from their immediate environment/culture. Integral approach to Chicana/o philosophy of art. GE credit: ACGH, AH, DD, OL, VL, WC, WE. — I. Jackson

92. Internship (1-12)
Internship—3-36 hours. Prerequisite: course 10 or consent of instructor. Academic guidance combined with internship in community agencies serving Mexican/Latino/Latinx Chicana/o clients. Use of bilingual skills and knowledge of history, culture, economics, politics and social issues. May be repeated for credit up to 12 units. (P/NP grading only.)

98. Directed Group Study (1-5)
(P/NP grading only)

99. Special Study for Undergraduates (1-5)
(P/NP grading only)

Upper Division

100. Chicana/o Chicano Theoretical Perspective (4)
Lecture/discussion—3 hours; term paper. Prerequisite: courses 10 and 50. Critical examination of emerging Chicana/o Studies theoretical perspectives in light of contemporary intellectual frameworks in the social sciences, arts, and humanities. Includes an analysis of practices of self-representation, and socio-cultural developments in the Chicana/o community. GE credit: ACGH, DD, SS, WC, WE. — III. Chabram, Deeb-Sossa

110. Sociology of the Chicana/o Experience (4)
Lecture/discussion—4 hours. Prerequisite: course 10 or Sociology 1. The Chicana/o experience in the American society and economy viewed from theoretical perspectives. Immigration, history of integration of Chicana/o labor into American class structure, education inequality, ethnicity, the family and Chicana/o political culture. GE credit Sociology 110J. GE credit: SocSci, Div, Writ | ACGH, DD, OL, SS, WE. — II. Deeb-Sossa

111. Chicana/Mexicanas in Contemporary Society (4)
Lecture/discussion—4 hours. Prerequisite: course 10 or 50, Women’s Studies 50 or History 169B. Analysis of the role and status of Chicanas/Mexicanas in contemporary society. Special emphasis on their historical role, the Chicano/a movement, and the sociopolitical and economic changes that affect their status and their contributions to society and their community. (Former course 102J) GE credit: ArtHum | ACGH, DD, SS, WE. — Deeb-Sossa

112. Globalization, Transnational Migration, and Chicana/o and Latina/o Communities (4)
Lecture—4 hours. Prerequisite: course 10, Chicana/o and Latina/o migration experiences within a global context. Topics include national and/or transnational migration in Mexico, Central America, and the United States. GE credit: SocSci, Div, Writ | ACGH, DD, OL, SS, WE

113. Latin American Women’s Engagement in Social Movements (4)
Lecture/discussion—3 hours; term paper. Examination of how women of different racial/ethnic and class backgrounds in Latin America challenge their marginalization. Exploration of U.S. foreign policy, its effects on Latin America, and on Latin American women. GE credit: ACGH, DD, SS, WE, Writ. — I. Jackson

114. Women of Color Reproductive Health and Reproductive Politics in a Global Perspective (4)
Lecture/discussion—3 hours; term paper. Study contemporary issues in reproductive health and reproductive politics, both globally and in the U.S., for women of color. Offered in alternate years. GE credit: SocSci | ACGH, DD, SS, WC, WE. — Deeb-Sossa

120. Chicana/o Psychology (4)
Lecture—2 hours; discussion—2 hours. Prerequisite: course 21; introductory psychology recommended. Introduction to the field of Chicana/o psychology. Analysis of sociocultural context of Chicana/os and Latinas/os. Special attention to issues of ethnic identity development, bilingualism, and development of self esteem. Impact of minority experience, migration, acculturation are examined. GE credit: SocSci, Div | ACGH, DD, SS, WE. — Flores

121. Chicana/o Community Mental Health (4)
Lecture—3 hours; term paper. Prerequisite: course 10 or 20. Mexican health care problems and service utilization patterns of Chicana/os and Latinas/os will be analyzed. An analysis of social service policy, and the economic context of mental health programs. Offered Alternate Years. GE credit: SocSci, Div, Writ | ACGH, DD, OL, SS, WE. — Flores

122. Psychology Perspectives Chicana/o and Latina/o Family (4)
Lecture—4 hours. Prerequisite: course 10, introductory psychology highly recommended, and/or consent of instructor. Role of migration and acculturation on family structure and functioning. From a psychological and Chicana/o Studies perspective, contemporary gender roles and variations in family structures are examined. Special topics include family violence, addiction, family resilience and coping strategies. GE credit: SS, Writ. — I. Flores

122S. Psychology Perspectives Chicana/o and Latina/o Family (4)
Lecture—4 hours. Role of migration and acculturation on family structure and functioning. From a psychological and Chicana/o Studies perspective, contemporary gender roles and variations in family structures are examined. Special topics include family violence, addiction, family resilience and coping strategies. This course is taught abroad. Not open for credit to students who have completed course 122. GE credit: SciEng | ACGH, DD, OL, SS, WE. — Flores

123. Psychological Perspectives on Chicana/o and Latina/o Children and Adolescents (4)
Lecture—3 hours; term paper. Prerequisite: course 10 or 21, and upper division standing. Psychological and educational development of Chicana/Latino children and adolescents, with particular attention to the formation of ethnic, gender, class, race, and sexual identities. GE credit: SocSci, Div, Writ | ACGH, DD, OL, SS, WE. — Flores

125S. Latinas in Politics and Public Policy (4)
Lecture/discussion—3 hours; term paper. Special attention to the factionalization of Latina women within the political process and current political influence and participation of Latinas. GE credit: ACGH, DD, OL, SS, WE. — I. Chabram, de la Torre

131. Chicanas in Politics and Public Policy (4)
Lecture/discussion—4 hours. Prerequisite: course 30 or Political Science 1. Historical and political analysis of Chicana/Latina political involvement and activities in the general political system, Chicanas/o movement, Chicana/o movement. Course also examines the public policy process and the relationship of Chicanas/Latinas to current public policy formation. Offered in alternate years. GE credit: SocSci, Div | ACGH, DD, OL, SS, WE. — Weça

131S. Transnational Latina/o Political Economy (4)
Lecture—3 hours; discussion/laboratory—1 hour. Prerequisite: Spanish 3 or equivalent, or consent of instructor; Economics 1A and 1B recommended. Intensive reading, discussion and research on selected topics from Latin America and the US with regard to immigrant and native communities. Topics include comprehensive immigration and macroeconomic policies in the US and Latin America. Offered in a Spanish speaking country. GE credit: Div, Writ

140A. Quantitative Methods: Chicano/ Latino Health Research (4)
Lecture—3 hours; discussion/laboratory—1 hour. Prerequisite: Spanish 2 or equivalent high school algebra or the equivalent in college. Focuses on measuring Chicano/Latino health and health disparities approach. Assesses main types of study designs and addresses measurement of disease frequency and health effects. GE credit: SciEng | ACGH, DD, OL, SS, WE

145S. Bi-National Health (5)
Lecture—5 hours. Prerequisite: Biological Sciences 1A/1B-1C, Spanish 21 or 31 or consent of instructor; upper division standing only. Examination of health status and interventions in the context of border health, social and political factors. GE credit: Div, Writ | ACGH, DD, OL, SS, WE. — I. Flores, de la Torre

1465. Public Health in Latin America (5)
Lecture/discussion—4 hours; term paper. Critical examination of emerging Public Health issues in Latin America in light of economic, political and social conditions. Contemporary behavioral frameworks used in public health. Includes analysis of clinical medicine and health care systems. — de la Torre
1475. Indigenous Healing and Biodiversity in Latin America (5) Lecture—1 hour; term paper. Contrast between western and traditional healing practices in Latin America and the role of the natural environment in creating sustainable health delivery systems. Questions of health status attributable to public health and environmental risk factors. GE credit: OL, WC, WE. — I. de la Torre

150. The Chicana and Chicano Movement (4) Lecture—2 hours; term paper. Development of the Chicano Movement within the context of the socio-political movements of the 1960's in a national and global perspective. Ideological/political perspectives and the implications for political strategies. GE credit: ArtHum, Div, Wrt | ACGH, AH or SS, DD, WC, WE. — II. 8

154. The Chicana/o Novel (4) Lecture—4 hours. Prerequisite: Intermediate Spanish or consent of instructor. Introduction to the forms and themes of the Chicana/o novel with special attention to the construction of gender, nationality, sexuality, social class, and the family by contemporary Chicanas/o novelists. Bilingual readings, lectures, discussions, and writing. (Former course Spanish 126A.) GE credit: ArtHum, Div | ACGH, AH, DD, OL, WC, WE. — II. Chabram, M. Montoya

155. Chicana/o Theater (4) Lecture—4 hours. Prerequisite: Intermediate Spanish or consent of instructor. Examination of the formal and thematic dimensions of Chicana/o theater in the contemporary period with special emphasis on El Teatro Campesino and Chicana Feminist Theater. Bilingual readings, lectures, discussions, and writing in Spanish. (Former course Spanish 126B.) GE credit: ACGH, AH, DD, OL, WC, WE. — Chabram.

156. Chicana/o Poetry (4) Lecture—4 hours. Prerequisite: Intermediate Spanish or consent of instructor. Survey of Chicana/o poetry with special emphasis on its thematic and formal dimensions. Bilingual readings, lectures, discussions, and writing in Spanish; term paper. GE credit: ACGH, AH, DD, OL, WC, WE. — II. Chabram

157. Chicana and Chicano Narrative (4) Lecture/discussion—3 hours; term paper. Exploration of contemporary forms of the Chicana and Chicano narrative, encompassing visual art, fiction, poetry, film, theater, and creative nonfiction. Exposure to a variety of artists and scholars whose work shapes our evolving understanding of the Chicana/o experience. GE credit: ArtHum | ACGH, AH, DD, OL, WC, WE. — I. Chabram

160. Mexican Film and Greater Mexican Identity (4) Lecture/discussion—4 hours; film viewing—1 hour. Prerequisite: Intermediate Spanish. Survey of the role Mexican cinema plays in consolidation and contestation of post-revolutionary Mexican state and in the formation of a Greater Mexican cultural identity including Chicana/o identity. Showcases genres, periods, auteurs, movements, and emphasis on gendered and sexuality narratives. GE credit: ArtHum, Div | ACGH, AH, DD, OL, WC, WE. — de la Mora

165. Chicanas, Latinas and Mexicanas in Commercial Media (4) Lecture/discussion—4 hours; laboratory—2 hours. Prerequisite: course 60 or other film or feminist theory course; conversational fluency in Spanish. The portrayal of Chicanas, Latinas and Mexicanas in commercial media. The relation between the representation of Chicanas, Latinas, and Mexicanas women in commercial media, television and cinema and the role of women in Mexican and U.S. societies. Offered in alternate years. GE credit: AH, VI, WC, WE. — de la Mora

171. Mexican and Chicana Mural Workshop (4) Studio—8 hours; independent study—1 hour. Prerequisite: course 70 and/or written consent of instructor. The mural: a collective art process that empowers students and people through design and execution of murals. Students in the tradition of the Mexican Mural Movement; introduces materials and techniques. May be repeated one time for credit. (Same course as Art Studio 171.) GE credit: ArtHum | AH, VL, WE. — I. de la Torre, M. Montoya

172. Chicana/o Voice/Poster Silk Screen Workshop (4) Studio—8 hours; independent study—1 hour. Prerequisite: course 70 and/or written consent of instructor. The poster as a voice art form used by Chicanas/o and other people of color to point to the defects of social and political existence and the possibility for change, from the Chicana/o art/artist perspective. May be repeated one time for credit. GE credit: AH, OL, VI, WC. — II. Jackson

180. Grant Writing in the Chicana/o/Latina/o Community (4) Lecture—4 hours. Prerequisite: course 10, 23 or consent of instructor. Upper division standing. Overview of key elements for grant writing. Topics include community needs assessments, development of human subjects protocols, data collection, methods, evaluation designs, and foundation based methodologies for grant development applications in the Latino community. — de la Torre

181. Chicanas and Latinas in the U.S.: Historical Perspectives (4) Lecture/discussion—4 hours. Prerequisite: course 10 or Women’s Studies 50. Historical issues in the lives of Chicanas, PuertoRichenanas, and Cubans in the U.S. and their countries of origin. GE credit: ArtHum, Div, Wrt | ACGH, AH, DD, OL, SS, WE. — I. Chabram

182. Race and Juvenile Justice (4) Lecture—4 hours. Prerequisite: course 10, Women’s Studies 10, or Sociology 10, or equivalent. Individual and institutional responses to “troublesome” youth of color through history and in contemporary society. Emphasis on how race, as well as ethnicity, class, and gender have informed the treatment of “delinquent” youth. Offered in alternate years. GE credit: ArtHum or SocSci, Div, Wrt | ACGH, AH, DD, OL, SS, WE. — de la Torre

184. Latina Youth Gangs in Global Perspective (4) Lecture—3 hours; term paper. Comparative analysis of Latina youth gangs in Jackie, Latin America, and the United States. Social, economic, political, and cultural factors leading to youth gangs as well as the responses are considered within a global perspective. Not open for credit to students who have completed course 1845. Offered in alternate years. GE credit: SocSci | ACGH, DD, OL, SS, WC, WE. — de la Torre

1845. Latino Youth Gangs in Global Perspective Lecture—12 hours. Comparative analysis of Latin youth gangs in Europe, Latin America, and the United States. Social, economic, political, and cultural factors leading to youth gangs as well as the responses to youth gangs are considered within a global perspective. Not open for credit to students who have completed course 184. Offered irregularly. GE credit: SocSci | ACGH, DD, OL, SS, WC, WE. — de la Torre

192. Internship in the Chicana/Chicano/Latina/Latino Community (1-12) Internship—3-36 hours. Prerequisite: course 10, 21, or 50, Spanish 3 or equivalent. Academic guidance combined with internship in community agencies serving Mexican/Latina/Latina/Chicana/Chicano clients. Use of bilingual skills and knowledge of history, culture, economics, politics and social issues. Internship project required. May be repeated for credit up to 12 units. (P/NP grading only.)

1925. Internship (1-12) Internship. Prerequisite: consent of instructor; course 10, 21, or 50; Spanish 3 or equivalent. May be repeated for credit (P/NP grading only.)

194HA-194HB-194HC, Senior Honors Research Project (2-5) Independent study—6-15 hours. Prerequisite: senior standing in Chicana/o Studies major. Student is required to read, research, and write Honors Thesis on Chicana/o Studies topics. (Deferred grading only, pending completion of sequence.) GE credit: OL, WE.

198. Directed Group Study (1-5) Prerequisite: upper division standing and consent of Program Chairperson. (P/NP grading only.)

1985. Directed Group Study (1-5) Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5) Prerequisite: upper division standing and consent of Program Chairperson. (P/NP grading only.)

1995. Special Study for Advanced Undergraduates (1-5) Prerequisite: consent of instructor. (P/NP grading only.)

Graduate

230. Chicano/Latino Hispanic Politics (4) Seminar—3 hours; term paper. Prerequisite: two undergraduate courses in Chicano/o Studies or consent of instructor. Examination of Chicano/Latino political experiences. Evaluate theories, ideology, and practice of Chicano politics. Brief history of Chicano/Latino/Hispanic political activity, comparisons among political modes, gendered politics, and understanding relationships among Chicanos, Mexicans, and American and world politics. —Chabram

292S. Group Study for Graduate Students (1-5) Prerequisite: graduate standing, consent of instructor. May be repeated for credit when topic differs. (S/U grading only.)

299. Special Study for Graduate Students (1-12) Prerequisite: graduate standing and consent of instructor. (S/U grading only.)

Professional

396. Teaching Assistant Training Practicum (1-4) Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)

Child Development (A Graduate Group)

Katherine J. Conger, Ph.D., Group Chairperson

Group Office. 1315 Hart Hall

530-754-4109; http://humandevelopment.ucdavis.edu/

Faculty. See Human Development (A Graduate Group), on page 345.

Graduate Study. The Graduate Group in Child Development offers a multidisciplinary program leading to an M.S. degree. The program provides students with an opportunity to pursue a coordinated course of graduate study in the field of child development which cuts across departmental boundaries. Students may work with children and families in the community, as well as the University’s Center for Child and Family Studies. Recipients of the fellowship gain sufficient background to engage in professions that directly (e.g., preschool, 4-H) or indirectly (e.g., social policy) involve children and...
families, obtain positions in teaching or research settings, or pursue further study leading to a doctorate in child development, human development, clinical psychology, or related fields.

Applicants seeking admissions and fellowships consideration must submit all materials by our priority December 15 deadline. The final admissions deadline is March 1. See our website for more details.

Graduate Adviser. Contact Group office.

Cinema and Technocultural Studies

(College of Letters and Science)

Michael Neff, Ph.D., Program Director
Krisa Ravetto-Biagioli, Ph.D., Program Director

Committee in Charge
Sarah Pia Anderson, B.A. (Cinema and Technocultural Studies)
Jesse Drew, Ph.D. (Cinema and Technocultural Studies)
Joe Durnin, Ph.D. (Anthropology)
Jaimey Fisher, Ph.D. (German and Russian, Cinema and Technocultural Studies)
Colin M. Milburn, Ph.D. (English)
Michael Neff, Ph.D. (Computer Science, Cinema and Technocultural Studies)
Bob Ostertag, Ph.D. (Cinema and Technocultural Studies)
Krisa Ravetto-Biagioli, Ph.D. (Cinema and Technocultural Studies)
Eric Smoodin, Ph.D. (American Studies)
Julie Wyman, M.F.A. (Cinema and Technocultural Studies)

Faculty
Sarah Pia Anderson, B.A.
Jesse Drew, Ph.D.
Jaimey Fisher, Ph.D.
Colin M. Milburn, Ph.D.
Michael Neff, Ph.D.
Bob Ostertag, Ph.D.
Krisa Ravetto-Biagioli, Ph.D.
Julie Wyman, M.F.A.

Emeriti Faculty
Frances Dyson, Ph.D., Professor Emerita
Lynn Hershman, M.A., Professor Emerita

The Film Studies Major Program

The interdisciplinary major in Film Studies takes one of the most influential art forms of the twentieth century and today as its object of study. The field of Film Studies addresses the history, theory, and culture of this art form and asks questions about film texts themselves: modes of production (including everything from filmmakers’ aesthetic choices to the role of the global economic, historical, national, and cultural contexts); and spectators and audiences. Questions of gender, race, sexuality, and nationality, in all of these areas, have been central to Film Studies almost since its inception and continue to shape much of the work in the field. While the program emphasizes film history, criticism, and theory, students also have opportunities to explore film/video production.

The Program. Students majoring in Film Studies take upper-division courses in film history and film theory, as well as in at least three of five general areas of study. Students also develop a thematic emphasis, in consultation with an advisor, that draws on courses from at least two different departments/programs and that allows them to pursue their particular interests within the field of Film Studies. Students have the option of completing a senior thesis (either a written paper or an original film/video) within this emphasis.

Career Alternatives. The A.B. degree in Film Studies prepares students for a variety of careers in media industries: for example, local and national film and television producers, independent companies, local television newsrooms, community television stations, computer graphic companies, advertising and marketing companies, public relations departments, and film distribution and production companies wishing to pursue graduate work will be prepared to go on in film studies, as well as a variety of other fields that draw on interdisciplinary study: for example, American studies, English, history, and languages, drama, communication, computer science, cultural studies, women and gender studies, and ethnic studies programs. Many film studies students also choose to go on to law school, and the analytical skills, writing abilities, and familiarity with theoretical thought developed through the film major prepare them well for the study and practice of law.

A.B. Major Requirements:

Preparatory Subject Matter...........................................20-40

Film Studies 1 .................................................. 4
Film Studies 124 ........................................ 4

A four-course sequence in a single language or equivalent.............................................0-20

One course from: African American and African Studies 15, 50; American Studies 1A, 21, 30, Studio 30; Chicana/o Studies 50, 60; Design 1; French 50; Humanities 60; Italian 50; Japanese 25; Native American Studies 32; Textiles and Clothing 7; Women’s Studies 20, 25 ............................................. 4

One course from: African American and African Studies 10, 15, 50; Asian American Studies 1A, 1B, 1C, 1D; Chicana/o Studies 10, 50, 60; Native American Studies 1, 10, 12, 33; Women’s Studies 20, 25, 50, 70, 80 ............................................. 4

Two courses from: Art History 1A, 1B, 1C, 1D; Asian American Studies 2; Chinese 10, 11; Classics 10; Comparative Literature 3, 4, 5, 6, 7; Dramatic Art 1, 20; English 43, 44, 48; German 4C, 10C, 17B, 72B; Humanities 5, 6; Japanese 10; Music 10, 18; Native American Studies 33; Russian 41, 42 ............................................. 8

Note: One course may be from Design 15, 16 or Dramatic Art 10, 21A, 21B, 24.

Depth Subject Matter .............................................36-40

One course from: English 161A, 161 B or Film Studies 124 ........................................ 4
One course from: English 162; Film Studies 127, Philosophy 127; Women and Gender Studies 162 ............................................. 4
One course from: English 163; Media Studies 128; Textiles and Clothing 7; Women’s Studies 164 ............................................. 4

A current list of approved classes is available from the Advising office and from the faculty adviser.

UMT 16-20 units in one of the two breadth areas not used to satisfy the breadth requirement, or development of a thematic area in consultation with a faculty adviser........ 16-20

Qualified students who complete 20 units and have an overall GPA of 3.500 may choose the senior thesis option (194H-196H) for 8 of those 20 units. No course may be counted for more than one requirement for the major.

Total Units for the Major...........................................56-80

Minor Adviser. See Program office.

Minor Program Requirements:

Film Studies ..........................................................24

Upper division courses selected from the following list, with no more than two courses from any one category.................. 20

(a) Problems and Themes in Cinema: Anthropology 136, Classics 102, Dramatic Art 115, English 160, 161A, 161B, 162, Film Studies 124, 125, Women’s Studies 162

(b) Cinema, Nation and Nationality: German 119, 142, Film Studies 176A, 176B, Italian 150, Japanese 106, Russian 129, Spanish 148

(c) Film and Social Identities: African American and African Studies 170, 171, Film Studies 120, Jewish Studies 120, Women’s Studies 160, 164

(d) Film/Video Production: Art Studio 116, 117, 150

(e) Popular and Visual Culture: American Studies 130, 132, 133, 139, Art Studio 150, Communicative Science 165, Textiles and Clothing 107, Women’s Studies 139

Minor Adviser. See Program office.

The Technocultural Studies Major Program

The Technocultural Studies major is an interdisciplinary integration of current research in cultural history and theory with innovative hands-on production in digital media and “low-tech.” It focuses on the fine and performing arts, media arts, community media, literature and cultural studies as they relate to technology and science. Backed by critical perspectives and the latest forms of research and production skills, students enjoy the mobility to explore individual research and expression, project-based collaboration and community engagement.

The Program

Preparatory course work involves a solid introduction to the history, ideas and current activities of technocultural studies. For depth subject matter, students in the major select to concentrate on either critical studies or creative production emphases, and work toward a final project. All majors are required to take at least one course from another department or program relevant to their area of study, upon approval from Technocultural Studies, and may take more courses with approval. The final project for the critical studies emphasis consists of a substantial research paper. The final project for the creative production emphasis will be a major individual or collaborative work. Plans for final projects must be approved in advance.

Career Paths. Technocultural Studies is designed to prepare graduates to be highly adaptable, collaborative, multi-skilled and current with the latest developments. Perhaps most importantly is self-motivation: students do best when fueled by their own passions and plot their own directions, while held to very high standards. We feel this is the best education for living and working in a complex, rapidly changing world. Final research papers and creative production portfolios will provide graduate school admissions committees, employers or clients with tangible evidence of Technocultural Studies graduates’ track records and talents.

Quarter Offered: I-Fall, II-Winter, III-Spring, IV-Summer; 2015-2016 offering in parentheses

Pre-Fall 2011 General Education (GE): ACHV-American Cultures, DD-Domestic Diversity, Div;Wrt-Writing Experience

Fall 2011 and on Revised General Education (GE): AH-Arts and Humanities; SC-Science and Engineering; SS-Social Sciences, AGCH-American Cultures, DD-Domestic Diversity, OL-Oral Skills, QL-Quantitative, SL-Scientific, VL-Visual, WC-World Cultures, WE-Writing Experience
162. Surveillance Technologies and Social Media (4)
Lecture—3 hours; film viewing—3 hours; term paper.
Prerequisite: Technocultural Studies 1 or Science & Technology Studies 20. Study of the ubiquitous presence of CCTV, face recognition software, global positioning systems, biosensors, and data mining practices that have made surveillance part of our daily life. Study boundaries between security and control, information and spying. (Same course as Science & Technology Studies 162.) Offered in alternate years. GE credit: ACGH, AH or SS, Div, OL, VL, WE. —Ravetto

176A. Classic Weimar Cinema (4)
Lecture/discussion—3 hours; film viewing—3 hours. Prerequisite: Humanities 1. German Weimar (1919-1933) cinema. Fritz Lang, F.W. Murnau, and G.W. Pabst among others. Influence on world-wide (esp. Hollywood) film genres such as film noir, horror, science fiction, and melodrama. Not open for credit to students who have completed Humanities 176. Offered in alternate years. (Same Course as German 176A.) GE credit: ArtHum, Wrt | AH, OL, VL, WE, Div—II

176B. Postwar German Cinema (4)
Lecture/discussion—3 hours; film viewing—3 hours. Prerequisite: course 1. Exploration of German cinema from 1945 to 1980, when the Nazi past was a central theme. Study of postwar “Rubella films,” escapist “homeland films,” and New German Cinema of the 1970s (including films by Fassbinder, Kluge, Syberberg, and Herzog). Not open for credit to students who have completed Humanities 176. Offered in alternate years. GE credit: ArtHum, Wrt | AH, OL, VL, WE—II

189. Special Topics in Film Studies (4)
Lecture/discussion—3 hours; film viewing—3 hours. Prerequisite: course 1, upper division standing, or consent of instructor. Study of a special topic in film studies in a small class setting. May be repeated for credit if topic differs. (P/NP grading only.)—I, II, III. (I, II, III.)

190. Internship (1-12)
Supervised internship off and on campus in areas of Film Studies. May be repeated for credit. (P/NP grading only.)

194H. Special Study for Honors Students (1-5)
Variable—1.5 hours; independent study—3.5 hours. Prerequisite: senior standing, GPA of at least 3.500; consent of instructor. Guided research on a topic in Film Studies in preparation for the writing of an honors thesis in course 195H. May be repeated two times for credit. (P/NP grading only.)—I, II, III. (I, II, III.)

195H. Honors Thesis (1-5)
Independent study—3.5 hours. Prerequisite: course 194H, and consent of instructor; GPA of at least 3.500; senior standing. Writing of an honors thesis on a topic in Film Studies under the direction of a faculty member. May be repeated two times for credit. (P/NP grading only.)—I, II, III. (I, II, III.)

196H. Honors Project (1-5)
Project—3.5 hours. Prerequisite: course 194H and consent of instructor; GPA of at least 3.500; senior standing. Creation of an honors film, video, or mixed-media project under the direction of a faculty member. May be repeated two times for credit. (P/NP grading only.) GE credit: AH, VL, WE, Div—II, III. (I, II, III.)

1977. Tutoring in Film Studies (1-5)
Tutorial—3-15 hours. Prerequisite: consent of program director. Leading of small voluntary discussion groups affiliated with one of the program’s courses. May be repeated for credit. (P/NP grading only.)

198. Directed Group Study (1-5)
(P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)
(P/NP grading only.)

Professional
396. Teaching Assistant Training Practicum (1-4)
Prerequisite: graduate standing. May be repeated for credit (S/U grading only.)

Courses in Technocultural Studies (TCS)
Lower Division
1. Introduction to Technocultural Studies (4)
Lecture—3 hours; extensive writing. Contemporary developments in the fine and performing arts, media arts, digital and network arts, and literature as they relate to technological and scientific practices. GE credit: ArtHum | AH, VL, WE—Oster Tag

2. Critiques of Media (4)
Lecture/discussion—3 hours; term paper. Introduction to digital image and visual communication, with focus on creative responses to the media within visual arts, media arts, and net culture. Response of artists to the power of mass media, from early forms of photojournalism through contemporary “culture-jamming” and alternative media networks. GE credit: ArtHum | AH, VL, WE—Wymann

4. Parallels in Art and Science (4)
Lecture—3 hours; term paper. Issues arising from historical and contemporary encounters between the arts and science, with emphasis on comparative notions of research, experimentation, and progress. GE credit: ArtHum | AH, VL, WE.

5. Media Archaeology (4)
Lecture/discussion—3 hours; term paper. Evolution of media technologies and practices beginning in the 19th Century as they relate to contemporary digital arts practices. Special focus on the reconstitution of the social and artistic possibilities of lost and obsolete media technologies. GE credit: ArtHum or SciEng | AH or SE, VL, WE.

6. Technoculture and the Popular Imagination (4)
Lecture—3 hours, extensive writing. Issues of technological and scientific developments as conveyed through mass media and popular culture with special attention to public spectacle, exhibitions, broadcasts, performances, and literary and journalistic accounts. GE credit: ArtHum | AH, VL, WE—Kahn

7A-E. Technocultural Workshop (1)
Seminar—1 hour. Workshops in technocultural digital skills: (A) Digital Imaging; (B) Digital Video; (C) Digital Sound; (D) Web Design; (E) Topics in Digital Production. GE credit: VL | I, (I.)

Upper Division
100. Experimental Digital Cinema I (4)
Lecture/discussion—3 hours; laboratory—3 hours. Experimental approaches to the making of film and video in the age of digital technologies. Opportunities for independent producers arising from new media: Instruction in technical, conceptual, and creative skills for taking a project from idea to fruition. GE credit: VL—Wymann

101. Experimental Digital Cinema II (4)
Lecture/discussion—3 hours; laboratory—3 hours. Prerequisite: course 100. Continuation of course 100 with further exploration of digital cinema creation. Additional topics include new modes of distribution, streaming, installation and exhibition. GE credit: VL—Wymann

103. Interactivity and Animation (4)
Lecture/discussion—3 hours; laboratory—3 hours. Fundamentals of creating interactive screen-based work. Theories of interactivity, linear versus nonlinear story structures, and audience involvement and participation. Use of digital production tools to produce class projects. GE credit: VL—Wymann

104. Documentary Production (4)
Lecture/discussion—3 hours; project. Prerequisite: course 78 or the equivalent, course 155. Traditional and new forms of documentary, with focus on technocultural issues. Skills and strategies for producing work in various media. GE credit: VL. The theoretical and stages of production, from conception through post-production to critique. GE credit: VL—Drew, Wyman

110. Object-Oriented Programming for Artists (4)
Lecture/discussion—3 hours; laboratory—3 hours. Prerequisite: course 1. Introduction to object-oriented programming for artists. Focus on understanding the metaphors and potential of object-oriented programming for video, sound, performance, and interactive installations. GE credit: VL—I, II, III. Oster Tag

111. Community Media Production (4)
Lecture/discussion—3 hours; laboratory—3 hours. Use of video and new media tools to address social issues among neighborhood and community groups. Students will use basic video, sound, and lighting techniques as they work with local groups in a group video project. GE credit: VL—II, III.

112. New Radio Features and Documentary (4)
Lecture/discussion—3 hours; laboratory—3 hours. New feature and documentary production for radio and other audiophonic media, including podcasting and streaming Web sites and installation. Emphasis on new and experimental approaches to audio production for broadcast on community radio and in international arts programming.

113. Community Networks (4)
Lecture/discussion—3 hours; laboratory—3 hours. Impact and implications of computer-based networks in community, civic, and social life. Subjects may include community access computer sites, neighborhood, and other peer networks, the digital divide, open-source software, and citizen action.

115. Electronics for Artists (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 1. Creative application of electronic technology relevant to media and fine arts involving both electronic principles and hands-on application. GE credit: VL.—III. (III.)

120. History of Sound in the Arts (4)
Lecture—3 hours; term paper. Prerequisite: course 1. A survey of the use of sound, voice, noise, and noise in the modernist, avant-garde, and experimental arts, from the late 19th Century to the present. Focus on audiosonic and audiovisual technologies. GE credit: VL—Kahn

121. Introduction to Sonic Arts (4)
Lecture/discussion—3 hours; lecture/ laboratory—3 hours. Prerequisite: course 7C. Introduction to the use of sound within the arts. Techniques and aesthetics of experimental contemporary practices. Creation of original sound works. GE credit: VL.

122. Intermediate Sonic Arts (4)
Lecture/discussion—3 hours; laboratory—3 hours. Prerequisite: course 121. Creative application of electronic technology to media production, editing, mixing, and synthesis to combine voice, field recordings, and electronic signals. Incorporating live, recorded, and found sounds to create multi-dimensional stories. Techniques of live performance, audio recording, and sound installation. GE credit: VL.

123. Sight and Soundtrack (4)
Lecture/discussion—3 hours; laboratory—3 hours. Prerequisite: courses 7C, 121. A survey of the use of sound to articulate, lend mood or subconsciously underscore visual, environmental or performative situations,
125. Advanced Sound: Performance and Improvisation (4) Lecture/discussion—3 hours; term paper. Focus on telepresence, and simulated experience. Focus on the evolution of modern technolog-ies. Media as the cohesive and persuasive force of mass culture. GE credit: VL.—Dyson
158. Media Subcultures (4) Lecture/discussion—3 hours; term paper. Relationships between subcultural groups and media technol-ogies. GE credit: Div | ACGH, VL.—Dyson
160. Ghosts of the Machine: How Technology Rewires our Senses (4) Lecture—3 hours; extensive writing. Consent of instructor. Lecture and intensive workshop teaching small-scale film production. Appointments as an/ah director, actor of photography, actor, writer, lighting designer, sound designer and other critical positions are used to produce and submit a short film to a film festival. (Same course as Dramatic Art 175.) May be repeated two times for credit.—III. (III.) Anderson, Drew
190. Research Methods in Technocultural Studies (4) Lecture/discussion—3 hours; project. Introduction to basic research methods for Technocultural Studies: electronic and archived images, sounds and data, satellite downlinking, radiowave scanning, and oral histories. GE credit: VL. WE. —Drew
191. Writing Across Media (4) Lecture/discussion—3 hours; extensive writing. Introduction to experimental approaches to writing for different media and artistic practices. How written texts relate to the images, sounds, and performances in digital and media production. GE credit: WE. —Jones
197. Tutoring in Technocultural Studies (1-5) Tutorial—3-15 hours. Prerequisite: consent of instruc-tor. Undergraduates assist the instructor by tutoring students in one of the department’s regularly sched-uled courses. May be repeated for credit up to eight units. (P/NP grading only.)—I, II, III. (I, II, III.)
198. Directed Group Study (1-5) Prerequisite: consent of instructor. (P/NP grading only.)
199. Special Study for Advanced Undergraduates (1-5) Prerequisite: consent of instructor. Guided study with faculty member in independent scholarly activity. May be repeated for credit up to eight units. (P/NP grading only.)

The Major Program
Classical Civilization is an interdisciplinary major that examines the ancient Mediterranean cultures of Greece, Rome and the Near East, with courses offered on the languages, history, literature, religi-ons, myths, and archaeology of these societies, their achievements in rhetoric and philosophy, and their political and social institutions. Minor programs in Classical Civilization, Greek, and Latin, and many General Education courses are offered also.

The Program. The major has two tracks: (1) Classical and Mediterranean Civilizations, and (2) Classical Languages and Literatures. The core of both major tracks consists of two years of Latin, Greek or Hebrew, the introductory sequence on the ancient Mediterranean world (Classics 1, 2, 3), the advanced seminar (Classics 190), and a number of electives. The Classical and Mediterranean Civilizations track allows students to choose their electives from a broadly balanced program in history, art and archaeology, literature, philosophy and rhetoric. The Classical and Mediterranean Civilizations track focuses more intensively on language and literature, requiring the study of two languages and allowing fewer electives. Students planning to go on to graduate work in Classics should take Track 2 and study as much Latin and Greek as possible. They should make a point of talking to an advisor early in their undergraduate program. They are also advised to acquire a reading knowledge of French or German.

Career Opportunities. A degree in Classical Civil-ization represents a solid liberal arts education that provides an excellent foundation for a wide variety of careers. In the last twenty-five years, many majors have applied to law or medical schools and nearly all have been accepted. Additional career options include library and museum work, teaching, journalism, and graduate study in Classics, art, archaeology, history, literature, philosophy, and religion.

Classical Civilization

A. B. Major Requirements: UNITS
Classical and Mediterranean Civilizations track
Prerequisite Subject Matter.................. 26-27
Latin 1-2-3, or Greek 1-2-3, or Hebrew 1-2-3

Quarter Offered: I=Fall; II=Winter; III=Spring; IV=Summer; 2015-2016 offering in parentheses
Pre-Fall 2011 General Education (GE): ArtHum—Arts and Humanities; SciEng—Science and Engineering; SocSci—Social Sciences; Div—Domestic Diversity; Writ—Writing Experience
Fall 2011 and on Revised General Education (GE): AH—Arts and Humanities; SE—Science and Engineering; SS—Social Sciences; ACGH—American Cultures, DD—Domestic Diversity, OL—Oral Skills, QL—Quantitative, SL—Scientific, VL—Visual, WC—World Cultures; Writ—Writing Experience
Hons Program. Candidates for high or highest honors in Classical Civilization must write a senior honors thesis under the direction of a faculty member in Classics. Potential candidates for the honors program must enroll in Classics 194HA and 194HB, normally during the first two quarters of the senior year. Enrollment is limited to upper division students with a minimum of 125 units, and a 3.50 grade point average in courses in the Classical Civilization major. For further information, students should consult with the major advisor or program director. The requirements for the honors program are in addition to the regular requirements for the major in Classical Civilization.

Graduate Study. The Department offers a master's degree in Classics with emphasis on either Greek or Latin, however, admission into the graduate program has been suspended.

Prerequisite credit. Credit will not normally be given for a lower division course in Latin or Greek if it is the prerequisite already successfully completed. Exceptions can be made by the Program Director only.

Courses in Arabic, Classics, Greek, Hebrew, Hindi-Urdu, and Latin follow in alphabetical order.

Courses in Arabic (ARB)

Lower Division

1. Elementary Arabic 1 (5)
Lecture/discussion—5 hours. Introduction to basic Arabic. Interactive and integrated presentation of listening, speaking, reading, and writing skills, including the alphabet and basic syntax. Focus on standard Arabic with limited use of spoken Egyptian and/or one other colloquial dialect. GE credit: ArtHum | AH. —Hassouna

2. Elementary Arabic 2 (5)
Lecture/discussion—5 hours. Prerequisite: course 1 or with instructor after taking all parts of the course 1 final exam. Continues introduction to basic Arabic from course 1. Interactive and integrated presentation of listening, speaking, reading, and writing skills, including syntax. Focus on standard Arabic with limited use of spoken Egyptian and/or one other colloquial dialect. GE credit: ArtHum | AH. —II. (II.) Hassouna

3. Elementary Arabic 3 (5)
Lecture/discussion—5 hours. Prerequisite: course 1 and 2 or with consent of instructor after taking all components of the course 1 final exam. Continues introduction to basic Arabic from courses 1 and 2. Interactive and integrated presentation of listening, speaking, reading, and writing skills, including syntax. Focus on standard Arabic with limited use of spoken Egyptian and/or one other colloquial dialect. GE credit: ArtHum | AH. —III. (III.) Hassouna

22. Intermediate Arabic 22 (5)
Lecture/discussion—5 hours. Prerequisite: course 21 or with consent of instructor after taking all parts of course 21 exam. Continues from course 21. Interactive and integrated presentation of listening, speaking, reading, and writing skills, including idiomatic expression. Focus on standard Arabic with limited use of Egyptian and/or one other colloquial dialect. GE credit: ArtHum | AH. —II. (III.) Hassouna

23. Intermediate Arabic 23 (5)
Lecture/discussion—5 hours. Prerequisite: course 22 or with consent of instructor after completing all parts of the final exams for courses 21 and 22. Continues from courses 21 and 22. Interactive and integrated presentation of listening, speaking, reading, and writing skills, including idiomatic expression. Focus on standard Arabic with limited use of Egyptian and/or one other colloquial dialect. GE credit: ArtHum | AH. —III. (III.) Hassouna

Upper Division

121. Advanced Arabic (4)
Lecture/discussion—3 hours. Term paper. Prerequisite: course 23 or consent of instructor. Review, refinement, and development of skills learned in intermediate Arabic through work with texts, video, and audio on cultural and social issues. Integrated approach to reading, writing, listening, and speaking standard Arabic. GE credit: ArtHum | AH, WC. —I. (I.) Sharlet

122. Advanced Arabic (4)
Lecture/discussion—3 hours. Prerequisite: course 121 or permission of instructor. Continuation of course 121. Further development of advanced skills in reading, writing, listening, and speaking standard Arabic through work with texts, video, and audio on cultural and social issues. Limited use of one colloquial dialect. GE credit: ArtHum | AH, WC. —II. (II.) Radwan

123. Advanced Arabic (4)
Lecture/discussion—3 hours. Prerequisite: course 122 or permission of instructor. Continuation of course 122. Further development of advanced skills in reading, writing, listening, and speaking standard Arabic through work with texts, video, and audio on cultural and social issues. Limited use of one colloquial dialect. GE credit: ArtHum | AH, WC. —III. (III.) Radwan

144. A Story for a Life: The Arabian Nights (4)
Lecture/discussion-3 hours; term paper. In-depth investigation of the best-known work of pre-modern Arabic literature, taught in translation. Not open for credit to students who have taken Middle East/South Asia Studies 121A. (Same course as Middle East/South Asia Studies 121A.) Offered in alternate years. GE credit: ArtHum | AH, OL, WC, WE. —I. (I.) Sharlet

198. Directed Group Study (1-5)
Prerequisite: consent of instructor. Development of reading, writing, speaking, and listening skills in advanced Arabic. Materials may include al-Kitaab Part Two or Three, news articles and broadcasts, short stories, poetry, novels, essays, scripture, pro-phectic traditions, audio recordings, and television and film. May be repeated four times for credit if content differs. (P/NP grading only).—I, II, II, III.

Graduate

299. Individual Study (1-12)
Prerequisite: graduate standing. Restricted to Gradu- ate students. May be repeated for credit. (S/U grading only).—I, II, III. (I, II, III.)

Professional

396. Teaching Assistant Training Practicum (1-4)
Prerequisite: graduate standing. Restricted to Gradu- ate students. May be repeated 18 times for credit. (S/U grading only).—I, II, III. (I, II, III.)
Courses in Classics (CLA)

**Lower Division**

   Lecture—3 hours; term paper. Introduction to the literature, art, and social and political institutions of ancient Mesopotamia, Egypt, Palestine, and early Greece from 3000 to 500 B.C.E. GE credit: ArtHum, Wrt | AH, WC, WE.—II. (II) Popescu

2. **Ancient Greece and the Near East: 500 to 146 B.C.E. (4)**
   Lecture—3 hours; term paper. Introduction to the literature, art, and thought and the political and social institutions and values of Greece and its eastern Mediterranean neighbors—the Persians, Egyptians, and Jews. GE credit: ArtHum, Wrt | AH, WC, WE.—II. (II) Stem

   Lecture—3 hours; discussion—1 hour. Introduction to the history, literature, culture, political and social institutions and values of Roman Civilization, with an emphasis on the development of the Roman Empire and the interactions of Roman culture with other Mediterranean cultures. GE credit: ArtHum | AH, WC, WE.—II. (II) Stem

4. **Greek, Roman, and Near Eastern Mythology (3)**

5. **Women in Classical Antiquity (4)**
   Lecture/discussion—3 hours; term paper. Lives and roles of women and men in ancient Greece and Rome. Readings from history, philosophy, medical and legal documents, literature and myth. Offered irregularly. GE credit: ArtHum | AH, VL, WC, WE.—Seal

6. **Pompeii AD 79 (4)**
   Lecture—3 hours; term paper. Roman life in an urban community at the time of the eruption of Vesuvius. Slide presentations of the archeological evidence will be supplemented by selected readings from Petronius’ Satyricon and other ancient authors. Offered irregularly. GE credit: ArtHum, Wrt | AH, VL, WC, WE.

7. **The Classical Heritage in America (4)**
   Lecture/discussion—3 hours; term paper. Classical heritage. Notes on the influence of ancient Greece and Rome, and the United States from its colonial past to the present day. The reception of Greco-Roman thought and values as expressed in art, architecture, education, law, government, literature, and film. Offered irregularly. GE credit: ArtHum, Wrt | AH, VL, WC, WE.—Albu

8. **Greek and Latin Elements in English Vocabulary (3)**
   Lecture—3 hours. Knowledge of Latin and Greek not required. Elements of Greek and Latin vocabulary for increased understanding of English word formation and improved ability to understand and retain unfamiliar words. Emphasis on Greek and Latin elements but other languages not neglected. Not open for credit to students who have completed course 30F. GE credit: ArtHum | AH.—I, II, III, IV. (I, II, III, IV) Albu, Popescu, Rundin

9. **Greek and Latin Elements in Technical Vocabulary (3)**
   Lecture—3 hours. Knowledge of Greek and Latin not required. Elements of Greek and Latin vocabulary to increase understanding of English word formation in medical, scientific and technical terminology and improve ability to understand and retain unfamiliar terms. GE credit: ArtHum | AH.

10. **The Rise of Science in Ancient Greece (4)**
    Lecture/discussion—3 hours; term paper. Prerequisite: Mathematics 16A or the equivalent. Study of the emergence of scientific rationality in ancient Greece and its political and social context; concentration on four areas: mathematics, medicine, cosmology, and psychology. Reading from the Presocratics, Hippocrates, Plato, Aristotle, and Hellenistic philosophers. GE credit: ArtHum, Wrt | AH, WC, WE.

**Upper Division**

101A. **Readings in Arabic: 600-1850 (4)**
    Discussion—3 hours; extensive writing. Prerequisite: course 123 or the equivalent; students who have not completed course 123 should consult the instructor in advance of their application. Reading in Arabic. Poetry, prose literature, and selections from texts on religion, history, politics, science, philosophy and mysticism. Students can repeat the course one time if the instructor decides that they would benefit from additional practice working on the different selections from the same texts or if 50% or more of the texts are different. Offered irregularly. GE credit: ArtHum or SocSci, Div, Wrt | AH or SS, OL, WC, WE.—Hassouna, Radwan, Sharlet

101B. **Topics in Greek Civilization (4)**
    Lecture/discussion—3 hours; term paper. Prerequisite: one course in Classics, Latin or Greek or consent of instructor. Considered by time or place (e.g. the world of Homer) or by thematic genre (e.g. the Greek war of art). May be repeated two times for credit with topic different. Offered irregularly. GE credit: ArtHum | AH, WC, WE.—Albu

101C. **Topics in Roman Civilization (4)**
    Lecture/discussion—3 hours; term paper. Prerequisite: one course in Classics, Latin or Greek or consent of instructor. Topics may be ordered by time or place (e.g. Julius Caesar around age 18) or by thematic genre (e.g. gladiators: blood in the arena). May be repeated two times for credit with topic different. Offered irregularly. GE credit: ArtHum | AH, WC, WE.—Albu

101D. **Topics in Classical Receptions (4)**
    Lecture/discussion—3 hours; term paper. Prerequisite: one course in Classics or consent of instructor. Topics in classical reception from late antiquity to the present. Topics may be ordered by place (e.g. the classical tradition in Washington, D.C.) or by thematic genre (e.g. cinematic representations of the ancient world). May be repeated twice for credit when topic differs. Offered irregularly. GE credit: ArtHum | AH, WC, WE.—Albu

102. **Film and the Classical World (4)**
    Lecture—3 hours; film viewing—2.5 hours. Prerequisite: any Classics course except 30 or 31. The Classical World as portrayed in films. Viewings and discussions of modern versions of ancient dramas, modern films set in the ancient world, and films imbued with classical themes and allusions. Supplementary readings in ancient literature and mythology. GE credit: ArtHum, Wrt | AH, WE.—I, II Albu

110. **Origins of Rhetoric (4)**
    Lecture—3 hours; term paper. Prerequisite: one course in ancient history or consent of instructor. Issues in the development of rhetoric from its origins in ancient Greece to A.D. 430. Special attention to works of Plato, Aristotle, Cicero, and Quintilian. Role of grammar and rhetoric in schools of Roman Empire. The Christian rhetoric of Saint Augustine. Not open for credit to students who have completed Rhetoric and Communication 110 or Communication 110. GE credit: ArtHum, Wrt | AH, WE.—III.

120. **Greek and Roman Historiography (4)**
    Lecture/discussion—3 hours; term paper. Survey of Greek and Roman historical writing in English translation. Authors to be read may include Herodotus, Thucydides, Sallust, and Polybius. Focus on the development of historical writing as a literary genre. GE credit: ArtHum | AH, WC, WE. Offered in alternate years.—Seal

125. **Roman Political Thought (4)**
    Lecture—3 hours; term paper. Survey of Roman thinking about politics, as expressed both in formal theorizing and in a variety of contexts, including oratory, historiography, and epic. Study of Roman political reflection in its historical, cultural, and literary context. GE credit: ArtHum | AH, WC, WE. Offered in alternate years.—Seal

140. **Homer and Ancient Epic (4)**
    Lecture/discussion—3 hours; term paper. Prerequisite: course 10 or Comparative Literature I. Reading of the classical epics of Homer (Iliad, Odyssey) and Virgil (Aeneid) in English. Discussion of techniques of composition, the beliefs and values of their respective societies, and the generic tradition of ancient epic. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WC, WE.—Popechu

141. **Greek and Roman Comedy (4)**
    Lecture—3 hours; conference—1 hour. Readings in Aristophanes, Menander, Plautus, and Terence; lectures on the development of ancient comedy. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE.—Popechu

142. **Greek and Roman Novel (4)**
    Lecture—3 hours; term paper. Examination of the ancient Greek romances and their development into the grotesque realism of Petronius, and the religious mysticism of Apuleius’ The Golden Ass. GE credit: ArtHum, Wrt | AH, WE, WE.—Schein

143. **Greek Tragedy (4)**
    Lecture/discussion—3 hours; term paper. Prerequisite: course 10. Reading in modern plays of Aeschylus, Sophocles, and Euripides. Discussion of the development and influence of Athenian tragedy. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE.—Seal

150. **Socrates and Classical Athens (4)**
    Lecture/discussion—3 hours; term paper. Study of the major sources of our knowledge of Socrates, assessment of his role in the politics and culture of ancient Athens, his methods of analysis and his place in Western thought. Offered in alternate years. GE credit: ArtHum | AH, WC, WE.—Seal

171. **Mediterranean Bronze Age Archaeology (4)**
    Lecture—3 hours; extensive writing. Prerequisite: one of course 1, 2, 10, 15, Art History 1A, or Anthropology 3 recommended. Archaeological monuments of the ancient Near East, including Egypt and Mesopotamia, and of Greece and Crete during the Bronze Age. Special emphasis on the problems of state formation and on the co-existence and collapse of Bronze Age societies. Offered in alternate years. GE credit: ArtHum, Div, Wrt | AH, WE, WE.—Roller

172A. **Early Greek Art and Architecture (4)**
    Lecture—3 hours; term paper. Examination of the origin and development of the major monuments of Greek art and architecture from the eighth century to the mid-fifth century B.C. Not open for credit to students who have completed Art History 154A. (Same course as Art History 172A.) Offered in alternate years. credit: ArtHum, Wrt | AH, VL, WC, WE.—Roller

172B. **Later Greek Art and Architecture (4)**
    Lecture—3 hours; term paper. Study of the art and architecture of later Classical and Hellenistic Greece, from the mid-fifth century to the first century B.C. Not open for credit to students who have completed Art History 154B. (Same course as Art History 172B.) Offered in alternate years. GE credit: ArtHum, Wrt | AH, VL, WC, WE.—Roller

173. **Roman Art and Architecture (4)**
    Lecture—3 hours; term paper. Art and architecture of Rome and the Roman Empire, from the founding of Rome through the fourth century C.E. (Same course as Art History 173.) Offered in alternate years. GE credit: ArtHum, Wrt | AH, VL, WC, WE.—Roller

174. **Greek Religion and Society (4)**
    Lecture—3 hours; term paper. Prerequisite: a lower division Classics course, except Classics 3, 20, 30, or 31. Cults, festivals, and rituals of Greek religious practice and their relationship to Greek social and
175. Architecture and Urbanism in Mediterranean Antiquity (4)
Lecture—3 hours; extensive writing. Prerequisite: a lower division course except 30, 31; Art History 1A recommended. Architecture and urban development in the ancient Near East, Greece, and Rome. Special emphasis on the social structure of the ancient city as expressed in its architecture, and on the interaction between local traditions and the impact of Greco-Roman urbanism. (Same course as Art History 175.) Offered in alternate years. GE credit: ArtHum, Wrt | AH, WC, WE.—Ruller

190. Senior Seminar (4)
Seminar—3 hours; term paper. Prerequisite: completion of one upper division course in Latin, Greek or Hebrew or consent of instructor. Advanced interdisciplinary study of a problem in the ancient Mediterranean world using the techniques of history, archaeology, art history and philology. May be repeated for credit with consent of instructor. GE credit: ArtHum, Wrt | AH, WE.—I. Roller

194HA-194HB. Special Study for Honors Students (3-3)
Discussion—1 hour, independent study; term paper. Prerequisite: admission to the honors program and consent of faculty member supervising honors thesis. Directed reading, research, and writing culminating in the completion of a senior honors thesis under the direction of a faculty adviser. (Deferral grading only; pending completion of sequence. P/NP grading only.) GE credit: AH.—II. Ill.

197C. Community Tutoring in Classical Languages (1-5)
Tutoring—1-5 hours. Prerequisite: consent of instructor. Supervised instruction of Greek or Latin in nearby schools by qualified students in department. May be repeated for credit up to 5 units. (P/NP grading only)

198. Directed Group Study (1-5)
Prerequisite: upper division standing. (P/NP grading only)

199. Special Study for Advanced Undergraduates (1-5)
Prerequisite: upper division standing and consent of instructor. (P/NP grading only)

Graduate

200A. Approaches to the Classical Past (4)
Seminar—3 hours; term paper. Survey of major areas of classical scholarship, with special emphasis on the continuing impact of Mediterranean antiquity on later literature, history, art, and culture. Offered in alternate years. GE credit: ArtHum, Wrt.—I. Albu

200B. Approaches to the Classical Past (4)
Independent study—4 hours. Prerequisite: course 200A; graduate student status. Research project on major area of Classical scholarship, with special emphasis on the continuing impact of Mediterranean antiquity on later literature, history, art, and culture. Limited enrollment. Offered in alternate years. —III. Albu

201. Introduction to Classical Philology (4)
Seminar—3 hours; term paper. Survey of major contemporary areas of classical scholarship with special attention devoted to current problems in literary and textual criticism.

202. Homer (4)
Seminar—3 hours; term paper. Readings in the Iliad and Odyssey: the origins and transmission of the poems.

203. Vergil (4)
Seminar—3 hours; term paper. Reading of selected books of the Eclogues, Georgics, and Aeneid. Emphasis will be placed on the study of Vergilian poetic language.—Traill

204. Greek and Roman Comedy (4)
Seminar—3 hours; term paper. Historical and critical problems of Aristophanes or New Comedy. May be repeated for credit.

205. Latin Lyric and Elegy (4)
Seminar—3 hours; term paper. Critical examination of the works of Catullus, Horace, or Propertius. May be repeated for credit.

206. Greek Historiography (4)
Seminar—3 hours; term paper. Development of historical writing in Greece. May be repeated for credit.

207. Greek Drama (4)
Seminar—3 hours; term paper. Literary and philosophical analysis of Euripides, Sophocles, or Aeschylus. May be repeated for credit.

299. Research (1-12)
Prerequisite: consent of instructor. (S/U grading only)

Professional

396. Teaching Assistant Training Practicum (1-4)
Prerequisite: graduate standing. May be repeated for credit. (S/U grading only)—I, II, III. (I, II, III.)

Courses in Greek (GRK)

Lower Division

1. Elementary Greek (5)
Lecture—5 hours. Introduction to the basic grammar and vocabulary of Classical and New Testament Greek. Development of translation skills with emphasis on Greek-English. (Students who have successfully completed Greek 2 or 3 in the 10th or higher grade in high school may receive unit credit for this course on a P/NP grading basis only. Although a passing grade will be charged to the student's P/NP option, no petition is required. All other students will receive a letter grade unless a P/NP petition is filed.) GE credit: ArtHum | AH.—I. (I.) Popescu

2. Elementary Greek (5)
Lecture—5 hours. Prerequisite: course 1. Continuation of course 1. GE credit: ArtHum | AH.—II. (II.) Popescu

2NT. Elementary New Testament Greek (1)
Lecture—1 hour. Prerequisite: course 2 (concurrently). Supplementary study of New Testament Greek. GE credit: ArtHum | AH.—II. (II.) Popescu

3. Intermediate Greek (5)
Lecture—5 hours. Prerequisite: course 2. Continuation of course 2. Selected readings from Greek authors. GE credit: ArtHum | AH.—III. (III.) Popescu

3NT. Elementary New Testament Greek (1)
Lecture—1 hour. Prerequisite: course 3 (concurrently). Supplementary study of New Testament Greek. GE credit: ArtHum | AH.—III. (III.) Popescu

98. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only)

Upper Division

100. Readings in Greek Prose (5)
Lecture/discussion—4 hours; term paper. Prerequisite: course 2 or 3. GE credit: ArtHum, Wrt | AH, WE.—I. (I.) Seal

101. Plato (4)
Lecture—3 hours; term paper. Prerequisite: course 3. GE credit: ArtHum, Wrt | AH, WE.—II. (II.) Seal

102. Euripides (4)
Lecture—3 hours; term paper. Prerequisite: course 101. GE credit: ArtHum, Wrt | AH, WE.—III. Popescu

103A. Homer: Iliad (4)
Recitation—3 hours; term paper. Prerequisite: course 3. GE credit: ArtHum, Wrt | AH, WE.—II. (II.) Schein

103B. Homer: Odyssey (4)
Recitation—3 hours; term paper. Prerequisite: course 3. GE credit: ArtHum, Wrt | AH, WE.—II. (II.) Schein

104. Menander (4)
Lecture—3 hours; term paper. Prerequisite: course 3. GE credit: ArtHum, Wrt | AH, WE.

105. Attic Orators (4)
Lecture—3 hours; term paper. Prerequisite: course 100 or equivalent. Selected readings from the orators of 4th and 5th century Athens. May be repeated for credit if topic differs and with consent of instructor. Offered irregularly. GE credit: ArtHum | AH, WE.

110. Readings in the Greek Novel (4)
Lecture—3 hours; term paper. Prerequisite: course 100N. Selected readings from Greek prose fiction of the late classical, Hellenistic and imperial periods. Offered in alternate years. May be repeated two times for credit with consent of instructor. GE credit: Wrt.—III.

111. Sophocles (4)
Lecture—3 hours; term paper. Prerequisite: course 103. GE credit: ArtHum, Wrt | AH, WE.—(II.) Schein

112. Aristophanes (4)
Lecture—3 hours; term paper. Prerequisite: course 103. GE credit: ArtHum, Wrt | AH, WE.

113. Thucydides (4)
Lecture—3 hours; term paper. Prerequisite: course 103. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE.—Popescu

114. Lyric Poetry (4)
Lecture—3 hours; term paper. Prerequisite: course 103. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE.—Popescu

115. Aeschylus (4)
Lecture—3 hours; term paper. Prerequisite: course 103. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE.—Schein

116. Herodotus (4)
Lecture—3 hours; term paper. Prerequisite: course 103. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE.—Schein

121. Greek Prose Composition (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 100 or equivalent. Intensive grammar and vocabulary review through exercises in Greek prose composition. Offered in alternate years. GE credit: ArtHum | AH.

130. Readings in Later Greek (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 100 or equivalent. Translation and discussion of selected readings from Hellenistic to Byzantine Greek literature. Offered in alternate years. GE credit: ArtHum | AH, WE.

198. Directed Group Study (1-5)
(P/NP grading only).

199. Special Study for Advanced Undergraduates (1-5)
(P/NP grading only)

Courses in Hebrew (HEB)

Lower Division

1. Elementary Hebrew (5)
Lecture/discussion—4 hours; laboratory—1 hour. Speaking, listening, comprehension, reading and writing fundamentals of modern Hebrew. (Students who have successfully completed, with a C- or better, Hebrew 2 or 3 in the 10th or higher grade in high school may receive unit credit for this course on a P/NP grading basis only. Although a passing grade will be charged to the student’s P/NP option, no petition is required. All other students will receive a letter grade unless a P/NP petition is filed.) GE credit: ArtHum | AH.

1. Accelerated Intensive Elementary Hebrew (5)
Lecture/discussion—15 hours. Special 12 week accelerated, intensive summer session course that combines the work of courses 1, 2, and 3. Introduces to Hebrew grammar and development of language skills in a cultural context with emphasis on
2. Elementary Hindi/Urdu II (5)
Lecture/discussion—5 hours. Prerequisite: course 1. An introduction to Hindi and Urdu in which students will learn vocabulary and grammar in both Devanagari and Urdu scripts, and will practice skills in reading, writing, speaking and listening. GE credit: ArtHum | AH. —II. (II.) Franco

3. Elementary Hindi/Urdu III (5)
Lecture/discussion—5 hours. Prerequisite: course 2. An introduction to Hindi and Urdu in which students will learn vocabulary and grammar in both Devanagari and Urdu scripts, and will practice skills in reading, writing, speaking and listening. GE credit: ArtHum | AH. —III. (III.) Franco

21. Intermediate Modern Hebrew I (5)
Lecture/discussion—5 hours. Prerequisite: course 2 or the equivalent. Speaking, listening, comprehension, reading and writing fundamentals of modern Hebrew. GE credit: ArtHum | AH. —II. (II.) Franco

22. Intermediate Modern Hebrew II (5)
Lecture/discussion—5 hours. Prerequisite: course 21 or consent of instructor. Continued development and refinement of grammar, composition, and language skills required for reading literary texts and conversing about contemporary topics at an advanced level. History of the Hebrew language, taught to students who have taken courses 100 or 100A. —I. (I.) Franco

23. Intermediate Modern Hebrew III (5)
Lecture/discussion—5 hours. Prerequisite: course 22 or consent of instructor. Continued development and refinement of grammar, composition, and language skills required for reading literary texts and conversing about contemporary topics at an advanced level. History of the Hebrew language. Further development of writing and translating skills. Not open to students who have taken course 100C or 102. —II. (III.) Franco

Upper Division
100AN. Advanced Modern Hebrew I (4)
Lecture/discussion—3 hours, term paper. Prerequisite: course 23 or consent of instructor. Students who have taken course 100A as 2nd year Hebrew may take course 100AN. Third year Hebrew. Advanced grammar and composition. Focus on reading of literary texts, oral skills and accuracy in writing. GE credit: ArtHum | AH. —I. (I.) Franco

100BN. Advanced Modern Hebrew II (4)
Lecture/discussion—3 hours, term paper. Prerequisite: course 100AN or consent of instructor. Students who have taken course 100B as 2nd year Hebrew may take course 100BN. Third year Hebrew. Advanced grammar and composition. Focus on reading of literary texts, oral skills and accuracy in writing. GE credit: ArtHum | AH. —II. (II.) Franco

100CN. Advanced Modern Hebrew III (4)
Lecture/discussion—3 hours, term paper. Prerequisite: course 100BN. Students who have taken course 100C or 2nd year Hebrew may take course 100CN. Third year Hebrew. Advanced grammar and composition. Focus on reading of literary texts, oral skills and accuracy in writing. GE credit: ArtHum | AH. —III. (III.) Franco

Courses in Hindi (HIN)

Lower Division
1. Elementary Hindi/Urdu I (5)
Lecture/discussion—5 hours. An introduction to Hindi and Urdu in which students will learn vocabulary and grammar in both Devanagari and Urdu scripts, and will practice skills in reading, writing, speaking and listening. GE credit: ArtHum | AH. —I. (I.) Chauhan

2. Elementary Hindi/Urdu II (5)
Lecture/discussion—5 hours. Prerequisite: course 1. An introduction to Hindi and Urdu in which students will learn vocabulary and grammar in both Devanagari and Urdu scripts, and will practice skills in reading, writing, speaking and listening. GE credit: ArtHum | AH. —II. (II.) Chauhan

3. Elementary Hindi/Urdu III (5)
Lecture/discussion—5 hours. Prerequisite: course 2. An introduction to Hindi and Urdu in which students will learn vocabulary and grammar in both Devanagari and Urdu scripts, and will practice skills in reading, writing, speaking and listening. GE credit: ArtHum | AH. —III. (III.) Chauhan

Lecture/discussion—5 hours. Prerequisite: course 21. An intermediate level course for students who have completed Elementary Hindi/Urdu or the equivalent. Students will continue to practice their skills in listening, speaking, reading and writing in Hindi and Urdu. GE credit: ArtHum | AH. —II. (II.) Chauhan

22. Intermediate Hindi/Urdu II (5)
Lecture/discussion—5 hours. Prerequisite: course 22. An intermediate level course where students will continue to practice their skills in listening, speaking, reading and writing in Hindi and Urdu. GE credit: ArtHum | AH. —III. (III.) Chauhan

23. Intermediate Hindi/Urdu III (5)
Lecture/discussion—5 hours. Prerequisite: course 22. An intermediate level course where students will continue to practice their skills in listening, speaking, reading and writing in Hindi and Urdu. GE credit: ArtHum | AH. —III. (III.) Chauhan

Courses in Latin (LAT)

Lower Division
1. Elementary Latin (5)
Lecture—5 hours. Introduction to basic grammar and vocabulary and development of translation skills with emphasis on Latin to English. Students who have successfully completed Latin 2 or 3 in the 10th or higher grade in high school may receive unit credit for this course on a P/NP grading basis only. Although a passing grade will be charged to the student's P/NP option, no petition is required. All other students will receive a letter grade unless a P/NP petition is filed. GE credit: ArtHum | AH. —I. (I.) Popescu, Rundin

2. Elementary Latin (5)
Lecture—5 hours. Continuation of course 1. GE credit: ArtHum | AH. —II. (II.) Rundin

3. Intermediate Latin (5)
Lecture—5 hours. Prerequisite: course 2. Continuation of course 2. Selected readings from Latin authors. GE credit: ArtHum | AH. —III. (III.) Rundin

98. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only)

Upper Division
100. Readings in Latin Prose (4)
Lecture/discussion—4 hours. Prerequisite: course 3 or the equivalent. Review of Latin morphology, grammar, and vocabulary. Readings in prose authors, including Julius Caesar. GE credit: ArtHum | AH. —I. (I.) Stem

101. Livy (4)
Lecture—3 hours, term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE. —II. (II.) Stem

102. Roman Comedy (5)
Lecture—4 hours, term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE. —II. (II.) Albu

103. Vergil: Aeneid (4)
Lecture—3 hours, term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE. —II. Albu, Seal

104. Sallust (4)
Lecture—3 hours, term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE. —III. Stem

105. Catullus (4)
Lecture—3 hours, term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE. —III. Albu

106. Horace: Odes and Epodes (4)
Lecture—3 hours, term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE. —III. Albu

108. Horace: Satires and Epistles (4)
Lecture—3 hours, term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE. —III. Seal

109. Roman Elegy (4)
Lecture—3 hours, term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE. —III. Seal

110. Ovid (4)
Lecture/discussion—3 hours, term paper. Prerequisite: course 100 or equivalent. Translation and discussion of selected readings from the works of Ovid. May be repeated one time for credit if readings vary and with consent of instructor. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE, —IV. Albu

111. Lucrceius (4)
Lecture—3 hours, term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE. —IV. Albu

112. Cicero (4)
Lecture—3 hours, term paper. Prerequisite: course 100 or equivalent. Translation and discussion of selected readings from the works of Cicero. May be repeated one time for credit if readings vary and with consent of instructor. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE. —IV. Albu

115. Vergil: Eclogues and Georgics. (4)
Lecture—3 hours, term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE. —IV. Albu

116. Roman Historians (4)
Lecture/discussion—3 hours, term paper. Prerequisite: course 100 or equivalent. Readings in Latin from one or more of the major Roman historians and biographers. Authors may include Sallust, Nepos, Livy, Tacitus, Suetonius, and Ammianus Marcellinus. Offered in alternate years. GE credit: ArtHum | AH, WC, WE. —Seal

119. Readings in Republican Latin Literature (4)
Lecture/discussion—3 hours, term paper. Prerequisite: course 100 or equivalent. Translation and discussion of selected readings from Republican Latin literature. May be repeated for credit when topics vary. Offered in alternate years. GE credit: ArtHum | AH, WC, WE. —IV. Seal

120. Readings in Imperial Latin Literature (4)
Lecture/discussion—3 hours, term paper. Prerequisite: course 100 or equivalent. Readings in Imperial Latin literature. May be repeated two times for credit when topics differ. Offered in alternate years. GE credit: ArtHum | AH, WC, WE. —IV. Seal

121. Latin Prose Composition (4)
Lecture—3 hours, term paper. Prerequisite: course 100 or equivalent. Prose composition. Offered in alternate years. GE credit: ArtHum | AH, WE. —IV. Albu

125. Medieval Latin (4)
Lecture—3 hours, term paper. Prerequisite: course 3 and two upper division courses in Latin. Selected readings from the Vulgate and various medieval authors provide an introduction to the developments in the Latin language and literature from the fourth to the fifteenth centuries. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE. —IV. Albu
Clinical Nutrition

(College of Agricultural and Environmental Sciences)

Faculty. See the Department of Nutrition, on page 454.

The Major Program

The Clinical Nutrition major provides students with training in normal and therapeutic nutrition, biological and social sciences, food science, communication, business management and food service management. This major fulfills the academic requirements for admission into a dietician internship or the equivalent, which must be completed before qualifying for registration as a dietician.

The Program. The Clinical Nutrition major (formerly Dietetics) includes the same basic core of nutrition classes as the Nutrition Science major, but includes additional courses such as food service management, education, sociology, and communication. This prepares students to work with the public. Clinical Nutrition students spend the first two years completing preparatory coursework in the basic biological sciences, along with several of the social sciences. In the final two years, students take courses in normal and clinical nutrition, food science, biochemistry, and management techniques.

Entering freshman or transfer students are assumed to have basic computer skills and to demonstrate mathematics competency adequate to pass the Math Placement Exam with a minimum score of 25.

Career Alternatives. The Clinical Nutrition major qualifies students to apply for a dietetic internship accredited by the Accreditation Council for Education in Nutrition and Dietetics enabling them to become a Registered Dietitian, the professional credential necessary to work in a clinical setting. Once becoming a Registered Dietitian, the professional credential is required for work in a clinical setting. Once completion of preparatory coursework in the basic biological sciences, along with several of the social sciences, in the final two years, students take courses in normal and clinical nutrition, food science, biochemistry, and management techniques.

Graduate Study. Graduate Group in Clinical Research (GGCR) is an interdisciplinary graduate group in clinical research with a Master of Advanced Study degree in Clinical Research. The GGCR provides a solid clinical/translational, patient-oriented research foundation for junior faculty, clinical and pre-clinical fellows, and post-doc scholars. The program centers around three core elements: didactic instruction, mentored research, and special experiences.

Mandatory course work includes biostatistics, epidemiology, patient-oriented research, health services research, data management/informatics, scientific communication, research management, responsible conduct of research and career development. The instruction includes a 12-week summer curriculum followed by a one- or two-year core curriculum and electives that can be tailored to best meet each scholars career development needs.

Degree Offered. M.A.S. Plan II

Requirements:

Candidates must meet the following minimum requirements:

- High level of interest and potential to pursue innovative preclinical/translational or clinical research as a major focus of career plan, and a long-term goal of entering clinical research career.
- Submission of an application: 2-page research proposal, Description of training plan with identified mentor, Curriculum vitae, and letters of support.

Coaching Principles and Methods

(College of Letters and Science)

The Coaching Principles and Methods minor is an interdisciplinary minor open to undergraduates in all four colleges. Students must complete a statement of interest to assist in placing them in future internships. This form is available in the Physical Education Program Office, in 264 Hickey Gym, and may be turned in at any time.

Communication

[College of Letters and Science]

George A. Barnett, Chairperson of the Department
Department Office. 469 Kerr Hall; 530-752-9933

Faculty
George A. Barnett, Ph.D., Professor
Robert A. Bell, Ph.D., Professor
Joel Chao, Ph.D., Associate Professor
Bo Feng, Ph.D., Assistant Professor
Hyoung Hwang, Ph.D., Assistant Professor
Nicholas A. Palomares, Ph.D., Associate Professor
Jorge Petells, Ph.D., Assistant Professor
Lamari Taylor, Ph.D., Associate Professor
Narine Yegiyan, Ph.D., Assistant Professor

Emeriti Faculty
Rina Alcalay, Ph.D., Professor Emerita
Charles R. Berger, Ph.D., Professor Emeritus
Michael T. Matley, Ph.D., Professor Emeritus
James J. Murphy, Ph.D., Professor Emeritus
Academic Senate Distinguished Teaching Award
Ralph S. Pomeroy, Ph.D., Professor Emeritus
John L. Vols, M.A., Senior Lecturer Emeritus

Affiliated Faculty
Virginia O. Hamilton, Ph.D., Lecturer
Catherine Puckering, M.A., Lecturer
Alisa Shubb, M.A., Lecturer
John Theobald, M.A., Lecturer

The Major Program

The major in communication focuses upon human symbolic behavior in interpersonal and mediated contexts. The Program. The program of study in communication examines communication processes at several different levels of analysis. Courses dealing with communication at the individual, interpersonal, organizational and societal levels of analysis are offered.

Required Minor Electives

A minimum of eight units with courses at least two different departments. One course must be taken from both a race/class or gender list. Second course can be from race/class, gender list or from sociocultural issues and settings list.

Race/Class/Gender List: One course from:

Sociocultural Issues and Settings List: American Studies 115, 130, 152, Anthropology 1418, Education 115, 122, 153, Exercise Biology 102, 121, 122, Human Development 100B, 110, Native American Studies 156, Physical Education 120, Psychology 126, 140, 151, 157, 158, 161, 162, 168, Sociology 122, 123, 124, 131, 135, Women’s Studies 140.

PHE 192 has a prerequisite of junior/senior standing. PHE 192 cannot be taken until after a student has completed more than 90 total units. PHE 192 internship must be in a coaching or teaching setting. Setting must be approved IN ADVANCE by the coaching minor advisor before a CRN will be issued.

Minor Adviser. Lou Bronzan, 530-752-5541 or slbronzan@ucdavis.edu

Advising Center. 289 Hickey Gym

Graduate Adviser. N. Palomares

Courses in Communication (CMN)

Students must have satisfied the Entry Level Writing requirement before taking any course in Communication.

Lower Division

1. Introduction to Public Speaking (4)
   Lecture—1 hour; discussion—3 hours. Practice in the preparation and delivery of speeches based on contemporary principles and techniques of organization and persuading audiences. GE credit: Wrt | OL—I, II, III, (I, II, III) Shub

2. Interpersonal Communication Competence (6)

5. Global English and Communication (4)
   Lecture—2 hours; discussion—2 hours. English as a global language and its uses in intercultural communication. Cultural, historical, and political dimensions of varieties of English spoken around the world. Experiential grounding in strategies for increasing interpretive and verbal communicative competence for a globalized world. (Same course as Linguistics 5) GE credit: ArtHum or SocSci | AH or SS, OL. WC.—II. (II.) Farrell, Feng, Ramanathan

99. Special Study for Undergraduates (1-5)
   Prerequisite: consent of instructor. [IP/NP grading only]

Upper Division

101. Communication Theories (4)
   Lecture—3 hours; discussion—1 hour. Forms, functions, development, and testing of communication theory, with emphasis on social scientific approaches. Survey and comparison of significant micro and macro theories and models of face-to-face and mediated communication. Application of theories to real world problems. GE credit: SocSci | SS—I, II, III, IV, (I, II, III, IV) Feng

102. Empirical Methods in Communication (4)
   Lecture—3 hours; discussion—1 hour. Prerequisite: course 101 and Statistics 13 or equivalent. Social scientific research methods commonly employed in Communication. Topics include data design, measurement, sampling, questionnaire construction, survey research, experimental design, evaluation research, content analysis and qualitative field methods. GE credit: SocSci | SS—I, II, III, IV, (I, II, III, IV) Bell, Palomares, Yegiyan

103. Gender Differences in Communication (4)
   Lecture—4 hours; prerequisite: course 101 and course 102 or an equivalent course in research methods. Pass One open to Communication majors only. Examination of communication differences between men and women as sources of male/ female stereotypes, miscommunications, dilemmas, and difficulties (real and imagined). Treatment of genders as cultures. Topics include male/female differences in discursive practices and patterns, language attitudes, and relational dynamics. GE credit: SocSci | SS—I, II, Palomares

105. Semantic and Pragmatic Functions of Language (4)
   Lecture—4 hours. Prerequisite: course 101 and course 102 or an equivalent course in research methods. Pass One open to Communication majors only. The role of language in shaping attitudes and perceptions of self and others. The use and abuse of verbal symbols in communicative situations. Concepts of meaning in discourse. GE credit: SS—I, II, III, (II, III) Palomares

134. Interpersonal Communication (4)
   Lecture—4 hours. Prerequisite: course 101 and course 102 or equivalent are required. Pass One open to Communication majors only. Communication...
tion between individuals in social and task settings. One-to-one communication, verbal and nonverbal, in developing relationships. Consideration of theory and research on relevant variables such as shyness, selfdisclosure, reciprocity, games, and conflict. GE credit: SocSci | SS.— II, III, IV, (II, III, IV) Feng, Jenkins

135. Nonverbal Communication (4)
Lecture—4 hours. Prerequisite: course 101 and 102 (or equivalent course in research methods). Pass One open to Communication majors only. Examination of the interaction between nonverbal communication and verbal communication channels and the impact of new communication technologies on interpersonal and mediated communication contexts. Underlying functions served by nonverbal communication also considered. GE credit: SocSci | SS.— II, III, IV, (II, III, IV) Berge, Fucckering

136. Organizational Communication (4)
Lecture—4 hours. Prerequisite: course 101 and 102 (or equivalent course in research methods). Pass One open to Communication majors only. Organizational communication theory and practice is examined with an emphasis on the use of effective communication strategies for achieving organizational goals. GE credit: SocSci | SS.— II, IV, (II, IV) Barnett, Hamilton

137. Intercultural Communication (4)
Seminar—3 hours; term paper. Prerequisite: course 134. Major concepts and theories of intercultural communication. Examines the impact of diversity and differences in verbal and nonverbal communication; dimensions of cultural variations, barriers to intercultural communication, and intercultural communication competence. GE credit: SocSci | SS, DD— III (III) Feng

138. Communication and Cognition (4)
Lecture/discussion—4 hours. Prerequisite: course 101 and 102 (or equivalent course in research meth- ods). Pass One open to Communication majors only. Relationship between communication and cognition. Models of discourse comprehension and production, the influence of language attitudes on social judgments, and the effects of information processing on decision making are explored. GE credit: SocSci | SS—I, II, (II) Berger, Yegiyan

139. Advanced Organizational Communication (4)

140. Introduction to Mass Communication (4)

141. Media Effects: Theory and Research (4)
Lecture/discussion—4 hours. Prerequisite: course 101, 102 (or equivalent course in research meth- ods). Pass One open to Communication majors only. Social scientific studies of the effects of mass media messages on audience members’ actions, attitudes, beliefs, and emotions. Topics include the cognitive processing of media messages, television violence, political socialization, cultivation of beliefs, agenda-setting, and the impact of new technologies. GE credit: SocSci | SS—I, II, III, (II, III) Cho, Hwang, Taylor

Lecture—4 hours. Prerequisite: course 101, 102 (or equivalent course in research methods). Topics include the cognitive processing of media messages, television violence, political socialization, cultivation of beliefs, agenda-setting, and the impact of new technologies. GE credit: SocSci | SS—I, II, III, (II, III) Feng, Jenkins

125. News Media (4)
Lecture—4 hours. Prerequisite: course 101, 102 (or equivalent course in research methods). Topics include the cognitive processing of media messages, television violence, political socialization, cultivation of beliefs, agenda-setting, and the impact of new technologies. GE credit: SocSci | ACGH, SS—I, II, III, (II, III) Hwang, Theobald

143. Analysis of Media Messages (4)
Lecture/discussion—3 hours; term paper. Prerequi- site: course 101, 102 (or equivalent course in research methods). Examines the relationship between communication and cognition. Topics include the cognitive processing of media messages, television violence, political socialization, cultivation of beliefs, agenda-setting, and the impact of new technologies. GE credit: SocSci, Wrt | ACGH, SS, Wrt—I, II, III, (II, III) Bell, Fucckering

144. Media Entertainment (4)
Lecture/discussion—3 hours; term paper. Prerequi- site: course 101, 102 (or equivalent course in research methods). Examines the relationship between communication and cognition. Topics include the cognitive processing of media messages, television violence, political socialization, cultivation of beliefs, agenda-setting, and the impact of new technologies. GE credit: SocSci, Wrt | ACGH, SS, Wrt—I, II, III, (II, III) Taylor

145. Political Communication (4)
Lecture/discussion—4 hours. Prerequisite: course 101 and 102 or equivalent course in research methods. Examines the use of communication in political campaigns. GE credit: SocSci | ACGH, SS—Cho

146. Communication Campaigns (4)
Lecture/discussion—3 hours; term paper. Prerequi- site: course 101, 102 (or equivalent course in research methods). Examines the use of communication in political campaigns. GE credit: SocSci | ACGH, SS—Cho

148. Contemporary Trends in Media (4)
Lecture/discussion—4 hours. Prerequisite: course 101 and 102 (or equivalent course in research methods). Examines the use of communication in political campaigns. GE credit: SocSci | ACGH, SS—Cho

150. Current Topics in Communication (4)
Lecture/discussion—4 hours. Prerequisite: course 101 and 102 (or equivalent course in research methods). Examines the use of communication in political campaigns. GE credit: SocSci | SS—I, II, (III) Barnett

153. Proseminar in Social Interaction (4)
Seminar—3 hours; term paper. Prerequisite: course 101, 102, 136; consent of instructor. Open to Communication majors only. Reading, discussion, research, and writing on a selected topic in the specialty of social interaction. Potential topics include relationship initiation, maintenance, and deterioration; communication failure; nonverbal communication; conversational management; semantics and pragmatics of language, and family/marital communication. May be repeated for credit when topic differs. Offered in alternate years. GE credit: SocSci, Wrt | SS, WE—III, (III) Berger, Feng, Jenkins, Palomo

159. Proseminar in Mass Communication (4)
Seminar—3 hours; term paper. Prerequisite: course 101, 102, 136; consent of instructor. Open to Communication majors only. Reading, discussion, research, and writing on a selected topic in the specialty of social interaction. Potential topics include relationship initiation, maintenance, and deterioration; communication failure; nonverbal communication; conversational management; semantics and pragmatics of language, and family/marital communication. May be repeated for credit when topic differs. Offered in alternate years. GE credit: SocSci, Wrt | SS, WE—III, (III) Berger, Cho, Hwang, Taylor, Yegiyan

165. Media and Health (4)
Lecture/discussion—4 hours. Prerequisite: course 101, 102 (or equivalent course in research meth- ods). Survey of how communication technologies transform our lives at the individual and society level. Topics include human-computer interaction, social media; the effects of communication technologies in education, health, and business; and social and political implications of technological development. GE credit: SocSci | ACGH, V, SS—III, (III) Theobald

170. Communication, Technology, and Society (4)
Lecture/discussion—3 hours; term paper. Prerequi- site: course 101 and 102 (or equivalent course in research methods). Examines the use of communication in political campaigns. GE credit: SocSci | SS—I, II, (III) Taylor

175. Computer-Mediated Communication (4)
Lecture/discussion—3 hours; term paper. Prerequi- site: course 101 and 102 (or equivalent course in research methods). Examines the use of communication in political campaigns. GE credit: SocSci | SS—I, II, (III) Peña

180. Current Topics in Communication (4)
Lecture/discussion—4 hours. Prerequisite: course 101 and 102 (or equivalent course in research methods) . Examines the use of communication in political campaigns. GE credit: SocSci | SS—I, II, (III) Taylor

189A. Proseminar in Social Interaction (4)
Seminar—3 hours; term paper. Prerequisite: course 101, 102, 136; consent of instructor. Open to Communication majors only. Reading, discussion, research, and writing on a selected topic in the specialty of social interaction. Potential topics include relationship initiation, maintenance, and deterioration; communication failure; nonverbal communication; conversational management; semantics and pragmatics of language, and family/marital communication. May be repeated for credit when topic differs. Offered in alternate years. GE credit: SocSci, Wrt | SS, WE—III, (III) Berger, Feng, Jenkins, Palomo

189B. Proseminar in Mass Communication (4)
Seminar—3 hours; term paper. Prerequisite: course 101, 102, 136; consent of instructor. Open to Communication majors only. Reading, discussion, research, and writing on a selected topic in the specialty of social interaction. Potential topics include relationship initiation, maintenance, and deterioration; communication failure; nonverbal communication; conversational management; semantics and pragmatics of language, and family/marital communication. May be repeated for credit when topic differs. Offered in alternate years. GE credit: SocSci, Wrt | SS, WE—III, (III) Berger, Cho, Hwang, Taylor, Yegiyan

190C. Proseminar in Health Communication (4)
Seminar—3 hours; term paper. Prerequisite: course 101, 102, 140; consent of instructor. Reading, dis- cussion, research, and writing on a selected topic in the specialty of mass communication. Potential topics include, agenda-setting, the cultivation of beliefs, television violence, and health communication. One credit to upper-divisional groups, mediated political discourse, interactive technologies, and international/global communication. May be repeated for credit when topic differs. Offered in alternate years. GE credit: SocSci, Wrt | SS, WE—III, (III) Berger, Cho, Hwang, Taylor, Yegiyan

Quarter Offered: Fall—W. Winter—III. Spring—IV, Summer—2015-2016 offering in parenthesis.

Fall 2011 and on Revised General Education (GE): AH|Arts and Humanities; SE|Science and Engineering; SS|Social Sciences; ACGH|American Culture; DD—Domestic Diversity; DL—Oral Skills; QL—Quantitative, SL—Scientific, V—Visual, WC—World Cultures, WE—Writing Experience

Communication 205
physician-patient interaction, uses of communication technologies in health settings, and health-related advertising. May be repeated for credit when topic differs. Offered in alternate years. GE credit: Sci/Soc, Writ | SS, WE.—IIll. Bell, Ferguson

190D. Proseminar in Organizational Communication (4) Seminar—3 hours; term paper. Prerequisite: course 101, 102, 136; consent of instructor. Open to Com- munication majors only. Reading, discussion, research, and writing on a selected topic in the spe- cialty of organizational communication. Potential topics include organizational networks, organizational conflict and its resolution, mediation, bargaining and negotiation, superior-subordinate interaction, leadership styles, and interpersonal communication. May be repeated for credit when topic differs. Offered in alternate years. GE credit: Sci/Soc, Writ | SS, WE.—IIIl. Barnett

192. Internship in Communication (1-6) Internship—3-18 hours. Prerequisite: communication majors who have completed 20 units of upper-division communication courses. Open to Communication majors only. Supervised work experience requiring the application of communication principles and strategies or the evaluation of communication practices in a professional setting. Relevant experiences include public relations, advertising, sales, human relations, health promotion, political campaigns, journalism, and broadcasting. May be repeated up to 6 units of credit. (P/NP grading only.)—II, III, IV, (I, III, IV)

194H. Senior Honors Thesis (4) Seminar—1 hour; individual tutoring on research project—3 hours. Prerequisite: senior standing and approval by Honors Committee. Directed reading, research, and writing culminating in the preparation of honors thesis under the supervision of faculty adviser. GE credit: Sci/Soc | SS, WE.

197T. Tutoring in Communication (2-4) Seminar—1-2 hours; laboratory—1-2 hours. Prereq- uisite: upper division standing with major in Commu- nication and consent of Department Chairperson. Tutoring in undergraduate Communication courses, including leadership of discussion groups affiliated with departmental courses. May be repeated for credit up to a total of six units. (P/NP grading only.)

198. Directed Group Study (1-5) Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5) (P/NP grading only.)

Graduate

201. Theoretical Perspectives on Strategic Communication (4) Seminar—4 hours. Prerequisite: graduate standing; consent of instructor. Explores the intentional use of discourse and nonverbal behavior to reach goals. Explores theories and models that elucidate the processes that enable the execution of intentions in message plans and discourse. —I. (I)

203. Scientific Methods for Communication (4) Seminar—3 hours; term paper. Prerequisite: 201, 202, Psychology 204A, 204B or equivalent. Social scientific research methods commonly employed in Communication. Topics include research design methods; sampling; questionnaire construction; survey research experimental design evaluation; research content analysis and qualitative field methods. —IV. Palomares, Yegian

204. Measurement Sampling Questionnaire Construction (4) Seminar—4 hours. Prerequisite: course 101, 102, 136; consent of instructor. Open to Com- munication majors only. Reading, discussion, research, and writing on a selected topic in the spe- cialty of questionnaire construction. Potential topics include organizational networks, organiza- tional conflict and its resolution, mediation, bargaining and negotiation, superior-subordinate interaction, leadership styles, and interpersonal communication. May be repeated for credit when topic differs. Offered in alternate years. GE credit: Sci/Soc, Writ | SS, WE.—IIIl. Bell, Ferguson

210. Methods and Analysis in Communication (4) Lecture—2 hours; lab—2 hours. Prerequisite: graduate standing; one course in inferential statistics; consent of instruc- tor. Experimental designs in communication. Topics include: causation; threats to validity; conceptualiza- tion, operationalization; measurement; hypothesis testing; ethics; data analysis software focusing on the analysis of variance and planned contrasts; and the practical and effective implementation and writ- ing of experiments. —I. (I) Palomares

211. Survey Research Methods in Communication (4) Seminar—4 hours. Prerequisite: graduate standing; one course in inferential statistics; consent of instruc- tor. Methods for designing personal interview, phone, mail, and web-based surveys in communica- tion. Topics include: sampling strategies, sources of error and bias in survey designs, questionnaire con- struction, cognitive interviewing, interviewer behav- ior, and perspectives on attitude change and persua- sion. Application of persuasion theories and prin- ciples to the message design in applied contexts. —III. (I)

212. Communication and Cognition (4) Seminar—4 hours. Prerequisite: graduate standing; consent of instructor. Theories of individual and group behavior. Theories and models of individual risk information processing. Media depictions of threats and risk-related information and their poten- tial effects on audiences. Implications for the design and implementation of messages concerning threat and risk. Offered irregularly.

230. Social Interaction Theory and Research (4) Seminar—4 hours. Prerequisite: graduate standing; consent of instructor. Survey of theories and research on social interaction and interpersonal communica- tion. Covers communication of individual differ- ences in communication, communication and relationship development, family communication, conflict, cognitive and emotional processes underlying social interaction, social influence, intercultural communication, and nonverbal behavior. —II. (I) Yegian

231. Tactics of Interpersonal Influence (4) Seminar—4 hours. Prerequisite: graduate standing; consent of instructor. Achievement of interpersonal goals in social interaction. Topics include message production, tactics, strategies and planning; antici- pating potential obstacles; resisting and thwarting tactics; plan recognition; informal data detection. Exam- ined goals include compliance gaining, attitude change, ingratiation, information seeking, comfort- ing, and deception. Offered in alternate years. —III. (I)

232. Health Communication (4) Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Health commu- nication theories and research traditions. Topics include consumer health information seeking; physi- cian-patient interaction; social marketing; "education," and media advocacy campaigns; social networks and coping; media influ- ences on health; and new communication technolo- gies in health promotion and healthcare delivery. (Same course as Public Health Science 232.) Offered in alternate years. —II. (I) Bell

233. Communication in Medicine (4) Seminar—3 hours; term paper. Restricted to gradu- ate standing. Survey of research on communication between patients and health care providers. Topics include verbal and nonverbal behavior, power and influence, empathy and support, and conflict man- agement. Cultural, social, organizational, and tech- nological influences on these topics are also examined. Offered in alternate years. —IIl. Bell

234. Media and Health (4) Seminar—3 hours; term paper. Restricted to gradu- ate standing. Survey of research on media and health. Topics include health communication prac- tices of health care providers, and the influence of gaming and other new media on health behaviors. Offered irregu- larly. —IIl. (I) Bell, Taylor

244. Organizational Communication (4) Seminar—4 hours. Prerequisite: graduate standing and consent of instructor. Theory and research on communication processes in organizations. —Barnett

245. The Political Economy of Urban and Regional Development (4) Lecture—4 hours. Prerequisite: course 157, 244, or the equivalent. How health, political and economic restructuring and national and local policies are mediated by community politics; social production of urban form; role of the state in uneven development; dynamics of urban growth and decline, regional development in California. (Same course as Geogra- phy 245) —II. (III)

250. Mediated Communication Theory and Research (4) Seminar—4 hours. Prerequisite: graduate standing; consent of instructor. Survey of major theories on the intended and unintended effects of mediated commu- nication. Topics include media’s effects on learn- ing, political behavior, interpersonal violence, sexual socialization, consumer behavior, race relations, gender socialization, and cultural processes. —II. (I) Cho, Taylor, Yegian

251. Communication, Technology, and Society (4) Seminar—4 hours. Prerequisite: graduate standing; consent of instructor. Transformation of life at the individual and societal levels by communication technologies. Topics include the digital divide, media convergence in news and entertainment, human-computer interaction, distance learning, elec- tronic commerce, distributed work and e-democracy. Offered in alternate years. —II. (I) Taylor

252. Computer-Mediated Communication (4) Seminar—4 hours. Prerequisite: graduate standing; consent of instructor. The effects of computer-mediated communication on the ways in which people express themselves, form impressions about strang- ers, develop and maintain relationships, collaborate on group work, and expand social network, espe- cially in comparison to face-to-face communication. Offered in alternate years. —II. (III) Pettit

253. Negotiation (4) Seminar—4 hours. Prerequisite: graduate standing and consent of instructor. Theory and research on negotiating.

254. Communication Campaigns (4) Seminar—4 hours. Prerequisite: graduate standing; consent of instructor. Strategic uses of media and interpersonal channels to promote social change through social marketing, information, and media advocacy campaigns. Focus on theory-based inter- ventions in a variety of applied contexts. Offered in alternate years. —II. Barnett, Bell

260. Communication Applications (2-4) Discussion—1 hour; supervised field work—3-9 hours. Prerequisite: course 250 or permission. Work in communication. Organization and implementation of a research project for a specific application of a communication program. May be repeated one time for credit. (S/U grading only.)
Community and Regional Development

The Major Program
The Community and Regional Development major (formerly Applied Behavioral Sciences) aims to provide a broad comparative understanding of theories, methodologies, and issues relevant to the study of communities and the people in them. The program focuses on the ways that economic, political, and socio-cultural forces are transforming regions and local communities. The Community and Regional Development major offers students the opportunity to explore how knowledge can be used to improve the quality of community life.

The Program
Principal subjects of study within the major are community and organizational development, social change processes, the role of culture and ethnicity in shaping community life, community research methodologies, the impacts of innovation and technology on community development, and the effects of social, economic and political systems on communities. The major is organized to allow students to develop fields of concentration that meet their career goals.

Internships and Career Alternatives
Community and Regional Development students are required to complete an internship in their field before graduation. Internships have been arranged with local, county, and state planning units, health departments, schools, housing offices, and community education programs. Community and Regional Development graduates are prepared for occupations in community development, social research, program evaluation, organizational and educational consulting, city and regional planning, and for-profit organizations. The major also provides effective preparation for graduate or professional study in the social and behavioral sciences, or for professional degrees.

B.S. Major Requirements:

Preparatory Subject Matter............22-25
Community and Regional Development
1, 2 .................................................... 8
Plant Sciences 21 or Computer Science Engineering 15 ............................ 3-4
Economics 1A or 18 .................................. 4
Anthropology 2 or Sociology 1 .......................... 4-5
Statistics 13 or 32 or Sociology 468 : 3-4

Depth Subject Matter .................39-40
Core Issues in Community Development: Three courses from: Community and Regional Development 142, 152, 153A or 153B or 153C, 164, 172, 176, or 180 ........ 12
Economics of Community Change: Two courses from: Community and Regional Development 147, 149, 154, 157, 158, or 171 ........................................... 8
Political Processes and Community Change: Two courses from: Community and Regional Development 147, 152, 153, 154, 157, 158 ........................................... 8
**Note on substitutions: supplementary list of pre-approved substitutions available in Advising Office.
Internship: Community and Regional Development 192 ............................. 4

Areas of Specialization
Take 20 units from each of two options, including at least one Community and Regional Development course from each option, or 40 units from one option, including at least two Community and Regional Development courses. These courses cannot overlap with the depth subject. Up to 4 units of variable-unit course work may be counted toward this requirement; e.g., community and Regional Development 192.

Global Communities Option .............40
Students must consult with a faculty adviser to identify an emphasis within the option and to select suitable courses.

Gender and Development: Sociology 132, 145B, Anthropology 126B, Women and Gender Studies 102, 182
Globalization and Politics: Political Science 124, 130, 131, 175
Experiential Learning, Area Studies, and Language: Total number of units in Experiential learning, Area Studies, and Language courses cannot exceed 32
Up to 12 credits transferred from any accredited foreign program or foreign internship, including UCD EAP and Summer Abroad programs.
Up to 12 credits in regional area studies classes; e.g., Middle East, China, Latin America
Up to 12 credits for foreign language.

Organization and Management Option ..................................................40
Students must consult with a faculty adviser to identify an emphasis within the option and to select suitable courses.

Administration: Community and Regional Development 157, 158, 194HA and 194HB, Agricultural and Resource Economics 100A, 171A, Economics 115A, Political Science 100, 105, 142A, 142B, 155, 183
Communication: Communication 134, 136, 140, 152, Community and Regional Development 147, 176, Education 120, 163
Human Resources: Community and Regional Development 151, 157, Economics 151B, Sociology 120, 128, 129
Policy, Planning, and Social Services Option .............................................40
Students must consult with a faculty adviser to identify an emphasis within the option and to select suitable courses.

General: Community and Regional Development 118, 142, 151, 153, 154, 156, 162, 176, 180, 194HA and 194HB, Political Science 100, 105, 108, 109, 142A, 142B, 154, 155, 183, Sociology 120, 140, 154, 155, 185
Community Health and Counseling: Communication 134, 135, 165, Community and Regional Development 164, Education 160A, 160B, 163, Public Health Sciences 10, Human Development 120, 121, 120, Psychology 123, 126, 151, 154, 162, 168, Sociology 154
Education and Community: Agricultural Education 100, 160, Communication 146, Education 100, 110, 120, 151, 152, 150, Psychology 100, 132, Sociology 124

Quarter Offered: I-Fall, II-Winter, III-Spring, IV-Summer; 2015-2016 offering in parentheses;
Pre-Fall 2011 General Education (GE): A—Arts and Humanities; SE—Science and Engineering; SS—Social Sciences; D—Diverse; Dv—Domestic Diversity; Wr—Writing Experience
Fall 2011 and on Revised General Education (GE): AH—Arts and Humanities; SE—Science and Engineering; SS—Social Sciences; ACHG—American Cultures; DD—Domestic Diversity; OL—Oral Skills; OL—Quantitative; SL—Scientific; VL—Visual; WC—World Cultures; WE—Writing Experience
Family and Community: American Studies 152, Community and Regional Development 147, Human Development 100A, 100B, 100C, 101, 102, 103, 110, 130, 140, 140L, 141, 143, 160, 161, 162, Psychology 140, Sociology 122, 131, 134, 135, 152

English Composition Requirement .......................... 4

Minor Adviser. M. Kenney

Advising center for the major is located in 1303 Hart Hall 530-752-2244.

Honor Program. An Honors Program available to Community and Developmental majors who have demonstrated excellence in their field of study. Entrance into the honors program requires that a student have completed a minimum of 125 units with a minimum grade point average of 3.500 in upper division courses. Honors Program requires that a student have demonstrated excellence in their field of study. Examination of non-profit organizations, citizen participation, approaches to reducing poverty, community needs assessment, and regional development strategies. GE credit: SocSci, Div | AGCH, DD, OL, SS, VL, WE.—I. (II.) Hirtz

151. Community Field Research: Theory and Analysis (4)

Lecture—4 hours, extensive writing; project. Prerequisite: course 1 and any upper division Community and Regional Development courses are recommended. Emphasis on the design and analysis of community research considering the relationship between theory and practice. Study of community research methods, including empirical analysis, ethnographic approaches. Course requires design and completion of field research project. GE credit: SocSci, Div | AGCH, DD, OL, SS, VL, WE.—I. Hirtz

152. Community Development (4)

Lecture—4 hours, Prerequisite: course 1 or 151, Sociology 2, Anthropology 2, Asian American Studies 100, Chicana/o Studies 132, Geography 5, or Anthropology, American and African Studies 101 or consent of instructor. Introduction to principles and strategies of community organizing and development. Examination of non-profit organizations, citizen participation, approaches to reducing poverty, community needs assessment, and regional development strategies. GE credit: SocSci, Div | AGCH, DD, SS, WL, WE.—I. Hirtz

153A. International Community Development: Asia (4)

Lecture—4 hours. Prerequisite: course 1, Anthropology 2, International Agricultural Development 10. Examination and analysis of community development efforts in Japan and their impact on environmental and social justice movements in the United States and around the world. Offered in alternate years. GE credit: SocSci, Div | AGCH, DD, OL, SS, VL, WE.—I. Hirtz

153B. International Community Development: Europe (4)

Lecture—4 hours. Prerequisite: course 1 or 2, Anthropology 2, International Agricultural Development 10; course 164 or the equivalent recommended. Examination and analysis of community development efforts in Europe and the impact of global forces in different settings. Alternative strategies with emphasis on self-reliance and locally controlled development. Course is based in Kyoto, Japan, and includes field trips. GE credit: SocSci, Div | OL, SS, VL, WE.—Fujimoto

153C. International Community Development: Africa (4)

Lecture—2 hours; fieldwork—2 hours. Prerequisite: course 1 or 2, Anthropology 2. Comparative overview of International Agricultural Development 10; course 141 or equivalent recommended. Examination and analysis of community development efforts in Africa and the impact of global forces in urban and rural settings. Focus on strategies that promote self-reliance and locally controlled development. Course based in South Africa, includes field trips. GE credit: SocSci, Div | SS, VL, WC.—Benne

154. Social Theory and Community Change (4)

Lecture/discussion—4 hours; extensive writing; project; term paper. Prerequisite: course 1, Sociology 1, or Anthropology 2. Comparative overview of the dominant social science paradigms for the study of community development and change. Among the paradigms discussed are functionalism, conflict theory/ Marxism, structuralism, methodological individualism, reflexive modernity. GE credit: SocSci, Div | AGCH, DD, OL, SS, VL, WE,—I. (II.) Hirtz

156. Community Economic Development (5)

Lecture—4 hours; laboratory—2 hours. Prerequisite: Plant Sciences 21 or Engineering Computer Sciences 15 and course 152 or consent of instructor. How low income communities work together to improve their economic well-being, how communities change over their economic lives, and build community power.
and decision-making. Includes techniques to analyze community economic potential and identification of appropriate investment tools. Group project. GE credit: SocSci. | QS, SS, WE. —II. (II.) Benner

157. Politics and Community Development (4)
Lecture—4 hours. Prerequisite: prior course work in sociology or political science recommended. Analyzes political, economic and sociocultural forces shaping the form and function of local communities in the U.S. Considers theories of the state, the community and social change and case studies of actual community development in comparative historical perspective. GE credit: SocSci, Div, Writ | ACGH, DD, SS, WE. —II. (II.)

158. Small Community Governance (4)
Lecture—4 hours; fieldwork—3 hours. Prerequisite: course 151 or 160 or Political Science 100. Governing institutions and political processes in rural and small urban places. Local government organization, community and regional development. Restricted to upper division standing; eight units of Sociology, Anthropology, or Community and Regional Development. Prerequisite: upper division standing. Analysis of the relationship between work, technology, and human experience. Theories of the causes and consequences of labor process change; impact of race, ethnicity, class, gender, and citizenship status on work; responses of workers, communities, and policy-makers to workplace changes. —III. (III.)

162. People, Work and Technology (4)
Lecture—4 hours. Prerequisite: upper division standing and completion of eight units of coursework in Sociology, Anthropology, or Community and Regional Development. Restricted to upper division standing. Analysis of the relationship between work, technology, and human experience. Theories of the causes and consequences of labor process change; impact of race, ethnicity, class, gender, and citizenship status on work; responses of workers, communities, and policy-makers to workplace changes. —II. (II.)

164. Theories of Organizations and Their Roles in Social and Economic Change (5)
Lecture—4 hours; laboratory—2 hours. Prerequisite: course 1 or 2 or other equivalent social science course and Statistics 13 or equivalent. Planned changes with respect to community organizations. Private voluntary organizations, local community associations, and local government. Relationship between community organizations and social capital. Collaborative original data gathering and professional report writing. GE credit: SocSci | ACGH, DD, OL, SS, VL, WE. —II. (II.)

171. Housing and Social Policy (4)
Lecture—4 hours; term paper. Prerequisite: upper division standing, social impact, economics, and politics of housing in the United States. Special attention given to federal, state, and local policy and program strategies to produce and preserve affordable housing and inclusive neighborhoods. —III. (III.)

172. Social Inequality: Issues and Innovations (4)
Lecture/discussion—4 hours; extensive writing; term paper; project. Prerequisite: upper division standing and completion of eight units of course work in Anthropology, Sociology, or Community and Regional Development. Focus on the dimensions, causes, and consequences of altering social inequality in the U.S. Examination and analysis of major theories and forms (class, race/ethnicity, gender, and citizenship status) of inequality. Policy-based and grass-roots approaches to project. —III. (III.)

176. Comparative Ethnicity (4)
Lecture—4 hours; term paper. Prerequisite: upper division standing, eight units of Sociology, Anthropology, or combination. Role of ethnicity in shaping social organizations. Analytical approaches to issues arising from the study of ethnicity, through utilization of data from a range of different societies. GE credit: SocSci, Div, Writ | ACGH, DD, SS, WE. —II. (II.)

180. Transnational Community Development (4)
Lecture/discussion—4 hours; extensive writing; project; term paper. Prerequisite: course 1, or Anthropology 2, or Sociology 1. The effects of grassroots, non-state, non-corporate actors from abroad on local, national and international development. Socioeconomic, political, and cultural implications of transnational actions undertaken by international non-governmental organizations, individual migrants, and migrant grassroots civic organizations. GE credit: SocSci, Div, WTC, WE. —III. (III.) Guarnizo

192. Internship (1-12)
Internship—3-36 hours. Prerequisite: completion of 84 units and consent of instructor. Supervised internship, off and on campus, in community and institutional settings. (P/NP grading only.)

194HA-194HB. Special Study for Honors Students (4-4)
Independent study—3 hours; seminar—1 hour; project; term paper. Prerequisite: completion of 135 units at the time of enrollment; GPA 3.500 in the major; GPA 3.300 in overall standing; completion of at least four upper division courses; agreement of a faculty member to serve as thesis adviser; consent of instructor. Honors is a program of direct reading, research and writing culminating in the preparation of a Senior Honors Thesis under the direction of a faculty adviser. (Deferred grading only, pending completion of a minimum of 18 semester units at the time of enrollment; GPA 3.500 in the major; GPA 3.300 in overall standing. Analysis of the relationship between work, technology, and human experience. Theories of the causes and consequences of labor process change; impact of race, ethnicity, class, gender, and citizenship status on work; responses of workers, communities, and policy-makers to workplace changes. —I. (I.)

197T. Tutoring in Community and Regional Development (1-5)
Lecture/discussion—4 hours. Introduction to theories of community development and different concepts of community, poverty, and development. Emphasis on building theory, linking theory and development techniques to theory, evaluating development policy, and examining case studies of community development organizations and projects. [Same course as Geography 240T.] —II. (II.)

241. The Economics of Community Development (4)
Seminar—4 hours. Prerequisite: graduate standing. Economic theories and methods of planning for communities. Human resources, community services and infrastructure, industrialization and technological change, and regional growth. The community’s role in the greater economy. —I. Kenney

242. Community Development Organizations (4)
Seminar—4 hours. Prerequisite: course 240. Theory and praxis of organizations with social change agendas at the community level. Emphasis on non-profit organization and philanthropic foundations. —III. (III.)

242S. Community Development Fieldwork—10 hours; lecture—5 hours, workshop—5 hours. Prerequisite: course 240. Theory and praxis of organizations with social change agendas at the community level. Emphasis on local governance, non-profit organizations and philanthropic foundations at an intermediate level. Limited enrollment. —IV. (IV.)

244. Political Ecology of Community Development (4)
Lecture—4 hours. Prerequisite: graduate standing. Community development from the perspective of geographical political ecology. Social and environmental outcomes of the dynamic relationship between communities and land-based resources, and between social groups. Causes of community conservation and development in developing and industrialized countries. [Same course as Geogra- phy 254.] —II. (II.)

245. The Political Economy of Urban and Regional Development (4)
Lecture—4 hours. Prerequisite: course 157, 244, or the equivalent. How global, political and economic restructuring and national and state policies are mediated by community and regional development at the urban form; role of the state in uneven development; dynamics of urban growth and decline; regional development in California. [Same course as Geogra- phy 245.] —II. (II.)

246. The Political Economy of Transnational Migration (4)
Lecture—4 hours. Prerequisite: graduate standing. Theoretical perspectives and empirical research on social movement, transnational and economic processes of transnational migration to the U.S. Discussion of conventional theories will precede contemporary comparative perspectives on class, race, ethnicity, citizenship, and the ethnic economy. [Same course as Geography 246.] —I. (I.)

247. Transformation of Work (4)
Lecture/discussion—4 hours. Prerequisite: graduate standing in history or social science degree program or consent of instructor. Exploration of the ways that the experience, organization, and systems of work are being reconfigured in the late twentieth century. The impacts of economic restructuring on local communities and workers. —III. (III.)

248A. Social Policy, Welfare Theories and Communities I (2)
Seminar—2 hours. Prerequisite: graduate standing. Theories and comparative histories of modern welfare states and social policy in relation to legal/normative, organizational, and administrative aspects of welfare. Analysis of specific social issues within the U.S./California context. Not open for credit to students hav- ing completed Community & Regional Development 248A and 248B. (Same course as Geography 248.) Offered in alternate years. —III. (III.)

248B. Social Policy, Welfare Theories and Communities II (2)
Seminar—2 hours. Prerequisite: graduate standing, course 248A concurrently. Analysis of a specific set of social issues within the U.S./California context. Issues may include poverty, hunger, housing, health, family, disability, economic opportunity, affirmative action orientations, gender, age, or special social groups. Offered in alternate years.—Hirtz

249. Media Innovation and Community Development (4)
Seminar—4 hours. Restricted to Graduate Students. Role of innovative media technologies in the process of social change. Studies historical, practical and theoretical issues involving media in community organizing, social justice movements, democracy initiatives, and economic justice. —III. (III.)

250. Professional Skills for Community Development (4)
Lecture/discussion—2 hours; project—2 hours, field- work; extensive writing or discussion. Prerequisite: course 240. Priority enrollment for M.A. and Ph.D. students in Community and Regional Development. Help students develop the practical skills needed to work professionally in organizations that are involved in community development. Provides an overview of community development practice, project management, and consultation skills. —II. (II.)

The Major Program
Comparative literature is a dynamic major whose own self-definition is constantly shifting. Once mostly limited to the study of Western European literature and its Greco-Roman classical past, today Comparative Literature has become a global interdisciplinary study of literature in original languages and other media (including cinema, television, fine arts, and opera, for example). Thus, we can define Comparative Literature as the study of literature and culture across national boundaries and throughout historical time.

The Program. Both the major and the minor programs in Comparative Literature allow students to combine courses in one or more nationality departments with courses in Comparative Literature. The introductory course sequence (COM 1 through...
4) provides both an overview of ancient to contemporary literature and film and offers intensive practice in a major foreign language. In addition, any of the courses in the sequence satisfies the university composition requirement. All readings in undergraduate Comparative Literature courses are in English, but majors take upper division courses in at least one foreign language in the original language.

Students majoring in Comparative Literature choose a first and second literature of concentration, one of which may be English. After the introductory sequence, each student's major coursework is divided between courses in the two literatures of concentration and Comparative Literature courses. These Comparative Literature courses encourage students to take a broad view of a historical or cultural period, a theme, a genre, or a literary movement. The wide variety of options in the program permits great flexibility and encourages interdisciplinary connections among literature, art, linguistics, history, and the arts. Each student's plan of study must be approved by the major adviser at the beginning and end of each calendar year.

Career Alternatives. A Comparative Literature major offers excellent enhancement to pre-professional training, preparing students for graduate study in medicine, dentistry, veterinary medicine, and other science fields as well as law and business, besides coursework in translation and publishing, teaching, or graduate study in literature.

A.B. Major Requirements: Units

Preparatory Subject Matter

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comparative Literature 1 or 2; 3 or 4</td>
<td>8</td>
<td>Two other lower division courses in Comparative Literature (selected from 1-53C excluding the 10 series). Cannot include the two required courses in the 1-4 series. It is recommended that students who do not use a European language toward the major take one of the remaining required lower division courses in the 3 series, preferably the 53 course that relates to the region of the language the student is using to satisfy the upper division language requirement in the major.</td>
</tr>
<tr>
<td>Comparative Literature 141 (recommended for the junior year)</td>
<td>3</td>
<td>Comparative Literature 195 (to be taken in the spring quarter before graduation)</td>
</tr>
<tr>
<td>Comparative Literature 1 or 2; 3 or 4</td>
<td>8</td>
<td>Three upper division literature courses in a language other than English.</td>
</tr>

<td>Lecture/discussion — 3 hours, term paper. An introduction to shorter forms of prose fiction by major authors of different countries and periods with emphasis on the modern period. GE credit: ArtHum, Div, Wrt</td>
</tr>
<tr>
<td>10A-N. Master Authors in World Literature</td>
<td>24</td>
<td>Lecture/discussion — 1 two-hour session. Designed primarily to acquaint the non-literature major with a cross-section of writings by the world's most important authors; readings in English translation. Content alternates among the following segments: [A] Gilgamesh, Ramayana, Beowulf,ibelunglied; [B] Metamorphoses, Decameron, Arabian Nights, Canterbury Tales; [C] Chanson de Roland, El Cid, Igors Kampaganai, Morte d'Arthur, [D] Sung-Ling, Kafka, Kawabata, Fuentes, and Morrison. GE credit: ArtHum, Div, Wrt</td>
</tr>
</tbody>
</table>
Lecture/discussion—3 hours;  term paper. Changing tic, national, and cultural traditions. Offered in alternate from different historical periods and different linguistic traditions of the ancient world, and the non-Jew. Draws upon Russian, German, Yiddish, and American traditions. GE credit: ArtHum, Div | AH, WC, WE.—II. (II.) Larsen, Radwan

140. Thematic and Structural Study of Literature (4)
Lecture/discussion—3 hours; term paper. Interpretation of selected works illustrating the historical evolution of themes, as well as formal and structural elements. May be repeated for credit when subst- of course varies. GE credit: ArtHum, Div | AH, WC, WE.—II. (II.) Larsen, Radwan

141. Introduction to Comparative Critical Theory (4)
Lecture/discussion—3 hours; term paper. Prerequisite: one upper Division literature course or consent of instructor. Introduction to comparative critical theory and its use for interpreting literary texts, film, and media forms in global culture. (Same course as Critical Theory 101.) GE credit: ArtHum, Div | AH, WC, WE.—Blanchard, Larsen

142. Critical Reading and Analysis (4)
Lecture/discussion—3 hours; term paper. Prerequisite: consent of instructor. Close reading of selected texts; scrutiny of very limited amount of material, with attention to the problems of texts in translation. GE credit: ArtHum | AH, WC, WE.

143. Literary Traditions of the City (4)
Lecture—2 hours; discussion—1 hour. Writing. Exploration of the representation of the city in major translated literary texts from a variety of literary traditions and periods. Emphasis on the diversity of urban experience in literature. Topics include public and private space, memory, and gender. Offered in alternate years. GE credit: ArtHum, Div | AH, WC, WE.—I. Radwan, Sharlet

144. The Grotesque (4)
Lecture/discussion—3 hours; term paper. Prerequisite: completion of Subject A requirement and at least one course in literature. Study of the various stylistic devices and media forms in global culture. (Same course as Comparative Literature 145.) GE credit: ArtHum, Div | AH, WC, WE.—II. (II.) Lu

145. Representations of the City (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 6 and at least one course in literature. Study of the various stylistic devices and media forms in global culture. (Same course as Comparative Literature 141.) GE credit: ArtHum, Div | AH, WC, WE.—II. (II.) Radwan, Sharlet

146. Myth in Literature (4)
Lecture—3 hours, term paper. Prerequisite: course 6 recommended. Comparative study of different versions of one or more central myths, with attention to their cultural settings, artistic and literary forms of representation, as well as to their psychological dimensions. GE credit: ArtHum, Div | AH, WC, WE.—II. (II.) Radwan, Sharlet

147. Modern Jewish Writers (4)
Lecture/discussion—3 hours; term paper. Prerequisite: completion of the Subject A requirement and at least one additional course in literature. Study of selected modern writers of Jewish descent. GE credit: ArtHum, Div | AH, WC, WE.—II. (II.) Radwan, Sharlet

148. Mystical Literatures of South Asia and the Middle East (4)
Lecture/discussion—3 hours; term paper. Exploration of the comparative mystical literatures of major religious traditions, with a focus on those produced in South Asia and the Middle East, although including other traditions. Offered in alternate years. GE credit: ArtHum, Div | AH, WC, WE.—I. Venkatesan

151. Colonial and Postcolonial Experience in Literature (4)
Lecture—3 hours, term paper. Prerequisite: completion of Subject A requirement and at least one course in literature. A literary introduction to the cultural issues of colonialism and postcolonialism through reading, discussion and writing on narrative texts which articulate diverse perspectives on the new. GE credit: ArtHum, Div | AH, WC, WE.—II. (II.) Larsen, Radwan

152. Literature of the Americas (4)
Lecture/discussion—3 hours; term paper. Prerequisite: completion of Subject A requirement and at least one course in literature. Study of the various sty-
153. The Forms of Asian Literature (4)
Lecture/discussion—3 hours; term paper. Prerequisite: upper division standing. Introduction to distinctive Asian literary forms, such as haiku, noh, the Chinese novel and tale, through reading of major texts. GE credit: ArtHum, Div, Wrt | AH, WC, WE. —I. (I) Larsen

154. African Literature (4)
Lecture—3 hours; term paper. Prerequisite: completion of Entry Level Writing Requirement and at least one course in literature, or consent of instructor. Various stylistic, historical, social, and cultural factors that contribute to a hemispheric vision of American literature, encompassing works by Canadian, United States, Caribbean, Brazilian, and Spanish-American writers. Course taught abroad. May be repeated one time for credit. GE credit: ArtHum, Div, Wrt | AH, VL, WC, WE. —III, IV, (III, IV) Larsen

155. Classical Literatures of the Islamic World 600-1800 (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Subject A or consent of instructor. Major classical texts of the Islamic world with attention to intermingling of diverse cultural influences and historical context. Includes epic, romance, lyrical, mystical narrative, fairy tales, essays. Texts from Arabic, Persian, Ottoman Turkish, and Urdu literature. Offered in alternate years. GE credit: ArtHum, Div, Wrt | AH, WC, WE. —II. (II) Sharlet

156. The Ramayana (4)
Lecture—3 hours; term paper. Exploration of the Indian epic, Ramayana, through the lens of literature, performance and visual art. Emphasis on the text's diversity and its contemporary global relevance. Topics include Ramayanas in Southeast Asia, and in various South Asian diaspora communities. Offered in alternate years. GE credit: ArtHum, Div, Wrt | AH, WC, WE. —II. (II) Venkatesan

157. War and Peace in Literature (4)
Lecture/discussion—3 hours; term papers. Prerequisite: course 1, 2, or 3, or consent of instructor. Through a study of a few major works from Western and non-Western literature the course seeks to illuminate the ways in which literature from antiquity to the present has dealt with the antinomy peace/war through a variety of approaches. GE credit: ArtHum, Div, Wrt | AH, WC, WE. —II. (II) Radwan

158. The Detective Story as Literature (4)
Lecture—3 hours; term paper. Study of the origins, literary and social background, development and importance of the genre of detective in comparative context. GE credit: ArtHum, Div, Wrt | AH, WC, WE. —I.

159. Women in Literature (4)
Lecture—3 hours; term paper. Prerequisite: course 1, 2, or 3, or consent of instructor. Study of women in literature, including selected heroines who represent a particular theme, period, or genre. Texts range around the globe and from ancient to modern works, such as Lyttelton, Emma, Hedda Gabler, The Makiki Sisters, and Top Girls. GE credit: ArtHum, Div, Wrt | AH, WC, WE.

160A. The Modern Novel (4)
Lecture/discussion—3 hours; term paper. The changing image of man and his world as seen in novels by such writers as Proust, Strindberg, Chekhov, Pirandello. GE credit: ArtHum, Wrt | AH, WC, WE. —III. (III)

160B. The Modern Drama (4)
Lecture/discussion—3 hours; term paper. Readings of representative authors such as Strindberg, Chekhov, Pirandello, Ibsen. GE credit: ArtHum, Wrt | AH, WC, WE. —I. (II) Finney

161A. Tragedy (4)
Lecture/discussion—3 hours; term paper. Persistent and changing aspects of the tragic vision in literature from ancient times to the present. GE credit: ArtHum, Wrt | AH, WC, WE.

161B. Comedy (4)
Lecture/discussion—3 hours; term paper. Comic attitudes towards life in literary works of different ages. GE credit: ArtHum, Wrt | AH, WC, WE.

163. Biography and Autobiography (4)
Lecture/discussion—3 hours; term paper. Portrayals of a human life in biographies and/or autobiographies of different countries and ages. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WC, WE. —II. (II)

164A. The European Middle Ages (4)
Lecture/discussion—3 hours; term paper. Prerequisite: Subject A, Medieval literary genres as the foundation for modern literary forms. Topics and themes as love, God, vision, nature, history and politics, and sign theory. GE credit: ArtHum, Wrt | AH, WC, WE. —I. (I) Schlegel

164B. The Renaissance (4)
Lecture/discussion—3 hours; term paper. Prerequisite: Subject A, Literature, science, gender, politics, and exploration in European Renaissance. Readings in Petrarch, Machiavelli, Montaigne, Tasso, Ariosto, Stampa, Shakespeare, Ibsen, and Aphra Behn. GE credit: ArtHum, Wrt | AH, WC, WE. —II. (II) Schiesari

164C. Baroque and Neoclassicism (4)
Lecture/discussion—3 hours; term paper. Readings in major authors such as Calvini, Corneille, Pascal, Racine, Milton, and Grimmsenhausen, with consideration of the tension between the expansive energies of the "baroque" and the constraints of dogma and reason. GE credit: ArtHum, Wrt | AH, WC, WE.

164D. The Enlightenment (4)
Lecture/discussion—3 hours; term paper. Prerequisite: Subject A. Enlightenment writers such as Swift, Voltaire, Sterne, Voltaire, Rousseau, and Kant. Emphasis on the revolutionary impact of eighteenth century philosophical ideas and literary forms on modern political, social, and aesthetic culture. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WC, WE.

165. Caribbean Literatures (4)
Lecture/discussion—4 hours. Prerequisite: upper division standing. Comparative approach to the multilingual, multicultural literatures of the Caribbean. Works from English, French, and Spanish speaking regions with special attention to problems of identity, diaspora and resistance, class, gender, race. Not open for credit to students who have completed course 165S. GE credit: ArtHum, Div, Wrt | AH, WC, WE. —II. (II)

165B. Caribbean Literatures (4)
Lecture/discussion—4 hours. Prerequisite: upper division standing. Comparative approach to the multilingual, multicultural literatures of the Caribbean. Works from English, French, and Spanish speaking regions with special attention to problems of identity, diaspora and resistance, class, gender, race. Taught at the University of Havana, Cuba. Not open for credit to students who have completed course 165S. GE credit: ArtHum, Div, Wrt | AH, WC, WE. —II. (II)

165C. Caribbean Literatures (4)
Lecture/discussion—4 hours. Prerequisite: upper division standing. Comparative approach to the multilingual, multicultural literatures of the Caribbean. Works from English, French, and Spanish speaking regions with special attention to problems of identity, diaspora and resistance, class, gender, race. Taught at the University of Havana, Cuba. Not open for credit to students who have completed course 165S. GE credit: ArtHum, Div, Wrt | AH, WC, WE. —II. (II)

166. Literatures of the Modern Middle East (4)
Lecture/discussion—3 hours; term paper. Major translated works in modern Middle Eastern and North African literature, including Arabic, Hebrew, Persian, and Turkish. Social and historical formation, with topics such as conflict and coexistence, journeys, and displaced peoples. GE credit: ArtHum, Wrt | AH, WC, WE. —I. (I) Radwan

166A. The Epic (4)
Lecture/discussion—3 hours; term paper. Study of various forms of epic poetry in both the oral and literary traditions. May be repeated for credit in different subject area. GE credit: ArtHum, Wrt | AH, WC, WE. —II.

166B. The Novel (4)
Lecture/discussion—3 hours; term paper. Prerequisite: Subject A. The novel as global genre: picaresque, epistolary, Bildungsroman, historical novel, contemporary forms. May be repeated one time for credit. GE credit: ArtHum, Wrt | AH, WC, WE. —II.

167. Comparative Study of Major Authors (4)
Lecture/discussion—3 hours; term paper. Prerequisite: consent of instructor. Pivotal works of authors in the Western mainstream, such as Dante, Shakespeare, Goethe, Tolstoi, Proust, and Joyce. GE credit: ArtHum, Wrt | AH, WC, WE.

168A. Romanticism (4)
Lecture—3 hours; term paper. Prerequisite: any course in literature, or consent of instructor. Romanticism, with topics such as conflict and coexistence, journey and non-Western literature the course seeks to illuminate the ways in which literature from antiquity to the present has dealt with the antinomy peace/war through a variety of approaches. GE credit: ArtHum, Wrt | AH, WC, WE. —II. (II)

168B. Realism and Naturalism (4)
Lecture—3 hours; term paper. Prerequisite: consent of instructor. Novels and plays by Dickens, Zola, Flaubert, Dreiser, Ibsen, and Strindberg investigate marriage and adultery, the city and its perils, the hardships of industrialization, the war between the sexes, the New Woman, and other 19th-century themes. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WC, WE. —II. Finney

169. The Avant-Garde (4)
Lecture/discussion—3 hours; term paper. Studies in movements such as surrealism, expressionism and the absurd. GE credit: ArtHum, Wrt | AH, WC, WE.

170. The Contemporary Novel (4)
Lecture—3 hours; term paper. Study of important novels from different parts of the world, including Asia, Africa, Latin America, Europe, and the United States, in the period from the Second World War to the present. GE credit: ArtHum, Wrt | AH, WC, WE.

180. Selected Topics in Comparative Literature (4)
Lecture/discussion—3 hours; term paper. Prerequisite: completion of Subject A requirement and at least one course in literature. Study of a selected topic or topics appropriate to student and faculty interests and areas of specialization of the instructor. May be repeated one time for credit when topic differs. GE credit: ArtHum, Wrt | AH, WC, WE.

Lecture/discussion—6 hours, extensive writing, fieldwork—6 hours. Prerequisite: Subject A; at least one course in literature, or consent of instructor. Study of selected topics appropriate to student and faculty interests and areas of specialization of the instructor. May be repeated one time for credit when topic differs. GE credit: ArtHum, Wrt | AH, WC, WE. —IV. (IV)

192. Internship in Comparative Literature (1-12)
Internship—1-12 hours. Prerequisite: completion of 84 units; consent of instructor. Restricted to Comparative Literature majors. Internships in fields where
students can practice their skills. May be repeated for credit. (P/NP grading only.)—I, II, III. (I, II, III.)

194H. Special Study for Honors Students (1-5)
Independent study—1-5 hours. Prerequisite: open only to majors of senior standing who qualify for honors. Guided research, under the direction of a faculty member approved by the Program Director, leading to a senior honors thesis on a comparative topic. May be repeated for credit. (P/NP grading only.) GE credit: AH, WE.

195. Seminar in Comparative Literature (4)
Seminar—3 hours; term paper. Prerequisite: senior standing as a Comparative Literature major or minor or consent of instructor. Open only to Comparative Literature majors or minors in or consent of instructor. Advanced study of selected topics and texts in Comparative Literature, with explicit emphasis on the theoretical and interpretive approaches that define Comparative Literature as a discipline. May be repeated for credit for a total of 6 units. (P/NP grading only.)

198. Directed Group Study for Advanced Undergraduates (1-5)
(P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)
(P/NP grading only.)

Graduate

210. Topics and Themes in Comparative Literature (4)
Discussion—3 hours; term paper. Prerequisite: graduate standing in Comparative Literature, English, or a foreign-language literature, or consent of instructor. Comparative, interpretive study of the treatment of specific topics and themes in literary works from various periods, societies, and cultures, in light of these works’ historical and sociocultural contexts. May be repeated for credit when topic differs. —III. (II.)

214. Approaches to Lyric Poetry (4)
Seminar—3 hours; term paper. Prerequisite: graduate standing in Comparative Literature, English, or a foreign-language literature, or consent of instructor. Study of major theoretical developments in the understanding of poetic discourse. Offered in alternate years. —III. (II.)

215. Forms of the Spiritual Quest (4)
Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Analysis and interpretation of poetic texts in different historical periods and national literatures, with consideration of major theoretical developments in the understanding of poetic discourse. Offered in alternate years. —III. (II.)

220. Literary Genres (4)
Discussion—3 hours; term paper. Prerequisite: graduate standing in Comparative Literature, English, or a foreign-language literature, or consent of instructor. Comparative study of literary works in a particular genre from various linguistic, national, and cultural traditions, with particular attention to historical development within the genre and to genre theory. May be repeated for credit when topic differs. —I.

238. Gender and Interpretation (4)
Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Study of how literary texts from different periods, societies, and cultures represent gender roles and gender hierarchy, building on recent work on gender in anthropolog- 

250. Research in First Literature or Special Topic (4)
Project. Individually guided research, under the supervision of a faculty member, in the first literature of concentration or on a special topic culminating in a paper. Required of Ph.D. candidates.—I, II, III. (I, II, III.)

250B. Research in Second Literature or Special Topic (4)
Project. Individually guided research in the second literature of concentration, under the supervision of a faculty member, culminating in a paper. Required of Ph.D. candidates.—I, II, III. (I, II, III.)

250D. Dissertation Prospectus (4)
Independent study. Individually guided writing of the dissertation prospectus under supervision of a faculty member. Must be taken prior to completion of the qualifying exam. Required of Ph.D. candidates. (S/U grading only)—I, II, III. (I, II, III.)

255. Colloquium (2)
Lecture/discussion—2 hours. Prerequisite: graduate standing. Oral presentation and critique of research papers; discussion of current problems in teaching and research in Comparative Literature. May be repeated for credit. (S/U grading only)—I, II, III. (I, II, III.)

260. Contexts of the 19th-Century Novel (4)
Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Development in 19th-century history, culture, and society in relation to major trends in the 19th-century novel. Offered in alternate years. —III.

298. Directed Group Study (1-5)
Prerequisite: graduate standing. (S/U grading only.)

299. Individual Study (1-12)
(S/U grading only.)

299D. Special Study for the Doctoral Dissertation (1-12)
(S/U grading only.)

Professional

390. Teaching Comparative Literature in College (3)
Lecture—1 hour; discussion—2 hours. Methods of teaching Comparative Literature courses and specific assign- 

392. Teaching Internship in Comparative Literature (1)
Discussion—1 hour. Regular consultations between the student instructor teaching Comparative Litera- 

396. Teaching Assistant Practicum (1-4)
Prerequisite: graduate standing. May be repeated for credit. (S/U grading only)—I, II, III. (I, II, III.)

Comparative Pathology (A Graduate Group)

Dori Borjesson, Ph.D., Chairperson of the Group

Group Office. 5218, Vet Med 3A
530-752-3737; http://www.vetmed.ucdavis.edu/ pm/comppath/

Faculty

Verena Affolter, D.V.M., Ph.D., Professor (Pathology, Microbiology and Immunology)
Robert Anwill, D.V.M., M.P.V.M., Ph.D., Professor (Population Health and Reproduction)
Danika Bannach, D.V.M., Ph.D., Associate Professor (Population Health and Reproduction)
Andrew Baumele, Ph.D., Professor (Microbiology and Immunology)
Alexander Borovisky, M.D., Associate Professor (Department of Pathology and Laboratory Medicine)
Peter A. Barry, Ph.D., Associate Professor (Pathology and Oncology)
Nicole Baumgarth, D.V.M., Ph.D., Associate Professor (Pathology, Microbiology, and Immunology)
Charles L. Bevins, M.D., Ph.D., Professor (Microbiology and Immunology)
Dori L. Borjesson, D.V.M., M.P.V.M., Ph.D. (Microbiology and Immunology)
Walter M. Boyce, D.V.M., Ph.D., Professor (Pathology, Microbiology, and Immunology)
Aaron C. Braht, Ph.D., Assistant Professor (Pathology, Microbiology and Immunology)
Hilary A. Bradie, M.D., Ph.D., Professor (Otolaryngology)
Robert J. Brosnan, D.V.M., Ph.D., Assistant Professor (Surgical and Radiological Sciences)
Barbara A. Byrne, D.V.M., Ph.D., Assistant Professor (Pathology, Microbiology, and Immunology)
Robert D. Cardiff, M.D., Ph.D., Professor (Pathology and Oncology)
Kermitt Carraway, Ph.D., Professor (Biochemistry and Molecular Medicine)
Veronica Cerdeno, Ph.D., Assistant Professor (Pathology and Laboratory Medicine)
Hongwu Chen, Ph.D., Associate Professor (Cancer Center, Basic Sciences)
Tsang-Yu Chen, M.D., Ph.D., Associate Professor (Cancer Center, Basic Sciences)
Xinbin Chen, B.V.M., Ph.D., Professor (Surgical and Radiological Sciences)
Anthony T.W. Cheung, Ph.D., Professor (Pathology and Oncology)
Bruna C. Chomel, D.V.M., Ph.D., Professor (Population Health and Reproduction)
Mary M. Christopher, D.V.M., Ph.D., Professor (Pathology, Microbiology, and Immunology)
Brett A. Choteny, Ph.D., Assistant Adjunct Professor (Pathology and Laboratory Medicine)
Alan J. Conley, D.V.M., Ph.D., Professor (Population Health and Reproduction)
Patricia A. Conrad, D.V.M., Ph.D., Professor (Pathology, Microbiology, and Immunology)
Beate Crossley, D.V.M., Ph.D., M.P.V.M., Assistant Professor (Department of Medicine and Epidemiology)
James S. Cullor, D.V.M., Ph.D., Professor (Population Health and Reproduction)
Fitz Roy E. Curry, B.E., Ph.D., Professor (Biomedical Engineering)
Satya Dandeekar, Ph.D., Professor (Microbiology and Immunology)
WeiLin Deng, B.M., M.S., Ph.D., Assistant Professor (Cell Biology and Human Anatomy)
Peter Dickinson, D.V.M., Ph.D., Associate Professor (Neurology/Neurosurgery)
Thomas B. Farver, Ph.D., Professor (Population Health and Reproduction)
Janet Foley, M.S., D.V.M., Ph.D., Assistant Professor (Medicine and Epidemiology)
Computer Science

(College of Letters and Science)

Nina Amenta, Ph.D., Chairperson of the Department

Faculty. For complete faculty listing, please see Engineering: Computer Science, on page 268.

The Major Program

The Department of Computer Science administers two majors: Computer Science and Engineering (CSE), in the College of Engineering, and Computer Science (CS), in the College of Letters and Science. It also administers two minors: Computer Science, in the College of Letters and Science, and Computational Biology, in the College of Engineering. For information on the Computer Science and Engineering curriculum and the minor in Computational Biology, see Engineering: Computer Science, on page 268.

The primary differences between the CSE and CS majors are the extent of hardware coverage and curricular flexibility. The CSE major develops a solid understanding of the entire machine, including hands-on experience with its hardware components. The CS major teaches some hardware, at the digital design level, on simulators. The CSE major has fewer lower-level courses and a more generous menu of electives making it easier to complete a minor or double major.

Students in the CS major receive a solid grounding in the fundamentals of computer languages, operating systems, computer architecture, and the mathematical abstractions underpinning computer science. Students are prepared for both industry and postgraduate study.

B.S. Major Requirements:

Preparatory Subject Matter ............... 50-55
Mathematics 21A-21B-21C, 22A or 67 ..................................................... 15-16
Computer Science Engineering 20, 30, 40, 60 ..................................................... 16
Computer Science Engineering 50 or
Electrical and Computer Engineering 70  ......................................................... 4
One series from the following four: 15-19 (a) Chemistry 2A-2B-2C
(b) Chemistry 2A-2B and Biological Sciences, 1A-1B
(c) Chemistry 2AH-2BH-2CH
(d) Physics 9A-9B-9C and Mathematics 21D

Depth Subject Matter ....................... 51-54
Computer Science Engineering 122A, 120 or 122B, 140A, 140B, 150, 154A, 154B
Computer Science Engineering 132 or
Mathematics 135A or Statistics 131A ....... 4
Computer Science electives ................. 27-30
Minimum of 7 courses, including at least one mathematics or statistics course, from:
Computer Science Engineering courses numbered between 120 and 189 inclusive;
Computer Science and Engineering 193AB (counts as one); one approved course of 3 or 4 units from Computer Science and Engineering 192 or 199; Electrical and Computer Engineering 171, 172, 180A, 180B; Linguistics 177; Mathematics courses numbered between 100 and 189, excluding Mathematics 111, Statistics 131A, 131B, 132B.

Note: No course can count as both a required course and a Computer Science elective.

Total Units for the Major ................. 101-109

Minor Program Requirements: UNITS

Computer Science Engineering 60 ........... 4
Upper division Computer Science
Engineering courses ................................ 20
Select any upper-division Computer Science Engineering courses. A single approved course of 3 or 4 units from Computer Science and Engineering 192 or 199 is allowed.

Note. Computer Science Engineering 60 has a prerequisite chain of 20, 30, 40, 60 or 21A.

Graduate Study. See Graduate Studies, on page 111.

Peter Linz, Ph.D., Professor (Civil and Environmental Engineering)
Prasant Mohapatra, Ph.D., Professor, Chair (Computer Science)
Biswaanath Mukherjee, Ph.D., Professor (Computer Science) (Distinguished Graduate Mentoring Award)
Michael Neff, Ph.D., Assistant Professor (Computer Science)
Ronald Olsson, Ph.D., Professor (Computer Science)
John Owens, Ph.D., Assistant Professor (Electrical and Computer Engineering)
Raju Pandey, Ph.D., Associate Professor (Computer Science)
Sean Peisert, Ph.D., Assistant Adjunct Professor (Computer Science)
Bahram Ravani, Ph.D., Professor (Mechanical and Aerospace Engineering)
Robert Redinbo, Ph.D., Professor (Electrical and Computer Engineering)
David Rocke, Ph.D., Professor (Applied Science)
Gary Rodrigue, Ph.D., Professor (Applied Science)
Phillip Rogaway, Ph.D., Professor (Computer Science)
Oliver Staadt, Ph.D., Assistant Professor (Computer Science)
Henning Thoma, Ph.D., Assistant Professor (Molecular and Cellular Biology)
Zhendong Su, Ph.D., Associate Professor (Computer Science)
Ilias Tagkopoulos, Ph.D., Assistant Professor (Computer Science)
Susan Ustin, Ph.D., Professor (Land, Air and Water Resources)
V. Rao Vemuri, Ph.D., Professor (Applied Science)
S. Felix Wu, Ph.D., Professor (Computer Science)
Rao Vemuri, Ph.D., Professor (Applied Science)
Kent Wilken, Ph.D., Associate Professor (Electrical and Computer Engineering)
David Woodruff, Ph.D., Professor (Graduate School of Management)
Catherine Yang, Ph.D., Assistant Professor (Graduate School of Management)
Ben Yoo, Ph.D., Professor (Electrical and Computer Engineering)

Emeriti Faculty

Ralph Algaizy, Ph.D., Professor Emeritus
Meera Bhatnagar, Ph.D., Professor Emeritus
S.L. Hakimi, Ph.D., Professor Emeritus
Peter Linz, Ph.D., Professor Emeritus
Manfred Kuschnitzka, Ph.D., Professor Emeritus
Michael Soderstrand, Ph.D., Professor Emeritus
Donald Topp, Ph.D., Professor Emeritus
Richard Walters, Ph.D., Professor Emeritus

Affiliated Faculty

Owen Carmichael, Ph.D., Assistant Professor (Med: Neurology)

Graduate Study. The Graduate Group in Computer Science offers programs of study leading to the M.S. and Ph.D. degrees in Computer Science. The varied nature of the faculty brings a wide variety of research interests to the program. Research strengths lie in algorithms, computational biology, computer architecture, computer graphics and visualization, database systems, computer security and cryptography, computer networks, program specifications and
Conservation Biology

See Ecology (A Graduate Group), on page 229; Environmental Biology and Management, on page 293; and Wildlife, Fish, and Conservation Biology, on page 344.

Consumer Science

[College of Agricultural and Environmental Sciences]

Faculty. See under the Division of Textiles and Clothing, on page 525.

Major Programs. The Consumer Food Science option under the Food Science major is a related program. See also Food Science and Technology, on page 525, and Textiles and Clothing, on page 525.

Graduate Study. For graduate study, see Graduate Studies, on page 111.

Courses in Consumer Science (CNS)

Questions pertaining to the following courses should be directed to the Division of Textiles and Clothing Advising office in 129 Everson Hall.

Lower Division

92. Internship in Consumer Science (1-12) Internship—3-36 hours. Prerequisite: consent of instructor. Internship on and off campus in a consumer science related area. (P/NP grading only.)

Upper Division

100. Consumer Behavior (3) Lecture—3 hours. Prerequisite: preparation in areas of psychology or sociology and economics recommended. Provides a set of behavioral concepts and theories useful in understanding consumer behavior on the part of the individual, business, and social organizations. Conceptual models to help guide and understand consumer research will be presented. GE credit: SocSci, Div, Wrt | AH, WC, WE.—III. (III.)

192. Internship in Consumer Science (1-12) Internship—3-36 hours. Prerequisite: completion of a minimum of 84 units; consent of instructor. Internship on and off campus in a consumer science related area. (P/NP grading only.)

198. Directed Group Study (1-5) (P/NP grading only)

199. Special Study for Advanced Undergraduates (1-5) (P/NP grading only)

Graduate

299. Research (1-12) (S/U grading only)

Professional

396. Teaching Assistant Training Practicum (1-4) Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III)

Contemporary Leadership

[College of Agricultural and Environmental Sciences]

The Science and Society Program offers a minor in Contemporary Leadership, open to all undergraduates regardless of major. The minor provides a broad overview of leadership theory and practice, and engages students in critical thinking, self-reflection, problem solving and multicultural education.

Students should contact the minor adviser for course selection and approval.

Consult advisors often to insure timely enrollment in Science and Society 192 and 190X as courses with fewer than ten students will not be taught.

Minor Program Requirements:

UNITS

Contemporary Leadership......................... 24
Core Leadership Courses
Science and Society 130 .......................... 4
Science and Society 192 (must be taken concurrently with an approved internship) ......................... 2
Science and Society 190X .......................... 2

Preparatory Subject Matter

Students are required to complete four units from each of the following four categories. All courses are four units unless specified in parentheses:

Communication, Interpersonal Relationships and Human Behavior: Sociology 139AN, Communication 134, 135, 136, Community and Regional Development 172, 174, Linguistics 163, Psychology 151, Sociology 126, 128, University Writing Program 104 (AF) ......................... 4
Organization Structure and Cultures: American Studies 125, Anthropology 105, 123BHN, Community and Regional Development 152, 154, 158, 164, Sociology 10A (3), 156, 180A, 180B, 183, 185, 186, 188, 194, 199, 201, 202 .......................... 4
Multiculturalism, the Global Community and Social Change: American Studies 133, 153, 156, Community and Regional Development 176, English 179, History 173, 178A, 178B, Native American Studies 134, Political Science 124, 125, 130, Textiles and Clothing 174 .......................... 4

Minor Adviser. The list of appropriate courses changes over time. Consult Elvira Galvan Hack in Science and Society (Plant Pathology) to request an advising appointment at egnhack@ucdavis.edu.

Courses in Cultural Studies (CST) Graduate

200A. Histories of Cultural Studies (4)
Lecture/discussion—4 hours. Prerequisite: graduate standing or consent of instructor. Undergraduate coursework in the humanities or social sciences recommended. Histories and traditions of cultural studies internationally; multiple legacies of cultural studies as a field of inquiry in various geographical contexts; foregrounds important critical perspectives resulting from social and intellectual movements worldwide.—I. [III]

200B. Theories of Cultural Studies (4)
Lecture/discussion—4 hours. Prerequisite: course 200A or consent of instructor. Definitions of “critical” scholarship and examination of various contexts in which cultural studies theory has emerged worldwide. Both mainstream and alternative theoretical traditions, such as those developed by people of color and by other minoritized groups.—II. [III]

200C. Practices of Cultural Studies (4)
Lecture/discussion—4 hours. Prerequisite: courses 200A and 200B or consent of instructor. Methodological and practical applications of cultural studies research. Critical analyses of ethnography, textual

Quarter Offered: I—Fall, II—Winter, III—Spring, IV—Summer; 2015-2016 offering in parentheses

Pre-Fall 2011 General Education (GE): A-Humanities; S—Science and Engineering; S-Social Sciences; DD—Domestic Diversity; WR—Writing Experience
Fall 2011 and on Revised General Education (GE): AH—Arts and Humanities; SE—Science and Engineering; SS—Social Sciences;
analysis, social change, community development, and identity formation. Emphasis given to students' unique perspectives in cultural studies practice.—I, II, III. 204. History and Theory of Sexualities (4) Lecture/discussion—4 hours. Prerequisite: course 200A (may be taken concurrently) or consent of instructor. Studies of sexuality in feminist, literary, historical, social, and cultural contexts, focusing on the political, economic, and historical dimensions of the concept of “sexuality.” Offered in alternate years.—I, II.

205. Studies in the Rhetorics of Culture (4) Lecture/discussion—4 hours. Prerequisite: course 200A (may be taken concurrently) or consent of instructor. Theories and practices of rhetoric, focusing on the production and reception of cultural texts. Offered in alternate years.—I, II.

206. Studies in Race Theory (4) Lecture/discussion—4 hours. Prerequisite: course 200A (may be taken concurrently) or consent of instructor. Theories and practices of race and ethnicity, focusing on the production and reception of cultural texts. Offered in alternate years.—I, II.

207. Studies in Nationalism, Transnationalism, and Late Capitalism (4) Lecture/discussion—4 hours. Prerequisite: course 200A (may be taken concurrently) or consent of instructor. Theories and practices of nationalism, transnationalism, and late capitalism, focusing on the production and reception of cultural texts. Offered in alternate years.—I, II.

208. Studies in Memory, Culture, and Human Rights (4) Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Restricted to graduate students. A critical examination of memory, culture, and human rights. Offered every fall.—I.

210. Memory, Culture, and Human Rights (4) Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Restricted to graduate students. A critical examination of memory, culture, and human rights. Offered every fall.—I.

212. Studies in the Rhetorics of Culture (4) Lecture/discussion—4 hours. Prerequisite: course 200A (may be taken concurrently) or consent of instructor. Theories and practices of rhetoric, focusing on the production and reception of cultural texts. Offered in alternate years.—I, II.

214. Studies in Political and Cultural Representations (4) Lecture/discussion—4 hours. Prerequisite: course 200A (may be taken concurrently) and consent of graduate advisor. Framework for the analysis of political and cultural representations. Emphasis on concepts, theories, and methodologies illuminating dominant and vernacular cultural representations, appropriation, and innovation in transnational contexts. May be repeated for credit up to 4 times when electives offered irregularly.—I, II.

230. Research Seminar (4) Seminar—4 hours. Prerequisite: courses 200A and 250C or consent of instructor. Designed to facilitate student interaction and promote student research. Students present significant through the production of a publishable essay. Essays submitted, distributed, and discussed by seminar participants. May be repeated up to 12 units of credit.—I, II.

270A-270B-270C. Individual Guided Research Studies (1-4-4) Discussion—1 hour; independent study—2 hours; extensive writing. Prerequisite: course 200C, 250, consent of instructor. Individual guided research, under the supervision of a faculty member, on a cultural studies topic related to the student's program; dissertation project to produce a dissertation prospectus.—I, II, III, III, III.

270D. Dissertation Research (1-12) Individual study—3-3.6 hours. Prerequisite: advancement to doctoral candidacy. May be repeated for credit. (S/U grading only.)—I, II, III, II, III.

Professional

396. Teaching Assistant Training Practicum (1-4) Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)—I, II, III, II, III.

Adelle Zhang, M.F.A., Lecturer and Design Collection Curator

The Major Program

The Department of Design offers a creative, challenging, and flexible approach to the study of design with emphasis on socially responsible, human centered, and sustainable practice.

The Program.

Foundation courses: Design and Visual Culture; Design Drawing, Form and Color, and Graphic Design and Computer Technology; are required of all design majors. One additional course in the student's area of study is required for Preparatory Subject Matter. Depth Subject Matter courses provide: (1) further exploration of design principles and concepts, formal and technical issues, (2) conceptual and critical development through a series of history and theory classes; (3) in-depth studio experiences with projects that demonstrate a research-based, iterative design process. Optional capstone class. A more detailed explanation is available through the Design Advising office in 107 Art Building: 530-752-6244.

Preparatory Requirements. Before declaring a major in Design, students must complete the following courses with a combined grade point average of at least 2.60 at the University of California. All courses must be taken for a letter grade.

Preparatory Subject Matter......................... 28

Design 1 ............................................. 4

Design 15 ............................................ 4

Design 40A, 40B, or 40C ......................... 4

University Writing Program 11, 18 or 19 . 4

Portfolios. Portfolios are not required for admission to the major. However, it is highly recommended that design students maintain a portfolio of visual work for faculty and professional evaluation and consideration for enrollment in specialized courses, including independent study, group study, and internship.

Internships, Careers, and Study Abroad.

Design students are encouraged to supplement their coursework with internships in design firms, museums, and design-related businesses. Design graduates go directly from this program into further graduate study, or professional work including exhibition, fashion, information, interior architecture and product (lighting and furniture), textiles, visual communications (digital, environmental and print) and sustainable design. In addition, students have become entrepreneurs through freelance and commissioned work in many related areas. The Department of Design encourages students to experience design abroad through a variety of sponsored programs. For more information, contact UC Davis Study Abroad.

A.B. Major Requirements:

UNITS

Art 2 or Design 14................................. 4

Design 15 ............................................ 4

Design 16 ............................................ 4

University Writing Program 11, 18 or 19 . 4

Design 40A, 40B, or 40C ......................... 4

One course from the following:

Design 21, 31, 37, 50, 60, 70, 77, 90 4

Depth Subject Matter......................... 44

Two courses, at least one of which must be a Design course, from the following:

Art 101A, 101B, 1108, 1109; Design 107, 115, 117, 127B, 150A; Dramatic Art 128; Technocultural Studies 100, 101 10

Three courses, at least two of which must be Design courses, from the following:

Art 162B, 163, 164; Design 101, 115, 127B, 150A; Drama 112, 114, 116, 128; Technocultural Studies 100, 101 10

Three courses, at least two of which must be Design courses, from the following:

Art 162B, 163, 164; Design 101, 115, 127B, 150A; Drama 112, 114, 116, 128; Technocultural Studies 100, 101 10

Choose six courses from the lists below: 24

Quarter Offered: I=Fall, II= Winter, III=Spring, IV=Summer; Fall 2011 and on Revised General Education (GE): AH=Art and Humanities; SC=Science and Engineering; SS=Social Sciences; AGCH=American Cultures, DD=Dominic Diversity, OL=Oral Skills, QL=Quantitative, SL=Scientific, VL=Visual, WC=World Cultures, WE=Writing Experience.
Design

List B: Capstone Option (these courses are the most advanced in the major and prerequisites are strictly enforced): Design 154, 157, 159, 179, 180B, 187

Note: Substitutions for the listed courses may be allowed under certain circumstances with prior departmental approval.

Total Units for the Major …………….. 72

Major Adviser. Information on the current Aademic Advisers can be obtained by contacting the Undergraduate Advisor at 530-752-6244.

Graduate Study. The graduate program in Design leading to the Master of Fine Arts The UC Davis Master of Fine Arts (M.F.A.) in Design unifies theory and practice, offering graduate students a unique opportunity to work with a dedicated and renowned design faculty within one of the nation’s top public research universities. This two-year program encourages an interdisciplinary approach. Design includes a design theory, exhibition, fashion, history, interior architecture, lighting, textiles, and visual communication (environmental, information, print and screen-based design) to collaborate with outstanding faculty inside and outside the department whose work covers a broad array of disciplines. Graduate students in Design blend individually focused research and practice with collaborative work to develop a deep understanding of key design issues in history, theory, research methodology, and sustainable practices. The M.F.A. degree culminates in a project-based thesis and exhibition. For more information, see http://arts.ucdavis.edu/design/graduate-program.

Graduate Adviser. Please contact the Program at 530-752-8710.

Courses in Design (DES)

Questions pertaining to the following courses should be directed to the instructor or to the Design Advising office in 107 Art 530-752-6244. Scheduling of classes subject to change; please contact the Advising office to confirm when a course is offered.

Lower Division

1. Introduction to Design (4)
   Lecture—3 hours; discussion—1 hour. Priority given to Design majors. Introduction to design discipline through readings, writing, visual problem solving, and critical analysis. Topics: design principles and elements, vocabulary, color theory, Gestalt principles, conceptualization strategies. Role of designer and products in contemporary culture including social responsibility and sustainability. GE credit: ArtHum | AH, VL—I, II, III, IV. (I, II, III, IV.) Satter

2. Design Studio (4)
   Studio—4 hours; lecture/discussion—2 hours. Priority given to Design majors. Design concept development and detailing as it relates to the making of objects, structures and models using form, scale and materials. Product design and rapid prototyping methods using a range of techniques for advancing the design process. GE credit: ArtHum | AH, VL—I, II, III, IV, (I, II, III, IV.) Snyder

3. Graphic Design and Computer Technology (4)
   Studio—4 hours; lecture/discussion—2 hours. Priority given to Design students. Introduction to digital tools with emphasis on graphic design including theory, practice and technology. Includes principles of color, resolution, pixels, vectors, image enhancement, layout, visual organization, visual typographic. GE credit: ArtHum | AH, VL—I, II, III, IV. (I, II, III, IV.) Kessler

4. Design Drawing (4)
   Studio—4 hours; lecture/discussion—2 hours. Priority given to course 1, 14, 15, 16 or consent of instructor. Pass One priority given to Design majors. Visual communication and digital imaging techniques using black and white, and color. Critical analysis of photographic and the role of photography in society combining theoretical perspectives with practical applications. Elements, vectors, image enhancement, layout, visual organization, visual typographic. GE credit: ArtHum | AH, VL—I, II, III, IV. (I, II, III, IV.) Drew

5. Drafting and Perspective (4)
   Studio—4 hours; lecture/discussion—2 hours. Priority given to course 1, 14, 15, 16 or consent of instructor. Introduction to mechanical drafting, including scaled drawing, orthogonal projection, isometric, axonometric and perspective. Includes basic rendering techniques. GE credit: ArtHum | AH, VL—I, II, III, IV.

6. Photography for Designers (4)
   Studio—4 hours; lecture/discussion—2 hours. Priority given to course 1, 14, 15, 16 or consent of instructor. Pass One priority given to Design majors. Visual communication and digital imaging techniques using black and white, and color. Critical analysis of photographic and the role of photography in society combining theoretical perspectives with practical applications. Elements, vectors, image enhancement, layout, visual organization, visual typographic. GE credit: ArtHum | AH, VL—I, II, III, IV. (I, II, III, IV.) Drew

7. Coding for Designers (4)
   Studio—4 hours; lecture/discussion—2 hours. Priority given to course 1, 14, 15, 16 or consent of instructor. Pass One priority given to Design majors. Programming concepts and skills as applied for visual design. Algorithm-based design and development, flowcharts, pseudocode, entry level scripting or programming. Principles of coding, logic, syntax, structure. Analysis of historical examples of code-based design. Development, iteration, presentation of design projects. GE credit: VL—I, IV. (I, II, IV.) Drew

8. Energy, Materials, and Design Over Time (4)
   Lecture—3 hours; discussion—1 hour. Priority to Design majors. Global history of design across time viewed through the lens of the effects of the creation and discovery of new energy sources, processes and materials on design. Not open for credit to students who have taken course 40 or 140. GE credit: ArtHum | AH, DD, WE—Avila

9. Ideologies of Design (4)
   Lecture—3 hours; discussion—1 hour. Priority to Design majors. Introduction to the history and theory of design in particular relation to political, philosophical, cultural, social, economic, and environmental debates and objectives. GE credit: ArtHum | AH, WE—Avila, WE—III. (III.) Satter

10. Design for Aesthetics and Experience (4)
    Lecture—3 hours; discussion—1 hour. Priority to Design majors. Global historical survey of design’s engagement with changing notions of aesthetics and experience. Relates transformations in the theory, production, and usage of design (objects, landscapes, architectures, etc.) to larger cultural, social, and political contexts. Not open for credit to students who have taken course 40 or 140. GE credit: ArtHum | AH, DD, WE—Avila, WE—III. (III.) House"
127A. Sustainable Design (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1. Priority to Design majors. Principles, prac-
tice and materials of contemporary sustainable design in the context of environmental crisis. History of sustainable design in relation to the fields of text-
tiles, visual communication, interior architecture, exhibition design and visual. GE credit: ArtHum | AH—II. (I.) Savageau

127B. Studio Practice in Sustainable Design (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-
requisite: consent of instructor. Priority to Design-
majors. Analysis and practice of sustainable design within studio context. Design project that incorporate the reuse of post consumer waste, standard materials and expressive qualities. Cradle to Cradle philosophy and practice. Field trips required. GE credit: ArtHum | AH, VL—III. (III.) Sav-

gage

131T. Global Fashion and Product Design (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-
requisite: course 1, 14, 15, 16; course 77 recom-

dended or consent of instructor. Priority given to Design majors. Exploration of materials, embellish-
ments, and structural techniques derived from his-
toric and contemporary world cultures. Emphasis on unique expressions of individual application applied to hand made textiles, fashion and textile products. Offered irregularly. GE credit: ArtHum | AH, VL—Avila

132A. Textile Design: Woven Structures (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-
requisite: course 1, 14, 15, 16; course 60 recom-

dended or consent of instructor. Foundation course in handwoven textile structure and design, emphasizing yarn identifi-
cation, basic drafting, basic weaves and their derivations expressed in original color effects and yarn combinations. May be repeated one time for credit with consent of instructor. Offered irregularly. GE credit: ArtHum | AH, VL—Avila

132B. Loom-Constructed Textile Design (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-
requisite: course 1, 14, 15, 16; course 132A recom-
dended or consent of instructor. Priority to Design majors. Intermediate level study of complex fabric structure and design with emphasis on pattern in relation to sub-
title, dimension, and material. May be repeated one time for credit with consent of instructor. Offered irregularly. GE credit: ArtHum | AH, VL—Avila

134A. Introduction to Interior Design—Residential Environments (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-
requisite: courses 1 and 21; courses 14, 15, 16 recom-
dended or consent of instructor. Priority to Design majors. Introduction to the theory and practice of interior design with focus on residential spaces. Basic methods of design conceptualization, develop-
ment, and presentation. GE credit: ArtHum | AH, VL—I. (I.) Kessler

134B. Introduction to Interior Design—Commercial and Technical Spaces (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-
requisite: course 1 and 21; 14, 15, 16 recommended or consent of instructor. Priority given to Design majors. Introduction to the theory and practice of interior design with focus on commercial and technological spaces. Archetypal spaces and non-residential building systems. ADA ac-
sibility, design programming and research methods. GE credit: ArtHum | AH, VL—I. III. (II.) Kessler

135A. Furniture Design and Detailing (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-
requisite: course 1, 14, 15, 16 recommended or consent of instructor. Priority given to Design majors. Development of designs for contem-
porary furniture. Consideration of behavioral and physical requirements, and cultural and historic expres-
sion, and structural and aesthetic qualities. Process includes research, drawings, and construction of scale models. Required field trip. GE credit: ArtHum | AH, VL—II. (II.) Kessler

135B. Furniture Design and Prototyping (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-
requisite: course 1, 14, 15, 16; course 21 recom-
dended or consent of instructor. Priority given to Design majors. Design and construction of full size prototype furniture based on preliminary work com-
pleted in course 135A. Material technology, con-
struction methods assessed. Development of shop drawings and furniture con-
struction. Required field trip. Offered irregularly. GE credit: ArtHum | AH, VL

136A. Lighting Technology and Design (4)
Laboratory—4 hours; lecture/discussion—2 hours. Pre-
requisite: course 1, 14, 15, 16; course 21 recom-

mended or consent of instructor. Priority to Design majors. Introduction to lighting design and technol-
ology. Understanding the role of lighting and vision, luminous and thermal comfort, health and energy efficiency. GE credit: ArtHum | AH, VL—II. (II.) Siminovitch

136B. Designing with Light—Industrial Design (4)
Laboratory—4 hours; lecture/discussion—2 hours. Pre-
requisite: course 1, 14, 15, 16, 136A; course 21 recom-
mended or consent of instructor. Priority to Design majors. Emphasis on understanding the effect of day-
light on the perception of interior designs as well as on vision, luminous and thermal comfort, health and energy efficiency. GE credit: ArtHum | AH, VL—II. (II.) Papamichael

137A. Daylighting and Interior Design (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-
requisite: course 1, 14, 15, 16; 21 recommended or consent of instructor. Priority to Design majors. Emphasis on understanding the effect of day-
lighting on design incorporating sustainable design strategies. Lecture—3 hours; discussion—1 hour. Prerequisite: course 1, Art History 1A, 1B, or 1D recommended or consent of instructor. Social contexts, meanings, aesthetics, stylistic developments, and methods significant in eastern hemisphere textiles. Offered irregularly. GE credit: ArtHum | AH, VL—II. (III.) Avila

137B. Daylighting Design Studio (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-
requisite: course 1, 14, 15, 16 and 137A recom-
mended or consent of instructor. Priority to Design majors. Introduction to daylighting design and observation of its effects on interior designs using scale models with light and photogra-
photographing them outdoors and in CITC’s Heliodon to understand year-round performance. GE credit: ArtHum | AH, VL—III. (III.) Papamichael

138. Materials and Methods in Interior Design (4)
Lecture/discussion—3 hours; project—1 hour. Pre-
requisite: course 1, 14, 15, 16 or consent of instruc-
tor. Priority to Design majors. Introduction to the functional and aesthetic impact of interior and exterior spaces. Industrial design projects exploring light and light distribution characteristics, and structural techniques. afforded in alternating years. GE credit: ArtHum | AH, VL, WE

142A. World Textiles: Eastern Hemisphere (4)
Lecture—4 hours. Prerequisite: course 1; Art History 1A, 1B, 1C, or 1D recommended. Social contexts, meanings, aesthetics, stylistic developments, and methods significant in eastern hemisphere textiles. Lecture—3 hours; discussion—1 hour. Prerequisite: course 1, 14, 15, 16 or consent of instructor. Social contexts, meanings, aesthetics, stylistic developments, and methods significant in eastern hemisphere textiles. Emphasis on the Middle East, Europe, and the Americas up to cont-
emporary times. Two required field trips. GE credit: ArtHum | Div—Savageau

143. History of Fashion (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1; Art History 1A, 1B or 1C recommended or consent of instructor. Priority to Design majors. Social contexts, meanings, aesthetics, stylistic developments and methods significant in western hemisphere textiles. Emphasis on the Middle East, Europe, and the Amer-
icas up to contemporary times. Two field trips required. GE credit: ArtHum | AH, VL, WE—II. (III.) Avila

144. History of Interior Architecture (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1. Pass One priority to Design majors. The-
matic survey of interior design with emphasis on dwellings in their cultural settings and development of modern interior design theories. Interiors consid-
ered in relation to buildings’ exteriors, sites, and use. Offered irregularly. GE credit: ArtHum | AH, WE—II. (III.) Drew

145. History of Visual Communication (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: upper division standing or consent of instructor. Restricted to students with upper division standing. Design principles and visual strategies for effective information display; analysis of contemporary and historical examples of visual representations and visual narratives in science, humanities, and the arts; emerged of digital methods for interactive data presentation. GE credit: ArtHum | AH, VL—II. (III.) Verba

150A. Computer-Assisted Drawing for Designers (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-
requisite: courses 1 and 21; 14, 15, 16 recom-
dended or consent of instructor. Priority to Design majors. Computer assisted drawing and modeling using a mid-level, multi-use CAD program. Basic architectural and mechanical drawing technique in both two-dimensional and three-dimensional environments. Not open for credit to students who have taken course 150. GE credit: ArtHum | AH, VL—I. (I) Kessler

150B. Computer-Assisted Presentations for Interior Architects (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-
requisite: courses 1 and 21; 14, 15, 16 recommended or consent of instructor. Priority to Design majors. Computer assisted drawing and modeling using a mid-level, multi-use CAD program. Basic architectural and mechanical drawing technique in both two-dimensional and three-dimensional environments. Not open for credit to students who have taken course 150. GE credit: ArtHum | AH, VL—I. (I) Housefield

151. Type in Motion (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-
requisite: courses 1, 14, 15, 16; course 115 recom-
dended or consent of instructor. Priority given to Design majors. Fundamentals of creating motion-based, screen-based typography. Consideration of narrative structures, movement assembly, and traditional and non-traditional methods of understanding typography within digital space. GE credit: ArtHum | AH, VL—I. III. (III.) Drew
on design for social awareness/interaction/benefit.
Creation of public visual-media campaign. Not open for credit to students who have completed course 1528. GE credit: ArtHum | AH, VL—II, III. (III.) Verba

155A. Pattern, Form and Surface (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-requisite: course 1, 14, 15, 16, 117; course 115 recommended or consent of instructor. Priority to Design majors. Technical and conceptual aspects of creating web sites that address current trends in such as CSS for type and position and interactivity with ActionScript. Attention to conceptual framework, visual design and user interaction design. Research and written pre-production materials required. Experimental. GE credit: ArtHum | AH, VL—II, III. (III.) Drew

159. Design for Understanding (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-requisite: course 1, 14, 15, 16, 117; 115 recommended or consent of instructor. Priority to Design majors. Exploration of fashion design processes for presenting in a public fashion show. Not open for credit to students who have taken more than 8 units of course 191A. May be repeated one time for credit. GE credit: ArtHum | AH, VL—II, III. (III.) Avila

160A. Advanced Interior Design: Institutional Spaces (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-requisite: course 1, 14, 15, 16; courses 50, 115, 150A recommended or consent of instructor. Priority to Design majors. Advanced exploration of fashion design with an emphasis on professional portfolio development and presentation. Emphasis on conceptualizing, designing, and fabricating a cohesive line of wearable garments suitable for presenting in a public fashion show. Not open for credit to students who have taken more than 8 units of course 191A. May be repeated one time for credit. GE credit: ArtHum | AH, VL—II, III. (III.) Avila

160B. Advanced Interior Architecture (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-requisite: course 1, 14, 15, 16; courses 50, 115, 150A recommended or consent of instructor. Priority to Design majors. Advanced problems in interior architectural design emphasizing space planning for corporate and institutional environments. Field trips required. GE credit: ArtHum | AH, VL—II, III. (III.) Kesler

170. Experimental Fashion & Textile Design (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-requisite: course 1, 14, 15, 16; course 60 or 70 recommended or consent of instructor. Priority to Design majors. Use of traditional and contemporary processes to create images and patterns on fabric using a variety of dyes, including direct applications, bound and unbound resist. Emphasis on individual exploration and interpretation of processes and techniques. May be repeated for credit one time with consent of instructor. GE credit: ArtHum | AH, VL—II, III. (III.) Avila

161. Textile Surface Design: Screen and Digital Printing (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-requisite: course 1, 14, 15, 16; course 60 or 70 recommended or consent of instructor. Priority to Design majors. Design of textiles and screen printing on fabrics; soft-product development; integration of handmade and digitally generated imagery on cloth. GE credit: ArtHum | AH, VL—II, III. (III.) Avila

170. Experimental Fashion & Textile Design (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-requisite: course 1, 14, 15, 16; course 60 or 70 recommended or consent of instructor. Priority to Design majors. Design of textiles and screen printing on fabrics; soft-product development; integration of handmade and digitally generated imagery on cloth. GE credit: ArtHum | AH, VL—II, III. (III.) Avila

171. Fashion Drawing: Technical and Illustration (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-requisite: course 1, 14, 15, 16; course 77 recommended or consent of instructor. Priority to Design majors. Exploration of fashion design processes for industry within the social and physical context. Emphasis on two-dimensional conceptualization of ideas, garment construction, and idea processes utilizing commercial textiles. Field trip required. GE credit: ArtHum | AH, VL—II, III. (III.) Avila

177. Computer-Assisted Fashion Design (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-requisite: course 1, 14, 15, 16; courses 50, 115, 150A recommended or consent of instructor. Priority to Design majors. Advanced exploration of fashion design with an emphasis on professional portfolio development and presentation. Emphasis on conceptualizing, designing, and fabricating a cohesive line of wearable garments suitable for presenting in a public fashion show. Not open for credit to students who have taken more than 8 units of course 191A. May be repeated one time for credit. GE credit: ArtHum | AH, VL—II, III. (III.) Avila

179. Fashion Design: Signature Collection (4)
Studio—4 hours; lecture/discussion—2 hours. Pre-requisite: course 77, 107, 170 or 177 or consent of instructor. Priority to Design majors. Advanced exploration of fashion design with an emphasis on professional portfolio development and presentation. Emphasis on conceptualizing, designing, and fabricating a cohesive line of wearable garments suitable for presenting in a public fashion show. Not open for credit to students who have taken more than 8 units of course 191A. May be repeated one time for credit. GE credit: ArtHum | AH, VL—II, III. (III.) Avila

Graduate

221. Theory and Issues in Design (4)
Seminar—3 hours; independent study. Prerequisite: graduate standing in Design or consent of instructor. Perspectives on theoretical and aesthetic issues related to the design professions such as methodology in historical and contemporary contexts, implications of technology on design theory and practice, and design relationships to environmental sustainability, recycling, and other social issues. May be repeated one time for credit. I—II. (I.)

222. Research Methods and Critical Writing for Design (4)
Seminar—3 hours; independent study. Prerequisite: course 221; graduate standing in Design or consent of instructor. Focuses on research methods and critical writing related to design topics including case studies, original and secondary source research, and critical reviews. Expectation of a paper meeting professional standards suitable for publication from each student at end of course. May be repeated one time for credit. I—II. (I.)
through case studies, guest lectures and field trips, and readings. Short written assignments and presentations will be required. —I, II, III.

224. Seminar in Design Research and Teaching (4)
Independent study—6 hours; extensive writing—4 hours; discussion—2 hours. Prerequisite: courses 221, 222, 223; concurrent academic appointment (TA) in courses 142A, 142B, 143, 144, 145; graduate standing in Design; consent of instructor. Student will work closely with instructor on a research and writing project related to subject matter of undergraduate history courses noted above with the goal of introducing student to advanced historical research processes and development of writing skills. May be repeated two times for credit. —I, II, III.

225. Studio Practice in Design (4)
Studio—3 hours. Prerequisite: course 221. Class size limited to graduate standing in Design or consent of instructor. Students work together on an explorative project to experience the multiple phases of design through an iterative process. Design projects will be geared towards relevance in contemporary social, cultural and political contexts. Credit limited to 12 units. May be repeated two times for credit. —II.

290. Seminar in Design (4)
Seminar—4 hours. Prerequisite: standing or consent of instructor. Selected topics in design methodology, research, communication, and education. May be repeated for credit. —III. (III.)

292. Practicum in Design (1-12)
Prerequisite: graduate standing in Design or consent of instructor. Interaction with a working professional in the student's field of interest to apply theories and concepts to working practice. (S/U grading only.)

298. Directed Group Study for Graduate Students (1-5)
Studio. Prerequisite: consent of instructor. (S/U grading only.)

299. Individual Focused Study (1-12)
Prerequisite: graduate standing in Textile Arts and Costume Design or consent of instructor. Advanced study in studio practice on independent projects with faculty consultation. May be repeated for credit.

299D. Project Concentration (1-12)
Prerequisite: graduate standing in Textile Arts and Costume Design or consent of instructor. A minimum of 22 units must be taken in Project Concentration and Individual Focused Study. Student creates a body of original work at a professional level, with written and visual documentation of process and concepts underlying the project, culminating in public presentation. (S/U grading only.) —I, II, III.

Professional

396. Teaching Assistant Training Practicum (1-4)
Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.) —I, II, III, IV, I, II, III.

The Major Program

The department offers a core language program in both Chinese and Japanese and courses in literature and culture. The core language program in Chinese has two tracks: one for students who have no background whatsoever and one for students with prior language background.

The Program. A student elects to major in either Chinese or Japanese. Practical language skills are taught using the most modern methods so that upon entering the upper division a student will have attained substantial fluency in the spoken language (hearing and speaking) and the written language (reading and writing). Upper-division courses balance the need to further language skills with the need to understand and appreciate the cultural richness of either Chinese or Japanese civilization. All students are encouraged to combine their study of...
A.B. Major Requirements:

Preparatory Subject Matter ................. 0-30

Chinese 1, 2, 3, 4, 5, 6; OR 1BL, 2BL, 3BL, OR 1CN, 2CN, 3CN; OR equivalent as determined by a required language placement exam. Recommended but NOT required: Chinese 10, 11, 50; Comparative Literature 14, Japanese 10, Linguistics 1, History 9A.

Depth Subject Matter ............................. 40

Chinese 106, 107, 111, 112, 113, 114, 160................................. 28

Note: With prior approval of the undergraduate adviser, students already proficient in Chinese at any third-year level (111-112-113) must offer upper-division Chinese courses to replace language course(s).

Three* courses selected from Chinese 100A, 101, 102, 103, 104, 105, 108, 109A, 110, 115, 116, 120**, 130**, 131, 132, 133A, 133B, 194A, 194B, 194C; or other approved substitutions; *one of the three courses must be from Chinese 101, 102, 103, 104, 109G. .................................................... 28

Chinese 120, 130, 133, 140 and 150 can be repeated when the contents are different.

Recommended substitutions: Japanese 101, 102, 103, 104, 105, 106; Anthropology 148A or 148B; Art History 163A or 163B; East Asian Studies 113; History 191A-F; Religious Studies 172; or other advanced literature and culture courses selected in consultation with the undergraduate adviser.

Total Units for the Chinese Major ..... 40-70

Major Advisors in Chinese. M. Halperin, Y. He, M. Yeh

Japanese A.B. Major Requirements:

Preparatory Subject Matter ................. 0-30

Japanese 1, 2, 3, 4, 5, 6 OR equivalent as determined by a language placement exam. Recommended but NOT required: Japanese 10, 15, 25, Chinese 10, 11, 50, Linguistics 1, History 9B.

Depth Subject Matter ............................. 40

Japanese 101, 102, 103, 111, 112, 113, 151................................. 28

Note: With prior approval of the undergraduate adviser, students already proficient in Japanese at any third-year level (111-112-113) must take other upper division Japanese courses to replace language course(s).

Three courses selected from the following: Japanese 104, 105, 106, 107, 108, 109, 114A-C, 115, 121, 122, 123, 130, 131, 132, 133A, 133B, 135, 136, 137, 138, 141, 152, 156, 157, Anthropology 149A, 149B; Art History 164; Chinese 170, 172; or other advanced literature and culture courses selected in consultation with the undergraduate adviser.

Total Units for the Japanese Major ..... 40-70

Minor Program Requirements:

Minors are offered in Chinese and in Japanese for students wishing to follow a formally recognized program of study in those languages and literatures.

UNITS

Chinese ...................................................... 20

20 All upper-division courses, including both language courses and literature in translation courses, may be used to meet this requirement. OR lower division course (Chinese 10, 11, or 50; Japanese 10, 25, 50) may also be used. In addition, students must demonstrate their language proficiency, normally through completion of Chinese 3BL or 6 or Japanese 6. Only four units from 192, 198, and 199 may be applied to the minor. For details, consult the undergraduate adviser.

Honors Program. Candidates for high or highest honors in Chinese or Japanese must enroll in Chinese 199 or JPN 199 and complete a research project or a scholarly paper under the direction of a faculty member. The project will have a minimum duration of two quarters and carry a minimum of 6 units of credit. Additionally, entrance into the honors program requires completion of at least 35 units with a minimum GPA of 3.500 in courses counted toward the major. Interested students should consult with the faculty in their field of interest in their junior year and undertake the program during the first two quarters of their senior year. Other arrangements must be authorized in advance by the department chair.

Students who complete the honors thesis receive departmental citation, and if their overall GPA qualifies them, may be recommended by the faculty for honors, high honors or highest honors at graduation.

Education Abroad Program. The university maintains study abroad programs in China, Japan, Hong Kong, and Taiwan. They offer excellent opportunities for students to polish their language skills and experience Asian cultures firsthand. Students are encouraged to participate. Appropriate courses taken abroad can be applied toward the major or the minor. For details, consult the department's undergraduate adviser, the Education Abroad Program office or the UC Davis Study Abroad Office.

Related Courses. See East Asian Studies course list.

Prerequisite Credit. No student may repeat a course if that course is a prerequisite for a course that has already been completed with a grade of C- or better.

Placement. Chinese 1 and Japanese 1 are intended for beginning students with no prior knowledge of those languages. Students who do have some knowledge but wish to improve their skills should meet with one of the advisers to discuss appropriate placement. Students must follow department guidelines for placement in all language courses and instructor approval is required for enrollment.

Backtracking. Satisfactory completion of a language course is evidence that a student’s language skills are beyond those expected in that prerequisite course. Accordingly, students who have completed a language course cannot go back and take its prerequisites. If the prerequisite courses are required for the major, students may substitute other upper division courses. Students who are not sure how this requirement applies to them should speak to the undergraduate adviser.

Waived Language Courses. Students with exceptional language ability may waive required courses. If lower division courses have been waived, students will not have to take courses in their place. If upper division courses have been waived, students can use other appropriate courses to earn the units they need to complete the major. Consult the undergraduate adviser regarding selection of appropriate courses.

Courses in Chinese (CHN)

Lower Division

1. Elementary Chinese (CHN)

Lecture/discussion—5 hours. Introduction to Chinese grammar and development of all language skills in a cultural context with special emphasis on communication. (Students who have successfully completed Chinese 2 or 3 in the 10th or higher grade in high school may receive unit credit for this course on a P/NF grading basis only. Although a passing grade will be charged to the student’s P/NF option, no petition is required. All other students will receive a letter grade unless a P/NF petition is filed.)—I, II, III. (I, II, III.)

1A. Accelerated Intensive Elementary Chinese (CHN)

Lecture—15 hours. Prerequisite: place-ment exam required. Special nine week accelerated, intensive summer session course that combines the work of courses 1, 2, and 3. Introduction to Chinese grammar and development of all language skills in a cultural context with emphasis on communication.

1BL. Accelerated Written Chinese I (CHN)

Lecture—5 hours. Prerequisite: ability to understand and speak Mandarin Chinese at an elementary level. Trainings on all the communicative skills of listening, speaking, reading, and writing for students who already have elementary level ability to understand and speak Mandarin Chinese. Emphasizes on standard Mandarin pronouns, specific Chinese characters, and discourse level conversations. Not open for credit to students who have completed course 8. GE credit: ArtHum | AH, OL, WC.—I. (I)

1CN. Mandarin for Cantonese Speakers I (CHN)

Lecture—5 hours. Prerequisite: ability to read and write Chinese characters at the elementary school level. Accelerated training in spoken Mandarin, particularly in the phonetic transcription system known as pinyin, for students who already can read and write Chinese. Course assumes no knowledge of spoken Mandarin Chinese. Not open for credit to students who have completed course 7. (Former course 7.)—I. (I)

2. Elementary Chinese (CHN)

Lecture/discussion—5 hours. Prerequisite: course 1. Continuation of course 1 in the areas of grammar and basic language skills.—I, II, III. (I, II, III.)

2BL. Accelerated Written Chinese II (CHN)

Lecture—5 hours. Prerequisite: course 1BL or advanced placement with Chinese Placement Exam. Further trainings on all the communicative skills of listening, speaking, reading, and writing for students that already have elementary level ability to understand and speak Mandarin Chinese. Emphasizes on standard Mandarin pronunciation, Chinese characters, and discourse level conversations. Not open for credit to students who have completed course 18. GE credit: ArtHum | AH, OL, WC.—II. (II)

2CN. Mandarin for Cantonese Speakers II (CHN)

Lecture—5 hours. Prerequisite: course 1CN. Continuation of course 1CN. Training in spoken Mandarin for students who already can read and write Chinese. Not open for credit to students who have completed course 17. (Former course 17.)—II. (II)

3. Elementary Chinese (CHN)

Lecture/discussion—5 hours. Prerequisite: course 2. Continuation of course 2. Completion of grammar sequence and continuing practice of all language skills.—I, II, III. (I, II, III.)
Offered in alternate years. [Same course as Reli-
Gious Studies 173A] GE credit: ArtHum, Div, Writ | AH, WC.—II. (II.) Yeh

101. Chinese Film (4)
Lecture/discussion—3 hours; film viewing—3 hours. Prerequisite: History 9A or any course on traditional China; upper division standing. English language survey of Chinese America, starting at the end of the twentieth century. Chinese films as important texts for understanding national, transnational, racial, gender, and class politics of modern China. (Same course as Cinema & Cultural Studies 147A) GE credit: ArtHum, Div | AH, VL, WC.—Chen

102. Chinese American Literature (in English) (4)
Lecture—3 hours; term paper or discussion—1 hour. Prerequisite: a course in Chinese history recommended; upper division standing. English language survey of Chinese American literature which reflects cultural roots in China, the impact of immigration, and the diaspora experience in the United States after immigration. Memory, nostalgia, national identities, cross-cultural communication, globalization, and trans-national politics. GE credit: ArtHum, Div, Writ | AH, WC.—II, III. (II, III) Chen

103. Modern Chinese Drama (4)
Lecture—3 hours; term paper or discussion—1 hour. Prerequisite: a course in Chinese history recommended; upper division standing. English language survey of modern Chinese spoken drama in the twentieth century and its major playwrights, in the context of Chinese history and the interaction of Chinese culture with other cultures. GE credit: ArtHum, Div, Writ | AH, VL, WC.—II, III. (II, III) Chen

104. Modern Chinese Fiction (in English) (4)
Lecture—3 hours; term paper or discussion—1 hour. Prerequisite: course 10 or a course in Chinese history recommended. English language survey of Chinese fiction as it evolved amidst the great historical, social and cultural changes of the twentieth century. Thorough study of the most influential writers and genres. GE credit: ArtHum, Div, Writ | AH, WC.—III. (III) Chen

105. Western Influences on Twentieth-Century Chinese Literature (in English) (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 10 or History 9A recommended. Introduction of Western literary thought into modern China, the experimentation with Western literary forms and techniques, and the development of Marxism in contemporary literature, surveyed in alternate years. GE credit: ArtHum, Div, Writ | AH, WC.—III. (III) Chen

106. Chinese Poetry (in English) (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: History 9A or any course on traditional China recommended. Organized topically and chronologically, the lyric tradition is explored from the dawn of folk songs down to modern expressions of social protest. Topics include friendship, love, oppression, war, parting, death, ecstasy and beauty. All readings are in English. GE credit: ArtHum, Div, Writ | AH, WC.—I. (I) Yeh

107. Traditional Chinese Fiction (in English) (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 10 or a course in Chinese history. English-language survey of Chinese literature's development down to modern times. Combine survey with readings of key short stories or novels. GE credit: ArtHum, Div, Writ | AH, WC.—II. (II) Halperin, He

108. Poetry of China and Japan (in English) (4)
Lecture—3 hours; discussion—1 hour. A comparative approach to Chinese and Japanese poetry, examining poetry in oral and written cultures; includes a general outline of the two traditions, plus study of poetic forms, techniques, and distinct treat-ments of universal themes: love, nature, war, etc.

Offered in alternate years. [Same course as Japa-
nese 108] GE credit: ArtHum, Div, Writ | AH, WC.—II. (II) Yeh

109A, C-E, G-T. Topics in Chinese Literature (in English) (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: depending on topic, course 10, 11, 104, 106, 107, or a course in Chinese history. Topics in Chinese lit-
erature may include: [A] crime and punishment; [C] women writers; [D] the kingly errant; [E] the city in fiction; [G] the literature of twentieth-century Taiwan; [T] popular literature; [I] I the scholar and the courtes-
ian. Offered in alternate years. GE credit: ArtHum, Div, Writ | AH, WC.—III. (III) Chen, Halperin, Yeh

110. Great Writers of China: Texts and Context (in English) (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: any course from the General Education Literature Preparation List, or consent of instructor. Examination of major theoretical concepts and interpretive meth-
ods in the study of literature by using examples from the Chinese tradition; discussions of classical and modern works with an emphasis on the relations between literature, author, society, and culture. GE credit: ArtHum, Div, Writ | AH, WC.—II, III. (II, III) Chen, Halperin, Yeh

111. Modern Chinese: Reading and Discussion (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 6 or 3BL or AA; or successful completion of Chinese Placement Exam and with placement at the third-
year level. Not open for students who have completed course 111, 112, or 113. Nine-week intensive sum-
mer course combines courses 111, 112, and 113. Training at intermediate-high and advanced-low level in spoken and written Chinese in cultural and communicative contexts based on lan-
guage skills developed in course 6. GE credit: ArtHum | AH, OL, WC.—I. (I)

111A. Intensive Third-Year Chinese (12)
Lecture/discussion—13.3 hours. Prerequisite: course 6 or 3BL or AA; or successful completion of Chinese Placement Exam and with placement at the third-
year level. Not open for students who have completed course 111, 112, or 113. Nine-week intensive sum-
mer course combines courses 111, 112, and 113. Training at intermediate-high and advanced-low level in spoken and written Chinese in cultural and communicative contexts based on lan-
guage skills developed in course 6. GE credit: ArtHum | AH, OL, WC.—I–VI.

112. Modern Chinese: Reading and Discussion (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 111. Readings in modern Chinese newspaper articles, essays, and short stories, based on lan-
guage skills developed in course 111. GE credit: ArtHum | AH, WC.—II. (II)

113. Modern Chinese: Reading and Discussion (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 112. Continuation of CHN 112, further developing communication skills in Modern Standard Mandarin-speaking environments. Reading of dialogues/articles pertaining to contempo-
rary China. GE credit: ArtHum | AH, OL, WC.—I. (I)

114. Introduction to Classical Chinese: Confucius (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 6 or consent of instructor. Texts from the Con-
fcucian canon are read with the assistance of pre-
pared word glossaries so that the student can learn to read classical Chinese, the people and the king and the court, the city; the scholars and the courtes-
ians. GE credit: ArtHum | AH, OL, WC.—III. (III)

115. Introduction to Classical Chinese: Mencius (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 114. Continues course 114 by reading selec-
tions from the text of the Mencius. GE credit: ArtHum | AH, WC.—II. (II)

38L. Accelerated Written Chinese III (5)
Lecture—5 hours. Prerequisite: course 2BL. Advanced written styles and syntax in Chinese. Stu-
dents completing this course proceed to course 111, which starts the third-year Chinese, or to some other appropriate upper-division course. Not open for students who have completed course 28. (Former course 28.—III. (III.)

3CN. Mandarin for Cantonese Speakers III (5)
Lecture—5 hours. Prerequisite: course 2CN. Continu-
ation of course 2CN. Prepares students for entering upper division courses in Chinese. Not open for students who have completed course 27. (Former course 27.—III. (III.)

4. Intermediate Chinese (5)
Lecture/discussion—5 hours. Prerequisite: course 3 or the equivalent. Intermediate-level training in spoken and written Chinese in cultural contexts, based on language skills developed in course 3. GE credit: W.C.—I. (I)

4A. Accelerated Intermediate Chinese (15)
Prerequisite: course 3 or 1A or placement exam. Special nine-week accelerated, intensive summer session course that combines the work of courses 4, 5, and 6 into an intensive level training in spoken and written Chinese in cultural and communicative contexts, based on language skills developed in course 3 or 1A. Not open to students who have completed course 4, 5, or 6. GE credit: ArtHum | AH, OL, WC.—IV. (IV)

6. Intermediate Chinese (5)
Lecture/discussion—5 hours. Prerequisite: course 5 or the equivalent. Intermediate-level training in spoken and written Chinese in cultural contexts, based on language skills developed in course 5. GE credit: ArtHum | AH, OL, WC.—II, III. (II, III, II, III)

10. Modern Chinese Literature (In English) (4)
Lecture—3 hours; term paper or discussion—1 hour. Introductory course requiring no knowledge of Chi-
inese language or history. Reading and discussion of short stories and novels and viewing of two films. Designed to convey a feeling for what China has experienced in the twentieth century. Not open for students who have already taken, or are taking concurrently, course 104. GE credit: ArtHum, Div, Writ | AH, WC.—II. (II) Chen

11. Great Books of China (in English) (4)
Lecture—3 hours; discussion—1 hour. Selected read-
ings in English translation are supplemented with background information on periods, authors and the interactions of literature, culture, and historical and cultural change. Methods of analysis are introduced and applied in class discussions. GE credit: ArtHum, Div, Writ | AH, WC.—I. (I) Halperin, He

50. Introduction to the Literature of China and Japan (4)
Lecture/discussion—4 hours. Methods of literary analysis and their application to major works from the various genres of Chinese and Japanese litera-
ture (in translation), including film. East Asian cul-
tural traditions will also be introduced. (Same course as Japanese 50.) GE credit: ArtHum, Div, Writ | AH, WC.—I, II, (I, II) Gundy

98. Directed Group Study (1-5)
(P/NP grading only)

99. Special Study for Undergraduates (1-5)
(P/NP grading only)
116. Introduction to Classical Chinese: Narrative Styles (4)
Lecture—4 hours; discussion—1 hour. Prerequisite: course 115. Course 115 counts as 2 of the 4 credits required. This course focuses on the development of narrative structures in Chinese literature. It covers a variety of narrative forms, including historical, fictional, and philosophical genres. GE credit: ArtHum | AH—II, III, IV, (I, II, III).

120. Advanced Chinese (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 113 or consent of instructor. Selected readings from all genres to develop advanced skills in reading, writing, oral comprehension, and translation. GE credit: ArtHum | AH—I, II, III. (II, III, IV)

130. Readings in Traditional Chinese Fiction (4)
Lecture—1 hour; discussion—3 hours. Prerequisite: course 112 or the equivalent; course 114 recommended. Close reading in Chinese of representative works from the Tang Dynasty (618-907) to modern times. May be repeated one time for credit when content varies. GE credit: ArtHum | AH—I, II, III. (II, III, IV; III, IV; IV)

132. Readings in Modern Chinese Poetry (4)
Lecture—2 hours; discussion—1 hour. Prerequisite: course 6 or consent of instructor. Chinese poetry and reflect the modernity of the twentieth century. GE credit: ArtHum | AH, WC, VI—II. (II, III)

133. Readings in Modern Chinese Prose and Drama (4)
Lecture—4 hours. Prerequisite: course 113 or equivalent language proficiency based on placement exam. Literary works and scholarly essays on selected topics of Chinese prose and drama, development of a deep understanding of Chinese culture and society through the exploration of traditional reading materials. May be repeated two times for credit when topic differs. GE credit: ArtHum | AH, WC—IV. (IV)

134. Chinese Film in Chinese Language (4)
Lecture—3 hours; film viewing—3 hours. Prerequisite: course 120 or fourth level Chinese placement exam. Chinese film and scholarly essays on Chinese cinema and film history. Develop a deep understanding of Chinese culture and society through the viewing and studying Chinese films in the Chinese language. GE credit: ArtHum or SocSci | AH or SS, OL, VI—IV; WC—IV. (IV)

140. Readings in Classical Chinese (4)
Lecture/discussion—3 hours; term paper. Prerequisite: consent of instructor. Study and philological analysis of selected texts from the first millennium of Chinese literature. May be repeated two times for credit. GE credit: ArtHum | AH—I, II, III. (II, III, IV)

150. Fifth-Year Chinese: Selected Topics in Chinese Language, Literature, and Culture (4)
Lecture/discussion—4 hours. Prerequisite: successful completion of course 120, or course 123 after Spring 2012, or fifth-year level Chinese placement exam. Literary works and scholarly essays on selected topics of Chinese culture and society. Development of a deep understanding of Chinese culture and society through sophisticated Chinese speaking and writing exercises. May be repeated three times for credit when topic differs. Offered irregularly. GE credit: ArtHum, Div; Wrt | AH, OC, WC—II, III. (II, III, IV) Chaudhuri

160. Chinese Language (4)
Lecture/discussion—4 hours. Prerequisite: course 6 (may be taken concurrently). Linguistics 1 recommended. The Chinese language viewed in its linguistic context, synchronically and diachronically. Historical phonology, classical and literary language, rise of written vernacular, descriptive gram-

226 Eastern Languages and Cultures

6. Intermediate Japanese (5)
Lecture/discussion—5 hours. Prerequisite: successful completion of course 5 or the equivalent. Intermediate-level training in spoken and written Japanese in cultural context, based on language skills developed in course 5. GE credit: ArtHum | AH, OL, WC—II, III.

75. Intensive Intermediate Japanese (20)
Lecture/discussion—20 hours. Special intensive course that combines the work of courses 3, 4, 5, and 6. Introduction to Japanese grammar and development of all language skills in a cultural context with emphasis on communication. Taught in Japanese. GE credit: ArtHum | AH, OL, WC—II. (III)

10. Masterworks of Japanese Literature (in English) (4)
Lecture—2 hours; discussion—1 hour. Introduction to Japanese literature: readings and discussion in English of important works from earliest times to the present. GE credit: ArtHum, Div, Wrt | AH, WC, WE—Sorensen

155. Introduction to Japanese Culture (2)
Lecture/discussion—2 hours; fieldwork. Restricted to students enrolled in units for the Kyoto Quarter Abroad program. Aspects of Japanese culture: literature, history, religion, art, language, and society. Conducted in English; taught in Japan. (P/NP grading only) GE credit: ArtHum | AH, WC—III. (III; Sorensen)

25. Japanese Language and Culture (in English) (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or Linguistics 1 or Anthropology 4 recommended. Classification and communication of experience in Japanese culture; principles of language use in Japanese society. Speech levels and honorific language, language and gender, minority languages, literacy. Role of Japanese in artificial intelligence and computer science. Offered in alternate years. GE credit: ArtHum or SocSci, Div; Wrt | AH or SS, WC, WE—I, II. (II, III)

98. Directed Group Study (1-5)
(P/NP grading only) GE credit: AH.

99. Special Study for Undergraduates (1-5)
(P/NP grading only)

Upper Division
101. Japanese Literature in Translation: The Early Period (4)
Lecture—2 hours; discussion—1 hour. Study of early Japanese literature from the Nara to the end of the Heian period through a broad survey of the major literary genres such as lyric poetry, court diaries, prose narratives, poems, and classical Chinese writings. GE credit: ArtHum, Div; Wrt | AH, WC, WE—I. (II, III, IV) Gundry

102. Japanese Literature in Translation: The Middle Period (4)
Lecture—2 hours; discussion—1 hour. Study of the major literary genres from the twelfth century to the second half of the nineteenth century including poetry, linked-verse, military chronicles, no drama, Buddhist literature, hashi, harukas, kabuki, bunraku, plays and Edo prose narratives. GE credit: ArtHum, Div; Wrt | AH, WC, WE—I. (II, III, IV) Sorensen

Lecture—3 hours; discussion—1 hour. Modern Japanese literature from the 1870s to the 1970s. Surveys representative literary works and ideas against the social and intellectual background of the Meiji, Taisho, and Showa periods. GE credit: ArtHum, Div; Wrt | AH, WC, WE—I. (II, III, IV) Chang
104. Modern Japanese Literature: War and Revolution (3)
Lecture/discussion—3 hours. Perspectives and sensibilities with which major modern Japanese writers have interpreted the traumatic and often poignant experiences of war and socio-political upheavals from the late nineteenth century to the 1970s. Lectures, discussions, and readings in English. Offered in alternate years. GE credit: ArtHum, Div, Wrt | AH, WC.—I. Chang

105. Modern Japanese Literature: Hero and Anti-Hero (3)
Lecture/discussion—4 hours. The ways in which representative hero and anti-hero protagonists in modern Japanese literature perceive, confront, challenge, and resolve a wide array of social, political, and moral problems of their times. Course taught in English. GE credit: ArtHum, Div, Wrt | AH, WC.—I. Chang

106. Japanese Culture Through Film (4)
Lecture/discussion—3 hours; film viewing—3 hours. Prerequisite: upper division standing or consent of instructor. Aspects of Japanese culture such as love, sexuality, war, the military, the family, the position of women, growing up and death as portrayed in Japanese cinema. Lectures, discussions, and readings in English. Films with English subtitles. GE credit: ArtHum, Div, Wrt | AH, VL, WC.—III. (I.) Chang

107. Modern Japanese Autobiographies (in English) (4)
Lecture—3 hours; term paper/discussion—1 hour. Prerequisite: upper division standing or consent of instructor. Aspects of Japanese culture such as love, sexuality, war, the military, the family, the position of women, growing up and death as portrayed in Japanese cinema. Lectures, discussions, and readings in English. Films with English subtitles. GE credit: ArtHum, Div, Wrt | AH, WC.—I. Chang

108. Poetry of China and Japan (in English) (4)
Lecture—3 hours; discussion—1 hour. A comparative approach to Chinese and Japanese poetry, examining poetic practice in the two cultures, includes a general outline of the two traditions, plus study of poetic forms, techniques, and distinct treatments of universal themes: love, nature, war, etc. Offered in alternate years. [Same course as Chinese 108.] GE credit: ArtHum, Div, Wrt | AH, WC.—I, II. Gundy

Lecture—3 hours; discussion—1 hour; film viewing—3 hours. Japanese popular culture, from its medieval and traditional antecedents to contemporary incarnations. Emphasis on the major forms of twentieth-century popular culture, including genre films, popular theater, TV manga (cartoons), animation and video game, fiction. GE credit: ArtHum, Div | AH, VL, WC.—III. Sorensen

111. Modern Japanese: Reading and Discussion (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 6. Repeaper division standing or consent of instructor. Aspects of Japanese culture such as love, sexuality, war, the military, the family, the position of women, growing up and death as portrayed in Japanese cinema. Lectures, discussions, and readings in English. Films with English subtitles. GE credit: ArtHum, Div, Wrt | AH, WC.—I. Chang

112. Modern Japanese: Reading and Discussion (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 111. Continuation of course 111. GE credit: ArtHum | AH, OL, WC.—II. (I.)

113. Modern Japanese: Reading and Discussion (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 112. Continuation of course 112. GE credit: ArtHum | AH, OL, WC.—III. (I.)

114. Spoken Japanese (2)
Discussion—2 hours. Prerequisite: course 6 or the equivalent. Training in spoken Japanese for students with a basic working knowledge of the language. (P/NP grading only.) GE credit: OL.—I. (I.)

114B. Spoken Japanese (2)
Discussion—2 hours. Prerequisite: course 114A or consent of instructor. Continuation of course 114A. Training in spoken Japanese for students with a basic working knowledge of the language. (P/NP grading only.) GE credit: OL.—II. (I.)

114C. Spoken Japanese (2)
Discussion—2 hours. Prerequisite: course 114B or consent of instructor. Continuation of course 114B. Training in spoken Japanese for students with a basic working knowledge of the language. (P/NP grading only.) GE credit: OL.—III. (I.)

115. Japanese Composition (2)
Lecture—2 hours. Prerequisite: course 6 or consent of instructor. Development of skills in the techniques of writing Japanese. Practice in short essay writing with an aim toward mastery of the vocabulary and syntax of written style Japanese.—I. (I.)

1175. Intensive Modern Japanese: Reading and Discussion (17)
Lecture/discussion—17 hours. Prerequisite: course 5. Introduction to basic Japanese grammar and development of more advanced reading, writing, and conversation skills in a cultural context. Combination of courses 6, 111, 112, and 113 taught intensively in Japanese. Not open to students who have taken courses 1, 2, 3, or 4, an exception can be made for students who have taken course 6 or its equivalent, provided that those five units are deducted from the 17 total unit load. GE credit: ArtHum | AH, OL, WC.—III. (II.)

131. Readings in Modern Japanese Literature: 1920-1945 (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 112 or the equivalent. Four-year-level reading of representative modern Japanese literature including short stories, novels, diaries, memoirs, poetry and excerpts from novels and plays from 1920 through the militaristic era, to the end of the war years in 1945. GE credit: ArtHum | AH.—II. (II.) Chang

Lecture—3 hours; discussion—1 hour. Prerequisite: course 113 or the equivalent. Continuation of course 131, but may be taken independently. Covers selected texts from the immediate post-war years beginning in 1945 down to 1970 and the post-war recovery. GE credit: ArtHum | AH.—II. (II.) Chang

133. Readings in Modern Japanese Literature: 1970 to Present (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 113 or the equivalent. Continuation of course 132, but may be taken independently. Covers selected texts from 1970 to the present. Offered in alternate years. GE credit: ArtHum | AH, WC.—I. Chang

134. Readings in the Humanities: Traditional Culture (4)
Lecture—3 hours; discussion—1 hour or term paper. Prerequisite: course 113. Fourth-year level reading of modern works by major specialists on traditional Japanese culture: history, religion, thought, art, international relations, and literary history and criticism. Focus is equally on developing reading skills and learning about Japanese culture. GE credit: ArtHum | AH, WC.—II. (II.)

135. Readings in the Humanities: The Modern Period (4)
Lecture—3 hours; term paper. Prerequisite: course 113. Fourth-year level reading of authentic modern writings on Japan and Japanese culture: history, philosophy, politics, society, religion, law, politics, international relations, aesthetics, and comparative culture by prominent critics, commentators, and scholars. GE credit: AH, WC.—III. (I.)

136. Readings in Newspapers and Magazines (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 113 or the equivalent. Fourth-year level reading of newspaper and magazine reports, articles, and editorials on domestic and international affairs relating to contemporary Japan. Offered in alternate years. GE credit: ArtHum | AH, WC.—III. (II.)

137. Readings in Contemporary Japanese Literature (4)
Lecture/discussion—4 hours. Prerequisite: course 113 or equivalent (placement exam or consent of the instructor). Readings of selected literary works by contemporary writers. Representative writers include Yoshimoto Banana, Otsuchi, Suzuki Koji, Kyogoku Natsumiko, Ogawa Yoko, and Murakami Haruki. Readings and discussions in Japanese with emphasis on translation into English. Offered in alternate years. GE credit: AH, WC.—III. Sorensen

141. Introduction to Classical Japanese (4)
Lecture/discussion—4 hours. Prerequisite: one advanced Japanese reading course such as Japanese 113, 132, or the equivalent reading knowledge of Japanese. The basic features of classical Japanese grammar through careful reading of selected literary texts such as Hojoki or Tsurezuregusa. Offered in alternate years.—III. Sorensen

151. Japanese Linguistics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1, 2, and 3 or equivalent. Introduction to Japanese linguistics, featuring writings on Japanese language. Analysis of Japanese from the perspectives of phonology, syntax, discourse analysis, sociolinguistics and psycholinguistics. GE credit: ArtHum or SocSci.—I. (I.) Koyama

152. Traditional Japanese Drama (4)
Lecture—3 hours; discussion—1 hour. Survey in English of Japanese drama, focusing on traditional forms: noh, kyogen, bunraku puppet theater, and kabuki, with some attention to modern theater. Tests of plays and secondary works on performance techniques and the composition of plays. Offered in alternate years. GE credit: ArtHum, Div, Wrt | AH, VL, WC, WE.—III. Sorensen

156. Japanese Literature on Film (4)
Lecture/discussion—3 hours; film viewing—2 hours. Survey of films based on works of Japanese literature, emphasis on pre-modern and early modern texts. Introduction to major directors of Japan, with a focus on cinematic adaptation. Lectures and readings in English. Films in Japanese with English subtitles. Offered in alternate years. GE credit: ArtHum, Div, Wrt | AH, VL, WC, WE.—III. Sorensen

192. Japanese Internship (1-12)
Internship—3-36 hours to be arranged. Prerequisite: upper division standing and consent of instructor. Work experience in Japanese language, with analytical term paper on a topic approved by instructor. (P/NP grading only.)

1977. Tutoring in Japanese (1-5)
Tutoring—1-5 hours. Prerequisite: consent of Department chairman. Leading of small voluntary discussion groups affiliated with one of the Program's regular courses. May be repeated for credit, but only 2 units may be applied to the minor. (P/NP grading only.)

198. Directed Group Study (1-5)
(P/NP grading only.) GE credit: AH, WC.

199. Special Study for Advanced Undergraduates (1-5)
(P/NP grading only.) GE credit: AH, WC.

Graduate
291. Seminar in Modern Japanese Literature: Major Writers (4)
Seminar—4 hours. Prerequisite: any one of courses 131, 132, 133, 134, 135, or the equivalent. In-depth reading and critical analysis of major works by and critical literature on one or two prominent modern or contemporary writers such as Natsume Soseki, Mori Ogui, Shimmazaki Toton, Akiyagawa Ryunosuke, Tanizaki Junnosuke, Abe Kobo and Oe Kenzaburo. Offered in alternate years.—II. Chang

299. Research (1-12)
(S/U grading only.)

East Asian Languages and Cultures 227
East Asian Studies

[College of Letters and Science]

Katharine Burnett, Ph.D., Program Director

Program Office, 1277 Social Science and Humanities Building; 530-752-4046; http://eastasian.ucdavis.edu

Committee in Charge
Katharine Burnett, Ph.D., Associate Professor (Art History)
Becky Bossler, Ph.D., Professor (History)
David Gundry, Ph.D., Assistant Professor (East Asian Languages & Cultures)
Kyu Hyun Kim, Ph.D., Associate Professor (History)
Sheldon Lu, Ph.D., Professor (Comparative Literature)
Ethan Scheiner, Ph.D., Professor (Political Science)
Xiaoling Shu, Ph.D., Professor (Sociology)
Eddy U., Ph.D., Associate Professor (Sociology)
L. Zhang, Ph.D., Professor (Anthropology)

The Major Program
The East Asian Studies major gives the student an understanding of East Asia (especially China and Japan) through interdisciplinary studies that combine sustained work in an East Asian language with courses on East Asian countries.

The Program
The program offers core courses in East Asian history, humanities, social sciences, and languages. After taking the core courses in conjunction with two years of either Chinese or Japanese language study, the student chooses additional courses focusing on a special field of interest, such as anthropology or history.

Programs, Internships, and Career Alternatives.
To enhance the student’s understanding of East and Southeast Asia, our majors are strongly encouraged to participate in UC Davis’s Study Abroad Program, which gives students the opportunity to live and experience a culture within East or Southeast Asia. Our majors are also encouraged to work with UC Davis’s Internship and Career Center, which provides customized assistance for EAS students to obtain legislative, legal, and business internships and careers. Likewise, the UC Davis Sacramento and UC Washington Centers arrange internships and run full-credit academic programs in Sacramento and Washington D.C. These programs provide opportunities for our majors. Graduating EAS majors are prepared for employment in government agencies (such as Foreign Service), state agencies, international or non-governmental organizations (NGO, such as the United Nations), foundations, journalism, teaching, counseling, and companies with international business interests, trade, or finance. The broad-based and multidisciplinary components of this major program enhance career prospects in jobs that demand knowledge of cultures of East and Southeast Asia.

Total Units for the Major: 77-78

Major Adviser, East Asian Studies Undergraduate Advising Committee, Social Science & Humanities Building: 530-752-9241; easugadvisor@ucdavis.edu.

Minor Program Requirements:
Courses taken for the minor are expected to reflect a predominant interest in East Asia or Southeast Asia. All upper division courses counting towards the East Asian Studies major may be used to fulfill the requirements for the minor program, as long as they deal predominantly with East Asia or Southeast Asia.

Minor Program: East Asian Studies: History 9B and 18 upper division units, of which at least 12 must be courses focusing on China; OR History 9A and 18 upper division units, of which at least 12 must be in courses focusing on Japan. | 22 |

Courses in East Asian Studies: The following courses count toward the major and are open to students throughout the campus. See departmental listings for course descriptions.

Anthropology
148A. Culture and Political Economy in Contemporary China
148B. Contemporary Japanese Society

Art History
1D. Asian Art
163A. Chinese Art
163B. Chinese Painting
163C. Painting in the People’s Republic of China

Japanese
All courses.

Political Science
148A. Government and Politics in East Asia: China
148B. Government and Politics in East Asia: Pacific Rim
148C. Government and Politics in East Asia: Southeast Asia

Religious Studies
75. Chinese Philosophy: An Introduction
170. Introduction to Buddhism
172. Ch’an (Zen) Buddhism

Sociology
147. Sociological Perspectives on East Asia
188. Social Stratification in China

Courses in East Asian Studies (EAS)

Lower Division
88. Korean Society: Late 19th Century to the Present (4)
Lecture/discussion—4 hours. Modern Korean society [late 19th Century to contemporary period], emphasizing the perseverance and transformations of traditional social and cultural patterns. GE credit: ArtHist, Div, Wrt. — II. Kim

Upper Division
113. Cinema and Society in China (4)
Lecture—3 hours, discussion—1 hour. Prerequisite: one course from History 190B, 193, or consent of instructor. Knowledge of Chinese not required. Viewing and analysis of one Chinese film with English subtitles each week, followed by discussion and short essays. Cinematic technique, social values and film topics from 1930s to today. Not open for credit to students who have completed Chinese 113. GE credit: ArtHist, Div, Wrt. — III. (III.)

190. East Asian Studies Seminar (4)
Seminar—3 hours; term paper. Prerequisite: upper division standing or consent of instructor. Political, social, cultural, and economic issues in East Asia. Topic varies each year. May be repeated for credit if topic differs. Offered irregularly.

192. East Asian Studies Internship (1-12)
Internship—3-36 hours; term paper. Prerequisite: upper division standing and consent of instructor. Work experience in the East Asian Studies field, with analytical term paper on a topic approved by the instructor. (P/NP grading only.)

194H. Special Study for Honors Students (1-5)
Independent study—1-5 hours. Prerequisite: open only to majors of senior standing who qualify for honors program. Guided research, under the direction of a faculty member, leading to a senior honors thesis on a topic in East Asian Studies culture, society, or language. (P/NP grading only.)

196A-196B. Honors Seminar (4-6)
Seminar—2 hours; conference—2 hours. Prerequisite: a GPA of 3.50 in the major, senior standing, and consent of instructor. A two-quarter research project culminating in an Honors thesis. A grade of B or higher must be earned to qualify the student for honors distinction at graduation. (Deferred grading only, pending completion of sequence.)

198. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only.)
Ecological Management and Restoration

(College of Agricultural and Environmental Sciences)

Faculty. See Plant Sciences, on page 476.

The Major Program

This major is designed for students who are interested in understanding how to manage and restore wildland and rangeland plant communities. Courses are selected to provide an interdisciplinary background that encompasses ecology, applied plant biology, and the social sciences. Students will acquire a core understanding of natural and managed ecosystems and how they function, interact with the natural environment, are connected with human society and social change, and are restored and managed.

The Program. The curriculum provides depth in the ecological and botanical sciences directed toward an integrated understanding of how communities and ecosystems function and how this knowledge assists in their management and restoration. Courses in environmental policy and law expose the students to the social drivers and constraints of ecosystem management. All students gain practical experience through practical field courses and a required internship. Students may also pursue an Honors thesis in their senior year.

Career Alternatives. Graduates from this program are prepared to pursue a wide range of careers, including positions in ecological restoration and ecosystem management; rangeland and reserve management; environmental consulting; public, private, or non-profit agencies concerned with restoration and natural resource management; Cooperative Extension; teaching; information and communication services. Graduates are qualified to pursue advanced studies in fields such as ecology, agroecology, environmental studies, geography or weed science.

Total Units for the Major. 111-141

Major Adviser. T. P. Young

Advising Center for the major, including peer advising, is located in 1220 Plant and Environmental Sciences 530-752-7175.

Ecology (A Graduate Group)

S.P. Lawler, Ph.D., Chairperson of the Group

Faculty

Gwen Arnold, Ph.D., Assistant Professor (Environmental Science and Policy)
Heidi L. Ballard, Ph.D., Associate Professor (School of Education)
Marissa L. Baskett, Ph.D., Associate Professor (Environmental Science and Policy)
Alison M. Berry, Ph.D., Professor (Plant Sciences)
Robert L. Bettinger, Ph.D., Professor (Anthropology)
Monique Borgerhoff Mulder, Ph.D., Professor (Anthropology)
Louis W. Botfsford, Ph.D., Professor (Wildlife, Fish, and Conservation Biology)
Walter M. Boyce, Ph.D., Professor (Pathology, Microbiology, and Immunology)
Patrick H. Brown, Ph.D., Professor (Plant Sciences)
Mary Cadensso, Ph.D., Associate Professor (Plant Sciences)
James Carey, Ph.D., Professor (Entomology)
Tim Caro, Ph.D., Professor (Wildlife, Fish, and Conservation Biology)
Edward P. Caswell-Chen, Ph.D., Professor (Nematology)
Ernest S. Chang, Ph.D., Professor (Bodega Marine Laboratory)
Tom Coooms-Hahn, Ph.D., Professor (Neurobiology, Physiology, and Behavior)
Anthony V. Cornell, Ph.D., Associate Professor (Entomology)
Howard V. Cornell, Ph.D., Professor Emeritus (Environmental Science and Policy)
Margaret Crofoot, Ph.D., Assistant Professor (Anthropology)
Randy A. Dahlgren, Ph.D., Professor (Land, Air and Water Resources)
Academic Senate Distinguished Teaching Award
Christyann M. Darwent, Ph.D., Associate Professor (Wildlife, Fish, and Conservation Biology)
John M. Eadie, Ph.D., Professor (Wildlife, Fish, and Conservation Biology)
Jonathan Eisen, Ph.D., Professor (Evolution and Ecology)
Deborah L. Elliott-Fisk, Ph.D., Associate Professor (Plant Sciences)
Yufang Jin, Ph.D., Assistant Professor (Plant Sciences)
Nadi A. Jasieniuk, Ph.D., Associate Professor (Animal Science)
Emilio A. Laca, Ph.D., Professor (Plant Sciences)
John Largier, Ph.D., Professor (Environmental Science and Policy)
Andrew M. Latimer, Ph.D., Assistant Professor (Plant Sciences)
Sharon P. Lawler, Ph.D., Professor (Entomology)
Edwin E. Lewis, Ph.D., Professor (Nematology)
C. -Y. Cynthia Lin, Ph.D. Associate Professor (Environmental Science and Policy, Bodega Marine Laboratory)
Andrew Marshall, Ph.D., Associate Professor (Anthropology)
Brenda McCowan, Ph.D., Professor (Wildlife, Fish, and Conservation Biology)
Michael R. Miller, Ph.D., Assistant Professor (Animal Science)
Frank M. Miltoenher, Ph.D., Associate Professor (Animal Science)
Steven G. Morgen, Ph.D., Professor (Environmental Science and Policy, Bodega Marine Laboratory)
Peter B. Moyle, Ph.D., Professor (Wildlife, Fish, and Conservation Biology)
Steven A. Nadler, Ph.D., Professor (Nematology)
Gabrielle Nevitt, Ph.D., Professor (Neurobiology, Physiology, Behavior)
Richard L. McElreath, Ph.D. Associate Professor (Civil and Environmental Engineering)
Gregory Pasternack, Ph.D., Professor (Wildlife, Fish, and Water Resources)
Gail L. Patricelli, Ph.D., Assistant Professor (Evolution and Ecology)
Katy Thaw Pau, U. Ph.D., Professor (Land, Air and Water Resources)

Nann A. Fangue, Ph.D., Assistant Professor (Wildlife, Fish Conservation Biology)
Hossein Farzini, Ph.D., Professor (Agricultural and Resource Economics)
Howard Ferris, Ph.D., Professor (Nematology)
Albert Fischer, Ph.D., Professor (Plant Sciences)
James E. Foley, Ph.D., Professor (VM: Epidemiology)
Brian Gaylord, Ph.D., Associate Professor (Evolution and Ecology)
Shu Geng, Ph.D., Professor (Plant Sciences)
Paul Gepts, Ph.D., Professor (Plant Sciences)
Matthew E. Gilbert, Ph.D., Assistant Professor (Plant Sciences)
Steven E. Greco, Ph.D., Associate Professor (Environmental Sciences and Policy)
Richard Grosberg, Ph.D., Professor (Evolution and Ecology)
Susan L. Handy, Ph.D., Professor (Environmental Science and Policy)
Alan Hastings, Ph.D., Professor (Environmental Science and Policy)
Robert Hijmans, Ph.D., Associate Professor (Environmental Science and Policy)
Tessa Hill, Ph.D., Associate Professor (Geology)
Marcel Holyoak, Ph.D., Professor (Environmental Science and Policy)
William Horwath, Ph.D., Professor (Land, Air and Water Resources)
Benjamin Z. Houlton, Ph.D., Assistant Professor (Land, Air and Water Resources)
Silas S. O. Hung, Ph.D., Professor (Animal Science)
Louise E. Jackson, Ph.D., Professor (Land, Air and Water Resources)
Marie A. Jasieniuk, Ph.D., Associate Professor (Animal Science)

Quarter Offered: Fall, Winter, Spring, Summer; Fall, 2011 and on Revised General Education (GE): AH—Arts and Humanities; SC—Science and Engineering; SS—Social Sciences; ACHN—American Cultures, DD—Domestic Diversity; Wrt—Writing Experience

Fall 2011 and on Revised General Education (GE): AH—Arts and Humanities; SC—Science and Engineering; SS—Social Sciences; ACHN—American Cultures, DD—Domestic Diversity; Wrt—Writing Experience
Courses in Ecology (ECL)

Graduate

200A. Principles and Applications of Ecology (5)
Lecture—4 hours; discussion—1 hour. Prerequisite: first course in Ecology [e.g., Environmental Science and Policy 100]. Statistical I02, Mathematics DA, 168 or consent of instructor; pass 1 open to graduate majors. Provides a broad background in the principles and applications of ecology, and serves as a foundation for advanced topics. Emphasis on biological diversity and ecosystem functioning, as well as the principles and applications of plant ecology, population genetics and evolution. Emphasis on population genetics and evolution. Emphasis on historical developments, current understanding, and real world applications. —I. (I.) Holway, Rice

Lecture—4 hours; discussion—1 hour. Prerequisite: course 200A; pass 1 open to graduate majors. Principles and applications of population genetics and evolution, focusing on concepts relevant to population biology. Emphasis on the evolution of ecological, evolutionary, and population genetics, population genetics and evolution, as well as the principles and applications of plant ecology, population genetics and evolution. Emphasis on historical developments, current understanding, and real world applications. —I. (I.) Holway, Rice

201. Ecosystems and Landscape Ecology (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 200A and 2008. Integration of concepts to understand and manage ecosystems in a complex and changing world. Emphasis on interactions among biotic, abiotic and human factors and changes over space/time. Local to global controls over water, carbon and nutrients across ecosystems, landscapes. GE credit: ScEng | SE—II. (II.) Cade

203. Physiological Ecology (3)
Lecture—3 hours. Prerequisite: Evolution and Ecology 101 or Environmental Studies 100; Neurobiology, Physiology, and Behavior 110 or Plant Biology 111 or Environmental Studies 129; elementary calculus. A comparative examination of several animal groups addressing fundamental physiological mechanisms that shape the ecology of each animal group. Offered in alternate years. —I. Wainwright

204. Population and Community Ecology (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Environmental Studies 100 or Evolution and Ecology 101, Mathematics 21A-21B or consent of instructor; Mathematics 228b recommended. Review of major concepts of population and community ecology, with emphasis on the rationale of theory and use of theory as applied in the ecology of natural and managed systems. Offered in alternate years. —I. Lomolino

205. Community Ecology (4)
Lecture—2 hours; discussion—2 hours. Prerequisite: Environmental Studies 100, Evolution and Ecology 101, or Plant Biology 117. Introduction to literature and contemporary research into processes structuring ecological communities. —B. Karban, Lawler

Lecture—3 hours, laboratory—4 hours. Prerequisite: introductory courses in statistics and plant ecology; consent of instructor. Principles and techniques of vegetation analysis, including structure, composition, and dynamics. Emphasis given to sampling procedures, association analysis, ordination, processes, and mechanisms of succession, and classification. Most techniques are demonstrated or conducted during field trips and laboratories. Offered in alternate years. —I. (I.) Loomis

207. Plant Population Biology (3)
Lecture—2 hours, laboratory/discussion—1 hour. Prerequisite: advanced undergraduate ecology course (e.g., Environmental Science and Policy 100, Evolution and Ecology 101, or Plant Biology 117), and advanced undergraduate course in genetics and/or evolution (e.g., Biological Sciences 101 or Evolution and Ecology 100). Introduction to theoretical and empirical research in plant
211. Advanced Topics in Cultural Ecology (4)  
Lecture/discussion—3 hours; term paper. Prerequisite: Environmental Science and Policy 133/Anthropology 135 or consent of instructor. Focus on themes and analytical tools in anthropology. Topics include issues of sustainability, conservation, and cultural diversity. Offered in alternate years. (I) Lubell, McElreath

212A. Environmental Policy Process (4)  
Lecture—3 hours; discussion—1 hour. Prerequisite: Introduction to political policy (e.g., Environmental Studies 160) or environmental law (e.g., Environmental Studies 161); course in bureaucratic theory (e.g., Political Science 187 or Environmental Studies 166); course in statistics (e.g., Sociology 106 or Agricultural and Resource Economics 106). Introduction to selected topics in the policy process, applications to the field of environmental policy. Develops critical reading skills, understanding of frameworks of the policy process and political behavior, and an ability to apply multiple frameworks to the same phenomenon. Offered in alternate years. (Same course as Environmental Science and Policy 212A.) (I) Arnold, Lubell

212B. Environmental Policy Evaluation (4)  
Lecture—1 hour; discussion—1 hour; seminar—2 hours. Prerequisite: introductory microeconomics (e.g., Economic 108); Statistics 108 or Agricultural and Resource Economics 106; policy analysis (e.g., Environmental Studies 168A or the equivalent); Agricultural and Resource Economics 176. Methods and practices of policy analysis; philosophical and intellectual bases of policy analysis and the political role of policy analysis. (Same course as Environmental Science and Policy 212B.) Offered in alternate years. (I) Springborn

213. Population, Environment, and Social Structure (4)  
Seminar—3 hours; term paper. Prerequisite: at least one course in population or human ecology, or in environmental science. Relationships among population dynamics, resource scarcity and environmental problems, and social structure; focus on demographic content of global ecological models and simulations, ecological content of modern demographic theories, and debates about scarcity, inequality, and social conflict and change. Offered in alternate years. (I/II)

214. Marine Ecology: Concepts and Practice (3)  
Lecture—1 hour; discussion—1.5 hours; fieldwork—1.5 hours. Prerequisite: graduate standing or one course in ecology, one course in evolution or genetics, or permission of instructor; survey course in marine ecology recommended. Critical review and analysis of concepts and practices in modern marine ecology at the interface of several fields of study including behavioral, evolutionary, and physiological. Emphasis on critical thinking, problem solving, and hands-on study. Three field trips required. (III) Morgan

216. Ecology and Agriculture (4)  
Lecture—1 hour; discussion—2 hours. Prerequisite: Evolution and Ecology 11 or consent of instructor. Ecological principles as relevant to agriculture. Integration of ecological approaches into agricultural research to increase ecosystem functions and services. Topics include crop autoecology, biotic interactions among crops and pests, ecosystem and landscape ecology. Not open for credit to students who have completed Vegetable Crops 216. Offered in alternate years. (I) Jackson

217. Conservation and Sustainable Development in Third World Nations (4)  
Lecture/discussion—2 hours. Prerequisite: at least one course from two of these three groups: (a) Environmental Studies 160, 161, 168A, 168B; (b) Environmental Studies 101, 133, International Agricultural Development 103, Geography 142; (c) Anthropology 126, 131, Geography 141, Sociology 144, 145A, 145B. Examination of the patterns of resource ownership, control and management in agricultural and pasture lands, and wildlands, with emphases on conservation and sustainability. Comparison of industrial democracies and poorer nations. (Same course as International Development 217.) Offered in alternate years. (III)

219. Ecosystem Biogeochemistry (4)  
Lecture—3 hours; laboratory/discussion—2 hours. Prerequisite: introductory courses in ecology/biology and soils are recommended; undergraduates accepted with consent of instructor. Multi-disciplinary analysis of energy and nutrient transfers within terrestrial ecosystems. Examination of processes and inter- and intra-system interactions between the atmosphere, biosphere, lithosphere, and hydrosphere. Laboratory section uses biogeochemical simulation models to examine case studies. (Same course as Soil Science 219.) Offered in alternate years. (I) Houlton

220. Spatio-Temporal Ecology (2)  
Lecture/discussion—2 hours. Prerequisite: Population Biology 200B or course 204 and Evolution and Ecology 104. An introduction to Evolution and Policy 212 or consent of instructor. Spatio-temporal ecological theory focusing on population persistence and stability, predator-prey and host-parasitoid interactions, species coexistence and competition, and maintaining ecosystems. Emphasis on policy-relevant topics, non-linear dynamics, and conservation. Topics vary. (Same course as Population Biology 220B.) May be repeated one time for credit. (S/U grading only.) (III)

225. Terrestrial Field Ecology (4)  
Seminar—1 hour; fieldwork—12 hours. Prerequisite: introductory ecology and introductory statistics or consent of instructor. A field course conducted over spring break and four weekends at Bodega Bay, emphasizing student projects. Ecological hypothesis testing, data gathering, analysis, writing, and oral presentation will be stressed. (Same course as Entomology 225/Population Biology 225.) (III) Karban

231. Mathematical Methods in Population Biology (3)  
Lecture—3 hours. Prerequisite: Mathematics 16C or 21C or the equivalent. Mathematical methods used in population biology. Linear and nonlinear difference equation and differential equation models are studied, using stability analysis and qualitative methods. Partial differential equation models are introduced. Applications to population biology models are stressed. (Same course as Population Biology 231.) (I) Hastings

232. Theoretical Ecology (3)  
Lecture—3 hours. Prerequisite: course 204 or the equivalent and Mathematics 16C or 21C, or one of courses 100 or 121 or Evolution and Ecology 101, and a strong mathematics background (Mathematics 22A-22B-22C or the equivalent). Examination of major conceptual and methodological issues in theoretical ecology. Models formulation and development will be emphasized. Topics will vary from year to year. May be repeated for credit. Offered in alternate years. (II) Hastings

233. Computational Methods in Population Biology (3)  
Lecture/laboratory—2 hours; discussion/laboratory—1 hour. Prerequisite: A course in theoretical ecology (e.g., course 231 or an equivalent to Environmental Science and Policy 121 from your under-graduate institution) or consent of instructor; no programming experience required. Numerical methods for simulating population dynamics using the computational software package R. Emphasis placed on model formulation and development, the theoretical concepts and philosophical principles to guide simulation efforts, model parameterization, and implementing simulations with R. (Same course as Population Biology 233.) Offered in alternate years. (S/U grading only.) (II) Sackett, Schreiber

Lecture—2 hours; discussion—0.5 hours; laboratory—0.5 hours. Prerequisite: undergraduate genetics and ecology/conservation biology courses recommended. Introduction to the field of applied ecological genetics to include applications in conservation ecology, population genetics, population biology, wildlife health and conservation biology. Limited enrollment. (Same course as Population Biology 242.) (II) Ernst

271. Research Conference in Ecology (1)  
Seminar—1 hour. Prerequisite: consent of instructor. Critical presentation and evaluation of current literature and ongoing research in ecology. Requirements include active participation in weekly discussions and the presentation of a paper or chapter once per quarter. May be repeated for credit. (Same course as Population Biology 271.) (S/U grading only.) (I, II, III) Schreiber

280. Current Anthropology Journal Editorial Workshop (4)  
Workshop—1 hour; independent study—2 hours. Students must enroll in all three quarters. Reading and offering workshop critiques of manuscripts submitted for publication, and reading and discussion of other relevant work in anthropology and human ecology. Track and edit publisher’s decisions and authors’ replies that accompany major features. Participation in the development of new sections for the electronic edition of the journal including a “news and views” section and a debate section. (Same course as Anthropology 280.) May be repeated for credit. May be repeated for 12 units of credit with consent of instructor. (S/U grading only.) (I, II, III)

290. Seminar in Ecology (1-4)  
Seminar—1-4 hours. Prerequisite: consent of instructor. Topics in ecology. Students are expected to present an oral seminar on a particular aspect of the general topic under consideration. (S/U grading only.) (I, II, III, II, III)

296. Topics in Ecology and Evolution (1)  
Seminar—1 hour. Prerequisite: graduate standing. Seminars presented by visiting lecturers, UC Davis faculty, and graduate students. May be repeated for credit. (Same course as Population Biology 296.) (S/U grading only.) (I, II, III, II, III)

297T. Tutoring in Ecology (1-4)  
Seminar—1-4 hours. Prerequisite: consent of instructor. Topics in ecology. Students are expected to present an oral seminar on a particular aspect of the general topic under consideration. (S/U grading only.) (I, II, III, II, III)

297T. Tutoring in Ecology (1)  
Lecture—1 hour; discussion—1 hour. Prerequisite: graduate standing in ecology; consent of instructor. Teaching ecology includes working with discussion groups for regular departmental courses under direct guidance of staff. May be repeated for credit. (S/U grading only.)
Economics

[College of Letters and Science]

Ann Stevens, Ph.D., Chairperson of the Department
Deborah Swenson, Ph.D., Vice Chairperson of the Department

Department Office: 2216 Social Sciences and Humanities Building
530-752-9241; http://www.econ.ucdavis.edu

Faculty

Paul Bergin, Ph.D., Professor
Giacomo Bonanno, Ph.D., Professor
James Bushnell, Ph.D., Associate Professor
Cullen Cameron, Ph.D., Professor
Scott E. Carrell, Ph.D., Associate Professor
Gregory Clark, Ph.D., Professor
Robert C. Feenstra, Ph.D., Professor
Athanasios Gefichos, Ph.D., Assistant Professor
Espen Henriksen, Ph.D., Assistant Professor
Oscar Jorda, Ph.D., Professor
Christopher M. Meissner, Ph.D. Professor
Douglas Miller, Ph.D., Associate Professor
Marianne E. Page, Ph.D., Professor
Giovanni Peri, Ph.D., Professor
Klaus Nehring, Ph.D., Professor Emeritus
T. Y. Shen, Professor Emeritus

Andrzej Brzeski, Ph.D., Professor Emeritus
W. Eric Gustafson, Ph.D., Senior Lecturer Emeritus
Academic Senate Distinguished Teaching Award
L. Jay Halus, Ph.D., Professor Emeritus
Kevin D. Salyer, Ph.D., Professor Emeritus
Burkhard C. Schipper, Ph.D., Associate Professor Emeritus
Kathryn N. Russ, Ph.D., Associate Professor Emeritus
Kevin D. Salyer, Ph.D., Professor Emeritus
Joaquim Silvestre, Ph.D., Professor Emeritus
Ann Huff Stevens, Ph.D., Professor Emeritus
Deborah Swenson, Ph.D., Professor Emeritus
Alan M. Taylor, Ph.D., Professor Emeritus
Wing T. Woo, Ph.D., Professor Emeritus

Minor Program Requirements: UNITS

Economics 1A and 1B; Statistics 13, 32, or 102; Mathematics 16A-16B or 21A-21B; Mathematics 100 and 101 be taken as soon as possible after the introductory courses.

Major Advisers. Contact Department office.

Economics

nomic development, public finance, econometrics, or mathematical economics.

Internships and Career Alternatives. Internships for economics majors may have been arranged at banks, brokerage firms, government enterprises, and governmental units. The internships must complement the student’s course work. A degree in economics is excellent preparation for students who wish to go on to law school, business school, advanced work in economics, or graduate work in international relations. It is also a good background for careers in management and positions with the government.

A.B. Major Requirements: UNITS

Preparatory Subject Matter ............... 17-20

Economics 1A-1B .............................. 8
Statistics 13, 32, or 102 ...................... 3-4
Mathematics 16A-16B or 21A-21B ........... 6-8

Depth Subject Matter ....................... 44

Economics 100, 101 .......................... 8
Economics 102 ................................. 4
One course from: Economics 110A, 110B, 111A, 111B .................................. 4
Select 16 units from Economics 103, 106, 116, 121A, 121B, 122, 125, 130, 131, 132, 134, or 137 .............................. 20
Additional upper division Economics courses .................................................. 12

Total Units for the Major ................... 61-64

Recommended. Students considering graduate study in economics are strongly urged to take Mathematics 21A-21B and 22A.

The Economics Department suggests that Economics 100 and 101 be taken as soon as possible after the introductory courses.

Graduate Advisers. Contact Department office.

Minor Program Requirements: UNITS

Economics 100, 101 ........................... 8
Select 4 units from upper division Economics courses ...................................... 4

Preparation. Economics 1A and 1B; Statistics 13, 32, or 102; Mathematics 16A and 16B or 21A and 21B; Mathematics 16A and 16B or 21A and 21B should be completed before taking Economics 100 and 101. Students need to complete Economics 100 and 101 before taking the advanced courses.

Course Limits. Except under extraordinary circumstances, no more than two economics courses should be taken in any quarter. In special cases, the department will accept a limited number of related upper division courses from other departments in satisfaction of the economics upper division course requirements. Approval from a departmental adviser is required in all such cases.

Graduation with High or Highest Honors. To be eligible for departmental recommendation for High or Highest Honors in Economics at graduation, a student must take all upper division courses in Economics for a letter grade, earn at least a 3.500 grade point average in those courses, and complete at least eight units of course work that result in the submission of an honors project. Consult the Catalogue of Letters and Science section of this catalog and contact the Department for more information.

Study Abroad. The economics department wishes to accommodate students who would like to complement their economics degrees with a study abroad experience. Up to 20 units of upper division credit from foreign campuses (excluding Economics 100 and 101) may be used towards the completion of the degree. To ensure that foreign courses will apply towards the economics degree, students need to select courses from the pre-approved list at the UC Davis Study Abroad office or seek pre-approval in the economics department for the foreign courses they wish to complete.

Graduate Advisers. Contact Department office.

American History and Institutions. This University requirement can be satisfied by completion of Economics 111A, 111B; see also under University requirements.

Courses in Economics (ECN)

Lower Division

1A. Principles of Microeconomics (4) Lecture—3 hours; discussion—1 hour. Course 1A and 1B may be taken in either order. Analysis of the allocation of resources and distribution of income. The pricing mechanism and how it is affected by public policy.

1B. Principles of Macroeconomics (4) Lecture—3 hours; discussion—1 hour. Course 1A and 1B may be taken in either order. Analysis of the economy as a whole; determinants of the level of income, employment and prices; money and banking, economic fluctuations, international trade, economic development; the role of public policy.

90X. Lower Division Seminar (1-2) Seminar—1-2 hours. Prerequisite: lower division standing and consent of instructor. Examination of a special topic in Economics through shared readings, discussions, and written assignments. May not be repeated for credit. Limited enrollment.

92. Internship and Field Work (1-12) Internship—3-36 hours; term paper. Prerequisite: junior or senior standing; availability of internship placement; or approved field work project; stockbrokerage interns must have completed Management 11A-11B; consent of instructor. Intensive study of practical application of concepts in economics, stressing research methods and empirical analysis. (P/NP grading only.)

98. Group Study for Undergraduates (1-5) Prerequisite: consent of instructor. Primarily for lower division students. (P/NP grading only.)

99. Individual Study for Undergraduates (1-5) Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division

100. Intermediate Micro Theory (4) Lecture—3 hours; discussion—1 hour. Prerequisite: course 1A, 1B; Mathematics 16A-16B or 21A-21B with grade of C- or better in each. Price and distribution theory under conditions of perfect and imperfect competition. General equilibrium and welfare eco-
Economics

101. Intermediate Macro Theory (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1A, 1B; Mathematics 16A-16B or 21A-21B with grade of C or better in each, or consent of instructor. Analysis of economic data to investigate key relationships emphasized in introductory microeconomics and macroeconomics. Obtaining, transforming, and displaying data; statistical analysis of economic data; and basic univariate and multivariate regression analysis. Only 2 units of credit allowed to students who have completed course 1A or Agricultural and Resource Economics 106. GE credit: VL—I, II, III. (I, II, III.)

102. Analysis of Economic Data (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1A, 1B, Statistics 13 or 32, Mathematics 16A-16B or 21A-21B, with grade of C or better in each, or consent of instructor. Analysis of economic data to investigate key relationships emphasized in introductory microeconomics and macroeconomics. Obtaining, transforming, and displaying data; statistical analysis of economic data; and basic univariate and multivariate regression analysis. Only 2 units of credit allowed to students who have completed course 1A or Agricultural and Resource Economics 106. GE credit: VL—I, II, III. (I, II, III.)

103. Economics of Uncertainty and Information (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 100; Mathematics 16A-16B or 21A-21B, Statistics 13 or 32, with grade of C or better in each course, or consent of the instructor. Descriptive and normative analysis of individual decision making, with applications to personal, professional, financial, and public policy decisions. Emphasis on decision making under uncertainty and over time. Heuristics and biases in the psychology of decisions; overcoming decision traps.—I. (I.)

106. Decision Making (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1A, 1B and 110A. Development and application of analytical tools to explain the nature and functioning of economies before the Industrial Revolution. Examples will be drawn from a variety of societies, including England, China, Polynesia, and Pre-Columbian America. GE credit: SS—I, II, III. (I, II, III.)

110B. World Economic History Since the Industrial Revolution (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1A, 1B and 110A. Development and application of analytical tools to explain the nature and functioning of economies after the Industrial Revolution. Examples will be drawn from a variety of societies, including England, China, Germany, and India. GE credit: SS—I, II, III. (I, II, III.)

111A. Economic History (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A-1B or consent of instructor. Survey of economic change in the United States from Colonial times to the present, with reference to other regions of the Western Hemisphere. GE credit: SS—I, II, III. (I, II, III.)

111B. Economic History (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A-1B, or consent of instructor. Survey of economic change in the United States from 1865 to the post World War II period. GE credit: SS—I, II, III. (I, II, III.)

115A. Economic Development (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1A and 1B. Major issues encountered in economic development of the United States from 1865 to the present, including growth and structural change, human welfare, population growth and health, labor markets and internal migration. Important issues of policy concerning international trade and industrialization. (Same course as Agricultural and Resource Economies 115A.) GE credit: SocSci, Div I SS, WC—I, II, III. (I, II, III.)

115B. Economic Development (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1A and 1B. Major macroeconomic issues of developing countries. Issues include problems in generating a market; the product of monetary and fiscal policies, foreign aid and investment. Important issues of policy concerning international borrowing and external debt of developing countries. (Same course as Agricultural and Resource Economies 115B.) GE credit: SocSci I SS, WC—I, II, III. (I, II, III.)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100, Mathematics 16B and 21B. Economics analysis of the relative virtues of capitalism and socialism, including welfare economics. Marxist exploitation theory, the socialist calculation debate (Hayek and Lange), alternative capitalist systems (Japan, Germany, China), and contemporary models of market socialism. GE credit: WC.

121A. Industrial Organization (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A/B; 100, or consent of instructor. An appraisal of the role of competition and monopoly in the American economy; market structure, conduct, and economic performance of a variety of industries. GE credit: SocSci—I, II, III. (I, II, III.)

121B. Industrial Organization (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1A, 1B, 100, or consent of instructor. The study of antitrust and economic regulation. Emphasis on applying theoretical models to U.S. industries and cases studied in the class. Introduction to game theory. Explanation of the behavior of rational individuals with interacting and often conflicting interests. Non-cooperative and cooperative theory. Applications to economics, political science and other fields.—I, II, III. (I, II, III.)

122. Theory of Games and Strategic Behavior (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 100, Mathematics 16A and 16B or 21A and 21B or consent of instructor. Introduction to game theory. Examination of the behavior of rational individuals interacting and often conflicting interests. Non-cooperative and cooperative theory. Applications to economics, political science and other fields.—I, II, III. (I, II, III.)

125. Efficiency in Energy Markets (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1A and 1B, Mathematics 16A and 16B and course 102 or consent of instructor. Introduction to game theory. Explanation of the behavior of rational individuals with interacting and often conflicting interests. Non-cooperative and cooperative theory. Applications to energy efficiency and production, and environmental and energy policy, market structure and power, global climate change, optimal regulation, and real-world applications, e.g., California electricity crisis.—II. (II.)

130. Public Microeconomics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 100, Economics 16A and 16B or 21A and 21B or consent of instructor. Public economics: the basic theory of welfare economics. Application of the theory to public policy issues: cost analysis. Topics include consumer protection, pollution, education, poverty and crime.—I, II, III. (I, II, III.)

131. Public Finance (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 100, Mathematics 16A and 16B or 21A and 21B or consent of instructor. The analysis of government regulation and deregulation in the airplane and trucking industries. GE credit allowed to students who have completed Agricultural and Resource Economics 171A or 171B may not receive credit for this course.—I, II, III. (I, II, III.)

132. Health Economics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 100 or consent of instructor. The health care market, emphasizing the role and use of economics. Individual demand, provision of services by doctors and hospitals, health insurance, managed care and competition, the role of government access to health care.—II. (II.)

134. Financial Economics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A, 1B, and 100; Mathematics 16A; Statistics 13. General background and rationale of corporate finance as resource allocation over time; decision making under uncertainty and the role of information; capital market and interest rate structure; financial decisions. Students who have completed Agricultural and Resource Economics 171A may not receive credit for this course.—I. (I, II, III)

135. Money, Banks and Financial Institutions (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 100, 101, Statistics 13. Banks and the banking system. Uncertainty and asymmetric information in the lending process; efficiency of competitive equilibrium in lending markets. Regulation and the conduct of monetary policy.—II. (II.)

136. Topics in Macroeconomic Theory (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 101. Advanced Topics in macroeconomic theory. The course develops the theoretical and empirical analysis of a specific field of macroeconomics. Possible topics include, business cycle theories, growth theory, monetary economics, political economics and theories of unemployment and inflation.—II. (II.)

137. Macroeconomic Policy (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 100, 101, Statistics 13. Theory and practice of macroeconomic policy, both monetary and fiscal.—I. (I.)

140. Econometrics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 102, course 100 and course 101; Mathematics 16A and 16B or Mathematics 21A and 21B, Statistics 13, or any upper division Statistics course. Problems of observation, estimation and hypothesis testing in economics through the study of the theory and application of linear regression models. Critical evaluation of selected examples of empirical research. Exercises in applied economics. Not open for credit to students who have enrolled in or completed Agricultural and Resource Economics 106.—II. (II.)

145. Transportation Economics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 100, Mathematics 16A, 16B, Statistics 13 or consent of instructor. Intended for advanced economics undergraduates. Pass one open to Economics and Graduate School of Management majors. Application of theoretical and empirical microeconomic models to the economics of transportation, the behavior of travelers, and the impact of transportation on economic activity and welfare. GE credit: WC.

151A. Economics of the Labor Market (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 100, Mathematics 16A, 16B, Statistics 13 or consent of instructor. Intended for advanced economics undergraduates. Examination of fundamental problems of planning and financing transportation “infrastructure” (roads, ports, airports). The economics of the automobile industry, as well as the impact of government regulation and deregulation in the airlines and trucking industries.

151B. Economics of Human Resources (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 151A. Human resource analysis; introduction to human capital theory and economics of education; the basic theory of vocational choice including theories of labor market discrimination; income distribution; poverty. Policy issues; negative income tax; manpower training programs; incomes policy.—II. (II.)

Quarter Offered: I-Fall; II-Winter; III-Spring; IV-Summer; 2015-2016 offering in parentheses.
152. Economics of Education (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 100; course 102; Mathematics 168 or 218; Statistics 131 or 132, with grade of C or better in each course, or consent of the instructor. Application of theoretical and empirical tools of economics to the education sector. Demand for Education; Education Production and Market Structures in Education. Policy applications: class size reduction, school finance equalization, accountability, and school choice.

160A. International Microeconomics (4)
Lecture—5 hours; discussion—1 hour. Prerequisite: course 1A or consent of instructor. International trade theory: impact of trade on the domestic and world economies; public policy toward external trade. Only two units of credit allowed to students who have completed course 162. I, II, III.

160B. International Macroeconomics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A, 1B, 100, 101, or consent of instructor. Macroeconomic theory of an open economy: Balance of payments, open macroeconomic mechanism, international monetary economics issues; international financial institutions and their policies. Only two units of credit allowed to students who have completed course 162. I, II, III.

162. International Economic Relations (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A or consent of instructor. International trade and monetary relations, trade policy, exchange rates, and investments between international capital migration and investment. Emphasis on current policy issues. Course intended especially for non-majors. Not open for credit to students who have completed course 160. GE credit: SocSci | SS, WC. I, II, III.

171. Economy of East Asia (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A or consent of instructor. Industrial dynamics and trade issues in selected countries of the East Asia. Consult department for course scheduling. I, II, III.

190. Topics in Economics (4)
Lecture/discussion—3 hours; discussion—1 hour. Prerequisite: consent of instructor. Selected topics in economic analysis and public policy. Variable content. May be repeated for credit.

190X. Upper Division Seminar (1-6)
Seminar—1-6 hours. Prerequisite: courses 100 and 101, and consent of the instructor. In-depth examination at an upper division level of a special topic in Economics. Emphasis on focused analytical work.

192. Internship
Internship—3-18 hours. Prerequisite: upper division standing; consent of instructor. Internship experience off and on campus in all subject areas offered in the Department of Economics. Supervised by a member of the staff. May be repeated for credit. (P/NP grading only.) GE credit: SE.

194HA-194HB. Special Study for Honors Students (4-4)
Independent study—3 hours; seminar—1 hour. Prerequisite: major in Economics with senior standing; consent of instructor and completion of 135 units with a minimum GPA of 3.500 in courses counted toward the major. A program of research culminating in the writing of a senior honors thesis under the direction of a faculty adviser. (Deferred grading only, pending completion of course.)

197T. Tutoring in Economics (1-5)
Tutorial—3-15 hours. Prerequisite: consent of instructor and chairpersons; assistance to the instructor by tutoring students in one of the department's regularly scheduled courses. May be repeated for up to 10 units of credit. (P/NP grading only.)

198. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)
Prerequisite: consent of instructor. (P/NP grading only.)

Graduate

200A. Microeconomic Theory (5)
Lecture—4 hours; discussion—1 hour. Prerequisite: graduate standing. Linear and nonlinear optimization theory applied to develop the theory of profit-maximizing firm and the utility-maximizing consumer. [Same course as Agricultural and Resource Economics 200A—II. (II) Silvestre]

200B. Microeconomic Theory (5)
Lecture—4 hours; discussion—1 hour. Prerequisite: course 200A. Characteristics of market equilibrium under perfect competition, simple monopoly and monopsony. Emphasis on general equilibrium and welfare economics; the sources of market success and market failure. (Same course as Agricultural and Resource Economics 200B—II. (II) Silvestre)

200C. Microeconomic Theory (5)
Lecture—4 hours; discussion—1 hour. Prerequisite: course 200B. Uncertainty and information economics. Individual decision making under uncertainty. Introduction to game theory, with emphasis on applications to markets with firms that are imperfect competitors or consumers that are imperfectly informed. (Same course as Agricultural and Resource Economics 200C—II. (II) Silvestre)

200D. Macroeconomic Theory (5)
Lecture—4 hours; discussion—1 hour. Prerequisite: course 101, Mathematics 21A, 21B, and 21C. Macro static theory of income, employment, and prices. I, II, III.

200E. Macroeconomic Theory (5)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 200B may be taken concurrently and 200D. Macrodynmic theory of income, employ- ment, and prices. I, II, III. Geromonichales

201A. History of Economic Thought I (4)
Lecture—3 hours; discussion—1 hour. Economic thought from the classical Greek era to modern times. Offered in alternate years.

201B. History of Economic Thought II (4)
Lecture—3 hours; discussion—1 hour. Origins and emergence of modern economic analysis. Offered in alternate years.

203A. Advanced Economic Theory (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 200A, 200B, or 200C. Advanced topics in general equilibrium theory and welfare economics: existence, determinateness and efficiency; intertemporal economics: uncertainty. I, II. Quinzii

203B. Advanced Economic Theory: Game Theory (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 200A, 200B, and 200C. Covers the most recent developments in game theory, with the focus changing from year to year. Selected topics are: refinements of Nash equilibrium, repeated games, evolution, social situations, bounded rationality, and bargaining theory. I, II, III. Schipper

203C. Topics in Economic Theory (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 200A, 200B, 200C. Selected topics in contemporary microeconomic theory. May be repeated for credit with the consent of the Graduate Studies Committee.

210A. Economic History (4)
Lecture/discussion—4 hours. Economic history of the eastern hemisphere in the modern period. Medieval Europe or other regions may be studied, depending on student interest. I, II. Cichon

210B. Economic History (4)
Lecture/discussion—4 hours. The United States from Colonial times to the present. Other areas of the western hemisphere may be studied, according to student interest.

210C. Economic History (4)
Seminar—4 hours. Prerequisite: a graduate course in economic history. Selected topics and issues, emphasis on current research and topics, offered as needed. [Quarter offered to be flexible.—II. (II) Meissner]

214. Development Economics (4)
Lecture—4 hours. Prerequisite: Agricultural and Resource Economics 100A, 100B, course 101, Agricultural and Resource Economics 204A and course 160A-160B recommended. Review of the principal theoretical and empirical issues whose analysis has formed development economics. Analysis of economic development theories and methodology and their application to specific policy issues in developing country contexts. (Same course as Agricultural and Resource Economics 214A—I, II, III.)

215A. Microdevelopment Theory and Methods I (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 200A or 204; course 240A recommended. Agricultural development theory, with a focus on microeconomics. Agricultural household behavior with and without market imperfections and uncertainty. Analysis of rural land, labor, credit and insurance markets, institutions, and policies. (Same course as Agricultural and Resource Economics 215A—I.)

215B. Open Macroeconomics of Development (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Agricultural and Resource Economics/Economics 200A or 204, 200D or 205, and 214 or 215A. Models and policy approaches regarding trade, monetary and fiscal issues, capital flows and debts are discussed in the macroeconomic framework of an open developing country. The basic analytical focus is real exchange rate and its impact on optimal allocation of resources. (Same course as Agricultural and Resource Economics 215B—II.)

215C. Microdevelopment Theory and Methods II (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 215A. Extension of development theory and microeconomic methods. Agricultural growth and technological change; poverty and income inequality; sectoral, multilateral, including village and regional models. Computable general equilibrium models and applications. (Same course as Agricultural and Resource Economics 215C—I, II, III.)

215D. Environment and Economic Development (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 200A, 204 or Agricultural and Resource Economics 275. Interdisciplinary course drawing on theoretical and empirical research on interactions between environmental resource use and economic development processes. Analysis of issues emerging at the interface of environmental and development economics. (Same course as Agricultural and Resource Economics 215D—II.

221A. The Theory of Industrial Organization (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 200A, 200B, or 200C. Game theory is used to analyze strategic interaction, product differentiation, entry-deterring strategies, contractual arrangements, vertical control and antitrust issues.—I. (I) Rapson

221B. Empirical Analysis in Industrial Organization (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 221A and 240B. Recent empirical work in industrial organization. Topics include empirical analysis of cartels, product differentiation, innovation and technological change, and imperfect competition in international markets.—II. (III) Rapson

221C. Industrial Organization and Regulation (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 221A and 240B. Optimal regulation of natural monopoly. Topics include regulatory mechanisms
for single and multiple output firms under symmetric and asymmetric information, optimality without regulation: the economic theory of regulation, and empirical studies of regulation and deregulation.

230A. Public Economics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 200C. Measures of deadweight loss and consumer surplus; optimal commodity and income taxation; tax incidence; policy issues in personal tax, corporate tax, corporate social insurance; the evaluation of effective tax rates.—II. (II.) Hynes

230B. Public Economics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 203A. Theory of the firm: microeconomic perspectives; income and employment determination; distribution of income; the evaluation of the welfare effects of government policies.—III. (III.) O’Rourke

230C. Public Economics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 200C and 240B. Advanced topics in public economics of the public sector, with emphasis on current research. Topics may vary from year to year.—II. (II.) Carrell, Stieglitz

235A. Alternative Approaches to Monetary Analysis (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 230A or 234. Theory of money supply and changes in nominal income. Also discusses the effects of changes in money supply on interest rates.—II. (II.) Solly

235B. Monetary Theory (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 235A. Emphasizes problem of finding an appropriate price for money in microeconomics/general equilibrium analysis. Consideration given to the meaning of money, its role in inflation and the real economy and its role in models of finance.—III. (III.) Geromichalos

235C. Monetary Policy (4)
Lecture—3 hours; discussion—1 hour. Organization of the Federal Reserve System, the definition of money, goals and tools of monetary policy, alternative targets for monetary policy, impact of monetary policy, the problem of lags, and alternative policies.—II. (II.) Flavin

239. Econometric Foundations (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: one course in undergraduate-level econometrics. The course will prepare students for econometric theory and empirical work by examining the statistical foundation of econometrics. Special attention is paid to problems specific to non-experimental data common to social sciences. Topics from matrix algebra are also covered. (Same course as Agricultural & Resource Economics 239)—I. (I.) Green

240A. Econometric Methods (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Statistics 133 and a course in linear algebra or the equivalent. Least squares, instrumental variables, and maximum likelihood estimation and inference for single equation linear regression model; linear restrictions; heteroskedasticity; autocorrelation; lagged dependent variables. (Same course as Agricultural & Resource Economics 240A)—II. (II.) Cameron

240B. Econometric Methods (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 240A. Topics include asymptotic theory and instrumental variables, pooled time-series cross-section and panel data analysis, seemingly unrelated regression, classical hypothesis tests, identification and estimation of simultaneous equation models, cointegration, error correction models, and qualitative and limited dependent variable models. (Same course as Agricultural and Resource Economics 240B)—II. (II.) Cameron

240C. Time Series Econometrics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 240A. Applied econometric theory; estimation, inference and forecasting of time series models; trends and non-standard asymptotic theory; vector time series methods and cointegration; time series models for higher order moments and transition data; state space modeling and the Kalman filter. (Same course as Agricultural and Resource Economics 240C)—II. (II.) Cameron

240D. Cross Section Econometrics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 240B. Estimation and inference for nonlinear regression models for crosssection data; models for discrete data and for limited dependent variables; models for panel data; additional topics such as bootstrap and semiparametric regression. (Same course as Agricultural and Resource Economics 240D)—II. (II.) Cameron

240E. Topics in Time Series Econometrics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 240A, 240B and 240C. Modern econometric techniques for time series data. Expand on topics covered in Economics 240A, 240B, and 240C. Contents may vary from year to year. (Same course as Agricultural and Resource Economics 240E)—II. (II.) Cameron

240F. Topics in Cross Section Econometrics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 240A, 240B and 240D. Modern econometric techniques for cross-section data. Expand on topics covered in Economics 240A, 240B, and 240D. Contents may vary from year to year. (Same course as Agricultural and Resource Economics 240F)—II. (II.) Cameron

250A. Labor Economics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 150A and 150B or equivalent. Philosophy of theory and history of American and foreign labor movements; union structure, organization and collective bargaining under changing labor market conditions; current labor market analysis.—I. (I.) Page

250B. Labor Economics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 151A or consent of instructor; course 204 or 200A recommended. Microeconomic theory of labor supply and labor demand, estimation of labor supply and demand functions and human capital theory; labor market analysis.—II. (II.) Page

260A. International Economics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 200A or 200B. Theories of trade determinants; gains from trade; tariffs and effective protection; economic unions.—I. (I.) Feenstra

260B. International Economics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 200D and 200E. Balance of payments adjustment policies, international exchange markets’ theories of balance of payments policy and international monetary mechanisms.—II. (II.) Bergin

260CN. International Investment and Trade (4)
Seminar—4 hours. Prerequisite: course 260A. Analysis of foreign investment and its links to trade; theories of the firm as they relate to firm’s export and investment decisions; and an introduction to the political economy of international trade.—II. (II.) Swenson

260D. Topics in International Macroeconomics (4)
Seminar—4 hours. Prerequisite: course 260B or consent of instructor. Survey of current literature in international macroeconomics. (Same course as Agricultural and Resource Economics 260D)—II. (II.) Simonovska

260E. Topics in International Trade (4)
Seminar—4 hours. Prerequisite: course 260A, 260B. Current literature in international trade theory.—II. (II.) Russ

260F. International Macroeconomic Policy (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 260B. Theory and practice of international macroeconomic policy. Topics include exchange rate regimes, international financial institutions, crises and current topics.

270A. Economics of Growth (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 200D and 200E. Modern theories and empirical work by examining the neoclassical theories up to current endogenous growth models. Emphasis on the analysis of human capital and growth, technological innovation, its diffusion and empirical evidence of exogenous growth.

270B. Economics of Growth (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 200D and 200E. Empirical analysis of growth patterns and growth models. Emphasis on the relationship between macroeconomic management and long-term growth; the use of foreign capital in accelerating growth and its occasional misalignments; the comparison of growth performance in East Asia and Latin America since 1980; experiences of centrally-planned economies and transitions to market-based growth; and the transformation from an industrial economy to a knowledge economy.

270C. Economics of Growth (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 200D and 200E. Institutional bases; politics; contracts and commitment; money and finance; mal-thusian dynamics; modern economic growth; transitions and industrialization; dual economics, core and periphery; sources of convergence and divergence; openness and growth; resources, demography, and geography; institutions, imperialism, and class conflicts.

275A. Effective Instruction: Curriculum and Assessment-Theory, Research, and Practice (2)
Lecture/discussion—2 hours. Prerequisite: accept in Teacher Credential Program. Restricted to Teaching Credential majors. Examination of contemporary theories of curriculum development, research about the relationship among instructional planning, classroom assessment, and student learning to guide teaching practice.—I. (I, II)

275B. Effective Instruction: English Language Development and Instruction English Language Learners (2)
Lecture/discussion—2 hours. Prerequisite: acceptance in the Teaching Credential program; successful completion of course 275A. Restricted to Teaching Credential majors. Examination and application of English language acquisition and development research to teaching practice. Particular attention to research that enhances learning of English language learners and under-performing students.—I. (I, II)

280. Orientation to Economic Research (2)
Discussion—2 hours. Course tries to bridge the gap between students’ coursework and their subsequent research. It deals with topics such as the origination of a research project, some mechanics of empirical research and hints on the submission of research papers. (S/U grading only)

290. Topics in Economics (4)
Seminar—4 hours. Prerequisite: consent of instructor. Selected topics in economic analysis and public policy, focusing on current research. May be repeated for credit.

291. Contemporary Economics Seminar (2)
Seminar—2 hours. Prerequisite: graduate standing in Economics. Seminar series on topics of current interest. May be repeated for credit. (S/U grading only)—I, II, III

298. Group Study (1-5)
Discussion—1-5 hours. Prerequisite: graduate standing and consent of instructor. (S/U grading only)

299. Individual Study (1-12)
Prerequisite: consent of instructor and graduate standing. (S/U grading only)

299D. Dissertation Research (1-12)
(S/U grading only)

Professional

397. Teaching of Economics (2)
Lecture/discussion—2 hours. Prerequisite: graduate standing in economics. Teaching of economics: methods of instruction, organization of courses, examination and evaluation procedures. (S/U grading only)—I (I)

Quarter Offered: I-Fall, II-Winter, III-Spring, IV-Summer; 2015-2016 offering in parentheses:
Pre-Fall 2011 General Education (GE): ArtHum=Arts and Humanities; SciEng=Science and Engineering; SocSci=Social Sciences; ACHG=American Cultures; DD=Dominant Diversity; OL=Oral Skills; QL=Quantitative; SL=Scientific; Wrt=Writing Experience
Fall 2011 and on Revised General Education (GE): AH=Arts and Humanities; SE=Science and Engineering; SS=Social Sciences; ACHG=American Cultures; DD=Dominant Diversity; OL=Oral Skills; QL=Quantitative; SL=Scientific; Wrt=Writing Experience

Wrt=Writing Experience

Minor Program Requirements:
The UC Davis School of Education is committed to developing informed citizens and advocates for productive educational environments in a democratic society. Education courses are designed for undergraduate students from all majors. A minor in Education will help students:

- Develop an understanding of the issues and concerns of public and private education
- Complete prerequisites for the teaching credential program
- Work towards a master's degree or doctoral degree in education or related field
- Seek employment in policy, advocacy, or other education related careers

Courses, Students must complete 20 units

Minor Program in Education. At least 12 units of the 20-unit minimum for the minor must be in Education. The remaining units for the minor may be in education or a related field as approved on the electives list.

Minor Program Requirements:
Upper Division Required Courses ........................... 12
Education 100, 110, 120 ..................................... 12

Elective Courses ................................................ 8
The remaining eight units may be taken from the following courses:
Education 115, 181 .......................................... 2
Education 114, 119, 122, 130, 142, 147, 150, 152, 173, 185 .......... 4
Education 192, 198 ........................................... variable

Approved Courses Outside of Education
Agricultural Education 100 ................................... 3
Mathematics 197CT ...................................... 1-3
Mathematics 197CT ...................................... 1-3
University Writing Program 197CT ......................... 4
African American & African Studies 130;
American Studies 152, Asian American Studies 101;
Biological Sciences 195A or B*;
Chicano Studies 132, Economics 152;
Human Development 100A, 100B, 101;
Linguistics 173, 180, Psychology 130, 132, 141;
Sociology 124, Spanish 116, 117;
University Writing Program 1040 ........................ 4
* Internship (192, 195A or B, 195TC, 197TC) and Independent Study (199), or a combination of both, may not exceed a total of four units. Elective courses may include only one internship.

Minor Advisers. A designated faculty member in the School of Education may advise students and give final approval on the minor. For additional information contact the Student Services office in School of Education Building.

Courses in Education (EDU)
Lower Division
81. Learning in Science and Mathematics
(2)
Lecture/discussion—2 hours, field work—2 hours.
Exploration of how students learn and develop understanding in science and mathematics classrooms.

82. Introduction to the study of science
(1)
Lecture—1 hour, lab work—1 hour.
Introduction to research methods and data analysis.

92. Internship (1-3)
Internship—3-9 hours. Prerequisite: consent of instructor. Enrollment dependent on availability of intern placements. Internship as a teacher’s aide or tutor in K-12 classrooms under the supervision of a faculty member. May be repeated for credit. (P/NP grading only.)

98. Directed Group Study (1-5)
Prerequisite: consent of instructor. Primarily for lower division students. (P/NP grading only.)

Upper Division
100. Introduction to Schools
(4)
Lecture—3 hours; field work—3 hours. Prerequisite: upper division standing. Study of occupational concerns of teachers; skills for observing classroom activities; school organization and finance; school...
110. Educational Psychology: General (4)
Lecture/discussion—4 hours. Prerequisite: Psychology 1; upper division standing. Learning processes, cognitive development, individual differences, testing and evaluation. GE credit: SocSci, Wrt | SS, WE—II, III, IV. (I., III.) Ballkrohnk

115. Educating Children with Disabilities (2)
Lecture—2 hours. Prerequisite: upper division standing. Educational issues and processes involved in teaching children with disabilities. The course will focus on the special education needs of children who are mainstreamed in regular classes. GE credit: SocSci | SS—II, III. (I., III.) Mundy, Solari

119. The Use and Misuse of Standardized Tests (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 110 or consent of instructor. Principles underlying educational and psychological testing. Purpose of testing; individual achievement and evaluation of school programs. Interpretation and misinterpretations of outcomes. Analysis of SAT, GRE and other common tests. Experience in test administration and test interpretation. GE credit: SocSci, Wrt | QL, SS, WE—II, III. (III.) Abedi

120. Philosophical and Social Foundations of Education (4)

122. Children, Learning and Material Culture (4)
Lecture/discussion—3 hours; extensive writing or discussion—1 hour; fieldwork. Prerequisite: upper division standing or consent of instructor. How material artifacts shape what and how children learn in school, at play, and in the material environment of the home. GE credit: SocSci, Wrt | QL, SS, WE—II, III. (III.) Goodwin

130. Issues in Higher Education (4)
Discussion—3 hours; field work—3 hours. Prerequisite: upper division standing or consent of instructor. Analysis of current issues in higher education and of some practical implications of varying philosophical approaches to the role of the university. GE credit: SocSci | SS, WE—II, III. (III.) Gonzales

147. Anglos, Latinos and the Spanish Black Legend: The Origins and Educational Implications of Hispanic Prejudice (4)
Lecture/discussion—3 hours; field work; term paper. Prerequisite: upper division standing or consent of instructor. Examination of anti-Hispanic prejudice in the United States focusing on the “Black Legend,” a 16th Century anti-Hispanic myth underpinning the doctrine of “Manifest Destiny.” Exploration of the Legend’s presence in contemporary American society through interviews and analysis of school textbooks. (Same course as Spanish 147.) GE credit: AnthHum, Div, Wrt | ACGH, AH, DD, WE—II. (I.) Gonzalez

150. Cultural Diversity and Education in a Sociopolitical Context (4)
Lecture/discussion—3 hours; extensive writing. Introduction to cultural diversity and education in a sociopolitical context. Interactive course. Small and large group discussions explore, extend, and apply readings; range of in class and out of class experiences to assignments and course themes, lectures, slide shows, speakers, brief fieldwork, and presentations. GE credit: SocSci | SS, DD, WE—II, III, II. (II, III.) Athenies, Enright, Martinez

151. Language Development in the Chicano Child (3)
Lecture/discussion—3 hours. Prerequisite: some knowledge of Spanish and linguistics recommended. Bilingualism, second language acquisition, bilingual education, language assessment, Chicano Spanish and the role of dialect varieties in the classroom. Not open for credit to students who have completed course 151T. Offered irregularly.

157. Language Development in the Chicano Child (3)
Lecture/discussion—3 hours. Prerequisite: some knowledge of Spanish and linguistics recommended. Bilingualism, first and second language acquisition, bilingual education, language assessment, Chicano Spanish and the role of dialect varieties in the classroom. Not open for credit to students who have completed course 151T. Offered irregularly.

152. Academic Spanish for Bilingual Teachers (3)
Lecture/discussion—3 hours; field work. Prerequisite: Spanish 23-24 or Spanish 31-32-33. Communicative class taught in Spanish focused on the development of Spanish communication skills for current and/or future bilingual teachers. Main topics are related to school content areas in bilingual settings, with an emphasis on standard and Southwest Spanish dialects. Restricted to Spanish speaking students. GE credit: AnthHum or SocSci | AH or SS, QL, WE—II. (II.)

153. Diversity in the K-12 Classroom (2)
Lecture/discussion—2 hours. Prerequisite: acceptance in Teaching Credential Program. Restricted to Teaching Credential Majors. Analysis of research on learning styles among culturally diverse students with review and evaluation of curricula and classroom teaching techniques. The ethnographic interview as a research tool. (Deferred grading only, pending completion of course 180A. Restricted to Teaching Credential Majors. Applications of computers in education as instructional, intellectual, and communication tools. (Deferred grading only, pending completion of sequence)—II, III, II. (II, III.) Martindale, Mendle, Pomeroy, White

180A. Computers in Education (3)
Lecture/discussion—1 hour; laboratory—2 hours; project—2 hours. Prerequisite: acceptance in Teacher Credential Program. Restricted to Teaching Credential Majors. Applications of computers in education as instructional, intellectual, and communication tools. (Deferred grading only, pending completion of course 180A. Restricted to Teaching Credential Majors. Applications of computers in education as instructional, intellectual, and communication tools. (Deferred grading only, pending completion of sequence)—I, II, III, II. (II, III.) Martindale, Mendle, Pomeroy, White

180B. Computers in Education (3)
Lecture/discussion—1 hour; laboratory—2 hours; project—2 hours. Prerequisite: acceptance in Teacher Credential Program; successful completion of course 180B. Restricted to Teaching Credential Majors. Applications of computers in education as instructional, intellectual, and communication tools. (Deferred grading only, pending completion of sequence)—I, II, III, II. (II, III.) Martindale, Mendle, Pomeroy, White

181. Teaching in Science and Mathematics (2)
Lecture/discussion—2 hours, field work—2 hours. Prerequisite: major in mathematics, science, or engineering; or completion of a one-year sequence of science or calculus and consent of the instructor. Class size limited to 40 students per section. Exploration of effective teaching practices based on examination of how middle school students learn math and science. Selected readings, discussion and field experience in middle school classrooms. (Same course as Geology 181.) GE credit: SS, WE, QL, WE—II, III, II. (II, III.) Ching

182. Semester Project for Curricular Integration (1)
Seminar—1 hour. Prerequisite: Agricultural Systems and Environment 21 or appropriate microcomputer course, experience with instructional computing and consent of instructor. Design and implementation of a curricular unit to integrate computer technology into a K-12 classroom setting. A project-based seminar intended for students with substantial prior experience in computer circuitry and related technologies. Not open for credit to students who have completed course 180 or 181.

183. Teaching High School Mathematics and Science (3)
Lecture/discussion—2 hours; field work. Prerequisite: course 81/Geology 81 or course 181/Geology 181 and major in mathematics science or engineering; or completion of a one-year sequence of science or calculus and consent of the instructor. Limited to 40 students per section. Exploration and creation of effective teaching practices based on examination of high school students learn mathematics and science. Field experience in high school classrooms. (Same course as Geology 183.) GE credit: SocSci | QL, SS, WE—II, III, II, III. (II, III.) Passmore, Stevenson

185. Learning in a Digital Age: Information, Schooling, and Society (4)
Lecture/discussion—2 hours; lecture/laboratory—2 hours. Focus on the changing nature of learning in a digital age: social media, ubiquitous connectivity, online education, electronic communications, writing, gaming, and youth culture. Readings will be drawn from major recent works detailing fundamental shifts in information, schooling, and society, as well as in alternate years. GE credit: SciEng, SS—II, IV. (II, IV.) Ching

192. Internship (1-3)
Internship—2.8 hours; discussion—1 hour. Prerequisite: upper division standing and consent of instructor. Internship as a tutor, teacher’s aide, or peer...
205A. Ethnographic Research in Schools I: Current Theory and Practice (4)

205B. Ethnographic Research in Schools II: Field-Based Approaches (4)
Discussion—4 hours. Prerequisite: graduate standing and course 205A. Student research projects in specific schools with cooperative critical analysis of the design, data collection, and inferencing by researchers. Students will continue to meet with instructor as a group throughout the quarter to discuss specific projects.—II. (II.) Watson-Gegeo

206A. Inquiry into Classroom Practice: Traditions of Teacher Research Approaches (4)
Lecture/discussion—2 hours; fieldwork. Prerequisite: consent of instructor; open to graduate teaching credential students. Introduction to traditions and approaches of teachers conducting research in their own classrooms: purposes, focal areas, methods of data collection and analysis, and written genre conventions.—I. (I.)

206B. Inquiry into Classroom Practice: Application for a Teacher Research (4)
Lecture/discussion—3 hours; fieldwork—1 hour. Prerequisite: satisfactory completion of course 206A or consent of instructor, open to graduate teaching credential students. Analysis and implementation of teacher research through the development, implementation and evaluation of a short-term classroom research-based intervention. Particular attention to research that enhances learning of English language learners and under-performing students.—III. (III.) Anthamaser, Ballard, Passmore, Falls, Booker, White

206C. Inquiry into Classroom Practice: Study Design (4)
Seminar—3 hour; fieldwork—1 hour. Prerequisite: satisfactory completion of course 206B or consent of instructor. Proposal development for classroom-based inquiry designed to address student learning needs. Mixes methods research design and preliminary data collection approaches. Design and application of baseline student assessment for proposal development. Literature review. Data collection in K-12 classrooms required. Open to Graduate MA Credential students only.—I. (I.) Ambrose, Falls, Merino, Wallace

206D. Inquiry into Classroom Practice: Data Analysis and Reporting (4)
Seminar—2 hours; fieldwork—1 hour; extensive writing or discussion. Prerequisite: satisfactory completion of course 206C or consent of instructor. Support of the inquiry begun in course 206C through continuous collaboration and feedback results in the writing and presentation of a research study. Open to Graduate MA Credential students.—III. (III.) Ambrose, Falls, Merino, Wallace

207. Conceptualization (4)
Lecture—2 hours; discussion—2 hours. Prerequisite: graduate standing or consent of instructor. Development of the skills of philosophical analysis and argument for the establishment of a point of view, in the consideration of education theory and practice. Classical and contemporary approaches to subject matter and activity emphasis, hidden curriculum, and modes of inquiry.

208. Presenting Educational Research in Written Reports (4)
Seminar—3 hours; extensive writing. Prerequisite: graduate standing or consent of instructor. Rhetorical and substantive challenges of presenting educational research through written reports, research theses, and genres; competing discourse conventions of educational research, policy, and practice; the social organization of publishing educational research. May be repeated one time for credit. Offered irregularly.

209. Image-based Field Research (4)
Lecture/discussion—3 hours; fieldwork—2 hours. Prerequisite: graduate standing or upper division standing with consent of instructor. Critical and practical understanding of video and still photography as resources for enhancing field research in schools and other social settings.

210. The Psychology of School Learning (4)
Lecture/discussion—4 hours. Study of human learning theory and research related to learning in school. Classical approaches of scholars such as Ausubel, Bruner, Gagne, Piaget, Vygotsky, Skinner. Review of contemporary issues of constructivism, metacognition, problem solving, learning strategies, science and mathematics teaching.—II. Martin, White

211. Sociocultural and Situative Perspectives on Learning and Cognition (4)
Lecture/discussion—3 hours; extensive writing—1 hour. Prerequisite: graduate standing or consent of instructor. Sociocultural and situative theories of cognition and learning. Major ideas of L.S. Vygotsky, followed by modern perspectives: situated cognition, cognitive apprenticeship, situated learning, communities of practice, cultural-historical activity theory, and distributed cognition. Implications of each theoretical perspective for educational practice. Offered in alternate years.—III. Ching, White

215. Research on Achievement Motivation in Education (4)
Seminar—3 hours; term paper. Prerequisite: graduate standing in Education or consent of instructor. Analysis and critique of recent research on cognitive processes related to achievement motivation in school settings. Topics include self-determination theory, attribution theory, goal theory, intrinsic and extrinsic motivation, learned helplessness, psychological reactance, gender and culture, and research designs. Offered in alternate years.—Mundy

220. Concepts and Methods of Policy Analysis (4)
Seminar—3 hours; fieldwork; term paper. Prerequisite: graduate standing. Introduction to concepts and methods of policy analysis. The relationship between educational issues and problems; policy development; constructing persuasive policy analyses; issues related to policy process.—I. (I.) Timar

221. Culture and Social Organization of Schools (4)
Seminar—4 hours. Prerequisite: graduate standing or consent of instructor. Culture and social organization of schools. Examines perspectives of social researchers, educational policymakers, and school members and their implications for educational research, policy and practice.

222. School Change and Educational Reform (4)
Lecture/discussion—2 hours; seminar—2 hours. Prerequisite: graduate standing in Education with course 120 or the equivalent. Analysis of models, processes, and case studies of school change and educational reform with real-world characteristics of schools and schooling, planned and unplanned change, the moral evaluation of school change, and the role of educational research.

223. Education and Social Policy (4)
Seminar—4 hours. Prerequisite: graduate standing in Education or consent of instructor. Focuses on understanding the social and political context of edu-
225. Education Policy and Law (4)
Lecture/discussion—4 hours. Prerequisite: graduate standing or consent of instructor. Examination of law as an instrument of social policy. Specific focus on the legalization of education decision making, its causes, dimensions, and effects on administrative and teacher authority. —Timar

226. Culture and Social Organization of Higher Education (4)
Seminar—3 hours; field work—1 hour. Prerequisite: graduate standing or consent of instructor. Critical study of culture and social organization of higher education. Institutions policies and functions in the U.S., with some attention to other countries. —Gonzalez

228. Politics and Governance of Education (4)
Seminar—3 hours; term paper. Prerequisite: graduate standing. Examination of political power, representation, influence, decision-making and inter-governmental relations in the public schools. Offered in alternate years. —Timar

229. Education Finance Policy (4)
Seminar—3 hours; term paper. Prerequisite: graduate standing. Examination of (1) United States financing public education, (2) the relationship between school finance and education policy, and (3) the relationship between education finance and education practice. —Rose

230. Special Topics in Education Policy (4)
Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Selected topics in education policy. Designed to facilitate preparation for the qualifying examination or dissertation. Students will critically analyze scholarly work including their own works in progress. May be repeated for credit when topic differs. —II, III. (II, III.) Athanases, Enright, Martinez, Tonkovich

234. Theory and Research in Early Literacy (4)
Seminar—3 hours; field work—1 hour. Prerequisite: graduate standing or consent of instructor. Analysis of children's initial processes in learning to read extending from the preschool years into second grade. Topics include emergent literacy, phonological awareness, word recognition, decoding, spelling, vocabulary, comprehension, and interaction in reading, assessment, instruction, and intervention. Offered in alternate years. —III. Tonkovich

236. Application of Hierarchical Linear Models in Education Research (4)
Lecture—2 hours; lecture/discussion—2 hours; term paper. Prerequisite: course 204A or similar course with permission of instructor. Applications of hierarchical linear models in educational research across multiple areas, such as policy, curriculum, and assessment. Develop working knowledge of hierarchical linear modeling and an understanding of its use in existing research as well as student’s work. —Gee

237. Survey Research Methods (4)
Lecture/discussion—3 hours; field work—1 hour; term paper. Prerequisite: course 114 or equivalent. Theories, principles, and application of survey research methodology. Students develop, validate, and administer survey instruments; select representative samples; conduct focus groups; and analyze survey data. Familiarity with introductory concepts in descriptive and inferential statistics is assumed. Offered in alternate years. —(II) Abedi

238. Participatory Action Research (PAR) (4)
Lecture/discussion—3 hours; field work—1 hour. Prerequisite: minimum of one quarter recommended of an introductory research methods course. Principles and strategies of PAR and related methodologies that emphasize collaborating with those affected by the issue being researched in order to educate, take action or effect social change. Conduct interviews with stakeholders, develop case analyses and research proposals. —II. Ballard

242. Research on Text Comprehension (4)
Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Analysis of recent research related to cognitive processing of written texts. Topics include word decoding, schema theory, background knowledge, assimilation, accommodation, working memory, processing depth, vocabulary acquisition, sentence-level processes, text-level processes, text structure, implications for curriculum and instruction. —Tompick

243. Research on the Teaching and Learning of Writing (4)
Seminar—4 hours. Prerequisite: graduate standing in Education or consent of instructor. Study of issues in research on composition; history of composition studies; data analysis techniques; product and process approaches; cognitive and social perspectives. Offered in alternate years.

244. Topical Seminar in Language, Literacy and Culture (4)
Seminar—3 hours; project—1 hour. Prerequisite: graduate standing. Critical study of selected issues of language, literacy, and culture as they relate to education. May be repeated two times for credit when topic differs. —I, II, III. (I, II, III.) Athanases, Enright, Martinez, Tonkovich

245. Theory and Research in Early Literacy (4)
Seminar—3 hours; field work—1 hour. Prerequisite: graduate standing or consent of instructor. Analysis of children's initial processes in learning to read extending from the preschool years into second grade. Topics include emergent literacy, phonological awareness, word recognition, decoding, spelling, vocabulary, comprehension, and interaction in reading, assessment, instruction, and intervention. Offered in alternate years. —III. Tonkovich

246. Reading as a Social and Cultural Process (4)
Lecture—3 hours; field work—1 hour. Prerequisite: course 211 recommended or consent of instructor. Recent theoretical and empirical work on reading in social contexts. Topics include reading as an individual interactive process, reading as a social and cultural process; critical perspectives on reading; implications of contrastive theoretical perspectives for curriculum and instruction in reading. Offered in alternate years.

247. Research on Response to Culturally Diverse Literature, K-12 (4)
Lecture—3 hours; field work—1 hour. Research on response to culturally diverse literature in classrooms and other K-12 settings. Topics include reader response theories, values in expanding the literary canon, problems of cultural authenticity, resistance to multicultural literature, and instruction for diverse texts and learners. Offered in alternate years. —(II) Athanases

248. Academic Language and Literacies (4)
Seminar—3 hours; fieldwork; project. Prerequisite: graduate standing or consent of instructor. Exploration of theories and research on academic language and literacies for the schooling of first and second language learners. Students use basic qualitative methods to collect and analyze classroom language and literacy data. Offered in alternate years. —(III) Enright

249. Discourse Analysis in Educational Settings (4)
Seminar—3 hours term paper. Prerequisite: graduate standing or consent of instructor. Seminar on classroom discourse (lessons, teaching/learning interactional sequences). Final term paper is an analysis of discourse data tape-recorded by student in a field setting. —II. (II) Watson-Gecow

251. Research in Bilingual and Second Language Education (3)
Seminar—3 hours. Prerequisite: course 151; knowledge of a foreign language. Discussion and analysis of recent research in bilingual and second language education. Topics include: language acquisition in second language learners and bilinguals, second language teaching methodologies, language models in bilingual education, interaction analysis in bilingual and cross-cultural classrooms, use of the vernacular in classrooms. Offered irregularly.

253. Language and Literacy in Linguistic Minorities (3)
Seminar—4 hours. Prerequisite: graduate standing in Education with upper division course work in mathematics or consent of instructor. Analysis of curricular issues and goals in mathematics education including long-term trends, current status and influences, proposed changes, and evaluation issues. Selected curriculum projects will be examined. —Ambrose, White

256. Research in Mathematics Education (4)
Seminar—4 hours. Prerequisite: graduate standing in Education with upper division course work in mathematics, or consent of instructor. Examination of research process in mathematics education; review of critical productive problems identified by researchers; evolution of trends, issues, theories and hypotheses in various areas of mathematics education. Research course emphasizes foundations. Offered in alternate years. —Ambrose, White

256. Research in Mathematics Education (4)
Seminar—4 hours. Prerequisite: graduate standing in Education with upper division course work in mathematics, or consent of instructor. Examination of research process in mathematics education; review of critical productive problems identified by researchers; evolution of trends, issues, theories and hypotheses in various areas of mathematics education. Research course emphasizes foundations. Offered in alternate years. —Ambrose, White

257. Computer Technology in Mathematics Education (4)
Seminar—4 hours. Prerequisite: graduate standing in Education with upper division course work in mathematics; or consent of instructor. Current research issues and activities in mathematics education; status, trends, theories and hypotheses. Formulation of research questions and design of studies. Projection of future directions for research. Offered in alternate years. —Ambrose, White

260. The Modern History of Science Education (4)
Seminar—4 hours. Prerequisite: graduate standing in Education with upper division coursework in science, or consent of instructor. History of curricular issues and goals in science education from the late 19th century forward, including long-term trends, current status and influences, proposed changes, and evaluation issues. National science standards and curriculum projects. Offered in alternate years. —Passmore

262A. Research Topics in Science Education I (4)
Seminar—4 hours. Prerequisite: graduate standing in Education with upper division coursework in science, or consent of instructor. History of curricular issues and goals in science education from the late 19th century forward, including long-term trends, current status and influences, proposed changes, and evaluation issues. National science standards and curriculum projects. Offered in alternate years. —Passmore
280. Inquiry and Practice: Research Design and Application for Educational Leaders (4)
Lecture/discussion—4 hours; fieldwork; project. Prerequisite: admission into the CANDEL EdD program or consent of instructor. Students identify an issue from their educational setting, engage in data collection/analysis, write-up the process/results, and present to class. May become a dissertation proposal, if the problem or its extension is of sufficient interest and value. —II, III

281A. Problem-Based Learning Courses: Part 1 (4)
Lecture/discussion—4 hours; extensive writing or discussion; fieldwork. Prerequisite: admission into the CANDEL EdD program or consent of instructor. Students identify an issue from their educational settings, engage in data collection/analysis, write-up the process/results, and present to class. May become a dissertation proposal, if the problem or its extension is of sufficient interest and value. —II, III

281B. Problem-Based Learning Courses: Part 2 (4)
Lecture/discussion—4 hours; extensive writing or discussion; fieldwork. Prerequisite: admission into the CANDEL EdD program or consent of instructor. Continuation of part one. —II, III

281C. Problem-Based Learning Courses: Part 3 (4)
Lecture/discussion—4 hours; extensive writing or discussion; fieldwork. Prerequisite: admission into the CANDEL EdD program or consent of instructor. Continuation of part two. —II, III

282A. Beginning Issues and Practices: Contemporary Educational Leadership (4)
Lecture/discussion—4 hours; fieldwork; project. Prerequisite: admission into the CANDEL EdD program or consent of instructor. Students explore the history and dynamic relationships among leadership theory/practice and their application to current educational settings. Students will reflect on and refine their personal theory of leadership. —II, III

282B. Beginning Issues and Practices: Diversity Issues for Educational Leaders (4)
Lecture/discussion—4 hours; fieldwork; project. Prerequisite: admission into the CANDEL EdD program or consent of instructor. Students will critically examine the theory/practice/process of leadership in community-building and collaboration in/across communities, while addressing the utilization of human and material resources and the creation of partnerships, community linkages, and collaborative efforts. —II, III

283A. Advanced Issues and Practices: Leadership Across Communities (4)
Lecture/discussion—4 hours; fieldwork; project. Prerequisite: admission into the CANDEL EdD program or consent of instructor. Students will critically examine the theory/practice/process of leadership in community-building and collaboration in/across communities, while addressing the utilization of human and material resources and the creation of partnerships, community linkages, and collaborative efforts. —II, III

283B. Advanced Issues and Practices: Leadership and Student Services (4)
Lecture/discussion—4 hours; fieldwork; project. Prerequisite: admission into the CANDEL EdD program or consent of instructor. Practical and theoretical perspectives for building a sense of vision to lead the profession of student affairs and to meet the needs of the whole student. —II, III

284A. Policy: History and Theory of Educational Policy (4)
Lecture/discussion—4 hours; fieldwork; project. Prerequisite: admission into the CANDEL EdD program or consent of instructor. Students will critically examine the history/theory of educational policy. They will explore the role of policy and examine its impact on the education sector. Students will critically engage in leading diverse schools that will be explored. Emphasis will be placed on the interaction between underrepresented segments of society and educational institutions. Best Practices in leading diverse settings will be explored. —II, III

284C. Policy: Possibilities and Limitations of Educational Policy in a Democracy (4)
Lecture/discussion—4 hours; fieldwork; project. Prerequisite: admission into the CANDEL EdD program or consent of instructor. Students will critically examine the history/theory of educational policy. They will explore the role of policy and examine its impact on the education sector. Students will critically engage in leading diverse schools that will be explored. Emphasis will be placed on the interaction between underrepresented segments of society and educational institutions. Best Practices in leading diverse settings will be explored. —II, III

Lecture/discussion—4 hours; fieldwork; project. Prerequisite: admission into the CANDEL EdD program or consent of instructor. Human resource and legal concepts and activities governing decisions of school leaders in public education. Attention to the theory, application, and practice of personnel and risk management, curriculum, student services, teacher rights, student roles, school community, and legal rights for families. —II, III

286A. Organizational Structures and Change: Curriculum & Instruction Issues in Education (4)
Lecture/discussion—4 hours; fieldwork; project. Prerequisite: admission into the CANDEL EdD program or consent of instructor. Students will critically examine the history and dynamic relationships among leadership theory/practice and their application to current educational settings. Students will reflect on and refine their personal theory of leadership. —II, III

286B. Organizational Structures and Change: Curriculum & Instruction Issues in Education (4)
Lecture/discussion—4 hours; fieldwork; project. Prerequisite: admission into the CANDEL EdD program or consent of instructor. Students will critically examine the history and dynamic relationships among leadership theory/practice and their application to current educational settings. Students will reflect on and refine their personal theory of leadership. —II, III

287. CANDEL Dissertation Seminars (6-12)
Prerequisite: admission into the CANDEL EdD program or consent of instructor. Third year seminars encourage students to complete dissertations within the year. Cohort members meet together in three-week meetings with faculty members and share their writing, data collection, analysis, discussion of results, development of conclusions/implications. May be repeated nine times for credit until completion of dissertation. (S/U grading only) —I, II, III, (I, II, III)

288. Proseminar in Education (4)
Seminar—3 hours; fieldwork—3 hours. Prerequisite: admission to the Ph.D. dissertation program in Education. Professional induction into educational research field and Graduate Group in Education at UC Davis. Introduction to landscape of educational research methodologies, purposes and theories. Analysis of debates within field. Investigation of K-12 educational outreach efforts at UC Davis. —I, II, III

Quarter Offered: I=Fall, II=Winter, III=Spring, IV=Summer; 2015-2016 offering in parentheses
Sciences. Emphasis on effective teaching methods.

tions from the social, biological, and physical
mental school curriculum, emphasis on contribu-
in elementary schools. Current conceptions of ele-
program. Supervised teaching in regular classrooms
(2-18)
304C. Teaching in the Elementary Schools
Lecture/discussion—2 hours; fieldwork—9.48 hours.
Prerequisite: acceptance into a teacher education
program. Supervised teaching in regular classrooms
in elementary schools. Evaluation of teaching materi-
als including instructional technology. Current ele-
mentary school emphasis on contributions from fine arts and humanities. —II. III."

305A. Teaching in the Middle Grades (5-8)
Lecture—2 hours; seminar—2 hours; student teach-
ing—15-50 hours. Prerequisite: acceptance into a
teacher education program. Supervised teaching in
regular or special education classrooms in middle
grades. Current conceptions of the middle-grades
curriculum with emphasis on social, biological, and
physical sciences. Effective teaching methods.

Lecture/discussion—2 hours; fieldwork—9.48 hours.
Prerequisite: acceptance into a teacher education
program. Supervised teaching in regular secondary
classrooms. Techniques for classroom communica-
tions; constructing goals and objectives; assessment
of learning; special problems of adolescents; instruc-
tional technology.—I-II-III.

307. Methods in Elementary Science (2)
Lecture/discussion—2 hours. Prerequisite: accep-
tance into teacher education program. Principles,
procedures, and materials for teaching the biologi-
cal and physical sciences in elementary schools.—I.

308. Methods in Elementary Social Studies (2)
Lecture/discussion—2 hours. Prerequisite: accep-
tance into a teacher education program. Principles,
procedures, and materials for teaching history and
the social sciences in elementary schools.—III.

309. The Teaching of Mathematics, K-9 (3)
Lecture/discussion—3 hours. Prerequisite: accep-
tance into a teacher education program. Mathemat-
ics curriculum and teaching methods for K-9
reflecting the needs of California’s diverse student
populations.—I. II. III. Rosas

322A. Pedagogical Preparation for
Secondary Social Science I (3)
Lecture/discussion—1 hour; discussion—1 hour.
Prerequisite: course 322A. Intermediate teaching
methods and curriculum approaches for secondary
social science teaching. State and national curriculum
standards; application of learning theory to effective
instruction; interdisciplinary teaching and active
learning approaches; effective teaching strategies for
English Learners.—I. II. (II.) Rosas

322B. Pedagogical Preparation for
Secondary Social Science II (3)
Lecture/discussion—2 hours. Prerequisite: course 322A.
Teaching methods and curriculum approaches for
social science teaching. Interdisciplinary
approaches to teaching major themes across social
science content areas; teaching potentially contro-
versial social science topics; teaching democratic
civic values, student assessment and evaluation. —II.

323A. Physical Science in the Secondary School (3)
Laboratory/discussion—2 hours; discussion/labora-
tory—1 hour. Prerequisite: acceptance into a
teacher education program. Activity-based overview
of concepts and processes in secondary school phys-
ical sciences. Emphasis upon philosophy, appropri-
ate teaching methods, materials, assessment and eval-
uation of learning. — II. II. (II.) Rosas

323B. Life Sciences in the Secondary School (3)
Laboratory/discussion—2 hours; discussion/labora-
tory—1 hour. Prerequisite: acceptance into a
teacher education program. Effective teaching
based overview of concepts and processes in secondary school biol-
ogy and life sciences. Emphasis on philosophy, appropriate teaching
methods, materials, assessment and evaluation of learning, and issues.—II. (II.)

298. Group Study (1-5)
(S/U grading only.)

299. Individual Study (1-6)
Independent study—3-18 hours. Individual study
under the direction of a faculty member. (S/U grad-
ing only.)

299D. Research (1-12)
Independent study—3-36 hours. Research for indi-
vidual graduate students. (S/U grading only.)

Professional

300. Reading in the Elementary School (4)
Lecture—3 hours; fieldwork—3 hours. Prerequisite:
grade standing. Principles, procedures, and cur-
riculum materials for teaching of reading. Includes
decoding skills with a special emphasis on phonics,
comprehension skills, study skills, and reading in the
content areas.—II.

301. Reading in the Secondary School (4)
Discussion—4 hours. Prerequisite: grade stand-
ing, enrollment in the secondary credential program,
or consent of instructor. Principles, procedures, and
materials for teaching secondary school teachers to improve
the reading competence of students. Strategies for
enhancing learning through reading and writing in
disciplines, with special attention to linguistically
diverse populations.—I. II. III. Martinez

302. Language Arts in the Elementary School (2)
Lecture—2 hours. Prerequisite: grade standing.
Principles, procedures, and materials for the teach-
ing of oral and written expression, listening, language,
drama, and children’s literature in elementary
schools.

303. Art Education in the Elementary School (2)
Lecture/discussion—2 hours. Prerequisite: admissi-
on to multiple subject credential program. Understand-
ing the principles of education in the arts through
participation. Development of concepts, introduction
to media, and techniques suitable for the elementary
school. Curriculum, pedagogy, and materials for
teaching the visual and performing arts curriculum in
elementary schools.—III. (III.)

304A. Teaching in the Elementary Schools (2-18)
Lecture/discussion—2 hours; fieldwork—9.48 hours.
Prerequisite: acceptance into a teacher education
program. Supervised teaching in regular classrooms
in elementary schools. Selection and organization of
teaching materials. Introduction to techniques of
diagnosing school achievement of children.—I. (I.)

304B. Teaching in the Elementary Schools (2-18)
Lecture/discussion—2 hours; fieldwork—9.48 hours.
Prerequisite: acceptance into a teacher education
program. Supervised teaching in regular classrooms
in elementary schools. Current conceptions of ele-
mentary teaching, emphasis on contributions from
the social, biological, and physical sciences. Emphasis on effective teaching methods. —II. (II.)
Endocrinology and Metabolism

Christopher Thaisis, Ph.D. (Clark Kerr Presidential Chair and Director, University Writing Program) Ross Thompson, Ph.D., Professor (Psychology) Thomas Timar, Ph.D., Professor (Education) Cary Tredler, Ph.D., Associate Professor (Education) Yuuko Uchikoshi Tankovich, Ed.D., Associate Professor (Education) Stefano Varese, Ph.D., Professor

Graduate Study. The Graduate Group in Endocrinology and Metabolism offers programs of study and research leading to the Ph.D. degree. Students may concentrate in: language, literacy and culture; learning and mind sciences; mathematics education; school organization and educational policy; or science and agriculture education. Students may also combine these fields of study with designated emphasis areas such as Critical Theory; Second Language Acquisition, Women's Studies, and Writing, Rhetoric, and Composition Studies. Detailed information regarding graduate study may be obtained by writing to the Graduate Coordinator or at http://education.ucdavis.edu/programs/PhDoverview.html.

Preparation. Students should have earned a Bachelor's or M.A. degree or the equivalent in a discipline relevant to their proposed emphasis program. For example, students applying for the mathematics education emphasis should have earned the B.A. or M.A. or M.A.T. degree in mathematics or mathematics education.

Graduate Advisers. Michel Kurlaender, Lee Martin

Graduate Coordinator. Mary M. Reid

Courses. See Education, School of, on page 236.

The Major Programs

Eleven majors, leading to the B.S. degree, are open to students.

Aerospace Science & Engineering

Biological Engineering

Biological Systems Engineering

Chemical Engineering

Civil and Environmental Engineering

Computer Science

Electrical and Computer Engineering

Materials Science and Engineering

Mechanical and Aerospace Engineering

Transportation Technology and Policy

Minor Programs

The College of Engineering offers nine undergraduate minors: Biomedical Engineering (Department of Biomedical Engineering) Computational Biology (Department of Computer Science) Construction Engineering and Management (Department of Civil and Environmental Engineering) Electrical Engineering (Department of Electrical and Computer Engineering) Energy Science and Technology (Department of Biological and Agricultural Engineering) Energy Policy (Department of Biological and Agricultural Engineering) Energy Efficiency (Department of Biological and Agricultural Engineering) Materials Science (Department of Chemical Engineering and Materials Science) Sustainability in the Built Environment (Department of Civil and Environmental Engineering)

Courses in Engineering (ENG)

Students are encouraged to carefully adhere to all prerequisite requirements. The instructor is authorized to drop students from a course for which stated prerequisites have not been completed.

Lower Division

1. Introduction to Engineering (1)

Lecture—1 hour. Open to first-year students only. Introduction to the role of engineers in the acquisition and development of engineering knowledge, the differences and similarities among engineering fields, and the work ethic and skills required for engineering. [P/NP grading only.] GE credit: SE—I, II, III. [I, II] VanderGheynst

4. Engineering Graphics in Design (3)

Lecture—2 hours; laboratory—3 hours. Engineering design, descriptive geometry, pictorial sketching, computer-aided graphics, and their application in the solution of engineering problems. GE credit: SciEng | SE; VL—I—II, III, IV. [I, II] Schaaf, Sasaki
6. Engineering Problem Solving (4)

7. Technology and Culture of the Internet (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: basic computer experience recommended. Technology and culture of networked computing and the Internet. Topics include the history and development of network computing, Internet architecture and services, basics of Web page design and hypertext markup language, political, social, cultural, economic and ethical issues related to the Internet. GE credit: SciEng | SE.

10. The Science Behind the Technology in Our Lives (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: high school algebra. Understanding of how the technology in our lives works using only basic concepts and rudimentary mathematics. GE credit: SciEng or SocSci, Wrt | SE or SS.—II, I. Orel, Parikh

11. Issues in Engineering (1)
Lecture—1 hour. Prerequisite: Participation in the NESA Engineering Program or consent of instructor. Designed to broaden student’s understanding of the engineering profession, its methods, principles, design and development process, career opportunities, and professional responsibilities.—I. (I.) Vander-Gheynst

17. Circuits I (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 22A (C- or better recommended); Mathematics 22B (C- or better recommended) may be taken concurrently. Physics 9C or 9DH (C- or better recommended). Basic electric circuit analysis techniques, including electrical quantities and elements, resistive circuits, transient and steady-state responses of RLC circuits, sinusoidal excitation and phasors, and complex frequency and network functions. GE credit: SciEng | SE, VL, —I, II, III, (I, II, III).

20. Introduction to Space Exploration: Understanding the Technological and Environmental Challenges to Our Exploration of the Solar System (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: high school level Algebra, Geometry, General Science, and/or Physics (highly recommended). Introductory overview of the space environment. Discussion of space exploration technology including propulsion, orbital mechanics, and spacecraft engineering. Offered in alternate years. GE credit: SciEng | QL, SE, SL.

35. Statics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: C- or better in Physics 9A; Mathematics 21D (may be concurrent). Force systems and equilibrium conditions with emphasis on engineering problems. GE credit: SciEng | SE, VL, —I, II, III, (I, II, III).

45. Properties of Materials (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: C- or better in Mathematics 16C or 21C, Chemistry 2A, and Physics 1A. Introductory course on the properties of engineering materials and their relation to the internal structure of materials. GE credit: SciEng | QL, SE, SL, WE —I, II, III, IV, (I, II, III, IV).

45S. Honors Properties of Materials (1)
Discussion—1 hour. Prerequisite: enrollment in the Materials Science and Engineering Honors Program; concurrent enrollment in course 45 required. Examination of special materials science and engineering topics through readings, discussions, laboratory work, or special activities which may include projects, laboratory experience or computer simulations. Open only to students in the Materials Science and Engineering Honors program.—II, (II).

45Y. Properties of Materials (4)
Web virtual lecture; laboratory; Prerequisite: C- or better in Mathematics 16C or 21C, Chemistry 2A and Physics 9A. Introduction to the properties of engineering materials and their relation to the internal structure of materials. Not open for credit to students who have passed course 45. GE credit: SciEng | QL, SE, SL, VL —IV, (IV).

98. Directed Group Study (1-4)
Restricted to College of Engineering students only. (P/NP grading only.) May be repeated for credit up to 3 times.

Upper Division

100. Electronic Circuits and Systems (3)
Lecture—3 hours; lecture—2 hours. Prerequisite: course 17 (C- or better recommended). Introduction to analog and digital circuit and system design through hands on laboratory design projects. Students who have completed Electrical and Computer Engineering students only. Kinematics and kinetics of particles, systems of particles, and of rigid bodies; application of these topics are applied to engineering problems. Only two units of credit allowed to students who have previously taken course 36. GE credit: SciEng | QL, SE, VL, —I, II, III, (I, II, III). Cheng, Eke, Hess, Joss.

103. Fluid Mechanics (4)
Lecture—3 hours. Prerequisite: C- or better in each of the following: Engineering 35 and Mathematics 22B and Physics 98. Open to students in the College of Engineering and Hydrology majors. Fluid properties, fluid statistics, continuity and linear momentum equations for control volumes, flow of incompressible fluids in pipes, dimensional analysis and boundary-layer flows. Not open for credit to students who have completed Chemical Engineering 150A. GE credit: SciEng | SE, VL, —I, II, III, (I, II, III). Aldredge, Davis, Delplanque, Hwang, Kennedy, Robinson

104. Mechanics of Materials (4)
Lecture—4 hours. Prerequisite: grade of C- or better in Engineering 35 and Mathematics 22B and Physics 98. Open to students in the College of Engineering and Hydrology majors. Fluid properties, fluid statistics, continuity and linear momentum equations for control volumes, flow of incompressible fluids in pipes, dimensional analysis and boundary-layer flows. Not open for credit to students who have completed Chemical Engineering 150A. GE credit: SciEng | SE, VL, —I, II, III, (I, II, III). Aldredge, Davis, Delplanque, Hwang, Kennedy, Robinson

104L. Mechanics of Materials Laboratory (1)
Lecture—3 hours. Prerequisite: course 104. Experiments which illustrate the basic principles and verify the analysis procedures used in the mechanics of materials are performed using the basic tools and techniques of linear and nonlinear statics. GE credit: SciEng | SE, VL, —I, II, III, (I, II, III).

105. Thermodynamics (4)
Lecture—4 hours. Prerequisite: C- or better in Mathematics 22B and Physics 98. Open to College of Engineering students only. Fundamentals of thermodynamics: heat energy and work, properties of pure substances, First and Second Law for closed and open systems, reversibility, entropy, thermodynamic temperature scale, and the properties of thermodynamics to engineering systems. GE credit: SciEng | QL, SE, VL, —I, II, III, (I, II, III). Aldredge, D’Souza, Erickson

106. Engg Economics (3)
Lecture—3 hours. Prerequisite: upper division standing in Engineering. The analysis of problems in engineering economy; the selection of alternatives; replacement decisions. Compounding, tax, origins and cost of capital, economic life, and risk and uncertainty are applied to methods of selecting most economic alternatives. GE credit: SciEng or SocSci, QL, SE, SL, SS, VL, —II, III, (I, II, III). Hartough, Slaughter

111. Electric Power Equipment (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: grade of C- or better in course 17. Principles of AC and DC electrical motors and generators, their control systems and power sources. Selection of electric power equipment components based on their construction features and performance characteristics. Offered irregularly. GE credit: SciEng | QL, SE, VL, WE.—Delwiche Hartsough

121. Fluid Power Actuators and Systems (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: grade of C- or better in Engineering 100 and Engineering 102. Hydraulic and pneumatic systems with emphasis on analysis and control of actuators. Design of hydraulic and pneumatic systems, specification and sizing of components, and selection of electrohydraulics/electro-pneumatics, servo valves, and closed loop systems to solve basic control problems. Offered in alternate years. GE credit: SciEng | QL, SE, SL, WE.—III. (III) Rosa

122. Introduction to Mechanical Vibrations (4)
Lecture—4 hours. Prerequisite: C- or better in Engineering 102; C- or better in Engineering 6 or course 5 or Computer Science Engineering 30, ability to program in MATLAB. Free and forced vibrations in lumped-parameter systems with and without damping; vibrations in coupled systems; electromechanical analogs; use of energy conservation principles. GE credit: SciEng | QL, SE.

160. Environmental Physics and Society (3)
Lecture—3 hours. Prerequisite: Physics 9D, SC, or 10 and 18 or Mathematics 16B or the equivalent. Impact of humankind on the environment will be discussed from the perspective of the physical sciences. Calculations based on physical principles will be made, and the resulting policy implications will be considered. (In the College of Engineering, students may receive only one unit of credit towards the Technical Electives requirement.) (Same course as Physics 160.) GE credit: SciEng or SocSci | SE or SL, VL—II, III. (II, III.) Jungerman, Craig

180. Engineering Analysis (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: C- or better in Mathematics 21D and 22B; C- or better in Engineering 6 or Mechanical Engineering 5 or Computer Science Engineering 30. Solutions of systems of linear and nonlinear algebraic equations; approximation methods; solutions of ordinary differential equations; initial and boundary value problems; solutions of partial differential equations of elliptic, parabolic, and hyperbolic types; Eigen value problems. GE credit: SciEng | SE, VL—I. (I.) Halef

188. Science and Technology of Sustainable Power Generation (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: upper-division standing. Physics 7C or 9C. Focus on scientific understanding and development of power generation that is the basis of modern society. Concerns with the current and future demands for energy and the development of power generation technologies that are sustainable, in particular, discussion of the most recent innovations. GE credit: SocSci | SS, SC, SS, (I, II, III.) Hufnagel

190. Professional Responsibilities of Engineers (3)
Lecture—3 hours. Restricted to upper division students in the College of Engineering. Organization of the engineering profession; introduction to contracts, specifications, business ethics, patients, and liability; discussion of professional, ethical, societal, and political issues related to engineering. GE credit: SocSci | SS, SC, SS, (I, II, III.) Hufnagel

198. Directed Group Study (1-5)
May be repeated for credit up to 3 times. (P/NP grading only.) GE credit: SE.

Graduate

250. Technology Management (3)
Lecture—3 hours. Prerequisite: consent of instructor. Management of the engineering and technology activity. Functions of design, planning, production, marketing, sales, and maintenance. Technological
211C. Numerical Solution of Partial Differential Equations III (3)

Lecture—3 hours. Prerequisite: course 211B. Conservation laws, fluid dynamics, convection, fluid equations, elasticity equations, electromagnetic equations, transport equations. III. (III.) Rodrigue, Miller, Orel, Jensen.

213A. Computer Graphics (3)

Lecture—3 hours. Prerequisite: consent of instructor. Development of algorithms for perspective line drawing of three-dimensional objects, as defined by polygons or bicubic patches. —II. Max

217A. Applied Computational Science (3)

Lecture—3 hours. Prerequisite: course 210A, Mathematics 229A or the equivalent (may be taken concurrently). Applied modular programming in low level language (C or Fortran). Direct implementations and integrated applications of algorithms applied to computational science problems, which are exemplified through projects. Emphasis on the practical use and implementation of theory taught in course 210A. —I. Rodrigue, Miller, Orel, Jensen

217B. Applied Computational Science (3)

Lecture—3 hours. Prerequisite: course 210B or the equivalent (may be taken concurrently). Applied modular programming in low level language (C or Fortran). Direct implementations of the theory taught in course 210B and applications of algorithms for computational science problems, exemplified through projects including partial differential equations, initial/boundary value problems. —II. Rodrigue, Miller, Orel, Jensen.

218. Signal Processing (3)

Lecture—3 hours. Prerequisite: Mathematics 121A, 121B or the equivalent. Discrete-time and continuous-time signal processing. Fourier transforms, Laplace transform and reconstruction. Sampling theorem and analog-to-digital conversion, multirate signal processing, wavelets and filter banks; fast algorithms: FFT, DWT, and pyramid; data compression with wavelets; spectral factorization; designing application-specific wavelets. Offered in alternate years. —II. Dowla

219. Wavelets and Their Applications (3)

Lecture—3 hours. Prerequisite: Electrical and Computer Engineering 150A, Mathematics 167. Fourier transforms and digital filters; sampling theorem and analog-to-digital conversion, multirate signal processing, wavelets and filter banks; fast algorithms: FFT, DWT, and pyramid; data compression with wavelets; spectral factorization, designing application-specific wavelets. Offered in alternate years. —I. Dowla

220A. Artificial Neural Nets I (3)

220B. Artificial Neural Nets II (3)

221. Genetic Algorithms and Optimization (3)

Lecture—3 hours. Prerequisite: Mathematics 145 or the equivalent; graduate standing; ability to program in one of the modern programming languages. Introduction to genetic algorithms. Fundamental theorem; schema processing; genetic operators; applications to function optimization, VLSI circuit layout. Implementation on parallel computers; genetic programming; evolutionary algorithms. —III. Vemuri

225. Computational Structures for Signal and Image Processing and Graphics (3)

Lecture—3 hours. Prerequisite: Computer Science Engineering 152. Tools for research in digital media. Communication protocols, algorithms and architectures suitable in modern networked environment. Transmission of digital data over voice-grade channels, telecommunications networks for data transport, Broadband multimedia communications, ATM, and Broadband ISDN. Offered in alternate years. —II. Vemuri

230. Topics in Computational Fluid Dynamics (3)

Lecture—3 hours. Prerequisite: Mathematics 228 and Physics 112B. Microscopic and macroscopic descriptions of matter; thermodynamics and kinetics; constitutive, electrical, mechanical and thermal properties. —I, II, III. (I, II, III) Luhmann, Yeh, Baldus, Mcurdy

231A. Applied Quantum Mechanics (3)

Lecture—3 hours. Prerequisite: courses 205ABC (may be taken concurrently). Classical properties of matter; introduction to quantum mechanics by the correspondence principle. Solvable bound state/continuum problems, in 1-D: well, barrier, and harmonic oscillator. Solvable problems in 3-D: HO, well, and hydrogen atom. Matrix theory: Schroedinger, Heisenberg, and interaction picture. —II. (III) Orel, Kral, Yeh

231B. Applied Quantum Mechanics (4)

Lecture—3 hours. Prerequisite: course 231A. Approximate methods in quantum mechanics, perturbation methods, variational methods, time dependent perturbation theory, scattering, and radiation. —III. (I) Orel, Kral, Yeh

233A-233B-233C. Theory and Applications of Solid-State Physics (3-3-3)

Lecture—3 hours. Prerequisite: course 230C or the equivalent. Structure and properties of crystals; theory of dielectrics, metals and alloys; magnetism, superconductivity, and semiconductors. Applications to various solid-state devices. —II—III—III. (III—III—III) Orel

234A. Applied Electromagnetics I (3)

Lecture—3 hours. Prerequisite: Electrical and Computer Engineering 130B or the equivalent. Electromagnetics: Gauss’s law, potentials, fields, boundary value problems, multiple pole expansions, dielectrics, polarization, capacitance, inductance, torque, forces, eigenfunction expansions, Magnostatics, Bio-Savart law, Ampere’s law, vector potential, gauge transformations, magnetization, induction, constitutive relations. —II. (III) Kolter, Hwang

234B. Applied Electromagnetics II (3)

Lecture—3 hours. Prerequisite: course 234A. Maxwell’s equations, wave equations for fields and potentials. Poising’s Theorem and power flow. Momentum and angular momentum in the electromagnetic field. Stress tensor. Polarization. Reflect-
234C. Applied Electromagnetics III (3) Lecture—3 hours. Prerequisite: course 234B. Dynamics of relativistic particles; collisions between charged particles, energy loss, and scattering; radiation by moving particles; bremsstrahlung, method of virtual quanta, radiative beta processes; multipole fields; radiation damping, self fields of a particle, scattering and absorption of radiation.—I. (I.) Kolner, Hwang

225. Biophotonics in Medicine and the Life Sciences (3) Lecture/discussion—3 hours. Prerequisite: Physics 108 and Biology 101-105; course 202 highly recommended; graduate standing. Introduction to the science and technology of biomedical optics and photonics, with an overview of applications in medicine and the life sciences. Emphasis on research supported by the NSF Center for Biophotonics at UC Davis Medical Center. (Same course as Biomedical Engineering 255 and Biophysics 255S.)—II. (III.) Chang, Matthews

262A. Atomic and Molecular Interactions (3) Lecture—3 hours. Prerequisite: Physics 215A-215B-215C or the equivalent. Atomic structure and spectra. Offered in alternate years.—(I.) Orel

262B. Atomic and Molecular Interactions (3) Lecture—3 hours. Prerequisite: Physics 215A-215B-215C. Molecular structure and spectra. Offered in alternate years.—(II.) Orel

262C. Atomic and Molecular Interactions (3) Lecture—3 hours. Prerequisite: course 262B. Classical and quantum mechanical collision theory of electron and heavy particle scattering. Offered in alternate years.—(III.) Orel

263A. Quantum Statistics of Light (3) Lecture—3 hours. Prerequisite: Physics 208B-208C and Physics 215A-215B-215C or the equivalent. Classical susceptibilities, single quantization of light/matter interaction, resonance phenomena, second quantization of electromagnetic fields, number representation and operators.—II. (I.) Orel, McCurdy

264A. Classical Optics I (3) Lecture—3 hours. Prerequisite: course 108B and Electrical and Computer Engineering 130B or Physics 110. (I, II, III.) (A) Crystal optics; anisotropic wave propagation; dispersion relations, phase and group velocity surfaces. Polarization, Stokes parameters, Poincare sphere. Optical crystallography; interference figures; optical centers, optical groups. Piezoelectricity, electro-optic, magneto-optic effects. Geometrical optics; eikonal equation, Lagrange's integral invariant, Fermat's principle.—I. (II.) Kolner

285A. Physics and Technology of Microwave Vacuum Electron Beam Devices I (4) Lecture—4 hours. Prerequisite: B.S. degree in physics or electrical engineering or the equivalent for background. Physics and technology of electron beam emissions, flow and transport, electron gun design, space charge waves and klystrons. Offered in alternate years.—II. (III.) Luhmann

285B. Physics and Technology of Microwave Vacuum Electron Beam Devices II (4) Lecture—4 hours. Prerequisite: 285B. Physics and technology of gyrotrons, gyro-amplifiers, free electron lasers, magnetrons, crossfield amplifiers and relativistic devices. Offered in alternate years.—II. (III.) Luhmann

Electrical and Computer Engineering 255 and Biophysics 255S.)—II. (III.) Orel

290C. Graduate Research Group Conference (1) Seminar—1-2 hours. (S/U grading only.)—I, II, III. (I, II, III.)

290. Biophotonics Seminar (1) Seminar—1 hour. Prerequisite: consent of instructor. May be repeated for credit up to five units per segment when topic differs.—I, II, III, IV

290A-N. Special Topics in Applied Science (1-5) Lecture, laboratory, or combination. Prerequisite: graduate standing or permission of instructor. Special topics in the following areas: (A) Atomic, Molecular, and Optical Physics; (B) Chemical Physics; (C) Computational Physics; (D) Biophotonics/Biotechnology; (E) Materials Science; (F) Information Science and Photonics; (G) Nonlinear Optics; (H) Plasma/Fusion Energy Physics; (I) Quantum Electronics; (J) Condensed Matter/Statistical Physics; (K) Classical Optics; (L) Microwave and Millimeter-Wave Technology; (M) Synchrotron Radiation Science; (N) Space Physics. May be repeated for credit up to five units per segment when topic differs.—I, II, III, IV

280. Biophotonics Internship (7-12) Courses in Biophotonics (BPT) Graduate

280. Biophotonics Internship (7-12) Internship—36 hours. Prerequisite: graduate standing; consent of instructor. Open only to students in the designated emphasis in Biophotonics. Research experience diverse to that from the student’s dissertation topic at an industrial company, national laboratory, or a cross-college laboratory for one quarter. (S/U grading only.)—I, II, III, IV

280A. Biophotonics Seminar (1) Seminar—1 hour. Prerequisite: graduate standing or consent of instructor. Presentation of current research in the area of biophotonics by experts in the field, followed by group discussions. May be repeated up to three times for credit. (S/U grading only.)—I, II, III, IV

280B. Biophotonics Seminar (1) Seminar—1 hour. Prerequisite: graduate standing or consent of instructor. Presentation of current research in the area of biophotonics by experts in the field, followed by group discussions. May be repeated up to three times for credit. (S/U grading only.)—I, II, III, IV

280C. Biophotonics Seminar (1) Seminar—1 hour. Prerequisite: graduate standing or consent of instructor. Presentation of current research in the area of biophotonics by experts in the field, followed by group discussions. May be repeated up to three times for credit. (S/U grading only.)—I, II, III, IV

280D. Biophotonics Seminar (1) Seminar—1 hour. Prerequisite: graduate standing or consent of instructor. Presentation of current research in the area of biophotonics by experts in the field, followed by group discussions. May be repeated up to three times for credit. (S/U grading only.)—I, II, III, IV

280E. Biophotonics Seminar (1) Seminar—1 hour. Prerequisite: graduate standing or consent of instructor. Presentation of current research in the area of biophotonics by experts in the field, followed by group discussions. May be repeated up to three times for credit. (S/U grading only.)—I, II, III, IV

280F. Biophotonics Seminar (1) Seminar—1 hour. Prerequisite: graduate standing or consent of instructor. Presentation of current research in the area of biophotonics by experts in the field, followed by group discussions. May be repeated up to three times for credit. (S/U grading only.)—I, II, III, IV

280G. Biophotonics Seminar (1) Seminar—1 hour. Prerequisite: graduate standing or consent of instructor. Presentation of current research in the area of biophotonics by experts in the field, followed by group discussions. May be repeated up to three times for credit. (S/U grading only.)—I, II, III, IV

280H. Biophotonics Seminar (1) Seminar—1 hour. Prerequisite: graduate standing or consent of instructor. Presentation of current research in the area of biophotonics by experts in the field, followed by group discussions. May be repeated up to three times for credit. (S/U grading only.)—I, II, III, IV

280I. Biophotonics Seminar (1) Seminar—1 hour. Prerequisite: graduate standing or consent of instructor. Presentation of current research in the area of biophotonics by experts in the field, followed by group discussions. May be repeated up to three times for credit. (S/U grading only.)—I, II, III, IV
biological materials, and to educate students for this work. Our goals are to advance the science, teach the principles of engineering, and disseminate the knowledge of engineering needed to produce, distribute, and process biological products such as food and fiber, while conserving natural resources, preserving environmental quality, and ensuring the health and safety of people.

Objectives. We educate students in the fundamentals of mathematics, physical and biological sciences, and engineering, balanced with the application of principles to practical problems. We teach students to develop skills for solving engineering problems in biological systems through use of appropriate analysis, synthesis, and engineering design techniques. We prepare students for entry into engineering practice and graduate education, as well as for engagement in lifelong learning. We foster the ability of our students to collaborate and communicate effectively, and provide an awareness of the importance of economics, professional responsibility, and the environment.

Students graduating with a B.S. degree in Biological Systems Engineering from UC Davis are prepared to:

• Apply life sciences in engineering at the biochemical, cellular, organismal, and macro, levels.
• Solve biological systems engineering problems while employed in the private or public sector.
• Consider the environmental consequences of their engineering activities.
• Communicate effectively with professional colleagues and public constituencies,
• Act in an ethical manner, and
• Continue their education in a changing professional world.

The Biological Systems Engineering Undergraduate Program

Biological Systems Engineering is an engineering major that uses biology as its main scientific base. With rapid advances in biology and biotechnology, engineers are needed to work side by side with life scientists to bring laboratory developments into commercial production and field application. Industries in bioenergy, bioprocessing, biotechnology, food processing, aquaculture, agriculture, plant production, animal production, and forest production all need engineers with strong training in biology. The heightened concern for environmental resources and their preservation generates many engineering opportunities as society strives to maintain balance within the biosphere.

In the freshman and sophomore years, the Biological Systems Engineering major requires sequences of courses in mathematics, physics, chemistry, engineering science, and humanities, similar to all accredited engineering programs. In addition to these course sequences, the Biological Systems Engineering major also requires courses in the biological sciences. Exclusive of General Education units, the Biological Systems Engineering major requires a minimum of 161 units (90 units in the lower division; 71 units in the upper division).

Biological Systems Engineering graduates take jobs in the biotechnology, food, and medical industries; work for state agencies; or pursue graduate study. Students can also use the program as a pathway to professional schools in medicine, veterinary medicine, dentistry, or business.

The Biological Systems Engineering program is accredited by the Engineering Accreditation Commission of ABET; see http://www.abet.org. Students are encouraged to adhere carefully to all prerequisite requirements. The instructor is authorized to drop students from a course for which stated prerequisites have not been completed.

Upper Division Requirements:

If your career objective is a professional degree in the health sciences (e.g., medicine, veterinary medicine, or dentistry), you should consult with advisers from the appropriate school to plan for successful admission and to ensure that you take specific courses that may be required and that you have the necessary experience. The upper division requirements are listed following the areas of specialization:

• Biotechnology Engineering
• Agricultural and Natural Resources Engineering
• Food Engineering

Areas of Specialization

Biotechnology Engineering: Biotechnology involves the handling and manipulation of living organisms or their components to produce useful products. Students specializing in biotechnical engineering integrate analysis and design with applied biology to solve problems in renewable energy production, large-scale biotechnical production, control of biological systems, and bio-based materials production.

Students may focus on the mechanisms and processes for the sustainable production and use of energy from renewable biological sources. Students may also focus on the challenges in scaling up laboratory developments to industrial production, including production, packaging, and application of biocatalysts for plant pests and diseases; genetically altered plants; plant materials and food products; and microbial production of biological products, tissue culture, and bioremediation. Students may also focus on the development of biosensors to detect microorganisms and specific substances, useful in the development of products based on biotechnological processes and materials.

Biotechnical engineers work in the biotech industries on process design and operation, scale-up, and instrumentation and control.

Recommended biological science electives:

Biological Sciences 101, 102, 103
Microbiology 102
Molecular and Cellular Biology 120L
Plant Biology 113

Recommended engineering electives:

Biological Systems Engineering 161 Chemical Engineering 161B, 161C, 161L
Civil and Environmental Engineering 143, 148A, 149, 150, 153
Engineering 180
Mechanical Engineering 161, 162, 163

Food Engineering

Producing the food we eat every day constitutes the largest industrial sector of the U.S. economy, and this production involves the work of engineers in a wide variety of food industries, both at home and around the world. Students specializing in food engineering design food processes and operate equipment to produce food of high quality, safe, and nutritious food with minimal impact of these operations on the environment.

Students learn to apply engineering principles and concepts to harvesting, storage, process, package, and distribute food and related products. In addition to engineering principles, the food engineering specialization provides an understanding of the chemical, biochemical, microbiological, and physical aspects of food. Students study concepts of food refrigeration, freezing, thermal processing, drying, and other food operations.

Food engineers work as practicing engineers, scientists, and managers in the food industry.

Recommended biological science electives:
requirement for students in the Biological Systems by the College of Letters and Sciences cannot be

Master Undergraduate Adviser.

Biological Systems Engineering electives—Select a minimum of 4 units from all upper division Biological Systems Engineering courses not otherwise required, with the exception of Biological Systems Engineering courses 189-199.

Statistics 100C, 100D, 101C, 101D, 102, 104, 105 Engineering electives—Select a minimum of three units. All upper division courses offered by the College of Engineering may be taken as engineering electives with the exception of the following:

Civil and Environmental Engineering 123, Computer Science Engineering 188, Engineering 190, 191B, 199C, all courses numbered 190-197 and 199 (except Engineering 190, which may be taken for 2 units of engineering elective credit) …… 3

Biological science electives—All upper division courses in the College of Biological Sciences (with the exception of Biological Sciences 132, Evolution and Ecology 175, Exercise Science 102, 112, 115, 118 through 149L, Microbiology 100 and all courses numbered 190-199) may be used as biological science electives. The following courses may also be taken as biological science electives: Applied Biological Systems Technology 161; Animal Science 118, 143, 144, 146; Agricultural Management 102; Environmental Horticulture 101; Environmental Science and Policy and Management 120, 182, 185 (offered at UC Berkeley); Environmental Science and Policy 100, 110, 152; Environmental Toxicology 101, 112A, 131; Food Science and Technology 102A, 104L, 119, 120, 121, 128, 159; Infectious Diseases 141; Soil Science 100; Wildlife, Fish, and Conservation Biology 121. Students may choose other upper division courses with substantial biological content offered by the College of Agricultural and Environmental Sciences; consultation with a faculty adviser and approval by petition is required …… 3

Upper Division Composition Requirement* one course from the following: University Writing Program 101, 102B, 102E, 102F, 102G, 102A, 104A, 104E, 104F, 104T …… 4

Energy Minor Programs

There is an urgent need to develop and commercialize new technologies that are novel in the use of energy that have the potential to provide a sustainable and use of energy. The goal of these minors is to prepare students for careers that require training in energy science and technology and energy policy. Clean tech and green tech markets including energy are some of the most rapidly growing fields in new investment. Well-trained individuals in all related fields are needed to provide the level of expertise required to advance technology and policy and to satisfy state, national, and international objectives for greater energy sustainability. The minors are expected to accommodate persons of diverse background with educational interests in areas that may include engineering, science, policy, economics, planning, and management.

The Graduate Program in Biological Systems Engineering

Integral to the Graduate Program in Biological Systems Engineering is the focus on finding economical and environmentally sustainable solutions to many of the most important global issues of our time: the safety, security, and abundance of our food, detection of pathogens, development of bio-energy alternatives, control of insect-borne disease and damage, as well as the preservation of our land, air and water resources. We enjoy the strategic advantage of being located in California, the national leader in agricultural production and crop diversity, and a major center for biotechnology. With the unique status of belonging to both the College of Engineering and the College of Agricultural and Environmental Sciences, collaboration is the rule. We interact with colleagues in both engineering and the life sciences to create multidisciplinary approaches to teaching and research. Students benefit from this dynamic environment that combines the strengths of nationally ranked engineering, agricultural and environmental programs.

Financial support is available in the form of research assistantships, teaching assistantships, fellowships and financial aid.

Research Highlights:

- Bioenvironmental engineering
- Renewable energy
- Industrial biotechnology
- Food safety
- Biosensors
- Bioprocess engineering
- Bioinstrumentation
- Ergonomics, health and safety
- Aquacultural engineering
- Ecological systems engineering
- Food engineering
- Forest and fiber engineering
- Postharvest engineering
- Soil and water engineering
- Machine systems and precision agriculture

Research Facilities and Partnerships:

- Agricultural Ergonomics Research Center
- GIS Visualization Lab
- Energy Institute
- Bodega Marine Lab
- Western Center for Agricultural Equipment
- California Biomass Collaborative

Complete information is available on the departmental website.

Courses in Engineering: Biological Systems (EBS)

Lower Division

1. Foundations of Biological Systems Engineering (4)

Lecture—2 hours; laboratory—3 hours; project—3 hours. Restricted to students in Biological Systems Engineering. Introduction to engineering and the engineering design process. The program is offered for students who have completed the required prerequisite courses.

2. Introduction to Biological Systems Engineering (4)

Lecture—2 hours; laboratory—3 hours; project—3 hours. Required courses for students in the Biological Systems Engineering program. A grade of C- or better is required in this class.

Master Undergraduate Adviser. M. Delwiche

Quarter Offered: Fall, Winter, Spring, Summer

Pre-Fall 2011 General Education (GE): AH—Art and Humanities; SS—Social Sciences; WE—World Cultures

Fall 2011 and on Revised General Education (GE): AH—Art and Humanities; SS—Social Sciences; WE—World Cultures
75. Properties of Materials in Biological Systems (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: Biological Sciences 1A; grade of C- or better in Physics 9B, Physics 9C, or PHYS 90C (may be taken concurrently). Properties of typical biological materials; composition and structure with emphasis on the effects of physical and biochemical properties on design of engineered systems of biological materials with typical engineering materials. GE credit: ScienEng | QL, SE, SL, VL, WE.—II. (I.) Jenkins, Piedra-
hile.

224 Engineering: Biological and Agricultural

90C. Research Group Conference in Biological Systems Engineering (1)
Discussion—1 hour. Prerequisite: lower division standing in Biological Systems Engineering or Food Engineering; consent of instructor. Research group conference. May be repeated for credit. (P/NP grading only.) GE credit: SE.—I. (I.) Rosa

92. Internship in Biological Systems Engineering (1-5)
Internship. Prerequisite: lower division standing; project approval prior to period of internship. Supervised work experience in biological systems engineering. May be repeated for credit. (P/NP grading only.) GE credit: SE.

98. Directed Group Study (1-5)
Preparation of well-defined project. Group study of selected topics; restricted to lower division students. (P/NP grading only.) GE credit: SE.

99. Special Study for Lower Division Students (1-5)
(P/NP grading only.) GE credit: SE.

Upper Division

103. Fluid Mechanics Fundamentals (4)
Lecture—4 hours. Prerequisite: Physics 9B. Fluid mechanics axioms, fluid statics, kinematics, velocity fields for one-dimensional incompressible flow and boundary layers, turbulent flow time averaging, potential flow, dimensional analysis, and macroscopic and microscopic laws. Use of range of practical problems. (Same course as Hydrologic Science 103N.) GE credit: ScienEng | QL, SE, SL, VL.—II. (II.) Wallender

114. Principles of Field Machinery Design (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: Engineering 102, 104. Traction and stability of vehicles with wheels or tracks. Operating principles of field machines and basic mechanisms used in their design. GE credit: ScienEng | QL, SE, SL, VL.—III. Rosa

115. Forest Engineering (3)
Lecture—3 hours. Prerequisite: Engineering 104, Biological Sciences 1C. Applications of engineering principles to problems in forestry including those in forest regeneration, harvesting, residue utilization, and transportation. GE credit: ScienEng | QL, SE, SL, VL.—III. Harstoung

120. Power Systems Design (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: Engineering 17, 102, 103, 105. Design and performance of power devices and systems including combustion engines, electric generators and motors, fluid power systems, fuels, and emerging Technologies. Selection of units for power matching and optimum performance. GE credit: ScienEng | QL, SE, SL, VL, WE.—I. (I.) Rosa

125. Fluid Flow in Biological Systems (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 103; Engineering 105; Biological Sciences 2A, 2B and 2C. Fundamentals of heat transfer with application to biological systems. Theory and transient heat transfer analysis and simulation of heat conduction, convection and radiation. Heat transfer operations. GE credit: ScienEng | QL, SE, SL, VL, WE.—III. (III.) Fan, Nitiin

127. Mass Transfer and Kinetics in Biological Systems (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 125. Fundamentals of mass transfer and kinetics in biological systems. Molecular diffusion and convection. Thermodynamics and biochemical reactions. Applications to biological systems. GE credit: ScienEng | QL, SE, SL, VL, WE.—I. (I.) VanderGheynst, Zicari

128. Biomechanics and Ergonomics (4)
Lecture—3 hours; laboratory—4 hours. Prerequisites: Statistics 100B, Engineering 102; Anatomical, physiological, and biomechanical bases of physical ergonomics. Human motor capabilities, body mechanics, kinesiology, and anthropometry. Applications and use of biomechanics. GE credit: ScienEng | QL, SE, SL, VL, WE.—II. (II.) Jeoh, Slaughter

130. Modeling of Dynamic Processes in Biological Systems (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 75; Engineering 6 or Computer Science & Engineering 30; grade of C- or better in Mathematics 228 required for enrollment eligibility. Techniques for modeling processes through mass and energy balance, rate equations, and state equations. Computer problem solution of models. Example models include package design, evaporation, respiration, root water uptake, and plant growth. GE credit: ScienEng | QL, SE, SL, VL, WE.—I. (I.) K. McCarthy, Upadhyaya

135. Bioenvironmental Engineering (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: courses 125, 130B. Biological responses to environmental conditions. Principles and engineering design of environmental control systems. Overview of environmental pollution problems and legal restrictions for biological systems; introduction of environmental quality assessment techniques, environmental monitoring and control. GE credit: ScienEng | QL, SE, SL, VL, WE.—I. (I.) Jenkins, Zhang

144. Groundwater Hydrology (4)

145. Irrigation and Drainage Systems (4)
Lecture—4 hours. Prerequisite: course 103 or Hydrologic Science 103N. Engineering and scientific principles applied to design and operation of sprinkler and micro irrigation systems and drainage systems within economic, biological, and environmental constraints. Interaction between irrigation and drainage. GE credit: ScienEng | QL, SE, SL, VL, WE.—II. (II.) Grismer, Wallender

147. Runoff, Erosion and Water Quality Management in the Tahoe Basin (3)
Lecture/labatory—30 hours; fieldwork—15 hours; discussion—10 hours. Prerequisite: Physics 78 or 98, Mathematics 16C or 21C, Civil and Environmental Engineering 142 or Hydrologic Science 141 or Environmental and Resource Sciences 100. Four days in the Tahoe City. Practical hydrology and runoff water quality management from Tahoe Basin slopes. Development of hillside design and selection models and selecting designs and applications from physical science perspectives including precipitation-runoff relationships, sediment transport, and detention ponds. (Same course as Hydrologic Science 147C.) GE credit: ScienEng | QL, SE, SL—Grismer

151. Kinetics and Bioreactor Design (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 127. Provides the basic principles of reactor design for biosprocesses and applications. Special emphasizes the following topics: 1) kinetics and reactor engineering principles; 2) bio-reaction kinetics and 3) bioreactor design. GE credit: ScienEng | QL, SE, SL, VL, WE.—II. (II.) Fan, Zicari

165. Bioinstrumentation and Control (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: Engineering 100. Instrumentation and control for biological production systems. Measurement system concepts, instrumentation and data acquisition and control. GE credit: ScienEng | QL, SE, SL, VL, WE.—II. (II.) Fan, Delves, Slaughter

170A. Engineering Design and Professional Responsibilities (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: course 1, Engineering 102, 104. Engineering design including professional responsibilities. Emphasis on project selection, steering processes, specifications, human factors, biological materials, safety systems, and professionalism. Detailed design project will be assigned for courses 170B and 170BL. GE credit: ScienEng | QL, SE, SL, VL, WE.—I. (I.) Giles, Zhang

170B. Engineering Projects: Design (2)
Discussion—2 hours. Prerequisite: course 170A; course 170B required concurrently. Individual or group projects involving the design of devices, structures, or systems to solve specific engineering problems in biological systems. GE credit: ScienEng | QL, SE, SL, VL, WE.—II. (II.) Giles, Zhang

170BL. Engineering Projects: Design Laboratory (1)
Laboratory—3 hours. Prerequisite: course 170B required concurrently. Individual or group projects involving the design of devices, structures, or systems to solve specific engineering problems in biological systems. GE credit: ScienEng | QL, SE, SL, VL, WE.—II. (II.) Giles, Zhang

170C. Engineering Projects: Design Evaluation (1)
Discussion—1 hour. Prerequisite: course 170B; required to enroll in course 170C concurrently. Individual or group projects involving the fabrication, assembly and testing of components, devices, structures, or systems designed to solve specific engineering problems in biological systems. Project for study previously selected by student and instructor. GE credit: ScienEng | QL, SE, SL, VL, WE.—II. (II.)

175. Rhythm of Biological Materials (3)
Lecture—3 hours. Prerequisite: course 103 or Engineering 103N. Fluid and solid rheology, viscoelastic behavior of foods and other biological materials, and application of rheological properties to food and biological systems (i.e., pipeline design, extrusion, mixing, coating). GE credit: ScienEng | QL, SE, SL, VL, WE.—II. (II.) McCarthy

189A. Special Topics in Biological Systems Engineering (1-5)
190C. Research Group Conference in Biological Systems Engineering (I)
Discussion—2 hours. Prerequisite: upper division standing in Biological Systems Engineering or Food Engineering; consent of instructor. Research group conference. May be repeated for credit. (P/NP grading only.) GE credit: SE.—I, II, III. (I, II, III.)

192. Internship in Biological Systems Engineering (1-5)
Internship. Prerequisite: upper division standing; approval of project prior to period of internship. Supervised work experience in biological systems engineering; credit for (P/NP grading only.) GE credit: SE.

197T. Tutoring in Biological Systems Engineering (1-5)
Tutitorial—3-15 hours. Prerequisite: upper division standing. Tutoring individual students, leading small voluntary discussion groups, or assisting the instructing in laboratories affiliated with one of the department’s regular courses. May be repeated for credit if topic differs. (P/NP grading only.) GE credit: SE.

198. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only.) GE credit: SE.

199. Special Study for Advanced Undergraduates (1-5)
(P/NP grading only) GE credit: SE.

Graduate

200. Research Methods in Biological Systems Engineering (2)
Lecture—2 hours. Prerequisite: graduate standing. Planning, execution and reporting of research projects. Literature review techniques and proposal preparation. Reading and reporting papers. Uncertainty analysis in experiments and computations. Graphic analysis. Oral and written presentation of research results, manuscript preparation, submission and review.—I. Zhang, Giles

205. Continuum Mechanics of Natural Systems (4)
Lecture/discussion—4 hours. Prerequisite: Mathematics 21D and 228, Physics 9B. Continuum mechanics of static and dynamic air, water, earth and biological systems using hydraulic, heat and electrical conductivity; diffusivity; dispersion; strain; stress; deformation gradient; velocity gradient; stretch and spin tensors. (Same course as Hydrologic Science 205.)—III. Wallender

215. Soil-Machine Relations in Tillage and Traction (3)
Lecture—3 hours. Prerequisite: course 114. Mechanics of interactions between agricultural soils and tillage and traction devices; determination of relevant physical properties of soil; analyses of stress and strains in soil due to machine-applied loads; experimental methods for synthesizing characteristics of overall systems. Offered in alternate years.—(II.) Zhang, Giles

216. Energy Systems (4)
Lecture/discussion—4 hours. Prerequisite: course 105. Theory and application of energy systems. System analysis including input/output analysis, energy balances, thermodynamic availability, economics, environmental considerations. Energy conversion systems and devices including cogeneration, heat pump, fuel cell, hydroelectric, wind, photovoltaic, and biomass conversion processes. Offered in alternate years.—(II.) Upadhyaya

218. Solar Thermal Engineering (4)

220. Pilot Plant Operations in Aquacultural Engineering (3)
Lecture—1 hour, laboratory—6 hours. Prerequisite: Civil Engineering 243A, 243B or Applied Biological Systems Technology 161, 163. Topics in water treatment as they apply to aquaculture operations. Laboratory study of unit operations in aquaculture. Offered in alternate years.—(I.) Padghare

228. Occupational Musculoskeletal Disorders (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: graduate standing and consent of instructor. Epidemiology and etiology of occupational musculoskeletal disorders (MSDs) with focus on low back and upper extremities disorders; anatomical and biomechanical functions of lower back and upper extremities, MSDs risk factors assessment and control; research opportunities related to MSDs.—III. Fathallah

231. Mass Transfer in Food and Biological Systems (3)
Lecture/discussion—3 hours. Prerequisite: graduate standing. Application of mass transfer principles to food and biological systems. Study of mass transfer affecting food quality and shelf life. Analysis of mass transfer in polymer films used for coating and packaging foods and controlling release of biologically active compounds. Offered in alternate years.—(II.) Krochta, J.

233. Analysis of Processing Operations: Drying and Evaporation (3)
Lecture—3 hours. Prerequisite: course in food or process engineering, familiarity with FORTRAN. Diffusion theory in drying of solids. Analysis of fixed-bed and continuous countercurrent evaporator models. Computer applications in food and fermentation systems. Offered in alternate years.—(II.)

235. Advanced Analysis of Unit Operations in Food and Biological Engineering (3)
Lecture—3 hours. Prerequisite: course 132. Analysis and design of food processing operations. Steady-state and dynamic heat and mass transfer models for operations involving phase change such as freezing and drying. Separation processes including membrane applications in food and fermentation systems.—(III.) Singh

237. Thermal Process Design (3)
Lecture—2 hours; discussion—1 hour. Prerequisite: course in heat transfer. Heat transfer and biological basis for design of heat sterilization of foods and other biological systems; design of sterilizers in or bulk. Offered in alternate years.—III.

239. Magnetic Resonance Imaging in Biological Systems (3)
Lecture—3 hours. Prerequisite: graduate standing. Theory and applications of magnetic resonance imaging to biological systems. Classical Bloch model of magnetic resonance. Applications to be studied are drying of fruits, flow of food suspensions, diffusion of moisture, and structure of foods. Offered in alternate years.—I. M. McCarthy

240. Infiltration and Drainage (3)
Lecture—3 hours. Prerequisite: Soil Science 107, Engineering 103. Aspects of multiphase flow in soils and their effect on and immiscible displacement problems. Gas phase transport and entrainment during infiltration, and oil-water-gas displacement will be considered. Offered in alternate years.—II. G. Wallender

241. Sprinkle and Trickle Irrigation Systems (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: course 145/Hydrologic Science 115. Computerized design of irrigation systems. Consideration of emitter mechanics, distribution functions and water yield functions. Offered in alternate years.—III.

242. Hydraulics of Surface Irrigation (3)
Lecture—3 hours. Prerequisite: course 145, Hydrologic Science 115. Mathematical models of surface irrigation systems for predicting the distribution of water flowing onto a field. Quantity of runoff and distribution of infiltrated water over field length as a function of slope, roughness, infiltration and inflow rates. Offered in alternate years.—(III.) Wallender

243. Water Resource Planning and Management (3)
Lecture—3 hours. Prerequisite: Hydrologic Science 141 or the equivalent. Applications of deterministic and stochastic mathematical programming techniques to water resource planning, analysis, design, and management. Water allocation, capture, expansion, and reservoir operation. Concentric use of surface water and groundwater. Water quality management. Irrigation planning and operation models. (Same course as Agricultural Science 243.) Offered in alternate years.—(I.)

245. Waste Management for Biological Production Systems (3)
Lecture—3 hours. Prerequisite: graduate standing or consent of instructor. Characterization of solid and liquid wastes from agricultural and food production systems. Study of methods and system design for handling, treatment, and disposal/utilization of these materials.—II. Delwiche

260. Analog Instrumentation (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: Engineering 100. Instrument characteristics: generalized instrument models, calibration, and frequency response. Signal conditioning: operational amplifier circuits, filtering, and noise. Transducers: motion, force, pressure, flow, temperature, and photodetector. Offered in alternate years.—II. Delwiche

262. Computer Interfacing and Control (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: Engineering 100, course 163, Procedural and object-oriented programming in C++, analog and digital signal conversion, data acquisition and computer control. Offered in alternate years.—(III.) Delwiche

265. Design and Analysis of Engineering Experiments (5)
Lecture—3 hours; lecture/discussion—2 hours. Prerequisite: Statistics 100, Agricultural Systems and Environment 120, or an introductory course in statistics. Simple linear, multiple, and polynomial regression, correlation, residuals, model selection, one-way ANOVA, fixed and random effect models, sample size, multiple comparison and block repeated measures, and Latin square designs, factorial experiments, nested design and subampling, split-plot design, statistical software packages.—(III.) Upadhyaya, Plant

267. Renewable Bioprocessing (3)
Lecture—3 hours. Prerequisite: course 160, Biological Sciences 101 or Microbiology 102. Applications of biotechnology and bioprocess engineering toward the use of agricultural and renewable feedstocks for the production of biochemicals. Design and modeling of microbial- and plant-based production systems including associated fermentation, extraction, and purification operations. Offered in alternate years.—I. VanderGheynst

268. Polysaccharides Surface Interactions (3)
Lecture—3 hours. Prerequisite: graduate students in science or engineering. Study of fundamental surface science theories as applied to physical and chemical interactions of carbohydrates and polysaccharides. Offered in alternate years.—I. Zidan

270. Modelling and Analysis of Biological and Physical Systems (3)
Lecture—3 hours. Prerequisite: familiarity with a programming language. Mathematical modeling of biological systems: model development; analytical and numerical solutions. Case studies from various specializations within biological and agricultural engineering. Offered in alternate years.—III. Upadhyaya
Engineering: Biomedical

[Faculty]

Kryiacos Anthanasiou, Ph.D., Distinguished Professor (Biomedical Engineering; Medicine: Orthopaedic Surgery)
Sharon Aviran, Ph.D., Assistant Professor (Biomedical Engineering; and Medicine: Radiology)
Craig Benham, Ph.D., Professor (Biomedical Engineering; Mathematics; and Genome Center: Bioinformatics)
John Boone, Ph.D., Professor (Biomedical Engineering; and Medicine: Radiology)
Ye Chen-Izu, Ph.D., Associate Professor (Biomedical Engineering; Medicine: Pharmacology; and Internal Medicine)
Simon Cherry, Ph.D., Distinguished Professor (Biomedical Engineering; and Medicine: Radiology)
FitzRoy Curry, Ph.D., Professor (Biomedical Engineering; and Medicine: Physiology and Membrane Biology)
Yang Duan, Ph.D., Professor (Biomedical Engineering; and Medicine: Orthopaedic Surgery)
Mark Facciotti, Ph.D., Assistant Professor (Biomedical Engineering; and Genome Center)
Katherine Ferrara, Ph.D., Distinguished Professor (Biomedical Engineering; and Medicine: Orthopaedic Surgery)
David Fyhrie, Ph.D., Professor (Biomedical Engineering; and Medicine: Orthopaedic Surgery)
Volkan Heinrich, Ph.D., Associate Professor (Biomedical Engineering; and Medicine: Orthopaedic Surgery)
Tanya Kuhl, Ph.D., Professor (Biomedical Engineering; and Medicine: Orthopaedic Surgery)
J. Kent Leach, Ph.D., Associate Professor (Biomedical Engineering; and Medicine: Orthopaedic Surgery)
Laura Marcu, Ph.D., Professor (Biomedical Engineering; and Medicine: Neurological Surgery)
Tingrui Pan, Ph.D., Associate Professor (Biomedical Engineering; and Medicine: Orthopaedic Surgery)
Atul Parikh, Ph.D., Professor (Biomedical Engineering; and Medicine: Orthopaedic Surgery)
Jinyi Qi, Ph.D., Professor (Biomedical Engineering; and Medicine: Orthopaedic Surgery)
Vivek Raman, Ph.D., Assistant Professor (Biomedical Engineering; and Medicine: Radiation Oncology)
Cheemeng Tan, Ph.D., Assistant Professor (Biomedical Engineering; and Medicine: Orthopaedic Surgery)
Sasichiro Yamada, Ph.D., Associate Professor (Biomedical Engineering; and Medicine: Radiation Oncology)
Yahiya Yakoboyashi, Ph.D., Associate Professor (Biomedical Engineering; and Medicine: Radiation Oncology)

Emeriti Faculty

Maury Hull, Ph.D., Emeritus Professor (Biomedical Engineering; and Engineering and Aerospace Engineering)

The Biomedical Engineering Undergraduate Major

The Biomedical Engineering program is accredited by the Engineering Accreditation Commission of ABET; see http://www.abet.org.

Biomedical engineering is an interdisciplinary area of study that integrates knowledge from engineering with the biomedical sciences. It is a very diverse field, with biomedical engineers working in systems ranging from medical imaging to the design of artificial organs. Some major research advances in biomedical engineering include the left ventricular assist device (LVAD), artificial joints, kidney dialysis, bioengineered skin, angioplasty, computed tomography (CT), and flexible endoscopes. Students who choose biomedical engineering are interested in being of service to human health but do not routinely interact directly with patients.

The mission of the B.S. degree program of the Department of Biomedical Engineering is to combine exceptional teaching with state-of-the-art research for the advancement of technologies and computational techniques that meet medical and societal challenges. As a biomedical engineer, you can choose employment opportunities in industry, hospitals, academic research institutes, teaching, national laboratories, or government regulatory agencies.

The educational objectives of our program are to equip our graduates with skills necessary for success in careers related to biomedical engineering or another area of the student’s choosing, through employment in industry or government, or through pursuit of graduate or professional degrees and contribute effectively to society through engineering practice, research and development, education, or in governmental, regulatory or legal aspects.

The biomedical engineering curriculum has been designed to provide a solid foundation in mathematics, life and physical sciences, and engineering, and to provide sufficient flexibility in the upper division requirements to encourage students to explore specializations within the field. Our instructional program is designed to impart knowledge of contemporary issues at the forefront of biomedical engineering research. Exclusive of General Education units, the minimum number of units required for the Biomedical Engineering degree is 152.

For information about graduate degree options, see Biomedical Engineering (A Graduate Group), on page 183.

Lower Division Required Courses

Students are encouraged to adhere carefully to all prerequisite requirements. The instructor is authorized to drop students from a course for which stated prerequisites have not been completed.

UNITS

Mathematics 21A-21B-21C-21D

16

Mathematics 22A-22B

6

Physics 9A-9B-9C

15

Chemistry 2A-2B-2C

15

Chemistry 8A or 118A; Chemistry 8B or 118B

6

Engineering 6-17-17

6

University Writing Program 1Y, or 1V, or English 3, or Comparative Literature 1, 2, 3, or 4, or Native American Studies

4

Biological Sciences 2A

5

Biomedical Engineering 1

6

Upper Division Required Courses

Engineering 100 or Electrical and Computer Engineering 100

3

Biomedical Engineering 116 or Neurobiology Physiology Behavior 101

5

Biomedical Engineering 105, 108, 109, 110A, 110B, 110C, 110D

30

Science electives

7

To be chosen according to specialization.

Biomedical Engineering 102, 116, 116I, 116F, 116T

4

Any graded upper division Biomedical Engineering course (except Biomedical Engineering 116, 116I, 116F, 116T)

4

units of Biomedical Engineering 192 or 199 with the approval of the Biomedical Engineering Undergraduate Committee

Engineering electives

24

Any graded upper division Biomedical Engineering course (except Biomedical Engineering 102, 116, 116I, 116F, 116T)

units of Biomedical Engineering 192 or 199 with the approval of the Biomedical Engineering Undergraduate Committee

No more than four units allowed from lower division coursework.

Upper Division Composition Requirement

0.4

One course from the following (a grade of C or better is required): University Writing Program 101, 102B, 102E, 104A, 104E, 104F, 104I, 104T, or passing the Upper Division Composition Exam offered by the College of Letters & Science.

Quarter Offered: F-Fall; W-Winter, S-Spring, Y-Summer, 2011-2016 offering in parentheses.

Pre-Fall 2011 General Education (GE): AAH=Arts and Humanities; AC=Arts and Communication; ACGH=American Cultures; DD=Domestic Diversity; OR=Oral Skills; OL=Oral Literacy; OL@=Oral Literacy and Composition; P=Preparation; QQ=Quantitative; SL=Scientific Literacy; VL=Visual Literacy; WC=World Cultures; WR=Writing Experience

Fall 2011 and on Revised General Education (GE): AH=Arts and Humanities; SE=Science and Engineering; SS=Social Sciences;

ACGH=American Cultures; DD=Domestic Diversity; OL=Oral Skills; OL@=Oral Literacy; SL=Scientific Literacy; VL=Visual Literacy; WC=World Cultures; WR=Writing Experience
Biomedical Engineering Minor

The minor in Biomedical Engineering allows students from any engineering discipline to build upon their existing core strengths and add expertise in biomedical applications. This deeper technical training makes students more attractive to employers in the medical device industry and would also position students for graduate training in health related applications of engineering. The minor requires two life sciences courses not typically required for engineering students, one at the cellular level (Biomedical Engineering 102) and the other at the physiological level (Neurobiology, Physiology, and Behavior 101 or Biomedical Engineering 116). The remaining 12 units are to be selected in consultation with an advisor from the list of upper division Biomedical Engineering courses. Students will be advised to select additional courses to complement their existing curricula. Examples of relevant coursework for different majors are provided as a reference. These listings classify the upper division Biomedical Engineering courses into categories and provide a suggested subset of coursework for the majors most likely to have students interested in health-related applications.

Biomedical Engineering Minor Requirements:

All courses must be taken for a letter grade. No grade lower than a C- for coursework completed in the minor.

Biomedical Engineering Electives:

- 2 units from Electrical and Computer Engineering 100 or 161L, 162, 163, 167, 173, 189A, 189C
- 2 units from Chemistry 118AB
- 2 units from Biomedical Engineering 117, 118, 126, 140, 141, 142, 143, 151, 152, 161A, 161L, 162, 163, 167, 173, 189A, 189C

Upper Division

20. Fundamentals of Bioengineering (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: C- or better in Chemistry 2B and Mathematics 21D; Physics 9B. Basic principles of control theory applied to biomedical engineering: Biomedical systems and momentum conservation equations applied to solve problems in the biological and medical sciences. Only two units of credit may be repeated for credit when topic differs. GE credit: SciEng | SE.

89A. Topics in Biomedical Engineering (1-5)
Prerequisite: consent of instructor. Restricted to lower division students. Topics in Biomedical Engineering. (A) Cellular and Molecular Engineering. May be repeated for credit when topic differs. GE credit: SciEng | SE.

89B. Topics in Biomedical Engineering (1-5)
Prerequisite: consent of instructor. Restricted to lower division students. Topics in Biomedical Engineering. (B) Biomedical Imaging. May be repeated for credit when topic differs. GE credit: SciEng | SE.

89C. Topics in Biomedical Engineering (1-5)
Prerequisite: consent of instructor. Restricted to lower division students. Topics in Biomedical Engineering. (C) Biomedical Engineering. May be repeated for credit when topic differs. GE credit: SciEng | SE.

99. Special Study for Undergraduates (1-5)
Prerequisite: consent of instructor. Restricted to lower division students. Topics in Biomedical Engineering. (D) Special Study for Undergraduates. May be repeated for credit when topic differs. GE credit: SciEng | SE.

Upper Division

102. Quantitative Cell Biology (4)
Lecture/discussion—4 hours. Prerequisite: Biological Sciences 2A; Chemistry 118A or 118AB. Cell biology for bioengineers. Emphasis on physical concepts underlying cellular processes including protein trafficking, cell motility, cell division and cell adhesion. Current topics include cell biology, cancer, cancer and stem cells will be discussed. Only two units of credit for students who have completed Biological Sciences 104 or Molecular and Cellular Biology 143. GE credit: SciEng | QL, SE, VL—II. (II) Yamada

105. Probability and Statistics for Biomedical Engineers (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: C- or better in Mathematics 21D; Engineering 6 (may be concurrent). Concepts of probability, random variables and processes, and statistical analysis with applications to engineering problems in biomedical sciences. Includes discrete and continuous random variables, probability distributions and models, hypothesis testing, statistical inference and MATLAB applications. Emphasis on BME applications. GE credit: SciEng | QL, SE, VL—II. (II) Saiah

106. Biotransport Phenomena (4)
Lecture—4 hours. Prerequisite: C- or better in course 20; course 116 or Neurobiology, Physiology, and Behavior 101; Physics 9B, Mathematics 228. Open to Biomedical Engineering majors only. Topics of momentum and mass transfer with applications to biomedical systems; emphasis on basic fluid transport related to blood flow, mass transfer across cell membranes, and the design and analysis of artificial human organs. GE credit: SciEng | QL, SE, SI, VL—II. (II) Leach

107. Mathematical Methods for Biological Systems (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: C- or better in Engineering 6; course 20; Mathematics 228. Restricted to Biomedical Engineering majors only. Mathematical and computational modeling to solve biomedical problems. Includes stochastic processes and Monte Carlo simulations, and partial differential equations. Introduced to numerical techniques in MATLAB. GE credit: SciEng | QL, SE, VL—IV. (IV) VanWart

108. Biomedical Signals and Control (4)
Lecture—4 hours. Prerequisite: Engineering 6, 17; grade of C- or better in Mathematics 228. Restricted to Biomedical Engineering majors only. Systems and control theory applied to biomedical engineering problems. Time-domain and frequency-domain analysis of signals and systems, convolution, Laplace and Fourier transforms, transfer function, dynamic systems, control system design, control theory, stability, and noise filtering. GE credit: SciEng | QL, SE, VL—IV. (IV) Mlinar

Quarter Offered:

Fall: Fall, Winter, III-Spring, IV-Summer; 2015-2016 offering in parentheses.

Pre-Fall 2011 General Education (GE): AHS—Arts and Humanities; SciEng—Science and Engineering; SECSci—Social Sciences; Div—Dominant Diversity; Wrt—Writing Experience

Fall 2011 and on Revised General Education (GE): AA—Arts and Humanities; SE—Science and Engineering; SS—Social Sciences.

ACGH—American Cultures; DD—Dominant Diversity; OL—Oral Skills; QL—Quantitative; SL—Scientific; VL—Visual; WC—World Cultures; WE—Writing Experience
117. Analysis of Molecular and Cellular Networks (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: grade of C- or better in Biological Sciences 2A and Mathematics 22A. Restricted to upper division students. Introduction to standard mathematical notation. Mathematical and computational methods for analysis of such networks. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | QL, SE, SL, VL, WE.—III. (III.) Silva

118. Microelectromechanical Systems (4)
Lecture—2 hours; laboratory—3 hours; discussion—1 hour. Prerequisite: Exercise Science 103 and/or Engineering 45 and/or consent of instructor. Structural and mechanical properties of biomedical tissues, including bone, cartilage, ligaments, tendons, nerves, and skeletal muscle. (Same course as Exercise Science 147.) GE credit: SciEng | QL, SE.—II. (II.) Savageau

119. Protein Engineering (4)

120. Principles and Practices of Biomedical Imaging (4)
Lecture—4 hour. Prerequisite: Physics 9B; Engineering 6; Engineering 35. Structural and mechanical properties of tissue, cells, and organs. Imaging techniques for biological tissue, as well as for biomedical imaging. GE credit: SciEng | QL, SE.—III. (III.) Facciotti

121. Cell and Tissue Mechanics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Physics 9B; Mathematics 21C or Mathematics 21OC. Basic concepts and techniques of biomechanical analysis. Geometric properties of discrete and continuous systems. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | QL, SE, VL.—II. (II.) Parikh, Simon

122. Bioelectricity, Biomechanics, and Signaling Systems (4)
Lecture—3 hours; lecture/discussion—1 hour. Prerequisite: C- or better in Mathematics 22B; course 116; or Neuroscience, Biology, and Behavior 123. Fundamentals of bioelectricity in single cells, the extracellular matrix, and individual molecules, as well as of their assemblies, in particular membranes. GE credit: SciEng | QL, SL, VL.—II. (II.) Heinrich

123. Bioelectricity, Biomechanics, and Signaling Systems (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Basic concepts and techniques in biomechanical analysis. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | QL, SL, VL.—II. (II.) Chen-Lzu

124. Biomedical Fluid Mechanics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Chemical Engineering 45 and/or consent of instructor. Basic concepts and techniques in biomechanical analysis. GE credit: SciEng | QL, SE

125. Molecular Control of Biosystems (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Biological Sciences 2A, Physics 9B and Mathematics 22B. Building block models of molecular interaction networks: how such networks can be analyzed to understand gene regulation and signal transduction networks at different levels of organization in health and disease. Topics include classic genetic systems, signal transduction, biological feedback systems, and drug discovery. GE credit: SciEng | QL, SE.—III. (III.) Saiz

161A. Biomedical Engineering (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Biological Sciences 2A; Chemistry 8B. Restricted to upper division standing. Introduction to basic concepts and techniques of biomolecular engineering such as recombinant DNA technology, protein engineering, and molecular diagnostics. Three units of credit taken only as course 161S. Offered in alternate years. GE credit: SciEng | QL, SE.—I. Yokobayashi

161B. Biomedical Engineering: Brief Course (1)
Lecture—1 hour. Prerequisite: Biological Sciences 2A; Chemistry 8B; course 161L (may be taken concurrently). Basic concepts and techniques in biomolecular analysis. GE credit: SciEng | QL, SE.— IV. Yokobayashi

162. Introduction to the Biophysics of Molecules and Cells (4)
Lecture—4 hours. Prerequisite: C- or better in Mathematics 22B and Physics 9C. Introduction to fundamental physical mechanisms governing structure and function of bio-macromolecules. Emphasis on a quantitative understanding of the nano- to microscale biophysical interactions of individual molecules, as well as of their assemblies, in particular membranes. GE credit: SciEng | QL, SE, SL.—II. (II.) Heinrich

163. Bioelectricity, Biomechanics, and Signaling Systems (4)
Lecture—3 hours; lecture/discussion—1 hour. Prerequisite: C- or better in Mathematics 22B; course 116 or Neurobiology, Physiology, and Behavior 123. Fundamentals of bioelectricity in single cells, the extracellular matrix, and individual molecules, as well as of their assemblies, in particular membranes. GE credit: SciEng | QL, SE, SL.—II. (II.) Heinrich

164. Biomedical Fluid Mechanics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Basic concepts and techniques in biomechanical analysis. GE credit: SciEng | QL, SE
bioreactor design, tissue design criteria and outcomes assessment. GE credit: SciEng | OL, SE, SL, WE.—II. (II.) Yamada
189A. Topics in Biomedical Engineering (1-5)
Prerequisite: consent of instructor. Topics in Biomedical Engineering. (A) Cellular and Molecular Engineering; (B) Biomedical Imaging; (C) Biomedical Engineering. May be repeated if topic differs. Offered irregularly. GE credit: SciEng | SE.
190A. Upper Division Seminar in Biomedical Engineering (1)
Seminar—1 hour. Prerequisite: upper division standing. In-depth examination of research topics in a small group setting. Question and answer session with faculty members. May be repeated for credit. (P/Th/NP grading only.) GE credit: SE.
192. Internship in Biomedical Engineering (1-12)
Internship—3.66 hours. Prerequisite: consent of instructor. Restricted to upper division majors. Supervised work experience in the field of biomedical engineering. May be repeated for credit. (P/Th/NP grading only.) GE credit: SE.—I, II, III, IV. (II, III, IV.)
198. Directed Group Study (1-5)
Prerequisite: consent of instructor. May be repeated up to a total of 18 units. (P/Th/NP grading only.) GE credit: SE.—I, II, III, IV. (II, III, IV.)
199. Special Study for Advanced Undergraduates (1-5)
Prerequisite: consent of instructor. Special study for advanced undergraduates. (P/Th/NP grading only.) GE credit: SE.

The Graduate Program in Biomedical Engineering
Doctoral and master’s degrees in Biomedical Engineering are offered through the interdisciplinary Graduate Group in Biomedical Engineering. Please see http://www.bme.ucsd.edu and Biomedical Engineering (AGC) and Biomedical Engineering (AGB) on page 193 of the catalog for a description of graduate education offerings, requirements, group faculty and research faci.

Graduate
202. Cell and Molecular Biology for Engineers (4)
Lecture/discussion—4 hours. Prerequisite: Biological Sciences 104 or Molecular and Cellular Biology 121. Preparation for research and critical review in the field of cell and molecular biology for biomedical engineering. Emphasis on understanding and engineering concepts intrinsic to specific topics including receptor ligand dynamics in cell signaling and function, cell motility, DNA replication, and RNA processing, cellular energetics and protein sorting. Modern topics in bioinformatics and proteomics.—II. (II.) Yamada
204. Physiology for Bioengineers (5)
Lecture—4 hours. Prerequisite: Biological Sciences 1A or equivalent; graduate standing or consent of instructor. Basic human physiology of the nervous, muscular, cardiovascular, respiratory, and renal systems and their interactions; emphasis on the physical and computational principles governing these systems, including control and transport processes, fluid dynamics, and electrochemistry.—I. (I.) Benham
209. Scientific Integrity for Biomedical Engineers (2)
Lecture—1 hour; discussion—1 hour. Scientific integrity and ethics for biomedical engineers, with emphasis on discussion on mentoring, authorship and peer review, use of humans and animals in biomedical research, conflict of interest, intellectual property, genetic technology and scientific record keeping. Biomedical Engineering majors only. (S/U grading only.)—III. (III.) Simon
210. Introduction to Biomaterials (4)
Lecture—4 hours. Prerequisite: Engineering 45 or consent of instructor. Mechanical and atomic properties of metallic, ceramic, and polymeric implant materials of metallic, ceramic, and polymeric implant materials; corrosion, degradation, and failure of implants; inflammation, wound and fracture healing, blood coagulation; properties of bones, joints, and blood vessels; biocompatibility of orthopaedic and cardiovascular materials.
211. Design of Polymeric Biomaterials and Biomedical Engineering (4)
Lecture—4 hours. Prerequisite: Engineering 45 or consent of instructor; upper division undergraduates or graduate students. Design, selection and application of polymeric biomaterials. Integration of the principles of polymer science, surface science, materials science and biology.—II. (II.) Revzin
212. Biomedical Heat and Mass Transport Processes (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Mechanical Engineering 165, Biological Systems Engineering 125, Chemical Engineering 153 or the equivalent. Application of principles of heat and mass transfer to biomedical problems with emphasis on heat exchange between the biomedical system and its environment, mass transfer across cell membranes and the design and analysis of artificial human organs. (Same course as Mechanical and Aeronautical Engineering 212.) Offered in alternate years.—III. (III.) Aldridge
213. Principles and Applications of Biological Sensors (4)
Lecture—4 hours. Prerequisite: Chemistry 2C. Biological sensors based on principles of electrochemical, optical and affinity detection. Methods for integration of sensing elements (e.g. enzymes) into biosensors and miniaturization of biosensors.—I. (I.) Revzin
214. Blood Cell Biomechanics (4)
Lecture—4 hours. Prerequisite: Engineering 102. Mechanical properties that govern blood flow in the microcirculation and vascular wall, and as well as in blood vessels. (Same course as Mechanical and Aeronautical Engineering 215.)—II. (II.) Barakat
215. Biomedical Fluid Mechanics and Transport Phenomena (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103 or Chemical Engineering 150B or Civil and Environmental Engineering 141. Application of fluid mechanics and transport to biomedical systems. Flow in normal physiological function and pathological conditions, including hemodynamics and pharmacokinetics, flow effects on cell transport processes in the arterial wall and in tumors, and tissue engineering. (Same course as Mechanical and Aeronautical Engineering 215.)—III. (III.) Barakat
216. Advanced Topics in Cellular Engineering (4)
Lecture—4 hours. Prerequisite: course 214 or consent of instructor. Research strategies and technologies used in the study of immune function and inflammation. Static and dynamic measure-ments of stress, strain, and molecular scale forces in blood and vascular tissue, as well as genetic approaches to the study of disease.—I. (I.) Simon
217. Mechanobiology in Health and Disease (4)
Lecture/discussion—4 hours. Prerequisite: course 100B or equivalent (Engineering 103); Biological Sciences 101 or equivalent; Neurology, Physiology, and Behavior 101 or equivalent. Principles by which biomechanical forces affect cell and tissue function to impact the development of disease. Emphasis on cardiovascular system: structure and function, biofluid mechanics and mechanotransduction, disease mechanisms and research methods. Cartilage, bone and other systems; current topics discussed.—III. (III.) Passeri
218. Microsystems (4)
Lecture/discussion—4 hours. Introduction to the theory of physical and chemical principles at the microscale. Scale effects, surface tension, microfluidic mechanics, micromechanical properties, inter-molecular interactions and micro tribology. (Same course as Electrical and Computer Engineering 244B.)—I. (I.) Islam, Kiehl, Pan
222. Cytoskeletal Mechanics (4)
Lecture/discussion—4 hours. Prerequisite: course 202. Current topics in cytoskeletal mechanics including the physical properties of actin filaments and motor proteins, molecular force sensor and generator, cyto-skeletal regulation of cell motility and adhesion. Offered in alternate years.—I. (I.) Yamada
223. Multibody Dynamics (4)
Lecture—4 hours. Prerequisite: Engineering 102. Coupled rigid body kinematics/dynamics; reference frames, vector differentiation; configuration and motion constraints; holonomicity; generalized speeds; partial velocities; mass, inertia tensor/theorems; angular momentum; generalized forces; comparing Newton/Euler, Lagrange’s, Kane’s methods; computer-aided equation derivation; orientation; Euler and spherical parameters. (Same course as Mechanical and Aeronautical Engineering 225.)—II. (II.) Eke, Hubbard
225. Spatial Kinematics and Robotics (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: C Language and course 222. Spatial kinematics, screw theory, spatial mechanisms analysis and synthesis, robot kinematics and dynamics, robot workspace, path planning, robot programming, realtime architecture and software interface. (Same course as Mechanical and Aeronautical Engineering 225.) Offered in alternate years.—II. Cheng
227. Research Techniques in Biomechanics (4)
Lecture—2 hours; laboratory—4 hours; term paper/discussion—1 hour. Prerequisite: consent of instructor, Mathematics 228; Exercise Science 115 recommended. Experimental techniques for biomechanical analysis of human movement are examined. Techniques evaluated include data acquisition and analysis by computer, force platform analysis, strength assessment, planar and three-dimensional videography, data reduction and smoothing, body segment parameter determination, electromyography, and biomechanical modeling. (Same course as Mechanical and Aeronautical Engineering 227/Exercise Science 227.)—II. (II.) Williams, Hawkins
228. Skeletal Muscle Mechanics: Form, Function, Adaptability (4)
Lecture—4 hours. Prerequisite: basic background in biology, physiology, and engineering; Engineering 35 and 45, Mathematical Optimization; Physiological, Physiology, and Behavior 101 recommended. Basic structure and function of skeletal muscle examined at the microscopic and macroscopic level. Muscle adaptation in response to aging, disease, injury, exercise, and disuse. Analytic models of muscle function are discussed. (Same course as Exercise Science 228.)—I. (I.) Hawkins
231. Musculo-Skeletal System Biomaterials, Mechanics, and Engineering (4)
Lecture—4 hours. Prerequisite: Engineering 102. Mechanics of skeletal muscle and mechanical models of muscle, solution of the inverse dynamics problem; theoretical and experimental methods of biomechanics, kinetic and kinematic analysis, computation of intersegmental load and muscle forces, applications to gait analysis and sports biomechanics. (Same course as Mechanical and Aeronautical Engineering 231.)—III. (III.) Hull
232. Skeletal Tissue Mechanics (3)
Lecture—3 hours; laboratory—1 hour. Prerequisite: Engineering 104B. Overview of the mechanical properties of skeletal muscle and the musculo-skeletal system, the relationship of these properties to anatomic and histologic structure, and the changes in these properties caused by aging and disuse. The tissues covered include bone, cartilage, bone and synovial fluid, ligament and tendon. (Same course as Mechanical and Aeronautical Engineering 232.)—III. (III.) Fyhrie
233. Soft Tissue Mechanics (4)
Lecture—4 hours. Presentation of structure and function of musculoskeletal soft tissues: cartilage, tendon, ligament, fascia, skin, and related care. Application of biomechanics and its interaction with engineering principles governing the mechanical behavior of these tissues: viscoelasticity, quasi-linear viscoelasticity, and bifurcation theory. Offered in alternate years. I. (II.) Carlson
239. Advanced Finite Elements and Optimization (4)
Lecture—4 hours. Prerequisite: Engineering 180 or Applied Science 115 or Mathematics 128B. Introduction to advanced finite elements and design optimization methods, with application to modeling of complex mechanical, aerospace and biomedical systems. Review of the art in finite elements in optimum design of components under realistic loading conditions and constraints. Offered in alternate years. (Same course as Mechanical Engineering 193). I. (II.) Sarigil-Kilic
240. Computational Methods in Nonlinear Mechanics (4)
Lecture—4 hours. Prerequisite: Applied Science Engineering 115 or Mathematics 128B or Engineering 180. Deformation of solids and the motion of fluids treated with state-of-the-art computational models. Numerical treatment of nonlinear dynamics; classification of coupled problems; applications of advanced mathematical, aerodynamic, and biological systems. Offered in alternate years. (Same course as Mechanical and Aeronautical Engineering 240). I. (II.) Sarigil-Kilic
241. Introduction to Magnetic Resonance Imaging (3)
Lecture—3 hours. Prerequisite: Physics 9D, Mathematics 228. Equipment, methods, medical applications of MRI. Lectures review basic, advanced pulse sequences, image reconstruction, display and technological handling of how these are applied clinically. Lecture complements a more technical course. (Course 246 can be taken concurrently). I. (II.) Buonocore
242. Introduction to Biomedical Imaging (4)
Lecture—4 hours. Prerequisite: Physics 9D and Electrical and Computer Engineering 106 or consent of instructor. Basic physics and engineering principles of image science. Emphasis on ionizing and nonionizing radiation production and interactions with the body and detectors. Major imaging systems: radiography, computed tomography, magnetic resonance, ultrasonography, and optical microscopy.
243. Radiation Detectors for Biomedical Applications (4)
Lecture/discussion—4 hours. Prerequisite: Physics 9D, Mathematics 210, 228. Radiation detectors and sensors used for biomedical applications. Emphasis on radiation interactions, detection, measurement, and use of radiation for imaging. Operating principles of gas, semiconductor, and scintillation detectors. I. (II.) Cherry
246. Magnetic Resonance Technology (3)
Lecture—3 hours. Prerequisite: Physics 9D, Mathematics 228. Course covers MRI technology at an advanced level with emphasis on mathematical descriptions and problem solving. Topics include spin dynamics, signal generation, image reconstruction, pulse sequences, RF, gradient coil design, signal to noise, image artifacts. I. (II.) Buonocore
247. Current Concepts in Magnetic Resonance Imaging I (3)
Lecture—3 hours. Prerequisite: course 241 or 246 or consent of instructor. Modern pulse sequences, pulse sequence options, and biomedical/industrial applications; velocity encoded phase imaging and angiography, proton spectroscopy, linear imaging, spiral imaging, computer simulation of MRI, fast spin echo, other topics. I. (II.) Buonocore
248. Current Concepts in Magnetic Resonance Imaging II (3)
Lecture—3 hours. Prerequisite: course 247 or consent of instructor. Continuation of lecture coverage of modern pulse sequences, pulse sequence options, and biomedical/industrial applications: Control of tissue contrast by magnetization refocusing and spoiling, RF pulse design, diffusion and perfusion imaging, image artifact reduction methods, other. I. (II.) Buonocore
250. Mathematical Methods of Biomedical Imaging (4)
Lecture—4 hours. Prerequisite: graduate standing or consent of instructor. Complex mathematical techniques with emphasis on imaging systems. Matrices and vector spaces, Fourier analysis, integral transforms, signal representations, probability and random processes.
251. Medical Image Analysis (4)
252. Mathematical Methods of Biomedical Imaging (4)
Lecture—4 hours. Prerequisite: course 105 or Statistics 120; course 105 or Electrical and Computer Engineering 150A. Analytic tomographic reconstruction from projections in 2D and 3D; model-based image reconstruction methods; maximum likelihood and Bayesian image reconstruction methods. I. (II.) Qi
255. Biophotonics in Medicine and the Life Sciences (3)
Lecture/discussion—3 hours. Prerequisite: Physics 108 and Biology 101-105; course 202 highly recommended; graduate standing; Introduction to the science and technology of biomedical optics and photonics, with an overview of applications in medicine and the life sciences. Emphasis on research supported by the NSF Center for Biophotonics at UC Davis Medical Center. (Same course as Applied Science 255 and Biophysics 255). I. (II.) Chuang, Mathews
262. Cell and Molecular Biophysics for Bioengineers (4)
Lecture—4 hours. Prerequisite: course 284 or equivalent; graduate standing; undergraduate students by consent of instructor. Introduction to fundamental mechanisms of biology of the cell, gene, and assembly of bio-macromolecules. Emphasis is on a quantitative understanding of the nano-to-microscale interactions between and within individual molecules, as well as between molecules and particular membranes. Not open for credit to students who have completed course 162. I. (II.) Mercuro, Wachtman-Hogiu
271. Gene Circuit Theory (4)
Lecture—4 hours. Prerequisite: course 270 or 202 concurrently or consent of instructor. Analysis, design, and construction of gene circuits. Modeling strategies, elements of design, and methods of the artions in design. Case studies involving prokaryotic gene circuits to illustrate natural selection, discovery of design principles, and construction of circuits for engineering objectives. I. (II.) Savageau
272. Tissue Engineering (3)
Lecture/discussion—3 hours. Prerequisite: Biological Sciences 104 or Molecular and Cellular Biology 125. A survey of methodology and techniques in tissue engineering. Introduction to stem cells and extracellular matrix scaffolding. Design and development of tissues for functional restoration of various organs damaged or lost due to cancer, disease and trauma. Introduction to molecular genetic signals, responding stem cells and extracellular matrix scaffolding. I. (II.) Reddi
273. Integrative Tissue Engineering and Technologies (4)
Lecture/discussion—4 hours. Prerequisite: courses 202 and 204 or similar; graduate standing; course 272 strongly encouraged, although not a prerequisite. Engineering principles to direct cell and tissue behavior and formation. Contents include controlled delivery of macromolecules, transport within and around biomaterials, examination of mechanical forces of engineered constructs, and current experimental techniques that introduce them. Theoretical applications of linear systems, ordinary and partial differential equations, and probability theory and random processes that describe biological systems and instruments that measure them. Students will be introduced to numerical solution techniques in MATLAB. I. (II.) Leach
281. Acquisition and Analysis of Biomedical Signals (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: Engineering 100, Statistics 130A. Basic concepts of digital signal recording and analysis; sampling; empirical modeling; Fourier analysis, random processes, spectral analysis, and correlation applied to biomedical signals. I. (II.) Heinrich
282. Biomedical Signals Processing (4)
Lecture—4 hours. Prerequisite: Electrical and Computer Engineering 150A, 150B. Characterization and analysis of continuous and discrete-time signals from linear systems. Examples drawn from physiological-illustrate the use of these mathematical transformations to model biological and bioengineered systems and instruments. Filter design and stochastic signal modeling. Genomic signal processing.
284. Mathematical Methods for Biomedical Engineers (4)
Lecture/discussion—4 hours. Prerequisite: Mathematics 228, Statistics 130A, or consent of instructor; upper division biomedical engineering majors, and graduate students in sciences and engineering; priority given to Biomedical Engineering graduate students. Theoretical applications of linear systems, ordinary and partial differential equations, and probability theory and random processes that describe biological systems and instruments that measure them. Students will be introduced to numerical solution techniques in MATLAB. I. (II.) Raychaudhuri
285. Computational Modeling in Biology and Immunology (4)
Lecture/discussion—4 hours. Prerequisite: graduate standing or consent of instructor. Essential computational modeling techniques in immunology. Emphasis on applications of Monte Carlo methods in studying immune recognition and response. Introduction to Brownian dynamics and Molecular Motors; examples of motion at the molecular level diffusion and interactions. I. (II.) Raychaudhuri
286. Nuclear Imaging in Medicine and Biology (4)
Lecture/discussion—4 hours. Prerequisite: course 243 or consent of instructor. Radioactive decay, interaction of radiation with matter, radionuclide production, radiation detection, digital autoradiography, gamma camera imaging, single photon emission computed tomography, positron emission tomography and applications of these techniques in biology and medicine. I. (II.) Chen
293. Concepts in Molecular Imaging (4)
Lecture—2 hours; lecture/discussion—2 hours; term paper. Prerequisite: Chemistry 2C, Mathematics 21C, Physics 9D, consent of instructor. Current techniques and tools for molecular imaging. Emphasis on learning to apply principles from the physical sciences to imaging problems in medicine and biology. I. (II.) Sclufkie

The Department of Chemical Engineering and Materials Science offers five undergraduate programs: Chemical Engineering, Biochemical Engineering, Chemical Engineering/Materials Science and Engineering, Electronic Materials Engineering, and Materials Science and Engineering. Mission Statement. To advance, through teaching and research programs, the frontiers of chemical engineering, bioengineering, and materials science and engineering; to educate students with a sense of professionalism and community; and to serve the public of California through outreach efforts. Honors Program. An Honors Program is available to qualified students in the Chemical Engineering, Biochemical Engineering, and Materials Science and Engineering majors. It is a four-year program designed to challenge the most talented students in these majors. Students invited to participate will take a one-unit honors seminar in their freshman year and will spend their Sophomore year in honors courses. In the upper division, students will complete either an honors thesis or a project that might involve local industry (Chemical engineering 194 HA, HB, HC). Students must maintain a grade point average of 3.500 to continue in the program. Successful completion of the Honors Program will be acknowledged on the student's transcript. Chemical Engineering Undergraduate Program The Chemical Engineering program is accredited by the Engineering Accreditation Commission of ABET; see http://www.abet.org. Chemical engineers apply the principles of chemistry and engineering to produce useful commodities, ranging from fuels to polymers. Chemical engineers are increasingly concerned with chemical and engineering processes, the environment and food production. They work in diverse areas ranging from integrated circuits to integrated waste management. Preparation for a career in chemical engineering requires an understanding of both engineering and chemical principles to develop proficiency in conceiving, designing, and operating new processes. The chemical engineering curriculum has been planned to provide a sound knowledge of engineering and chemical sciences so that you may achieve competence in addressing current and future technical problems. Objectives. The objectives of the program in Chemical Engineering are to educate students in the fundamentals of chemical engineering, balanced with the application of these principles to practical problems; to train them as independent, critical thinkers who can also function effectively in teams; to foster a sense of community, ethical responsibility, and professionalism; to prepare them for careers in industry, government, and academia; to illustrate the necessity for continuing education and self-learning; and to help students to learn to communicate proficiently in written and oral form. Students are encouraged to adhere carefully to all prerequisite requirements. The instructor is authorized to drop students from a course for which stated prerequisites have not been completed.

Upper Division Composition Requirement | University | 0 or 4 |
| Choose one from the following (grade of C- or better is required): University Writing Program 102E, 102F, 104A, 104F, 104T or passing the Upper Division Composition Exam offered by the College of Letters & Science. | University | |

Options for Junior and Senior Years

The focus in your junior year is on fundamentals, such as thermodynamics, fluid mechanics, energy transfer, and mass transfer phenomena. In the senior year, you draw together these fundamentals and apply them in a study of kinetics, process design, and process dynamics and control. The program includes eight units of chemical, biochemical, and materials science electives that allow you to strengthen specific areas in chemical engineering, explore new areas, or pursue new areas of specialization.
Research does not replace the required lab elective.

Laboratory elective list: Biomedical Engineering 1611, Biotechnology 161A, 161B; Food Science and Technology 1028, 104L, 123; Molecular and Cellular Biology 1201, 120L, 1201, 1202; Microbiology, Physiology, and Behavior 101L, 104L; Viticulture and Enology 123L, 124L. Lecture elective list: Biological Sciences 2B, 2C, 101, 103, 104; Biological Systems Engineering 165; Biomedical Engineering 102, 107, 109, 117, 140, 161A, 162A; Biotechnology 160, 188; Chemical Engineering 144, 166, 170; Chemistry 120A, 130B; Food Science and Technology 102A, 104, 123; Microbiology 140, 150; Molecular and Cellular Biology 123; Neurobiology, Physiology, and Behavior 101, 107; Plant Biology 112; Plant Sciences 100A, 152; Statistics 120, 120A, 130A; Viticulture and Enology 123, 124

Upper Division Composition Requirement ................................. 0 or 4

One course from the following (grade of C- or better is required): Writing Program 102E, 102F, 104A, 104E, 104T or passing the Upper Division Composition Exam offered by the College of Letters & Science.

Materials Science and Engineering Undergraduate Program

The Materials Science and Engineering program is accredited by the Engineering Accreditation Commission of ABET, see http://www.abet.org.

Materials science and engineering is directed toward an understanding of the structure, properties, and processing of materials. Society demands new and improved materials for many applications for such materials as common metals, polymers, and ceramics. New materials are needed for high-speed transportation systems, surgical and dental implants, new generations of power plants, renewable energy sources, and solid-state electronic and photonics devices in computer and communication technology. Both the development of new materials and the understanding of present-day materials demand a thorough knowledge of basic engineering and scientific principles, including crystal structure, elastic and plastic behavior, thermodynamics, phase equilibria and reaction rates, and the physical and chemical behavior of engineering materials.

Materials engineers study phenomena found in many different engineering operations, from fracture behavior in automobiles to fatigue behavior in aircraft frames, from corrosion in petro-chemical refineries to radiation-induced damage in nuclear power plants, and from the fabrication of steel to the design of semiconductors. Materials engineers are involved in the development of new materials and the understanding of present-day materials. A thorough knowledge of the structure, properties, and processing of materials is essential for materials engineers.

A minimum of 14 units from one of the following focus areas:

Chemical Engineering: Chemical Engineering 31, 140, 141, 142

Civil Engineering: Civil Engineering 35, 104,

Civil Engineering 130, 132

A minimum of 4 units chosen from Chemical Engineering 15IA, Materials Science Engineering 170, 160, 188; Civil Engineering 123, 125, 143, 144 depending on area of focus, plus 4 upper division electives......................... 6-9

Students may receive up to a maximum of 4 units of credit for engineering 199 courses, when these courses are approved by the departmental undergraduate studies committee. To receive credit, students must submit a summary of their research to the committee. A letter of support from the faculty mentor is also required to verify that you have conducted substantial research activity.

* Students would need to take Neurobiology, Physiology, and Behavior 101 to be considered for enrollment in Biomedical Engineering 106 Upper Division Composition Requirement ................................. 0 or 4

One course from the following (grade of C- or better is required): University Writing Program 102E, 102F, 104A, 104E, 104T or passing the Upper Division Composition Exam offered by the College of Letters & Science.

Materials Science Minor

There is a constant need for professionals with more knowledge and experience in understanding the behavior of materials from which products such as electronics, sensors, biological implants, transportation vehicles, medical devices and infrastructure are made. The goal of this minor is to prepare students
The Graduate Program in Chemical Engineering
M.S. and Ph.D.
Ph.D. designated emphases are available as specializations in biotechnology, biophysics, and nuclear science.

Graduate Programs in the Department of Chemical Engineering and Materials Science
The Department of Chemical Engineering and Materials Science is home to two top-20 ranked graduate programs in Chemical Engineering and Materials Science & Engineering. We offer a unique environment for graduate studies, we are large enough to boast world-renowned faculty and state-of-the-art research facilities, yet small enough to give every graduate student personal attention.

Lower Division
1. Design of Coffee—An Introduction to Chemical Engineering (3)
Lecture—1 hour; laboratory—2 hours; project—1 hour. Non-technical introduction to how chemical engineers think, illustrated by elucidation of the process of roasting and brewing coffee. Qualitative overview of the basic principles of engineering analysis and design. Corresponding experiments testing design choices on the sensory qualities of coffee. Not open for credit to Chemical Engineering and Biochemical Engineering majors or students who have completed Chemical and Materials Science 5.
GE credit: SciEng | SE, SL, VL — III. (III.) Kuhl, Ristenpart
5. Analysis in Biochemical, Chemical, and Materials Engineering (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: Mathematics 21A and 21B (concurrently). Analysis of systems of interest to chemical engineers and materials scientists. Applications of differential and integral calculus. Dimensional analysis. GE credit: SciEng | QL, SE — II. (III.)
6. Computational Methods for Bio/Chemical/Materials Engineers (4)
Lecture—discussions—4 hours. Prerequisite: Mathematics 21C and course 5. Programming methods for solving problems in chemical, biochemical and materials engineering using Mathematica. Programming styles, data structures, working with lists, functions and rules, and visualizations drawn from material balances, statistics, numerical methods, and bioinformatics. Introduction to object oriented programming using Java. GE credit: SciEng | QL, SE — II. (III.)
90XI. Honors Discussion Section (1)
Discussion—1 hour. Prerequisite: open only to students enrolled in the Chemical Engineering or Biochemical Engineering Honors programs. Examination of special topics covered in selected upper division courses through additional readings, discussions, collaborative work, or special activities which may include projects, laboratory experience or computer simulations. May be repeated for credit when topics differ.—I, II, III.
94XI. Honors Seminar (1)
Seminar—1 hour. Prerequisite: open only to students enrolled in the Chemical Engineering or Biochemical Engineering Honors programs. Examination of selected current topics in chemical or biochemical engineering through readings, discussions, collaborative work or special activities which may include projects, laboratory experiences or computer simulations.—I. (I.)
Upper Division
188XI. Honors Materials Design (1)
Discussion—1 hour. Prerequisite: enrollment in the Materials Science and Engineering Honors Program. Examination of special topics covered in the materials design course through additional readings, discussions, collaborative work, or special activities which may include projects, laboratory experience or computer simulations. Open only to students in the Materials Science and Engineering Honors Program.—II. (II.)
188XII. Honors Materials Design (1)
Discussion—1 hour. Prerequisite: enrollment in the Materials Science and Engineering Honors Program. Examination of special topics covered in the materials design course through additional readings, discussions, collaborative work, or special activities which may include projects, laboratory experience or computer simulations. Open only to students in the Materials Science and Engineering Honors Program.—III. (III.)
189XR. Special Topics in ECM (1-5)
190XI. Honors Discussion Section (1)
Discussion—1 hour. Prerequisite: open only to students enrolled in the Chemical Engineering or Biochemical Engineering Honors programs. Examination of special topics covered in selected upper division courses through additional readings, discussions, collaborative work, or special activities which may include projects, laboratory experience or computer simulations. May be repeated for credit when topics differ.—I, II, III. (I, II, III.)
194HA. Special Study for Honors Students (2)
Independent study—6 hours. Open to only students enrolled in the Chemical Engineering or Biochemical Engineering Honors Programs. Guided independent study of a selected topic in Chemical Engineering or Biochemical Engineering. Preparation for course 194HB. GE credit: SciEng | SE — I, II, III. (I, II, III.)
194HB. Special Study for Honors Students (1-5)
Independent study—3 hours. Prerequisite: course 194HA. Open to only students enrolled in the Chemical Engineering or Biochemical Engineering Honors programs. Guided independent study of a selected topic in Chemical Engineering or Biochemical Engineering. Preparation for course 194HC. May be repeated for credit. GE credit: SciEng | SE — I, II, III. (I, II, III.)
194HC. Special Study for Honors Students (1-5)
Prerequisite: course 194HB. Open to only students enrolled in the Chemical Engineering or Biochemical Engineering Honors programs. Guided independent study of a selected topic in Chemical Engineering or Biochemical Engineering leading to the presentation of
158A. Process Economics and Green Design (4)

158B. Separations and Unit Operations (4)
Lecture—4 hours. Prerequisite: course 158A. Senior design experience with multiple realistic constraints. Heuristic and rigorous design of chemical process equipment. Separations by filtration, distillation and extraction. Synthesis of reactor and separation networks, heat and power integration. GE credit: SciEng | QL, GE, SE.—II. (II)

158C. Plant Design Project (4)
Laboratory/discussion—2 hours; project—2 hours. Prerequisite: course 158B or 161C. Senior design experience for chemical and biochemical processes. Impact of multiple realistic constraints. Design, cost and profitability analysis of complete plants. Use of computer-aided design techniques. GE credit: SciEng | QL, QL, SE, SL, VL, WE.—III. (III)

160. Fundamentals of Biomanufacturing (3)
Lecture—3 hours. Prerequisite: Microbiology 102, Biological Sciences 101, or Animal Biology 259B. Principles of large scale bioreactor production of metabolites, enzymes, and recombinant proteins including the development of strains/cell lines, fermentation/fermentor design, monitoring and operation, product recovery and purification, and biomanufacturing economics. Open not for credit for students who have completed either course 161C or 161B and 161A, only two units of credit to students who have completed either course 161A or 161B. GE credit: SciEng | QL, SE, VL.—I. (II), McDonald

161A. Biochemical Engineering Fundamentals (4)
Lecture/discussion—4 hours. Prerequisite: course 148A. Bio-kinetics; bioreactor design and operation; transport phenomena in bioreactors; microbial, plant and animal cell culture. GE credit: SciEng | QL, QL, SE, VL.—II. (II)

161B. Bio-separations (4)
Lecture/discussion—4 hours. Prerequisite: course 143. Product recovery and purification of biochemicals. Cell disruption, centrifugation, filtration, membrane separation, extraction, and chromatographic separation. GE credit: SciEng | QL, SE.—II. (II)

161C. Biotechnology Facility Design and Regulatory Compliance (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 161A and 161B (corequisite), or Molecular & Cellular Biology 263 (corequisite). Design of biotechnology manufacturing facilities. Fermentation and purification equipment, and utility systems. Introduction to current good manufacturing practices, regulatory compliance, and documentation. GE credit: SciEng or SocSci | QL, SE or SS, SE, VL.—II. (II) Block

161L. Bioprocess Engineering Laboratory (4)
Laboratory—9 hours; discussion—1 hour; term paper. Prerequisite: course 161A and 161B, or Vitiiculture and Enology 186, or Biological Sciences 102 and Molecular and Cellular Biology 120L. Restricted to chemical/biomedical engineering majors during pass. 1 laboratory experiments in the operation and analysis of bioreactors; determination of enzyme kinetic and catalytic coefficients in bioreactors; and ion exchange chromatography. GE credit: SciEng, Wrt | QL, QL, SE, VL, WE.—III

166. Catalysis (3)
Lecture—3 hours. Prerequisite: course 148A; consent of instructor. Principal types of catalysis based on an integration of principles of physical, organic, and inorganic chemistry and chemical kinetics and chemical reaction engineering. Catalysis in solution; catalysis by enzymes; catalysis in swellable polymers; catalysis in microscopic cages (zeolites); catalysis on surfaces. GE credit: SciEng | SE.—II. (II) Gates

170. Introduction to Colloid and Surface Phenomena (3)
Lecture—3 hours. Prerequisite: Chemistry 110A. Introduction to the behavior of surfaces and disperse systems. The fundamentals will be applied to the solution of practical problems in colloid science. The course should be advanced chemists, biologists, soil scientists, and related disciplines. GE credit: SciEng | SE.—II. (II) Stroeve

190C. Research Group Conferences (1)
Discussion—1 hour. Prerequisite: upper division standing in Chemical Engineering; consent of instructor. Research group conferences. May be repeated for credit. (P/NP grading only) GE credit: SE.—I, II, III, IV. (I, II, III, IV)

190X. Upper Division Seminar (1)
Seminar—1 hour. Prerequisite: upper division standing. In-depth examination of a special topic in a small group setting.

192. Internship in Chemical or Biochemical Engineering (1-5)
Internship—3-15 hours. Prerequisite: completion of a minimum of 84 units; project approval before period of internship, consent of instructor. Supervised work experience in Chemical or Biochemical. May be repeated for credit. (P/NP grading only) GE credit: SE.—I, II, III, IV. (I, II, III, IV)

198. Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only) GE credit: SE.—I, II, III, IV. (I, II, III, IV)

199. Special Study for Advanced Undergraduates (1-5)
Prerequisite: consent of instructor. (P/NP grading only) GE credit: SE.—I, II, III, IV. (I, II, III, IV)

Graduate

206. Biochemical Engineering (3)
Lecture—3 hours. Prerequisite: Microbiology 102 and 102L, Biological Sciences 101, 102, 103, Molecular and Cellular Biology 122, 120L, Food Science and Technology 205 recommended; or consent of instructor. Applications of basic biochemical and engineering principles of practical enzymatic processes. Lectures cover large scale production and separation of enzymes, immobilized enzyme systems, enzyme reaction design and optimization, and new application of enzymes in genetic engineering related biotechnology. Offered in alternate years.—II. Ryu

226. Enzyme Engineering (3)
Lecture—3 hours. Prerequisite: Microbiology 102 and 102L, Biological Sciences 102, 103, Molecular and Cellular Biology 122, 120L, 200A; or consent of instructor. Application of basic biochemical and engineering principles of practical enzymatic processes. Lectures cover large scale production and separation of enzymes, immobilized enzyme systems, enzyme reaction design and optimization, and new application of enzymes in genetic engineering related biotechnology. Offered in alternate years.—II. Ryu

246. Advanced Biochemical Engineering (2)
Lecture—2 hours. Prerequisite: course 206 or consent of instructor. Advances in the field of biotechnol- ogy including genetic engineering, enzyme engineering, fermentation science, and renewable resources development. The impact results of original research will be evaluated for understanding of the fundamental principles and for potential practical application.—II. (II) Ryu

252. Statistical Thermodynamics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 152B, Engineering 105B, or the equivalent. A treatment of the statistical basis of thermodynamics; introduction to statistical mechanics; discussion of the laws of thermodynamics; application of the statistical thermodynamic relationships to phase and chemical reaction equilibrium; introduction to molecular simulations and the evaluation of thermodynamic properties from molecular simulations.—II. (II) Dungan

253A. Advanced Fluid Mechanics (4)
Lecture—4 hours. Prerequisite: courses 141 and 259. Kinematics and basic principles of fluid flow. Principals of constitutive equations. Navier-Stokes equations for Newtonian fluids. Survey of rectilinear creeping flow, lubrication flow and boundary layer theory.—I. (I)

253B. Advanced Heat Transport (4)
Lecture—4 hours. Prerequisite: courses 142 and 259 or the equivalent. Fundamental energy postu- lates and derivation of macroscopic energy equations. Mechanisms of conduction, isotropic, thermoelastic and anisotropic materials, solution problems using Greens functions and perturbation theory.—II. (II)

253C. Advanced Mass Transfer (4)
Lecture—4 hours. Prerequisite: courses 143 and 259 (may be taken concurrently) or the equivalents. Kinematics and basic conservation principles for multicomponent systems. Constitutive equations for momentum, heat and mass transfer, applications to binary and ternary systems. Details of diffusion with reaction, and the effects of concentration.—I. (II)

254. Colloid and Surface Phenomena (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: graduate standing in science or engineering or consent of instructor. Thermodynamics and rate processes at interfaces. These fundamental processes will be applied to determine the collective properties of thin films and membranes, self-assembled systems, liquid crystals and colloidal systems. Experimental techniques in surface analysis.—III. (III) Stroeve, Longo

256. Chemical Kinetics and Reaction Engineering (4)
Lecture—4 hours. Prerequisite: courses 146 or the equivalent. Analysis of the performance of chemical reactors and design of chemical equipment. Focus on the principles of chemical kinetics and transport phe- nomena. Consideration of noncatalytic/catalytic reactions in single fluid phases and emphasis on reactions in multiple fluid mixtures, especially gas-solid reactors.—II. (II)

259. Advanced Engineering Mathematics (4)
Lecture—4 hours. Prerequisite: Mathematics 21D, 22A, 22B. Applications of methods of applied math- ematics to the analytical and numerical solution of linear and nonlinear ordinary and partial differential equations arising in the study of transport phenomena.—I. (I)

262. Transport Phenomena in Multiphase Systems (3)
Lecture/discussion—3 hours. Prerequisite: course 253C. Heat, mass and momentum transfer in multi- phase, multicomponent systems with special empha- sis on transport processes in porous media. Derivation of the averaging theorem and application of the method of volume averaging to multicomponent, reacting systems.—III. (III)

263. Rheology and Mechanics of Non-Newtonian Fluids (3)
Lecture—3 hours. Prerequisite: courses 253A and 259 or consent of instructor. Mechanics of polymer solutions and suspensions and the develop- ment of properly invariant constitutive equations. Topics include: viscometry, linear and nonlinear vis- coelasticity, and the mechanics of viscoelastic systems. Offered in alternate years.—II. Powell

265. Emulsions, Microemulsions and Bilayers (3)
Lecture—3 hours. Prerequisite: an undergraduate course in physical chemistry. Thermodynamics and mechanical properties of surfactant-laden interfaces. Forces between and within interfaces. Physics of micelle and microemulsion formation. Structure and stability of emulsions. Properties of phospholipid bilayers, with emphasis on vesicles.—II. (II) Dungan

Quarter Offered: I-Fall; II-Winter; III-Spring; IV-Summer; 2015-2016 offering in parentheses.
267. Advanced Process Control (3)  Lecture—3 hours. Prerequisite: course 157 or the equivalent. Advanced course in analysis and synthesis of linear multivariable systems. Emphasis on frequency-domain techniques and applications to chemical processes. Topics include singular value analysis, internal model control, robust controller design methods as well as self-tuning control techniques. Offered in alternate years. III.

289A-L. Special Topics in Chemical Engineering (1-5) Lecture and/or laboratory. Prerequisite: consent of instructor. Special topics in (A) Fluid Mechanics; (B) Nonlinear Analysis and Numerical Methods; (C) Process Control; (D) Chemistry of Catalytic Processes; (E) Biotechnology; (F) Interfacial Engineering; (G) Molecular Thermodynamics; (H) Membrane Separations; (I) Advanced Materials Processing; (J) Novel Experimental Methods; (K) Advanced Transport Phenomena; (L) Biomolecular Engineering. May be repeated for credit when topic differs. —II, III, I, II, III.

290. Seminar (1) Seminar—1 hour. (S/U grading only.)

290C. Graduate Research Group Conference (1) Discussion—1 hour. Prerequisite: consent of instructor. Research problems, progress and techniques in chemical engineering. May be repeated for credit. (S/U grading only.) —II, III, I, II, III.

294. Current Progress in Biotechnology (1) Seminar—1 hour. Prerequisite: graduate standing. Seminar presented by guest lecturers on subjects of their own research activity. May be repeated for credit. (Same course as Molecular and Cellular Biology 294.) (S/U grading only.) —II, III, I, II, III.

Ryu, Dae

298. Group Study (1-5) Prerequisite: consent of instructor. (S/U grading only.)

299. Research (1-12) (S/U grading only.)

Professional

390. Teaching of Chemical Engineering (1) Discussion—1 hour. Prerequisite: qualifications and acceptance as teaching assistant and/or associate in chemical engineering. Participation as a teaching assistant or associate-in in a designated engineering course. Methods of leading discussion groups or laboratory sections, writing and grading quizzes, use of laboratory equipment, and grading laboratory reports. May be repeated two times for credit. (S/U grading only.)—II, III, I, II, III.

Courses in Materials Science and Engineering (EMS)

Lower Division

2. Stuff: Diversity of Materials in Our Lives (2) Lecture/discussion—2 hours. Role of materials in technological societies and their impact on our way of living. Exploration of how materials are extracted from the earth, processed, and shaped into products, including discussion of disposal and reuse of materials. GE credit: SciEng | SE. —II. (II.)

Risbud

6H. Honors Materials Science Computer Applications (1) Discussion—1 hour. Prerequisite: enrollment in the Materials Science and Engineering Honors Program; concurrent enrollment in Engineering 6 required. Restricted to students in the Materials Science and Engineering Honors Program. Examination of materials science computer applications through traditional readings, discussions, collaborative work, or special activities which may include projects or computer simulations.

9H. Honors Solid-State Materials Science (1) Discussion—1 hour. Prerequisite: enrollment in the Materials Science and Engineering Honors Program; concurrent enrollment in Physics 9D required. Restricted to students in the Materials Science and Engineering Honors Program. Examination of solid-state materials science and modern physics topics through additional readings, discussions, collaborative work, or special activities which may include projects, laboratory experience or computer simulations.

Upper Division

147. Principles of Polymer Materials Science (3) Lecture—3 hours. Prerequisite: Chemistry 2A-2B; Chemistry 8A-8B or Engineering 45; introductory physics. Basic principles of polymer science presented including polymer structure and synthesis; polymerization mechanisms, polymer classes, properties, and reactions; polymer morphology, rheology, and characterization; polymer processing. (Same course as Fiber and Polymer Science 120.) GE credit: SciEng | QL, SE. —II. (II.)

160. Thermodynamics of Materials Processes and Phase Stability (4) Lecture—3 hours; discussion—1 hour. Prerequisite: C- or better in each of the following: Engineering 45, Mathematics 228B; Chemistry 2C (recommended). Review of thermodynamic principles of interest to materials scientists and engineers. Application of thermodynamics to material processing, phase stability, corrosion. GE credit: SciEng | QL, SE. —II. (II.)

162. Structure and Characterization of Engineering Materials (4) Lecture—4 hours. Prerequisite: C- or better in each of the following: Engineering 45, Mathematics 228, Physics 9B. Description of the structure of engineering materials on the atomic scale by exploring the fundamentals of materials science. The importance of this structure to materials’ properties. Description of experimental determination using x-ray diffraction techniques. GE credit: SciEng | QL, SE. —II. (II.)

162L. Structure and Characterization of Materials Laboratory (2) Laboratory—3 hours; discussion—1 hour. Prerequisite: course 162 [concurrent enrollment recommended]. Experimental investigations of structure of solid materials are combined with techniques for characterization of materials. Laboratory exercises emphasize methods used to study structure of solids at the atomic and microstructural levels. Methods focus on optical, x-ray and electron techniques. Only 2 units of credit allowed to students who have completed course 134L. Not open for credit to students who have completed course 132L. GE credit: SciEng, Wrt | QL, SE. —II. (II.)

164. Rate Processes in Materials Science (4) Lecture—3 hours; discussion—1 hour. Prerequisite: C- or better in Engineering 45, and course 160. Basic kinetic laws and the principles governing phase transformations. Applications in diffusion, oxidation, nucleation, growth and spinodal transformations. GE credit: SciEng | QL, SE, SL, VL. —II. (II.)

170. Sustainable Energy Technologies: Batteries, Fuel Cells, and Photovoltaic Cells (4) Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 45. Open to students in Engineering or related fields. Basic principles of future energy devices such as lithium batteries, fuel cells, and photovoltaic cells. Examines the current status of these energy technologies and analyze challenges that still must be overcome. Offered in alternate years. GE credit: SciEng | QL, SE. —II. (II.)

Kim

172. Electronic, Optical and Magnetic Properties of Materials (4) Lecture—3 hours; discussion—1 hour. Prerequisite: Chemistry 110A or Physics 9D, Engineering 6 or Chemical and Materials Science 6 or equivalent [recommended]. Electronic, optical, and magnetic properties of materials as related to structure and processing of solid state materials. Physical principles for understanding the properties of metals, semiconductors, ceramics, and amorphous solids and the applications of these materials in engineering. GE credit: SciEng | QL, SE, SL, VL. —I. (II.)

172L. Electronic, Optical and Magnetic Properties Laboratory (1) Laboratory—3 hours; lecture/laboratory—1 hour. Prerequisite: course 172 [concurrent enrollment recommended]. Experimental investigation of electronic, optical and magnetic properties of engineering materials, emphasizing the fundamental relationship between microstructure and properties as well as the influence of rate processes on the evolution of the microstructure of materials. GE credit: SciEng, Wrt | QL, SE, SL, VL. —I. (II.)

174. Mechanical Behavior of Materials (4) Lecture—3 hours; discussion—1 hour. Prerequisite: C- or better in Engineering 45; course 162 (recommended). Microscopic and macroscopic aspects of the mechanical behavior of engineering materials, with emphasis on recent development in materials characterization by nondestructive testing. Fundamental aspects of plasticity in engineering materials, strengthening mechanisms and mechanical failure modes of materials systems. GE credit: SciEng, Wrt | QL, SE, SL, VL. —III. (III.)

174L. Mechanical Behavior Laboratory (2) Laboratory—3 hours; lecture/laboratory—1 hour. Prerequisite: course 174 [concurrent enrollment recommended]. Experimental investigation of mechanical behavior of engineering materials. Laboratory exercises emphasize the fundamental relationship between microstructure and mechanical properties, and the evolution of the microstructure as a consequence of rate process. Not open for credit to students who have completed course 138L. GE credit: SciEng, Wrt | QL, SE, SL, VL. —II. (III.)

180. Materials in Engineering Design (4) Lecture—3 hours; lecture/discussion—1 hour. Prerequisite: C- or better in Engineering 45. Restricted to students with upper division standing. Quantitative treatment of materials selection for engineering applications. Discussion of design and material selection strategy; process and process selection strategy; process economics; lifecycle thinking and eco-design. Use of materials selection software. GE credit: SciEng, Wrt | OL, SE, SL, VL. WE. —III. (III.)

181. Materials Processing (4) Lecture—3 hours; lecture/discussion—1 hour. Prerequisite: C- or better in Engineering 45; and Engineering 105 or Chemical Engineering 152B or Electrical & Computer Engineering 140A or course 164. Principles of phase equilibria, thermodynamics and reaction kinetics applied to material processing. Effects of processing variables on the structure-property relationship. Fundamentals of the manufacturing processes for electronic, optical, functional and structural materials. GE credit: SciEng, Wrt | OL, SE, SL, VL. —III. (III.)

182. Failure Analysis (4) Lecture—3 hours; laboratory—3 hours. Prerequisite: C- or better in Engineering 45; course 174 (recommended). Analysis of the way materials fail. Effects of temperature, mechanical deformation and corrosion on the properties of materials, forensics and methodologies for investigating failures of materials including optical microscopy, scanning electron microscopy, and scanning electron microscopy. Investigation of practical problems. GE credit: SciEng, Wrt | QL, SL, VL. WE. —II. (II.)

188A. Materials Design Project (4) Laboratory—4 hours; discussion—1 hour. Prerequisite: courses 160, 162, 164, 172, and 174. Major materials design experience involving analysis of real materials synthesis/processing/fabrication and technological applications including critical assessments of economic, manufacturing, and ethical constraints. Various principles of materials science have been integrated into a culminating team design project.

Quarter Offered: F—Fall; W—Winter; S—Spring; V—Summer; 2015-2016 offering in parentheses

Pre-Fall 2011 General Education (GE): AH—Arts and Humanities; SciEng—Science and Engineering, SocSci—Social Sciences; Div—Domestic Diversity; Wrt—Writing Experience

Fall 2011 and on Revised General Education (GE): AH—Arts and Humanities; SE—Science and Engineering, SS—Social Sciences; ACOM—American Cultures, DD—Domestic Diversity, OL—Oral Skills, QL—Quantitative, SL—Scientific, VL—Visual, WC—World Cultures, WRT—Writing Experience
1888. Materials Design Project (4)
Laboratory—4 hours; discussion—1 hour. Prerequisite: course 188A. Major materials design experience involving analysis of real materials synthesis/processing/fabrication/technology applications including critical assessments of economic, manufacturing, and ethical constraints. Various principles of materials science are integrated into a culminating project. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | OL, SE, SL, VI, WE. —II, III. Sen

190C. Research Group Conferences (1)
Discussion—1 hour. Prerequisite: consent of instructor. Selected topics of current interest in materials science and engineering research. May be repeated for credit. (P/NP grading only.)—I, II, III, (I, II, III)

198. Directed Group Study (1-5)
Lecture—1-5 hours. Prerequisite: consent of instructor. Group study of selected topics. (P/NP grading only)

199. Special Study for Advanced Undergraduates (1-5)
Prerequisite: consent of instructor. (P/NP grading only)

Graduate

230. Fundamentals of Electron Microscopy (3)
Lecture—2 hours; lecture/discussion—1 hour. Prerequisite: course 162. Principles and techniques of scanning and transmission of electron microscopy used in the study of material phases will be described. Emphasis upon practical applications. Offered in alternate years.—II, III

230L. Laboratory for Electron Microscopy (2)
Laboratory—6 hours. Prerequisite: course 230 concurrently. Practical application of techniques of electron scanning and transmission microscopy including x-ray microanalysis. Offered in alternate years.—II

232. Advanced Topics in Transmission Electron Microscopy (3)
Lecture—1 hour; discussion—2 hours. Prerequisite: course 230. Advanced course in the techniques of electron microscopy including analytical techniques, probe operation, microanalysis, and high resolution imaging. Offered in alternate years.—II

232L. Laboratory for Advanced Transmission Electron Microscopy (2)
Discussion—1 hour; laboratory—3 hours. Prerequisite: course 230L. Laboratory in advanced transmission electron microscopy techniques relevant to specific graduate research projects in materials science. Offered in alternate years.—II

241. Principles and Applications of Dislocation Mechanics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: graduate standing in Engineering; consent of instructor. Concepts in dislocation theory are applied to explain plasticity of crystalline solids. Glide and climb of dislocations, strain hardening, recrystallization, theories of creep processes and interaction of dislocation with solute atoms, precipitates and impurity clouds are discussed. Offered in alternate years.—II

Lecture—3 hours. Prerequisite: graduate standing in Engineering and consent of instructor; course 160 recommended. Theory of alloying, kinetics of phase changes, homogeneous and heterogeneous transformation, transformation by shear, order-disorder reactions. Offered in alternate years.—II, III

244. Interaction of Materials and their Environment (3)
Lecture—3 hours. Prerequisite: Engineering 45 and 105A, or consent of instructor. Thermodynamic and kinetic foundations of the corrosion and oxidation processes. Practical aspects of corrosion control and prevention. Stress-corrosion and gas-embrittlement phenomena. Corrosion; microbially- and atmospheric corrosion. Offered in alternate years.—I

248. Fracture of Engineering Materials (3)
Lecture—3 hours. Prerequisite: course 174. Description of the failure of materials by crack propagation. Topics include the stress fields about elastic cracks, the Griffith- Irwin analysis, descriptions of plastic zones, fracture toughness testing, microstructural aspects of fracture and failure at elevated temperatures. Offered in alternate years.—II, III

249. Mechanisms of Fatigue (3)
Lecture—3 hours. Prerequisite: course 174 or consent of instructor; course 248 recommended. Microstructural description of the mechanisms of fatigue in metals. Topics include a phenomenological treatment of cyclic deformation, dislocation processes in cyclic deformation, fatigue crack nucleation, Stage I crack growth, threshold effects and high-temperature cyclic deformation. Offered in alternate years.—II

250A-F. Special Topics in Polymer and Fiber Science (3)
Lecture—3 hours. Prerequisite: course 147 or consent of instructor. Selected topics of current interest in polymer and fiber sciences. Topics will vary each term the course is offered. (Same course as Textiles and Clothing 250A-F.)

251. Applications of Solid State Nuclear Magnetic Resonance Spectroscopy (3)
Lecture—3 hours. Prerequisite: graduate standing in chemistry, physics or engineering, or consent of instructor. Fundamentals of solid state NMR spectroscopy and principles of advanced NMR techniques for analyzing structure of solid materials.—III

260. Advanced Thermodynamics of Solids (4)
Lecture/discussion—4 hours. Prerequisite: course 160. Thermodynamic principles, formalism and their application to solid materials. Specific examples from ceramic and solid state systems. Use of thermodynamic approach in developing understanding of and constraints for processes in real systems. Offered in alternate years.—I

262. Advanced Topics in Structure of Materials (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 162; course 174 recommended; graduate standing in Engineering or consent of instructor. Nature of microstructure in engineering materials. Crystalline and noncrystalline structures, with special emphasis on grain boundary segregation in the development of polycrystalline microstructure and the radial distribution function of amorphous materials. Not open for credit to students who previously completed [canceled] course 245. Offered in alternate years.—II

264. Transport Phenomena in Materials Processes (4)
Lecture/discussion—4 hours. Prerequisite: graduate standing in Engineering. Thermodynamic driving forces and atomic-scale mechanisms underlying diffusive mass transport in materials. Nucleation, growth and coarsening dynamics of phase transformations. Not open for credit to students who previously completed course 240.—II, (II)

272. Advanced Functional Properties of Materials (4)
Lecture/discussion—4 hours. Prerequisite: graduate standing in Physics, Chemistry and Engineering. Fundamental physical properties of solid materials important to solid state devices, specifically electronic, magnetic, and optical properties. Topics include band structures, metals, superconductors, semiconductors, dielectrics, optical properties, and magnetic and mechanical properties of these properties into devices.—I

274. Advanced Mechanical Properties of Materials (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 174. Comprehensive study of mechanical properties of materials, with special attention to dislocations and deformation and fracture control mechanisms. Mechanical properties of conventional engineering materials as well as advanced materials such as nanocrystalline solids and thin films are considered. Offered in alternate years.—I

282. Glass: Science and Technology (3)
Lecture—2 hours, extensive writing and reading. Prerequisite: graduate standing in Chemistry, Physics or Engineering, or consent of instructor. Modern paradigms in glass science and their applications to technologies. Relation of macroscopic properties of glasses and glass-forming materials to atomic-level structures, including principles of formation, relaxation, transport phenomena, nucleation, crystallization and phase separation in glasses. Offered in alternate years.—II, III

289A-G. Special Topics in Materials Science (1-5)
Lecture and/or laboratory. Prerequisite: consent of instructor. Special topics in: (A) Electronic Materials; (B) Ceramics and Minerals; (C) Physics and Chemistry of Materials; (D) Materials Processing; (E) Materials Science and Forensics; (F) Biomaterials; (G) Surface Chemistry of Metal Oxides. May be repeated for credit when topics differ.—I, II, III, (I, II, III)

290C. Graduate Research Conference (1-5)
Discussion—1 hour. Prerequisite: consent of instructor. Individual and/or group conference on problems, progress, and techniques in materials science and engineering research. May be repeated for credit. (S/U grading only)—I, II, III, (I, II, III)

294. Materials Science Seminar (1)
Seminar—1 hour. Current literature and developments in materials science with presentations by individual students. May be repeated for credit. (S/U grading only)—I, II, III, (I, II, III)

298. Group Study (1-5)

299. Research (1-12)
Prerequisite: consent of instructor. (S/U grading only)

Professional

390. The Teaching of Materials Science (1)
Discussion—1 hour. Prerequisite: meet qualifications for teaching assistant and/or associate-in in materials science and engineering. Participation as a teaching assistant or associate-in in a designated engineering course. Methods of leading discussion groups or laboratory sections, writing and grading quizzes, use of laboratory equipment, and grading laboratory reports. May be repeated two times for credit. (S/U grading only)—I, II, III, (II, III)

--

Quarter Offered: I-Fall, II-Winter, III-Spring, IV-Summer; 2015-2016 offering in parentheses

Pre-Fall 2011 General Education (GE): AAH=Arts and Humanities; SCI=Science and Engineering; SoCi=Social Sciences; DivD=Diverse; DomD=Dominant Diversity; Wmt=Writing Experience
Fall 2011 and on Revised General Education (GE): AH=Arts and Humanities; SCI=Science and Engineering; SS=Social Sciences; ACGH=African American Studies; DD=Dominant Diversity; OL=Oral Skills; QL=Quantitative; SL=Scientific, VL=Visual; WC=World Cultures, WE=Writing Experience

Engineering: Civil and Environmental
gram at the University of California, Davis are to...

...and the environment. We provide the programs of the Civil Engineering undergraduate program at an international institution, such as the University of Edinburgh, by participating in an Education Abroad Program. The department encourages interested students to participate in both Summer Abroad and Education Abroad Programs. Please consult with the undergraduate staff adviser in the department for more information. Often students are in their junior year of study when they participate in this option.

Civil Engineering Undergraduate Program
The Civil Engineering program is accredited by the Engineering Accreditation Commission of ABET; see http://www.abet.org.

Students are encouraged to adhere carefully to all prerequisite requirements. The instructor is authorized to drop students from a course for which stated prerequisite requirements have not been completed. Exclusive of General Education units, the minimum number of units required for the Civil Engineering major is 153 (77 units in lower division and 76 units in upper division).

Upper Division Requirements: Areas of Specialization

Undergraduates may emphasize one or more of the following areas of specialization, or generalize across all areas. You are urged to consult a departmental adviser when developing your individual program. Additional information on areas of specialization and potential faculty advisers can be obtained from the College of Engineering Bulletin and the departmental website.

Environmental Engineering. The focus of this area is on the management and improvement of air, land, and water quality in the face of increasing population, expanding industrialization, and global warming. Examples of environmental engineering problems include innovative analysis and design of air, water, wastewater, and solid waste treatment systems; mathematical modeling of natural and engineered systems; sampling, and transport and transformation of natural and anthropogenic pollutants; and modeling of air pollutant emissions.

Geotechnical Engineering. This area deals with civil infrastructure and environmental problems that require quantifying the behavior of geologic materials, as well as soils and rocks. Examples of geotechnical engineering problems include foundations for buildings and bridges, earthwork (such as dams, tunnels, highways), earthquake hazards (such as foundations, liquefaction, soil-structure interaction), and geo-environmental problems (ground water flow, subsurface contaminant transport and remediation).

Suggested Advisers. R. W. Boulanger, Y. F. Dihesoo, J. T. Delong, J. T. Harvey, B. Jeremic, B. L. Kutter

Structural Engineering and Structural Mechanics. The focus of this area is the conception, design, analysis, construction, and life-cycle modeling of all types of civil infrastructure, including buildings, bridges, dams, ports, highways, and industrial facilities. Structural materials include metals, reinforced concrete, timber, and advanced composites. Loads range from earthquakes to adverse environmental conditions. Structural mechanics emphasizes theoretical and computational tools that may be used in structural engineering.

Transportation Planning and Engineering. This area deals with the movement of people and goods in a manner consistent with society’s environmental (such as air and water quality) and socio-economic (such as equity and mobility) goals. Transportation engineering applies engineering, economic, and behavioral science principles to the planning, analysis, design, and operation of transportation systems, such as highways, transit, and air travel. Transportation planning involves the formulation and analysis of transportation policy, program, and project alternatives in consideration of societal goals, budgetary constraints, economic objectives, and technological feasibilities.

Water Resources Engineering. This area includes hydrology, hydraulics, fluid mechanics, and water resources systems planning and design. Hydrology deals with quantifying and understanding all aspects of the hydrologic cycle, including the relationships between precipitation, runoff, ground-water, and surface water. Water quality and contaminant transport issues are linked to all aspects of water resources management. Hydraulics and fluid mechanics deal with flows in pipes, conduits, open-channel systems, and natural systems, such as lakes and estuaries. Water resources systems planning and design deals with the comprehensive development and analysis of water resources to meet the multiple needs of industry, agriculture, municipalities, recreation, and other activities.

Quarter Offered: Fall, Winter, Spring, Summer.
Civil and Environmental Engineering 114, 190.............. 6 One course from Civil and Environmental Engineering 115, 153; Mathematics 118A; or Statistics 108........................................ 4 A minimum of four of the following group options (a minimum of two courses in each of the four areas Courses listed in more than one group may be counted only once...... 30* Environmental: Civil and Environmental Engineering 148A or 149 and at least one course from Civil and Environmental Engineering 140, 143, 148B, 150 Geotechnical: Civil and Environmental Engineering 171 and 171 Lab and at least one course from Civil and Environmental Engineering 173, 175, 179 Structures: Civil and Environmental Engineering 130 and at least one course from Civil and Environmental Engineering 131, 132, 135 136, 137, 138, 139 Transportation: Civil and Environmental Engineering 161, 162 or 179 and at least one course from Civil and Environmental Engineering 161, 162, 163, 165, 179 Water Resources: Civil and Environmental Engineering 141 and 141 Lab and at least one course from Civil and Environmental Engineering 142, 144, 145, 146, 155 Senior Design Requirement: You must complete one of the following courses as part of the Group Option or Civil & Environmental Engineering elective requirement: Civil & Environmental Engineering 127, 128, 143, 148A, 149, 153, 162, 165, Engineering Applied Science 188, Anthropology 104N, 191, Agricultural and Resource Economics 175, 176, Atmospheric Science 116, Community and Regional Development 142, 154, 172, Environmental Science and Policy 161, 162, 172, 191, Environmental Toxicology 101, 102A, Geology 130, 134, Landscape Architecture 180**, Nature and Culture 120, Plant Sciences 101, 141, 150, 162, may include Landscape Architecture 3........... 12 *Student enrollment requests will be reviewed by the instructor to ensure that a balanced group of students with different experience, majors or expertise are able to enroll. ** Due to variability in series course offering, consent of minor advisor is required.

Minor advisors: J. Darby, J.T. Harvey, J. Lund

Sustainability in the Built Environment Minor

All courses must be taken for a letter grade. A grade of C- or better is required for all courses used to satisfy minor requirements with an overall GPA in minor requirement courses of 2.00 or better.

To pre-apply to this minor program offered by Civil and Environmental Engineering, find full details regarding admission and completion in the Application Form available from the department website or the undergraduate staff adviser in 2045 Haussi Hall. All courses must be taken for a letter grade. A grade of C- or better is required for all courses used to satisfy minor requirements with an overall GPA in minor requirement courses of 2.00 or better.

Minor Requirements:

Construction Engineering and Management

Twelve units from: Civil and Environmental Engineering 179, Agricultural and Resource Economics 112, 155, 157, 171A, 171B, Economics 134, 162, may include one course from Agricultural and Resource Economics 18, Management 111, 118. 12

Minor advisors: J. Darby, J.T. Harvey, J. Lund

Sustainability in the Built Environment Minor

All courses must be taken for a letter grade. A grade of C- or better is required for all courses used to satisfy minor requirements with an overall GPA in minor requirement courses of 2.00 or better.

*Student enrollment requests will be reviewed by the instructor to ensure that a balanced group of students with different experience, majors or expertise are able to enroll. ** Due to variability in series course offering, consent of minor advisor is required.

Minor advisors: J. Darby, J.T. Harvey, J. Lund

The Graduate Program in Civil and Environmental Engineering

M.S. and Ph.D.; Designated Ph.D. emphasis available in Biotechnology

http://cee.engr.ucdavis.edu 530-752-1441 With over thirty faculty members, over 200 million in annual research expenditures and over 240 graduate students, the Department of Civil and Environmental Engineering integrates research, education and professional service in areas related to civil infrastructure and the environment. Graduate students benefit from close working relationships with professors who are the leading international experts in their field. They are supported in their study and research by robust funding, and they have access to state-of-the-art research centers. For example, one of the experimental laboratories that constitutes NEEES, the Network for Earthquake Engineering Simulation, http://nees.ucdavis.edu, has the largest centrifuge of its kind in the nation and gives researchers access to their peers at other unique centers via high-speed networks. Since 1960, researchers at the J. Amorocho Hydraulics Laboratory (JAHIL) have served the state of California by solving ecological, biological, environmental and hydraulic engineering problems. Students may also have the opportunity to work in one of the many state of the art environmental engineering labs or the structural testing facilities in the department. Our graduates go on to serve the profession and academia by advancing the leading edge of fundamental knowledge, as well as engineering practice. Generous financial support is available in the form of research assistantships, teaching assistantships, fellowships and financial aid. About 75% of the graduate students in our program are either fully or partially supported.

Research Highlights:

- Alternative fuel transportation infrastructure
- Earthquake engineering
- Environmental engineering
- Environmental planning and management
- Geotechnical engineering
- Hydraulics and fluid mechanics
- Hydrology
- Structural engineering
- Structural health monitoring
- Structural mechanics
- Systems planning and design
- Transportation engineering
- Transportation planning and design
- Water resources engineering

Research Facilities and Partnerships:

- Center for Watershed Sciences
- Center for Water-Energy Efficiency
- Institute of Transportation Studies
- J. Amorocho Hydraulics Laboratory (JAHIL)
- Nano-Engineering and Smart Structures Technologies
- NSF NEES Geotechnical Centrifuge
- Pavement Research Center
- Tahoe Environmental Research Center
- Western Cooling Efficiency Center

Complete Information on our website.

Courses in Engineering: Civil and Environmental (ECI)

Lower Division

3. Introduction to Civil and Environmental Engineering Systems

Lecture—3 hours, laboratory—3 hours. Prerequisite: Mathematics 21A [may be taken concurrently]. Restricted to lower division students; Civil Engineering majors during Pass 1. Introduction to civil engineering systems. General view of the engineering process as obtained by participation in laboratory experiments. Course available basis. Credit: GE credit: SciEng | QL, SE—II. (I.) Darby

16. Spatial Data Analysis (2)

Lecture—1 hour, laboratory—3 hours. Restricted to Civil Engineering and Biological Systems Engineering majors; non-majors accommodated on a space-available basis. Course available basis. Credit: GE credit: SciEng | QL, SE—II. (I.) Fan

17. Surveying (2)

Lecture—2 hours. Prerequisite: Physics 9A [may be taken concurrently]. Restricted to Civil Engineering and Biological Systems Engineering majors. Non-majors accommodated on a space-available basis. Credit: GE credit: SciEng | QL, SE—II. (I.) Fan

19. C Programming for Civil and Environmental Engineers (4)

Lecture—3 hours, laboratory—3 hours. Prerequisite: Mathematics 21A [may be taken concurrently]. Pass 1 open to Civil Engineering majors and Optical Science and Engineering majors. Credit: GE credit: SciEng | SE—III. (III.) Fan

90X. Lower Division Seminar (1-4)

Seminar—1-4 hours. Prerequisite: consent of instructor. Examination of a special topic in a small group setting. May be repeated for credit. Credit: GE credit: SciEng | SE

92. Internship in Engineering (1-5)

Internship. Prerequisite: lower division standing; approval of project prior to period of internship. Supervised work experience in civil engineering. Credit: GE credit: SciEng | SE
114. Probabilistic Systems Analysis for Civil Engineers (4) Lecture—4 hours. Prerequisite: C or better in Mathematics 21C. Probabilistic concepts and models in engineering, including analysis of engineering experimental and field data. Introduction to stochastic processes and models of engineering systems. Not open for credit to students who have completed course 107. GE credit: SciEng | QL, SE.—I, II, III, IV. [I, II, III]
115. Computer Methods in Civil & Environmental Engineering (4) Lecture—3 hours; laboratory—3 hours. Prerequisite: C programming or consent of instructor. Fundamentals of numerical algorithms and computer models for solving practical problems in Civil and Environmental Engineering. GE credit: SciEng | SE.—II, III, IV. [III, IV] Yonnis
119. Parallel Processing for Engineering Applications (4) Lecture—4 hours; laboratory—3 hours. Prerequisite: C programming or consent of instructor. Fundamentals of parallel computing for engineering applications; emphasis on structured parallel programming and memory parallel clusters. Not open for credit to students who have completed course 119B. Offered in alternate years. GE credit: SciEng | SE—Kleeman, Jeremic
123. Urban Systems and Sustainability (4) Lecture—4 hours; prerequisite: upper division standing. Systems-level approach of how to evaluate and then modify sustainability of urban systems based on interaction with natural environments. Topics include: definition/metrics of urban sustainability; system analyses of urban systems; enabling technology, policies, legislation, measures and modification of ecological footprints. GE credit: SciEng or SocSci, Div, Wrt | AGCH, DD, SE, SS, WE — Kendall
125. Building Energy Performance (4) Lecture—4 hours. Prerequisite: upper division standing in Engineering. Open to students in the College of Engineering. Mechanisms of energy consumption in buildings including: thermal loads, ventilation, air infiltration, thermal energy distribution, and HVAC systems; energy performance simulation; methods and strategies of energy efficiency. GE credit: SciEng | SE—Modena
126. Integrated Planning for Green Civil Systems (4) Lecture—3 hours; laboratory—3 hours. Prerequisite: Physics 9C or Landscape Architecture 60 or Design 145 or Environmental Science and Policy 100 or Nature and Culture 120 or Anthropology 100 or Statistics 32 or Plant Sciences 101; consent of instructor. Working within multidisciplinary teams, a heuristic approach and multiple realistic constraints, an integrated design process will be applied to the planning of a project-based green and sustainable civil system. GE credit: SciEng | SE—II, III, IV. [II, III, IV] Kendall, Lorge
127. Integrated Design for Green Civil Systems: Senior Design Experience (4) Lecture—3 hours; laboratory—3 hours. Prerequisite: course 126; consent of instructor. Restricted to senior level standing. Working within multidisciplinary teams and a heuristic, project-based learning environment, a green and sustainable civil system will be designed. Evaluate various design options under architectural, environmental, and economic constraints, and present designs through oral and written presentations. GE credit: SciEng | SE—II, III, IV. [III, IV] Kendall, Lorge
128. Integrated Construction for Green Civil Systems (4) Lecture—2 hours; laboratory—6 hours. Prerequisite: course 127. Working within multidisciplinary teams, a heuristic learning environment, and multiple realistic constraints, an integrated design process will be applied to the construction of a project-based green and sustainable civil system. Offered irregularly. GE credit: SciEng | SE—Kendall, Lorge
130. Structural Analysis (4) Lecture—4 hours. Prerequisite: C or better in Engineering 104, Mathematics 22A. Open to Civil Engineering majors only. Analysis of indeterminate and determinate trusses, beams and frames. Plastic bending and limit analysis. GE credit: SciEng | QL, SE.—I, III, IV. [I, II, III]
131. 0-1000 Structural Analysis (4) Lecture—3 hours; laboratory—3 hours. Prerequisite: C or better in Engineering 104; Engineering 6. Open to Engineering majors only. Matrix formulation and computer analysis of statically indeterminate structures. Stiffness, force and displacement solutions. Elastic structures. Finite element methods for elasticity and bending problems. Offered irregularly. GE credit: SciEng | SE
132. Design Structural: Metallic Elements (4) Lecture—4 hours. Prerequisite: course 130. Design of metallic beams, columns, and other members for various types of loading and boundary conditions; design of columns; member performance within structural systems. GE credit: SciEng | SE, VL—II, III. [II, III] Bolander, Kanvinde
135. Structural Design: Concrete Elements (4) Lecture—3 hours; laboratory—3 hours. Prerequisite: course 130. Restricted to Civil Engineering, Civil Engineering/Materials Science and Engineering, and Materials Science and Engineering majors only. Strength design procedures for columns, rebar, beams, Beams and beams of general cross-section. Building code requirements for bending, shear, axial load, combined stresses and bond. Introduction to prestressed concrete. GE credit: SciEng | QL, SE—II, III. [II, III] Chai
136. Building Design: Senior Design Experience (4) Lecture—3 hours; laboratory—3 hours. Prerequisite: course 130 or 131; course 135 or 132. Restricted to senior level standing. Design of a building structure for a specific need under the multiple constraints of safety, serviceability, cost and aesthetics. Offered irregularly. GE credit: SciEng | QL, SE—II, III. [II, III] Kavvas
138. Earthquake Loads on Structures (4) Lecture—3 hours; discussion—1 hour. Prerequisite: course 130 or 131. Determination of loads on structures due to earthquake forces. Methods of estimating equivalent static lateral forces; response spectrum and time history analysis. Concepts of mass, damping and stiffness for typical structures. Design for inelastic behavior: Interaction of plastic zones and Code requirements. GE credit: SciEng | SE—Kunnath
139. Advanced Structural Mechanics (4) Lecture—4 hours. Prerequisite: C or better in Engineering 104. Review of stress, strain, equilibrium, compatibility, and elastic material behavior. Plane stress and plane strain problems in elasticity; energy methods. Theories for unsymmetric bending, straight and curved beams. Beams on elastic foundations; stresses in plates and shells; elastic stability. GE credit: SciEng | SE—II. [II] Rashid, Sukumar
140L. Environmental Analysis of Aquatic Systems Laboratory (1) Lecture—3 hours. Prerequisite: Chemistry 2B or third quarter; course 140 may be taken concurrently. Restricted to Civil Engineering undergraduate and graduate students. Introduction to “wet chemical” and instrumental techniques commonly used in the examination of water and wastewater and associated data analysis. GE credit: SciEng | SE
141L. Engineering Hydraulics Laboratory (1) Lecture—3 hours. Prerequisite: course 141 (may be taken concurrently). Open to Engineering students only. Laboratory experiments and demonstration on flow measurements and modeling. Flood flow through channels and reservoirs. Frequency analysis of hydrologicprecipitations. Precipitation analysis for hydrologic design. Hydrologic design. GE credit: SciEng | QL, SE—II. [II] Kavvas
143. Green Engineering Design and Sustainability (4) Lecture—4 hours. Prerequisites: course 141. Groundwater occurrence, distribution, and movement; groundwater flow systems; radial flow to wells and aquifer test characterization; groundwater contamination; solute transport by groundwater; fate and transport of subsurface contaminants. Groundwater supply and transport modeling. GE credit: SciEng | QL, SE, SS, WE—II, III. [I, II, III]
144L. Groundwater Systems Design Laboratory (1) Laboratory—3 hours. Prerequisite: course 144, taken concurrently. Computer modeling of groundwater systems using sampling programs, well injection/withdrawal, and natural and engineered secondary conditions. Use of Groundwater Vistas computer program. —Ginn
145. Hydraulic Structure Design: Senior Design Experience (4) Lecture—2 hours; discussion—1 hour; laboratory—3 hours. Prerequisite: C or better in course 141. Restricted to senior level standing. Project-based course covering the design of an integrated urban drainage system, including design of alternatives, multiple realistic constraints (public...
strategies to satisfy multiple constraints including cost, effectiveness and environmental sustainability. Oral, poster or final report required. GE credit: SciEng | SE, SL.—III. (III.) Niemier

163. Energy and Environmental Aspects of Transportation (4)
Lecture—3 hours; extensive writing. Prerequisite: Economics 1A, Introduction to physical, biological and chemical processes in natural waters. Fundamentals of mass balances in water and waste water treatment. GE credit: SciEng | SE. —II. (II.) Wurtz, Young

148A. Water Quality Management (4)
Lecture—4 hours. Prerequisite: C- or better in Chemistry 2B. Basic concepts of water quality measurement and regulation. Design drawings and specifications and cost analysis. Offered irregularly. GE credit: SciEng | SE.—III. (III.) Younis

164. Water Resources Simulation (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103. Computer simulation techniques in the analysis, design and operation of surface water systems; modeling concepts and practices with application to surface runoff, water quality in rivers and streams and dispersion of contaminants in water bodies. GE credit: SciEng, Wrt | SE.—II.—II. (II.) Younis

148B. Water and Wastewater Treatment System Design: Senior Design Experience (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: C- or better in Engineering 103 and course 148A. Restricted to senior level standing. Design and evaluation of water and wastewater treatment systems. GE credit: SciEng | QL, SE, VL.—II, VI. —III. (III.) Darby

149. Air Pollution (4)
Lecture—4 hours; discussion—1 hour. Prerequisite: Mathematics 21D, 228, Chemistry 2B, Atmospheric Science 121A or Engineering 103. Physical and technical aspects of air pollution. Emphasis on geo- physical control of air pollution meteorology as well as physical and chemical properties of pollutants. [Same course as Atmospheric Science 149.] GE credit: SciEng | QL, SE, SL.—I. (I.) Cappa

150. Air Pollution Control System Design: Senior Design Experience (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103, 105, 106; course 149. Restricted to senior level standing. Design and evaluation of air pollution control devices and systems. GE credit: SciEng | SE.—II. (II.) Cappa

153. Deterministic Optimization and Design (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: Mathematics 21C and 22A; computer programming course. Optimization for engineering decision making; optimization techniques such as linear programming, dynamic programming, and non-linear programming. Applications in engineering disciplines, including multiple realistic problems, through computer-based course projects. GE credit: SciEng | QL, SE, SL.—I. (I.) Fan

155. Water Resources Engineering Planning (4)
Lecture—4 hours. Prerequisite: Engineering 106 or Economics 1A; course 114. Basic engineering planning concepts; role of engineering, economic, environmental social and information analysis; institutional, political and legal aspects. Case studies and computer models illustrate the planning of water resource systems. GE credit: SciEng or SocSci, Wrt | SE, SL.—I, II, III. —I. (I.) Lund

161. Transportation System Operations (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: C- or better in Engineering 6 (or the equivalent) and 102. Principles of transportation system operations; traffic control and density of measurement of transport models of transportation operations and congestion applied to urban streets and freeways. GE credit: SciEng | QL, SE.—II. (II.) Zhang

162. Transportation Land Use Sustainable Design: Senior Experience (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: C- or better in course 161 or 163. Restricted to senior level standing. Interactions between land use and transportation systems design. Generalized design guidelines and computer-based solutions for transportation land use. Students will select from various strategies to satisfy multiple constraints including cost, effectiveness and environmental sustainability. Oral, poster or final report required. GE credit: SciEng | SE, SL.—III.—III. (III.) Niemier

Hydrologic Engineering; (C) Geotechnical Engineering; (D) Geotechnical Engineering; (E) Structural Engineering; (F) Transportation Engineering; (G) Traffic and Transportation Engineering; (H) Transportation Planning; (I) Water Resources Engineering; (J) Water Resources Planning. May be repeated for credit when the topic is different. GE credit SciEng | SE.—I, II, III, I, II, III

190. The Civil Engineer in Society (2)
Lecture—1 hour; laboratory—3 hours. Open to upper division Civil Engineering majors. The Civil Engineering profession; introduction to concepts in business, management, economics, and career; introduction to professional organizations; introduction to the history of the Civil Engineering profession including the importance of professional licensure and a discussion of professional ethical and societal issues related to civil engineering. GE credit: SciEng | SS.—II. (II.) Kunneth

190C. Research Group Conferences in Civil and Environmental Engineering (1)
Discussion—1 hour. Prerequisite: upper division standing in Civil and Environmental Engineering; consent of instructor. Research group conferences. May be repeated for credit. (P/NP grading only.) GE credit: SE.—I, II, III, I, II, III

192. Internship in Engineering (1-5)
Internship. Prerequisite: upper division standing; approval of project plan and written consent of the internship. Supervised work experience in civil engineer- ing. May be repeated for credit. (P/NP grading only.) GE credit: SE.

198. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only.) GE credit: SE.

199. Special Study for Advanced Undergraduates (1-5)
Prerequisite: senior standing in engineering and at least a B average. (P/NP grading only.) GE credit: SE.

Graduate

201. Introduction to Theory of Elasticity (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 104. Fundamental equations of elasticity in three dimensions; plane stress and plane strain; flexure and torsion of bars of various shapes. Intro- duction to variational and approximate methods.—I. (I.) Rashid

203. Inelastic Behavior of Solids (3)
Lecture—3 hours. Prerequisite: course 201. Funda- mentals of theories of plasticity, viscoelasticity and viscoplasticity for solids. Stress analysis; constitutive modelling for engineering materials, e.g., metals, polymers, soils, etc., and microscopic motivation. Offered in alternate years.—Dafalias

205. Continuum Mechanics (5)
Lecture—2 hours. Prerequisite: course 201. Tensor formulation of the field equations for continuum mechanics, including large deformation effects. Invariance and symmetry requirements. Introduction to nonlinear thermoelasticity and thermodynamics. Solution of three-dimensional problems. Selected top- ics. Offered in alternate years.—Dafalias

206. Fracture Mechanics (4)
Lecture—4 hours. Prerequisite: course 201; Engi- neering 104. Linear and nonlinear fracture mechan- ics, stress analysis, energy concepts, brittle fracture criteria, path independent integrals, Dugdale- Barenblatt model, general cohesive zone models, ductile fracture criteria, crack tip fields, fracture mechanics, energy and propagating cracks, fatigue. Application of numeri- cal methods for fracture mechanics. Offered in alter- nate years.—Rashid

211. Advanced Matrix Structural Analysis (4)
Lecture—4 hours. Prerequisite: course 131. Analysis of complex frameworks by the displacement method; treatment of tapered beams, curved beams, and beams on elastic foundations; partial rigidity connec- tions; geometric and material nonlinearities; buck- ling; flexibility-based formulations; FEM-software for nonlinear analysis of structures.—I. (I.) Kunnath

212B. Finite Elements: Application to Linear and Nonlinear Structural Mechanics Problems (4) Lecture—4 hours. Prerequisite: course 212A. Application to linear and nonlinear structural mechanics problems. Linear elasticity, weak form, and finite element approximation. Incompressible material problems. Non-linear problems with material non-linearity.—III. (III.) Sukumar

213. Analysis of Structures Subjected to Dynamic Loads (4) Lecture—4 hours. Prerequisite: course 211 [may be taken concurrently]. Analysis of structures subjected to earthquake, wind and blast loading; distributed, consistent and lumped mass methods; computer implementation; nonlinear response spectrum; frequency and time domain analysis; seismic protection of structures; numerical methods in linear and nonlinear structural dynamics.—I. (I.) Kunath

221. Theory of Plates and Introduction to Shells (3) Lecture—3 hours. Prerequisite: course 201 [may be taken concurrently]. Development of classical and refined plate theories. Application to isotropic, orthotropic and composite plates. Solution of rectangular and circular plates. Membrane theory for axisymmetric shells and bending of circular shells.

223. Advanced Dynamics, Signal Processing, and Smart Structures Technology (4) Lecture—4 hours. Prerequisite: course 213 or equivalent. Signal processing and system identification of structures under dynamic excitations; Fourier and Laplace transforms; data acquisition and sensor design fundamentals; sensor technologies/techniques for nondestructive evaluation; structural control; actuators and dampers for smart structures; piezoelectric and acousto-optic emissions; micro- and nano-fabrication.—II. (II.) Loh

232. Advanced Topics in Concrete Structures (4) Lecture—4 hours. Prerequisite: course 130, 135, 138 and 139, and graduate standing. Ductility of reinforced concrete; strength of two-way slabs; modified compression field theory.—I. (I.) Chai

233. Advanced Design of Steel Structures (4) Lecture—4 hours. Prerequisite: courses 130 or 131, 132. Review of Load and Resistance Factor Design (LRFD); steel plate girder design; plastic design of indeterminate systems; moment frames and bracing systems; connection design; seismic design of steel structures; vibration of floating systems; steel-concrete composite design.—III. (III.) Kanvinde

234. Prestressed Concrete (4) Lecture—4 hours. Prerequisite: courses 130 or 131, 132. Survey of methods and applications: prestressing materials and systems; prestress losses; flexural design; design for shear and torsion; deflection control and control; continuous beams and indeterminate structures; partial prestressing; design of compression members; strut-and-tie models. Offered in alternate years.—Bolander

235. Cement Composites (4) Lecture—3 hours, laboratory—3 hours. Prerequisite: Engineering 21A or 115. Compositions of cement composites; materials selection and proportioning; component and composite properties; hydration reactions and microstructure development; mechanisms of failure; frost-resistance; fiber reinforcement; concrete durability; novel reinforcing materials; fly ash and recycled materials; non-metallic reinforcing; repair and retrofit technologies; applications to structural design. Offered in alternate years.—II. (II.) Young

237. Bridge Design (4) Lecture—4 hours. Prerequisites: courses 130, 135; course 234 recommended. Open to graduate students only. Bridge and construction characteristics; design philosophy, details according to Caltrans and American Association of State Highway and Transportation Officials codes, principles; steel, prestressed concrete, and modular bridges; modern bridges using advanced fiber reinforced polymer composites; fieldtrip required.—III. (III.) Cheng

240. Water Quality (4) Lecture—4 hours. Prerequisites: courses 141 and 142. Quality requirements for beneficial uses of water. Hydrologic cycle of quality. Hydromechanics in relation to quality of surface and groundwaters; transport and fate of waterborne pollutants. Heat budget for surface waters; predictive methods; introduction to water quality modeling.—II. (II.) Schladow

241. Environmental Reactive Chemical Transport Modeling (4) Lecture—4 hours. Prerequisite: Chemistry 2A, or Chemistry 2B, or course 149, or equivalent. Modeling of reactive chemical transport in air and water including kinetic reactions, equilibrium reactions, and phase partitioning. Emphasis on numerical solution schemes and programming techniques to provide deeper insight into model performance and limitations. Offered in alternate years.—III. Kleeman

242. Air Quality (4) Lecture—4 hours. Prerequisite: Engineering 105, course 149, or equivalent. Factors determining air quality. Effects of air pollutants. Physical and chemical fundamentals of atmospheric transport and reaction. Introduction to air quality modeling. Offered in alternate years.—III. (III.) Kleeman

243A. Water and Waste Treatment (4) Lecture—4 hours. Prerequisite: course 148A or the equivalent. Characteristics of water and airborne wastes; treatment processes and process kinetics; treatment system design.—I. (I.) Young

243B. Water and Waste Treatment (4) Lecture—4 hours. Prerequisite: course 243A. Continuation of course 243A. Aeration, thickening, biological processes, design of biological treatment systems.—II. (II.) Young

244. Life Cycle Assessment for Sustainable Engineering (4) Lecture—4 hours. Prerequisite: graduate standing. Life cycle assessment methodology is taught emphasizing applications to infrastructure and energy systems. Life cycle design, life cycle cost methods, other tools from industrial ecology, and links to policy are covered as well.—I. (I.) Kendall

245A. Applied Environmental Chemistry: Inorganic (4) Lecture—3 hours, discussion—1 hour. Prerequisite: Engineering 105, Chemistry 2B or the equivalent, course 140, Chemistry 2C or 107A recommended. Chemistry of natural and polluted waters. Topics include chemical, kinetic and equilibrium principles, redox reactions, gas solubility and solid-solution equilibria, thermodynamics, carbonate systems, condensation chemistry, interface, and biological phenomena. Offered in alternate years.—(II.) Young

245B. Applied Environmental Chemistry: Organic (4) Lecture—3 hours; discussion—1 hour. Prerequisite: Chemistry 128A, 128B, 128C, or the equivalent; Chemistry 2C or 107A recommended. Transport and transformation of organic chemicals in the environment. Topics include application of thermody- namics to predict solubility and activity coefficients; distribution of organic chemicals between the aqueous phase and air, soil, or solid phases; chemi- cal, photothermal and biological transformation reactions. Offered in alternate years.—(III.) Young

246. Pilot Plant Laboratory (4) Lecture—1 hour; discussion—1 hour; laboratory—6 hours. Prerequisite: course 243A, 243B (may be taken concurrently) or consent of instructor, graduate standing. Laboratory investigation of physical, chemical, and biological processes for water and waste water treatment.—II. (II.) Darby

247. Aerosols (4) Lecture—4 hours. Prerequisite: Engineering 103, 105, course 141, 149. Behavior of airborne particles including particle formation, modification, and removal processes. Offered in alternate years.—III. Kleeman

247L. Aerosols Laboratory (4) Lecture—2 hours; laboratory—6 hours. Prerequisite: course 247. Methods of generation and characterization of aerosols. Detailed topics may include flow rate measurement, aerosol scattering, and collection, ions measurement, metals measurement, and carbon measurement. May be repeated one time for credit.—Kleeman

248. Biofilm Processes (4) Lecture—4 hours. Prerequisite: Soil Science 111 or 211 or course 243B or consent of instructor; calculus and basic cell molecular biology recommended. Natural and engineered biofilms, including biofilm occurrence and development, spatial structural microbial processes, fundamental and applied research tools, biofilm reactors, beneficial uses, and detrimental effects.—Wuerz

249. Probabilistic Design and Optimization (4) Lecture—4 hours. Prerequisite: Mathematics 21C, 22A, programming course; Applied Science Engineering 115 and mathematical modeling course recommended. Applied mathematics with a focus on modeling, identifying, and controlling dynamic, stochastic, and underdetermined systems. Applications in civil engineering design, project evaluation, and risk management. Offered in alternate years.—II. Lund

250. Civil Infrastructure System Optimization and Identification (4) Lecture—4 hours. Prerequisite: Mathematics 21C, 22A, programming course; Applied Science Engineering 115 and mathematical modeling course recommended. Applied mathematics with a focus on modeling, identifying, and controlling dynamic, stochastic, and underdetermined systems. Applications in civil engineering design, project evaluation, and risk management. Offered in alternate years.—III. Fan

251. Transportation Demand Analysis (4) Lecture—4 hours. Prerequisite: course 114 or the equivalent. Procedures used in urban travel demand forecasting. Principles and assumptions of model components (trip generation, trip distribution, model split). New methods of estimating travel demand. Computer exercises using empirical data to calibrate models and forecast travel demand.—II. (II.) Nieennie

252. Sustainable Transportation Technology and Policy (3) Lecture—2 hours; discussion—1 hour. Prerequisite: course 165. Role of technical fixes and demand management in creating a sustainable transportation system. Emphasis on technology options, including
253. Dynamic Programming and Multistage Decision Processes (4)

254. Discrete Choice Analysis of Travel Demand (4)
Lecture—4 hours. Prerequisite: course 114. Behavioral and statistical principles underlying the formulation and estimation of discrete choice models. Practical application of discrete choice models to characterization of choice behavior, hypothesis testing, and forecasting. Emphasis on computer exercises using real-world data sets. (Same course as Geography 279.) —III. (III) Mokhtarian

256. Urban Traffic Management and Control (4)
Lecture—4 hours. Prerequisite: course 114. Basic concepts and models related to the branch of traffic science that deals with the movement of vehicles on a road network, including travel speed, travel time, congestion concepts, car-following, and freeway models. —II. (II) Chang

257. Flow in Transportation Networks (4)
Lecture—4 hours. Prerequisite: course 153; 161 or 256 recommended. Elements of graph theory, a survey of pertinent optimization techniques, extremal principles in network flow problems, deterministic equilibrium assignment, stochastic equilibrium assignment, extensions of equilibrium assignments and dynamic transportation network assignment. —II. (II) Lund

258. Transportation Planning in Developing Countries (3)
Lecture—3 hours. Prerequisite: course 160 or consent of instructor. Investigation of the role that transportation investments and policies play in the development of regions and countries. Emphasis is on identifying appropriate technologies, policies, and planning methods for designing transportation systems in nations of differing socioeconomic, geo-graphic, and institutional settings. Offered in alternate years. —III. (III) Sperring

259. Asphalt and Asphalt Mixes (4)
Lecture—4 hours. Prerequisite: course 179 or consent of instructor. Analysis of asphalt mixes and their use in civil engineering structures, with primary emphasis on pavements. Asphalt, aggregate properties and effects on mix properties. Design, construction, recycling, recent design and performance research. Offered in alternate years. —II. (II) Harvey

260. Sediment Transport (4)
Lecture—4 hours. Prerequisite: course 141 or equivalent. Sediment transport in hydrologic systems. Processes of sediment movement, which will emphasize how sediment moves and the physical processes that affect sediment transport. Field trip. Offered in alternate years.

264A. Transport, Mixing and Water Quality in Rivers and Lakes (4)
Lecture—4 hours. Prerequisite: course 141 and 240. Principal causes of mixing and transport in rivers, lakes and reservoirs, and their impacts on water quality. Freshwater/saltwater interface in coastal aquifers. Sediment moves and the physical processes that affect sediment transport. Field trip. Offered in alternate years. —Schladow

264B. Transport, Mixing and Water Quality in Estuaries and Wetlands (4)
Lecture—4 hours. Prerequisite: courses 141 and 240. Principal causes of mixing and transport in estuaries and wetlands, and their impacts on water quality. Topics include advection/diffusion; tides; transverse mixing; longitudinal dispersion; sediment transport; nutrient cycling; computer modeling of estuaries. Coastal and riverine systems. Offered in alternate years. —Schladow

265. Stochastic Contaminant Transport (4)

266. Applied Stochastic Methods in Engineering (4)
Lecture—4 hours. Prerequisite: courses 114 or Mathemat ics 131 or Statistics 130A or 131A. Mathematics 118A (may be taken concurrently). Stochastic processes classification; Gaussian random fields; stochastic calculus in mean square; Ito and Stratonovich representations; Fokker-Planck equation; stochastic differential equations with random coefficients. Offered in alternate years. —Kavvas

267. Water Resource Management (3)
Lecture—3 hours. Prerequisite: courses 114, 141, and 142; course 153 recommended. Engineering in the context of development and management. Uses of computer modeling to improve water management. —Same course as Geography 272.)—I. (I) Lund

268. Infrastructure Economics (3)
Lecture—3 hours. Prerequisite: Economics 1A, En gineering 106 or the equivalent. Economics applied to infrastructure engineering planning, operations, maintenance, and management problems; microeconomic and macroeconomic theories; benefit-cost analysis; effect of uncertainty; optimization economics; non-classical economics; public finance. Offered in alternate years. —Lund

269. Transportation-Air Quality: Theory and Practice (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 149 or the equivalent. Health and regulatory aspects of airborne pollutants. Principles of modeling vehicle emissions. Conformity issues and the regula-tory framework. Regional and micro-scale modeling. Offered in alternate years. —Niemeier

270. Advanced Water Resources Management (3)
Lecture—3 hours. Prerequisite: courses 153 and 267 or the equivalent. Discussion of technical papers related to planning theory, system maintenance, regionalization, multi-objective methods, risk analysis, invariant optimization formulation, economic development, forecasting, operations, and other topics. Offered in alternate years. —Lund

271. Inverse Problems (4)
Lecture—4 hours. Prerequisite: courses 114 and 144 or equivalents. Inverse calibration of distributed parameter models, using data representing model outputs. Forward and inverse mappings, stability, uniqueness and sensitivity. Optimization formulation of inverse problems, maximum likelihood and other objective functions, indirect and direct approaches, solution by UCODE in hands-on project format. —I. (I) Ginn

272A. Advanced Hydrogeology (4)

272B. Advanced Hydrogeology (4)

272C. Multiphase Reactive Transport (4)
Lecture—4 hours. Prerequisite: courses 142, 144, 148A. Multicomponent, multistate fluid flow and transport in geological systems. Reactions, mass transport, and diffusion mass transfer. Eulerian and Lagran-gean averaging methods. Applications to contami-nation remediation problems in river and subsurface hydrology. Offered in alternate years. —Ginn

273. Water Resource Systems Engineering (3)
Lecture—3 hours. Prerequisite: courses 114 and 153 or the equivalent. Planning, design, and management of water resource systems. Application of deterministic and stochastic optimization techniques. Water allocation, capacity expansion, and design and operation of reservoir systems. Surface water and groundwater management. Offered in alternate years. —I. (I) Lund

275. Hydrologic Time-Series Analysis (4)
Lecture—4 hours. Prerequisite: course 114 and 142. Application of statistical methods for analysis and modeling of hydrologic time series, including spectral analysis and prediction of hydrologic sequences using time series methodology. Offered in alternate years. —III. (III) Kavvas

276. Watershed Hydrology (4)
Lecture—4 hours. Prerequisite: course 142 or the equivalent. Analysis and mathematical modeling of hydrologic processes taking place in a watershed. Precipitation analysis and modeling. Theory of overland flow and its kinematic wave approximation. Analysis and modeling of saturated and unsaturated subsurface flow processes taking place on a hill slope. —II. (II) Kavvas

277A. Computational River Mechanics I (4)
Lecture—4 hours. Prerequisite: Applied Science Engineering 115, course 141 (both may be taken concurrently). Unsteady open channel flows, com-putation of water surface profiles, shallow water equa-tions. St. Venant equations, method of characteristics, finite difference methods, stability and accuracy of explicit and implicit schemes, flood routing in simple and compound channels, advec-tion of plumes. Not open to students who have completed course 277. —I. (I) Younis

277B. Computational River Mechanics II (4)
Lecture—4 hours. Prerequisite: course 277A. Open channel flows, physical aspects of river mechanics, formulation of depth-averaged transport equations, boundary conditions, coordinates transformation and grid gen-eration, finite-difference solution techniques, applica-tions to two-dimensional momentum and pollutant transport in rivers. Offered in alternate years. —III. (III) Younis

277C. Turbulence and Mixing Processes (4)
Lecture—4 hours. Prerequisite: graduate standing. Nature of turbulent flows, conservation equations, momentum, heat, scalar transport, pressure and wall-bounded flows, body forces and mixing, roughness effects, turbulence modeling and simulation. Offered in alternate years. —III. (III) Younis

278. Hydrodynamics (3)

279. Advanced Mechanics of Fluids (4)
Lecture—4 hours. Prerequisite: course 141. Rota-tional flows. Navier-Stokes equations and solutions for laminar flow, boundary layer equations and solu-tions for laminar flow.

280A. Nonlinear Dynamic Finite Elements for Elastic-Plastic Problems (4)
Lecture—4 hours. Prerequisite: consent of instructor. State of the art computational methods and tools for analyzing linear and nonlinear dynamics problems. Offered in alternate years. —III. Jeremic

280B. Nonlinear Dynamic Finite Elements (4)
Lecture—4 hours. Prerequisite: consent of instructor. State of the art computational methods and tools for analyzing linear and nonlinear dynamics problems. Offered in alternate years. —III. Jeremic

281A. Advanced Soil Mechanics (4)

281B. Advanced Soil Mechanics (5)
Lecture—4 hours; laboratory—3 hours. Prerequisite: course 171A. Site investigation and soil characterization within the context of slope stability analysis. —II. (II.) Delong

282. Pavement Design and Rehabilitation (4)
Lecture—4 hours. Prerequisite: course 179 or consent of instructor. Advanced pavement design and structural/functional condition evaluation for concrete and asphalt pavements. Highways, airfields, port facilities; new facilities, rehabilitation, reconstruction. Mechanistic-empirical procedures, materials, climate and traffic characterization. Use of current design methods; recent developments and research. Offered in alternate years. —III. Harvey

283. Physico-Chemical Aspects of Soil Behavior (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 171. Study of the geotechnical behavior of soils considering formation, transport, mineralogy, soil-fluid-electrolyte systems, surface tension, particle mechanics, shape, fabric, and structure. Laboratory exercises demonstrate effects of fundamental interparticle forces (contact, Van Der Waals, capillarity and chemical). Offered in alternate years. —I. Kutter

284. Theoretical Geomechanics (4)

286. Advanced Foundation Design (4)
Lecture—4 hours. Prerequisite: course 173. Design and analysis of pile and pier foundations, including seismic effects; deep excavation systems; tie-back, nailing, and anchor systems; coffer dams; loads on buried conduits; ground modification techniques; and other related topics. —III. (III.) Delong

287. Geotechnical Earthquake Engineering (4)
Lecture—4 hours. Prerequisite: courses 138 and 281A. Characteristic and estimation of earthquake ground motions; effects of fault excavation and local site response; liquefaction potential and remediation; residual strength and stability considerations; ground deformations; dynamic soil-structure interaction. —III.

288. Earth and Rockfill Dams (4)
Lecture—4 hours. Prerequisite: courses 281A and 281B (may be taken concurrently). Site selection; design considerations; layout; seismic effects including consequences of fault movements; construction; environmental considerations, instrumentation; maintenance remediation and retrofit of existing dams. Offered in alternate years. —II. (I-III.) Jeremic

289A-I. Selected Topics in Civil Engineering (1-5)
Lecture, laboratory, or combination. Prerequisite: consent of instructor. Directed group study of special topics with separate sections in (A) Environmental Engineering; (B) Hydraulic and Hydrologic Engineering; (C) Engineering Planning; (D) Geotechnical Engineering; (E) Structural Engineering; (F) Structural Mechanics; (G) Transportation Engineering; (H) Transportation Planning; (I) Water Resources Engineering; (J) Water Resource Planning. May be repeated for credit. —I, II, III, (I, II, III.)

290 Seminar (1)
Seminar—1 hour. Discussion of current graduate research, and guest lectures on recent advances. Oral presentation of individual study. Course required of graduate degree candidates. (S/U grading only.) —I, II, III, (I, II, III.)

290C Graduate Research Group Conference (1)
Discussion—1 hour. Research problems, progress, and techniques in civil engineering. May be repeated for credit. (S/U grading only.) —I, II, III, (I, II, III.)

290T Topics in Water and Environmental Engineering (1)
Seminar—2 hours. Seminars presented by visiting lecturers, UC Davis faculty and, graduate students. May be repeated for credit. (S/U grading only.) —I, II, III, (I, II, III.)

290G Group Study (1-5)
Group Study—1 (S/U grading only.)

299. Research (1-12)
(S/U grading only.)

Professional

390. The Teaching of Civil Engineering (1)
Discussion—1 hour. Prerequisite: meet qualifications for teaching assistant and/or associate in Civil Engineering. Participation as teaching assistant or associate in a designated engineering course. Methods of leading discussion groups or laboratory sections, writing and grading quizzes, use of laboratory equipment and laboratory report. May be repeated for total of 9 units. (S/U grading only.) —I, II, III, (I, II, III.)

390B. Group Study (1-5)
Prerequisite: consent of instructor. (S/U grading only.)

Gunther Weber, Ph.D., Assistant Adjunct Professor

The Computer Science and Engineering Program
The Department of Computer Science administers two curricula: Computer Science and Engineering in the College of Engineering, and Computer Science in the College of Letters and Science. It also administers two minors: Computer Science in the College of Letters and Science, and Computational Biology in the College of Engineering. For information on the Computer Science curriculum and minor: see Computer Science, on page 216.

The Computer Science Engineering major (below) prepares students to do further work in hardware, software, theory, or electronics, either in industry or in postgraduate study.

The primary differences between the Computer Science Engineering and the Computer Science majors are the extent of course work covering hardware and the flexibility of the curriculum. The Computer Science Engineering major develops a solid understanding of the entire machine, including hands-on experience with its hardware components. The Computer Science major has some course work on hardware, at the digital-design level, on simulators. The Computer Science Engineering major has fewer free electives. The CS major’s more generous electives make it easier to complete a minor or double major.

A key theme of the Computer Science Engineering curriculum is the hardware/software interaction, a theme reflected in the courses required and the orientation of the courses themselves.

The Computer Science and Engineering major provides students with a solid background in mathematics, physics, chemistry, and electronic circuits and systems, all supporting the computer hardware and computer software courses that constitute the focus of the curriculum.

Mission. The University of California, Davis, is, first and foremost, an institution of learning and teaching, committed to serving the needs of society. The Department of Computer Science contributes to the mission in three ways. First, its undergraduate and graduate education programs seek to educate students in the fundamental principles of computer science and the skills needed to solve the complex technological problems of modern society. The breadth of coursework provides a framework for life-long learning and an appreciation for multidisciplinary activities. Second, through its research programs, the department contributes to the development and progress of computer science, and software and information technology, to provide innovative, creative solutions for societal needs. Finally, the department disseminates its research to enhance collaborations with the public sector, further interdisciplinary interests that benefit society, and...
12. Introduction to Media Computation (4)
Lecture—3 hours; discussion/lab—1 hour. Prerequisite: Introduction to key computational ideas necessary to understand and produce media. Fundamentals of programming are covered as well as analysis of how media are represented and transmitted in digital form. Aimed primarily for non-computer science students. Some course as Cinema and Techno-cultural Studies 012. GE credit: ArtHum or SciEng | AH or SE, VL — II, III, I, III, III
13. Introduction to Computers (4)
Lecture—3 hours; laboratory—3 hours. Not open for credit to students who have completed course 30. Computer uses in modern society. Focus on uses in nontechnical disciplines. Includes word processing, spreadsheets, web-page creation, elementary programming, basic computer organization, use of the Internet, the uses of computers and their influence on society. Course not intended for CS or CSE majors. Only two units of credit allowed to students who have completed Plant Science 21. GE credit: Sci-Eng, Wrt | QL, SE, WE — I, II, III, I, II, III, II
20. Discrete Mathematics for Computer Science (4)
30. Programming and Problem Solving (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 16A or 21A [may be taken concurrently]; prior experience with basic programming concepts [variable, loops, conditional statements] recommended. Introduction to computers and computer programming, algorithm design, and debugging. Elements of good program style and Programming in the C language. Use of basic UNIX tools. GE credit: SciEng | QL, SE — I, II, III, III, I, II, III, I, II, III, I, II, III
40. Software Development and Object-Oriented Programming (4)
50. Computer Organization and Machine-Dependent Programming (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 40. Comparative study of different hardware architectures via programming in the assembly languages of various machines. Role of system software in producing an abstract machine. Introduction to I/O devices and programming. Only one unit of credit allowed for students who have taken Electrical and Computer Engineering 70. GE credit: SciEng | SE — I, II, III, II, II, III, II, III, II, III, III
60. Data Structures and Programming (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 20, 40 [C++ and UNIX]; grade of C- or better in each course. Design and analysis of data structures for a variety of applications. Trees, heaps, searching, sorting, hashing, graphs. Extensive programming. GE credit: SciEng | QL, SE — I, II, III, II, III, II, III, II, I, II, III, I, II, III, I, II, III
89A-L. Special Topics in Computer Science (1-5)
Lecture, laboratory, or combination. Prerequisite: consent of instructor. Special topics in Computer Science Theory; Architecture; Programming Languages and Compilers; Operating Systems; Software Engineering; Databases; Artificial Intelligence; Computer Graphics; Net- works; Computer-Aided Design; Scientific Computing; Social Science; Humanities; Arts and Humanities; Social Sciences; Engineering; Science and Engineering; Science; Social Science; American Culture; American Culture; Oral Skills; Quantitative; Scientific; Visual; World Culture; Writing Experience
tradesoffs, and evaluation of interactive information systems. GE credit: SciEng | SE, VL.—III. (III.) Amenta, Ma

165A. Database Systems (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 60. Database modeling and design (E/R model, relational model), relational algebra, query languages (SQL), file and index structures, query processing, transaction management. GE credit: SciEng | SE.—II. (II.) Ludaescher

165B. Database Systems (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 165A. Data modeling (object-oriented, graph-based, spatiotemporal models), Querying semistructured data (XML). Database theory (normalization, integration, provenance). Database programming (stored procedures, embedded SQL, web programming). Advanced topics (data warehousing, parallel data processing). GE credit: SciEng | SE.—III. (III.) Ludaescher

170. Introduction to Artificial Intelligence (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 140A. Design and implementation of intelligent computer systems. Knowledge representation and reasoning, machine perception and inference. Problem solving. Natural language processing. GE credit: SciEng | SE.—II. (II.) Davidson, Levitt

171. Machine Learning (4)
Lecture—3 hours; discussion—1 hour. Introduction to machine learning and unsupervised learning, including classification, dimensionality reduction, regression and clustering using modern machine learning methods. Applications of machine learning. GE credit: SciEng | SE.—III. (III.) Davidson, Matloff, Tagkopoulos

173. Image Processing and Analysis (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 60; Mathematics 67 or C or better in Mathematics 22A. Techniques for automated extraction of high-level information from images generated by cameras, three-dimensional surface sensors, and medical devices. Typical applications include detection of objects in various types of images and describing populations of biological specimens appearing in medical imagery. GE credit: SciEng | SE.—II. (II.) Amenta

175. Computer Graphics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 60; Mathematics 22A or Mathematics 67. Principles of computer graphics, with a focus on interactive systems. Current graphics hardware, elements of algorithms in two- and three-dimensional space, geometric transformations, camera models and interaction, graphics system design, standard graphics APIs, individual projects. GE credit: SciEng | SE.—II. (II.) Amenta, Hamann, Joy

177. Scientific Visualization (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 175. Computer graphics techniques for generating images of various types of measured or computer-simulated data. Typical applications for these graphics techniques include study of air flows around car bodies, medical data, and molecular structures. GE credit: SciEng | SE, VL.—II. (II.) Hamann, Joy, Max

187. Geometric Modeling (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 175. Interactive graphics techniques for defining and manipulating geometrical shapes used in computer-aided design and drafting, aircraft design, and architectural design. GE credit: SciEng | SE, VL.—I. (I.) Hamann, Joy, Max

188. Ethics in an Age of Technology (4)

189A-N. Special Topics in Computer Science (1-5)

190C. Research Group Conferences in Computer Science (1)
Discussion—1 hour. Prerequisite: upper division standing in Computer Science and Engineering; consent of instructor. Research group conferences. May be repeated for credit. (P/NP grading only)—I, II, III, (I, II, III.)

190X. Senior Seminar (2)
Seminar—2 hours. Prerequisite: senior standing. Examination of a special topic in a small group setting.—I, II, (I, II, III.)

192. Internship in Computer Science (1-5)
Internship. Prerequisite: completion of a minimum of 84 units; project approval prior to period of internship. Supervised work experience in computer science. May be repeated for credit. (P/NP grading only)

193A. Senior Design Project (2)
Lecture—1 hour; laboratory—3 hours. Prerequisite: course 140B recommended (may be concurrent) or consent of instructor. Open to Computer Science or Computer Science and Engineering seniors. Team design project involving analysis, design, implementation and evaluation of a large-scale problem involving computer and computational systems. The project is supervised by a faculty member. Students must take course 193A and 193B to receive credit. (Deferral grading only; pending completion of sequence.) GE credit: SciEng | SE.—II, III, (II, III) Davidson, Joy, Mahapatra

193B. Senior Design Project (2)
Lecture—1 hour; laboratory—3 hours. Prerequisite: IP grade in course 193A. Team design project involving implementation and evaluation of a large-scale problem involving computer and computational systems. The project is supervised by a faculty member. Students must take course 193A and 193B to receive credit. (Deferral grading only; pending completion of sequence.) GE credit: SciEng | SE.—II, III, (II, III) Davidson, Joy, Mahapatra

197T. Tutoring in Computer Science (1-3)
Discussion—1 hour; laboratory/discussion—3-6 hours. Prerequisite: consent of instructor. Restricted to upper-division standing. Tutoring in computer science courses, especially introductory courses. (P/NP grading only)—I, II, III, (I, II, III)

198. Directed Group Study (1-5)
Independent study. Consent of instructor. May be repeated for credit. (P/NP grading only.)—I, II, III, (I, II, III)

199. Special Study for Advanced Undergraduates (1-5) (P/NP grading only)

The Graduate Program in Computer Science
Doctoral and Masters degrees in Computer Science are offered through the interdisciplinary Graduate Group in Computer Science. Please see http://www.cs.ucdavis.edu and Computer Science (A Graduate Group), on page 216, for a description of graduate education offerings, requirements, group faculty and research foci.

Graduate

201A. Advanced Computer Architecture (4)
Lecture—3 hours; term paper. Prerequisite: course 154B or Electrical and Computer Engineering 170; course 150. Modern research topics and methods in computer architecture. Design implications of memory latency and bandwidth limitations. Performance enhancement via within-processor and between-processor parallelism. Term project involving student-proposed extensions/modifications of work in the research literature. Not open for credit to students who have completed course 250A.—I. Farrens

201B. High-Performance Uniprocessing (4)
Lecture—3 hours; term paper. Prerequisite: course 201A. Maximizing uniprocessor performance. Barriers to high performance; problems to the solutions; historical and current processor designs. Not open for credit to students who have completed course 250B.—II. Farrens

210C. Parallel Architectures (4)
Lecture—3 hours; project—1 hour. Prerequisite: course 201A. Evolution of parallel architectures from special-purpose machines to commodity clusters. Emphasis on recent machines and applications that drive them. Not open for credit to students who have completed course 250C.—III.

203. Novel Computing Technologies (4)
Lecture—3 hours; project—1 hour. Prerequisite: course 201A. Novel computing technologies that could revolutionize computer architecture. Quantum computing technologies, including algorithms, device, and fault tolerance. A survey of unconventional technologies involving nanoscale electronics, MEMS devices, biological devices, and nanotechnology. Offered in alternate years.—II.

220. Theory of Computation (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 120, 122A. Time and space complexity classes. Reductions, completeness, and the role of randomness. Logic and undecidability.—III. Roga

221. Computational Methods in Systems and Synthetic Biology (4)
Lecture—3 hours; discussion—1 hour. Computational methods related to systems and synthetic biology. An overview of modern learning techniques related to the analysis of biological data, biological networks. Predictive modeling and simulation of biological systems. Topics on biological circuit construction.—I. (I) Tagkopoulos

222A. Design and Analysis of Algorithms (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 122A; Statistics 131A recommended. Techniques for designing efficient algorithms, analyzing their complexity and applicability to a broad range of applications. Methods for recognizing and dealing with difficult problems.—I, II, (I, II) Amenta, Franklin, Gusfield, Martel, RagHAVan

222B. Advanced Design and Analysis of Algorithms (4)
Lecture—3 hours; project—1 hour. Prerequisite: course 222A. Advanced topics in complexity theory. Problem classification. The classes P, NP, P-space, coNP, Matching and network flow algorithms. Matrix multiplication. Approximation algorithms.—III. (III) Gusfield, Franklin, Martel, RagHAVan

223. Parallel Algorithms (4)
Laboratory/discussion—3 hours; project—1 hour. Prerequisite: course 222A. Theory of parallel computer systems including PRAMs, loosely coupled systems and interconnection networks. Parallel algorithms for classical problems and general techniques for their design and analysis. Proving lower bounds on parallel computation in several settings.—II. (II) Martel

224. String Algorithms and Applications in Computational Biology (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 222A. Algorithms that operate on strings. Pattern matching, set of patterns, regular expression pattern matching, suffix trees and applications, inexact

Quarter Offered: I-Fall, II-Winter, III-Spring, IV-Summer; 2015-2016 offering in parentheses.

Pre-Fall 2011 General Education (GE): Arts and Humanities: SciEng; Science and Engineering: SocSci; Social Sciences; Div-Dominant Diversity; Writ-Writing Experience
Fall 2011 and on Revised General Education (GE): AH-Arts and Humanities; SE-Science and Engineering; SS-Social Sciences; AGCH-American Cultures, DD-Dominant Diversity, OL-Oral Skills, QL-Quantitative, SL-Scientific, VL-Visual, WC-World Cultures, Writ-Writing Experience
225. Graph Theory (3)
Lecture—3 hours. Prerequisite: graduate standing in electrical engineering or computer science or consent of instructor. Graphs and fundamental concepts. Vectors, spaces and graphs. Planar graphs: Whitney’s and Kuratowski’s theorems. Topological parameters: packings and coverings. Connectivity: Menger’s theorem. Hamilton’s and Chordal theorems. Graph factorization: Tutte’s theorem. Graph coloring: Brooks and Vizing’s theorem. —II. Franklin

226. Computational Geometry (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 175, 222A. Mathematics of unstructured data. Algorithms for data structures such as Voronoi diagrams, oct-trees, and arrangements. Applications in computer graphics, concentration on problems in three-dimensions. Offered in alternate years. —III. Amenta, Max

227. Modern Cryptography (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 220 or 222A. Modern cryptography as a discipline emphasizing formal definitions and proofs of security. One-way functions, pseudo-randomness, encryption, digital signatures, zero-knowledge, secure two-party computation. —II. Franklin

228. Cryptography for E-Commerce (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 222A. Cryptographic primitives and protocols of importance to e-commerce, present and future. Distribution mechanisms, payment mechanisms, pricing mechanisms, anonymity and privacy mechanisms, fair exchange mechanisms. Offered in alternate years. —II. Levitin

229. Advanced Computational Structural Bioinformatics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: graduate standing. Algorithmic problems in structural biology; protein structure classification; protein structure prediction (including comparative modeling and ab initio protein structure prediction); molecular simulations (molecular dynamics and Monte Carlo simulations). —II. (I.) Koehl

230. Applied Numerical Linear Algebra (4)
Laboratory/discussion—3 hours; discussion—1 hour. Prerequisite: course 130 or Engineering Applied Science 209 or Mathematics 167. Numerical linear algebra [NLA] with emphasis on applications in engineering systems; matrix factorizations; perturbation and rounding errors of fundamental NLA algorithms. Offered in alternate years. —I. Bai

231. Large-Scale Scientific Computation (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 130. Algorithms and techniques for large-scale scientific computation, including basics for high performance computing, iterative methods, discrete and continuous Fourier transform, Poisson solvers, particle methods, spectral graph partitioning and its applications. Offered in alternate years. —II. Bai

234. Computational Functional Genomics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 124; graduate standing in Computer Science or Life Sciences. Bioinformatics methods for analysis and inference of functional relationships among genes using large-scale genomic data, including methods for integration of gene expression, promoter sequence, EST-DNA binding and other data, and applications to modeling of biological networks. —II. (II.) Filkov

235A. Computer and Information Security (4)
Lecture—3 hours; project. Prerequisite: course 150; course 152A recommended. Modern topics in computer security, including: encryption, access control, operating systems security, network security, applied cryptography, cryptographic protocols, secure programming practices, safe languages, mobile code, malware, and security and privacy, and case studies from real-world systems. Not open for credit to students who have taken course 235. —I. (I.) Chen

235B. Foundations of Computer and Information Security (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 235A; courses 120, 150 recommended. Theoretical foundations of methods used to protect data in computer and communication systems. Access control matrices and unification of security; policies; Bell LaPadula, Biba, Chinese Wall models, non-interference and non-deducibility; information flow and the confinement problem. Not open for credit to students who have taken course 235. —II. (I.) Bishop

236. Computer Security: Intrusion Detection Based Approach (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 150; course 153 recommended. Concepts of intrusion detection systems and their implementation based on machine learning, signature-based detection using pattern matching, automated response to attacks using artificial intelligence planning, tracking intruders based on principal component analysis, security policy languages. Offered in alternate years. —I. Levitin

240. Programming Languages (4)
Lecture—3 hours; discussion—1 hour. Prerequisites: courses 140, 150. Advanced topics in programming languages, including formal syntax and semantics, the relation between formal semantics and verification, an introduction to the lambda calculus. Additional topics may include design principles, alternative programming languages, in-depth semantic theory and models of language implementation. —II. (II.) Pandey

242. Translation of Programming Languages (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 240. Lexical analysis, parsing, storage management, symbol table design, semantic analysis and code generation. LL, LALR grammars. Compiler-compilers. —II. (II.) Pandey

243. Code Generation and Optimization (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 201A or Engineering Electrical and Computer 270. Compiler optimizations for performance, code size and power reduction. Topics include control- and data-flow analysis, redundancy elimination, loop and cache optimizations, register allocation, local and global scheduling, and modulo scheduling. —II. (II.) Wilken

244. Principles of Concurrent Programming (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: courses 20, 150. Fundamental concepts and applications of concurrent programs; concurrent program verification and derivation; synchronization mechanisms in programming languages; distributed programming techniques; case studies of languages. —I. (I.) Olsson, Pandey, Su

247. Concurrent Programming Languages (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 140A, 150. Fundamental concepts and models of parallel machines. Load balancing. Scalability. Portability. Efficiency measures. Design and implementation techniques for several classes of concurrent programming languages (such as object-oriented, functional, logic, and constraint-oriented programming languages). —I. (I.) Pandey, Olsson, Su

251. Operating Systems (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 150, 152A recommended. Operating system concepts and implementation, performance evaluation in operating systems. Algorithms, internal architectures for single processor OS and distributed systems. Concurrency control, recovery, security, OS kernels, operating systems. Special topics embedded systems, real-time systems, device driver, NPU (Network Processor Unit). —III. (III.) Pandey, Wu

252. Computer Networks (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 152B. Internet protocol based computer networks, applications, transport and network protocols. High speed LAN technologies: Ethernet, Asynchronous Transfer Mode (ATM). Delay models in data networks: analysis of multiservice techniques in polycycles, ring, random, and token access protocols. Multimedia applications and requirements and design. —II. Mukherjee, Mahapatra, Ghosal

255. Resource Management in Wireless Communication Networks (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 252A. Advanced research issues in wireless communication networks, including multi-user diversity and cross-layer optimization, basic network information theory, MAC, and the impact on networks, and dynamics spectrum management. Offered in alternate years. —III. Liu

256. Performance Evaluation (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: courses 20, 152A, 154A-154B or Electrical and Computer Engineering 170, Statistics 131A; course 150 recommended. Use of simulation and queueing theory in computer and communication system design. Applications to computer networks, computer systems, telecommunication networks, and computer and communication system design. —III. (II.) Maltzoff, Ghosal, Mahapatra, Mukherjee

257. Mobile and Wireless Networks (4)
Lecture—3 hours, independent study. Prerequisite: course 252. Fundamental techniques in design of second generation wireless networks: cellular network and protocols, medium access techniques, handoff control, signaling and mobility management, wireless data works, Internet mobility and Personal Communication Services (PCS). Third generation wideband systems, novel technologies, adhoc networks. Offered in alternate years. —II. Ghosal, Mahapatra, Mukherjee

258. Networking Architecture and Resource Management (4)
Lecture—3 hours; project—1 hour. Prerequisite: course 152A or Electrical & Computer Engineering 173A; course 252 recommended. Design and implementation principles of networking architecture and protocols. Internet, ATM, and telephony case studies. Topics: Internet technology; application and services; resource management; Quality of Service (QoS) provisioning, performance evaluation and future research issues. (Same course as Electrical & Computer Engineering 273.) —II. (II.) Chuah, Mohapatra

259. Optical Networks (4)

260. Software Engineering (4)
Lecture—3 hours; project. Prerequisite: course 142; course 160 recommended. Principles and techniques for domain-specific software reuse. —I. (I.) Devanbu

261. Program Verification (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 125 or Philosophy 112 or familiarity with first-order logic; knowledge of an imperative and functional programming language. Methods of proving correctness of programs with respect to formal specifications, with attention to those suited for employing automated deductive logics: background, symbolic execution, techniques suited to iterative programming, methods from denotational semantics, termination, dynamic logic and proofs of concurrent programs. —I. (I.) Levitin

262. Formal Specification (3)
Lecture—3 hours. Prerequisite: course 261. Formal specification of modules, and its relationship to top-down programming development and verification.
Abstract data types, together with methods for specifying them. Implementations and proofs of implementation correctness to reason about the programs. Parameterized types. Constructing good formal specifications. Offered in alternate years. — II. Levitt

262. Distributed Database Systems (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 165A. Concepts of distributed database systems and architectures, distributed database design, distributed query processing and optimization, transaction management, currency control, heterogeneous and multidatabase systems. — I, III. (III.) Gertz, Ludaescher

266. Spatial Databases (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 150. Concepts, models, and architectures for spatial databases, spatial access methods, query processing, spatio-temporal data management, moving objects, spatial data mining. Offered in alternate years. — II. Gertz, Ludaescher

267. Wide-Area Distributed Information Systems (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 152B or 165A. Wide-area distributed information systems, data broadcast, multicast, publish/subscribe, service differentiation, information retrieval, Web caching. Offered in alternate years. — III. Askoy

268. Scientific Data And Workflow Management (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 165A. Scientific data integration, metadata, knowledge representation, ontologies, scientific work design and management. Offered in alternate years. — III. Gertz, Ludaescher

270. Artificial Intelligence (3)

271. Machine Learning and Discovery (4)
Lecture—3 hours; project—1 hour. Prerequisite: course 170. Artificial intelligence techniques for knowledge acquisition by computers. Fundamental problems in machine learning and discovery. Systems that learn from examples, analogies, and solved problems. Systems that discover numerical laws and qualitative relationships. Projects centering on implementation and evaluation. — II. Levitt, Vemuri

272. Information Visualization (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 163 or 175 recommended. Advanced topics in information visualization: perceptually effective display methods, color design and selection, interaction models and techniques, focus-context techniques, distortion methods, large graph visualization techniques, visual data mining methods, and evaluation methods. — II. Ma

273. Applied Visual Computing (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: graduate standing. Visual computing paradigms, specific applications to computer graphics and virtual reality. Undergraduate and introductory courses. Offered in alternate years. — I. Hamann, Joy, Ma, Max

274. Automated Deduction (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 125 or Philosophy 112 or familiarity with first-order logic. Techniques of mechanical theorem proving. Methods based on resolution and term-rewriting. Decision procedures. Induction. Applications to program verification, question-answering and plan generation. Study existing mechanical theorem provers. Offered in alternate years. — III. Levitt

275A. Advanced Computer Graphics (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 274 or 178. Advanced topics in computer graphics. Hidden surface models, rendering of various surface types, subdivision methods, shading techniques, anti-aliasing, modeling techniques. — I. (II.) Joy, Hamann

275B. Advanced Computer Graphics (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 175 or 177 or 178. Advanced topics in computer graphics and geometric modeling. Topics taken from advanced research papers in computer graphics, imagination, visualization and geometrization. Discussion of current research in the field. Offered in alternate years. — I. (II.) Joy, Hamann, Ma

276. Advanced Volume Visualization (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 177. Applications, available tools and techniques, the challenges confronting the field of volume visualization, and some of the advanced topics in the field. Primary emphasis on current and advanced software and hardware techniques to achieve interactive visualization. — III. Hamann, Joy, Ma, Max

277. Advanced Visualization (4)
Lecture—2 hours; discussion—2 hours. Prerequisite: course 177. Visualization 3D including scalar fields, vector fields, and medical data. — III. Hamann, Joy

278. Computer-Aided Geometric Design (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 175. Mathematical techniques for the definition and manipulation of curves and surfaces. Beziers and curves and surfaces, B-spline curves and surfaces, subdivision surfaces, wavelets. Integration into various computer graphics rendering models, visualization systems and computer-aided design systems. Offered in alternate years. — III. Joy, Hamann

279. Computer Animation (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 175 or 177 or 178. Course surveys current research and fundamental techniques that lie behind character animation tools. Emphasis on improving expressive aspects of movement and how physics, motion capture data, the arts and psychology literature, and interactive techniques can be used towards this goal. Offered in alternate years. — II. Neff

280. Virtual Reality Technology (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 175. Fundamentals and principles of Virtual Reality (VR) technology. Potential and limits for its useful application. Developing a complete virtual reality application. Offered in alternate years. — III. Joy

289A-N. Special Topics in Computer Science (1-5)

290. Seminar in Computer Science (1)
Seminar—1 hour. Participation seminar; discussion and presentation of current research and development in computer science. (S/U grading only.) — I, II, III, IV, V, VI

290C. Graduate Research Group Conference (1)
Discussion—1 hour. Research problems, progress and techniques in computer science. May be repeated for credit. (S/U grading only.) — I, II, III, IV, V, VI

293A. Research in Computer Science (1)
Lecture—1 hour. Prerequisite: graduate standing in computer science. Study of research topics in computer science. Ph.D. level research methodologies (experimental, applied and theoretical). Study skills necessary to successfully find/solve significant research problems. Finds and successful interacting with a research advisor. Ethical issues in research/collaborative work. (S/U grading only.) — I. (I.) Martel

293B. Research in Computer Science (1)
Lecture—1 hour. Prerequisite: graduate standing in computer science; course 293A recommended. Study of Ph.D. level research methodologies (experimental, applied and theoretical), presenting research results for the computer science community. Study skills necessary to successfully find/solve significant research problems. (S/U grading only.) — II. (II.) Martel

298. Group Study (1-5)
Lecture, laboratory, or combination. Prerequisite: consent of instructor. (S/U grading only.)

299. Research (1-12)
(S/U grading only.)

Professional

390. The Teaching of Computer Science (1)
Discussion—1 hour. Prerequisite: meet qualifications for teaching assistant and/or associate-in in Computer Science. Participation as a teaching assistant or associate-in in a designated undergraduate course. Methods of leading discussion groups or laboratory sections, writing and grading quizzes, use of laboratory equipment, and grading laboratory reports. May be repeated for credit. (S/U grading only.) — I, II, III, IV, V, VI, VII

396. Teaching Assistant Training Practicum (1-4)
Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)
leaders in industry or to do meaningful research in industry, government or academia. Research—To develop and support research programs that produce useful technological advances while simultaneously training the next generation of researchers and leaders; to update and/or shift the focus of these programs frequently in response to the needs of our constituencies and the nation; to provide a stimulating environment that encourages our graduate students to develop their abilities as far as possible.

**Electrical Engineering Undergraduate Program**

The Electrical Engineering program is accredited by the Engineering Accreditation Commission of ABET, see http://www.abet.org.

Electrical engineering involves the design, analysis, and effective use of electrical systems including electronic computers. Electrical systems and computers play a central role in nearly all aspects of modern life, including communication, education, environmental protection, space exploration, defense, and home entertainment.

Students who complete the Electrical Engineering curriculum will obtain a Bachelor of Science in Electrical Engineering. One of the engineering deans recognized in all fifty states as eligible for registration as a Professional Engineer.

**Objectives.** The Electrical Engineering program has adopted the following objectives to serve the long-term interests of our students and the industries of Northern California and the nation. Foundation—To provide our graduates with a solid foundation in engineering science, including mathematics, physical science, and the fundamentals of electrical engineering. This foundation is necessary to succeed in more advanced engineering courses and to be able to continue learning throughout a career. Breadth—To provide our graduates the sufficient breadth in electrical engineering in order to understand engineering tradeoffs that cross disciplines, to contribute effectively to multidisciplinary projects, and to make an informed decision about their area of specialization. Depth—To provide our graduates with sufficient depth in a specific area of electrical engineering necessary to solve complex real-world engineering problems and to contribute to a specific discipline within electrical engineering. Ethics—To provide our graduates with a basic understanding of, and ability to handle correctly, ethical problems that may arise during their careers. To provide them with an understanding of their obligations to society at large. Exclusive of General Education units, the minimum number of units for the Electrical Engineering major is 145 (70 units in the lower division and 75 in the upper division). Students are encouraged to adhere carefully to all prerequisite requirements. The instructor is authorized to drop students from a course for which stated prerequisites have not been completed.

**Upper Division Requirements: Electrical Engineering Curriculum**

**Areas of Specialization**

For updated recommended courses, see the department website at http://www.ece.ucdavis.edu/undergrad/undergradhandbook.html.

**Physical Electronics:** solid-state devices, circuits and fabrication and the theory courses supporting those subjects.

**Recommended elective courses:**

- Core electives: Electrical and Computer Engineering 130B, 140B
- Design Electives with Lab: Electrical and Computer Engineering 118, or 132A, 132B or 135. Select remaining upper-division design electives from Electrical and Computer Engineering 110B, 112C, 135
- Technical electives: Electrical and Computer Engineering 112, 180B

**Suggested Advisers.** S. Eker, J. Hihath, C.E. Hunt, S. Islam, R.A. Kiehl, J.M. Woodall

**Electromagnetics:** microwave circuits and systems, and for all systems engineering.

**Recommended elective courses:**

- Core electives: Electrical and Computer Engineering 130B, 140B
- Design Electives with Lab: Electrical and Computer Engineering 132A, 132B. Select remaining upper division design electives from Electrical and Computer Engineering 110B, 112C, 135
- Technical electives: Select from Electrical and Computer Engineering 112 and 133

**Suggested Advisers.** G.R. Branner, A. Knoess, X. Liu, N. Luhmann, O. Momeni, A. Pham, B. Yoo

**Analog Electronics:** transistor- and system-level analog circuit design.

**Recommended elective courses:**

- Core electives: Electrical and Computer Engineering 110B, 140B, 150B
- Design Electives with Lab: at least two from Electrical and Computer Engineering 112, 157A, 165, 195A-195B
- Select remaining upper division design electives from Electrical and Computer Engineering 118, 132A, 132B, 132C, 151, 1576, 160, 210
- Technical electives: Select from Electrical and Computer Engineering 130B, 146A

**Suggested Advisers.** R. Amirifarajah, G.J. Gu, P.J. Hurst, S.H. Lewis, O. Momeni, S.D. O’Driscoll

**Digital Electronics:** transistor- and system-level digital circuit design.

**Recommended elective courses:**

- Core electives: Electrical and Computer Engineering 110B, 140B, 150B
- Design Electives with Lab: Electrical and Computer Engineering 118 and 180B or 151 or 172 or 183 or 195A-195B
- Select remaining upper division design electives from Electrical and Computer Engineering 116, 170, 172, 180B
- Technical electives: Select from Electrical and Computer Engineering 130B and 112 or 146A or 157A or 160 or 210

**Suggested Advisers.** R. Amirifarajah, P.J. Hurst, S.H. Lewis, S.D. O’Driscoll

**Communication Controls and Signal Processing:** digital communication, robotics, classical controls and communication, wireless and cellular digital communication systems, signal and image processing, and computer vision.

**Recommended elective courses:**

- Core electives: Electrical and Computer Engineering, 150B, 180B

**Quarter Offered:** I—Fall; II—Winter; III—Spring; IV—Summer; 2015-2016 offering in parentheses

**Pre-Fall 2011 General Education (GE):**

AAG—American Cultures; DD—Domestic Diversity; DIV—Domestic Diversity; WRW—Writing Experience

**Fall 2011 and on Revised General Education (GE):**

AH—Arts and Humanities; SC—Science and Engineering; SS—Social Sciences; Div—Domestic Diversity; WRW—Writing Experience
Computer Engineering Undergraduate Program

The Computer Engineering program is accredited by the Engineering Accreditation Commission of ABET; see http://www.abet.org.

Exclusions of General Education units, the minimum number of units required for the Computer Engineering undergraduate major is 148 (79 units in the lower division and 69 units in the upper division).

Students are encouraged to adhere carefully to all prerequisite requirements. The instructor is authorized to drop students from a course for which stated prerequisites have not been completed.

Upper Division Required Courses

| UNITS | Electrical and Computer Engineering 110B, 130B, 140B, 170*D, 180B* | 32 |

Technical Electives

| UNITS | Electrical and Computer Engineering 119AB, 134AB, 136AB, 181AB, 193AB, 195AB | 9 |

Electrical and Computer Engineering 100, 119AB, 134AB, 136AB, 181AB, 193AB, 195AB

Computer Engineering 119AB, 134AB, 136AB, 181AB, 193AB, 195AB

At least one design project course:**

Computer and Engineering Computer Engineering 190, 192, 196, 197, 198, 199

A maximum of 6 units for any combination of engineering courses numbered 190C, 192, 198, and 199 may be used.

Chemistry 2C, 2D, and any upper-division course except Chemistry 195 & 197

Engineering 35, 45, EE10 (if not used to satisfy major requirement), and any upper-division course not used in satisfaction of core degree requirements, excluding Engineering 160, 190 (restricted to one unit of technical elective), 198, Computer Science Engineering 132, 153, 157, 158, 154A, & 154B (154 courses may be used by EEE majors who did not take EEC 170)

Any upper-division Mathematics course except Mathematics 135A & 197TC

Any upper-division Physics course except 116, 137, 160 (restricted to one unit of technical elective), 195, 197T

Any upper-division Statistics course except Statistics 100, 102, 103, 104, 106, 108, 120, & 130A

Biological Sciences 101, 101D, 102, 103, 104, 120, 120P, 122P, 129P

Economics 101, 102, 103, 122, 140

Management 11A, 118, 120, 120, 140, 150, 160, 170, 180

Upper Division Composition Requirement:

One course from the following (a grade of C- or better is required): University Writing Program 101, 102A-L, 104A-T or passing the University Division Composition Exam

Computer Science Engineering 154B may be substituted for Electrical and Computer Engineering 170.

*** After completion of the upper division elective requirement (at least 8 courses, 2 core, 2 with labs, 1 project) any units in excess of 32 will count toward the technical elective requirement.

Electrical Engineering Minor

There has been an increasing need for professionals in most engineering disciplines who understand the fundamentals of electronic circuits, electronic signals, semiconductor devices, applied electromagnetics, control systems, computer systems, and communication systems. The objective of this minor program is to prepare students with the necessary theoretical and practical training in one or many of the above mentioned fields. The minor program curriculum is designed to allow flexibility while ensuring a solid foundation of fundamental electrical engineering concepts. The program is expected to accommodate students of diverse backgrounds.

The minor must be outside the department or program of your major and no more than one course may be counted toward both your minor and your major. The courses you take to satisfy the requirements of a minor, including those completed elsewhere, must be approved by an advisor in the Department of Electrical and Computer Engineering. You must have a minimum overall GPA of 2.000 and satisfy the minor course requirements, listed below.

To receive notation of this minor on your diploma, you must obtain a minor petition and file it no later than the deadline for filing for graduation.

Minor Requirements

| UNITS | Electrical Engineering .......... | 21 |

Computer Engineering

At least one of the following combinations:

Analog circuits: Electrical and Computer Engineering 110A and 110B

Electromagnetics: Electrical and Computer Engineering 130A and 130B

Physical Electronics: Electrical and Computer Engineering 140A and 140B

Signals and Systems: Electrical and Computer Engineering 150A and 150B

Control Systems: Electrical and Computer Engineering 150A and 150B

Digital Systems: Electrical and Computer Engineering 180A and 180B

M.S. and Ph.D.

http://www.ece.ucdavis.edu

The Department of Electrical and Computer Engineering prepares graduate students to do meaningful research and acquire skills and insights vital to solving some of the world’s most complex technological problems. Our graduate program offers a challenging and stimulating environment in areas such as device physics and optoelectronics, control and signal processing, computer engineering, circuit design, electronic circuits and systems, computer engineering, communication networks, computer engineering, circuit design, electronic circuits and systems, computer engineering, communication networks, and computer systems. The depth of resources in the study of circuit design alone, with one of the largest faculty groups in the field in the UC system, distinguishes us from other
programs, while our program in microwave communications and devices is unique. The Electrical and Computer Engineering Graduate Program benefits from the highly interdisciplinary culture at UC Davis and attracts faculty from biomedical, chemical, electrical, computer, civil, and mechanical engineering, as well as computer science and mathematics. Many of our graduates go on to leadership and technology management roles in industry, returning each year for our industrial affiliates meeting to network with other industry representatives, current students and faculty. Generous financial support is available from the Rochester Institute of Technology; teaching assistantships, fellowships and financial aid.

**Research Highlights:**
- Communications, control, networking, and signal processing
- Computer engineering
- Electronic circuits
- Optoelectronics
- RF, micro- and millimeter waves
- Physical electronics

**Research Facilities and Partnerships:**
- Center for Information Technology in the Interest of Society
- Northern California Center for Nanotechnology
- Center on Polymer Interfaces and Macromolecular Assemblies
- Lawrence Livermore National Laboratory
- Lawrence Berkeley National Laboratory
- Los Alamos National Laboratory
- California Lighting Technology Center
- PlanetLab Consortium
- Sandra National Laboratory

Complete Information on our website.

**Courses in Engineering: Electrical and Computer Engineering (EEC)**

**Lower Division**

**1. Introduction to Electrical and Computer Engineering (1)**
Lecture—1 hour. Electrical and Computer Engineering as a professional activity. What Electrical and Computer Engineering is, what can you do with it, and what does it mean to have your knowledge. (P/NP grading only.) GE credit: SciEng | SE.—I. (I)

**10. Introduction to Digital and Analog Systems (3)**
Lecture—1 hour; laboratory—3 hours. Prerequisite: Engineering 6 or Mathematics 22AL, Computer Science Engineering 30, Physics 9C and Engineering 17 (concurrent enrollment in Engineering 17 is allowed). Open to Electrical and Computer Engineering sophomores. Interactive and practical introduction to fundamental concepts of electrical and computer engineering by implementing electronic systems, which can be digitally controlled and interrogated, with a programmable microcontroller with the ability to program the electrical connections between analog and digital components. GE credit: SciEng | SE.—II. (II)

**70. Computer Structure and Assembly Language (4)**
Lecture—3 hours; workshop—1 hour. Prerequisite: Computer Science Engineering 30. Computer architecture, machine language, assembly language, macros and conditional macros; subroutine/parameter passing, input/output programming, interrupt and trap, direct-memory-access; absolute and relocatable code; restart code; program development in an operating system. Only one unit of credit to students who have completed Computer Science Engineering 50. GE credit: SciEng | SE.—II. (II)

**89A-F. Special Topics in Electromagnetics (1-5)**
Prerequisite: consent of instructor. Special topics in (A) Electromagnetics, (B) Physical Electronics, (C) Active and Passive Circuits, (D) Computer Systems and Software, (F) Digital System Design for freshmen and sophomore level students. May be repeated for credit if topic differs. Offered irregularly. GE credit: SciEng | SE

**90C. Research Group Conference in Electrical and Computer Engineering (1)**
Discussion—1 hour. Prerequisite: consent of instructor; course registration. Research group conferences. May be repeated for credit. (P/NP grading only)—I, II, III, (I, III)

**90X. Lower Division Seminar (1-4)**
Seminar—1-4 hours. Prerequisite: consent of instructor. Examination of a special topic in a small group setting. May be repeated for credit.

**92. Internship in Electrical and Computer Engineering (1-5)**
Internship—3-15 hours. Prerequisite: lower division standing, project approval prior to period of intern- shhip. Supervised work experience in Electrical and Computer Engineering. May be repeated for credit. (P/NP grading only)

**98. Directed Group Study (1-5)**
Prerequisite: consent of instructor. (P/NP grading only)

**99. Special Study for Lower Division Students (1-5)**
(P/NP grading only.

**Upper Division**

**100. Circuits II (5)**
Laboratory—3 hours; lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 17, C or better. Restricted to the following majors: Electrical Engineering, Computer Engineering, Computer Science & Engineering, Electrical and Computer Engineering, Electrical Engineering/Materials Science, Optical Science & Engineering, Biomedical Engineering, Applied Physics, Electrical & Computer Engineering graduate students. Theory, application, and design of analog circuits. Methods of analysis including frequency response, SPICE simulation, and Laplace transform. Operational amplifiers and design of active filters. Students who have completed Engineering 100 may receive 3.5 units of credit. GE credit: SciEng | QL, SE, VL—II, III, (I, III)

**110A. Electronic Circuits I (4)**
Lecture—3 hours; discussion—1 hour. Prerequisite: course 100; course 140A recommended. Use and modeling of nonlinear solid-state electronic devices in basic analog and digital circuits. Introduction to the design of transistor amplifiers and logic gates. GE credit: SciEng | SE, VL—II, III, (II, III)

**110B. Electronic Circuits II (4)**
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 110A. Analysis and design of integrated circuits. Single-stage amplifiers, cascaded amplifier stages, differential amplifiers, current sources, frequency response, and return-ratio analysis of feedback amplifiers. GE credit: SciEng | SE, VL—II, III, (III)

**112. Communication Electronics (4)**
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 110A and 150A; course 110B recommended. Electronic circuits for analog and digital communication, including oscillators, mixers, tunable amplifiers, modulators, demodulators, and phase-locked loops. Circuits for amplitude modulation (AM) and frequency modulation (FM) are emphasized. GE credit: SciEng | SE—II, (II)

**116. VLSI Design (4)**
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 110A; course 180A recommended. CMOS devices, layout, circuits, and functional units; VLSI fabrication and design methodologies. GE credit: SciEng | SE—II, (I)

**118. Digital Integrated Circuits (4)**
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 110A, 180A. Analysis and design of digital integrated circuits. Emphasis on Boolean logic circuit families. Logic gate construction, voltage transfer characteristics, propagation delay, and power consumption. Sequential/clocked circuits, sequential elements, interconnect, RAMs, ROMs, and PLAs. GE credit: SciEng | SE—II, (III)

**119A. Integrated Circuit Design Project (3)**
Workshop—1 hour; laboratory—6 hours. Prerequisite: course 116 or 118. Design course involving architecture, circuit design, physical design, and validation through extensive simulation of a digital or mixed-signal integrated circuit of substantial complexity under given design constraints. Team project that includes a final report. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | SE—II, (II)

**119B. Integrated Circuit Design Project (3)**
Workshop—1 hour; laboratory—6 hours. Prerequisite: course 119A. Design of digital and mixed-signal architec- ture, circuit design, physical design, and validation through extensive simulation of a digital or mixed- signal integrated circuit of substantial complexity under given design constraints. Team project that includes a final report. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | SE—II, (II)

**130A. Electromagnetics I (4)**

**130B. Introductory Electromagnetics II (4)**
Lecture—3 hours; discussion—1 hour. Prerequisite: course 130A. Plane wave propagation in lossy media, reflections, guided waves, single modulated waves and dispersion, and basic antennas. GE credit: SciEng | SE—II, (III)

**132A. RF and Microwave in Wireless Communication (5)**
Lecture—3 hours; laboratory—3 hours; discussion—1 hour. Prerequisite: course 110B, 130B, 140B. The study of Radio Frequency and Microwave theory and practice for design of wireless electronic systems. Transmission lines, microwave integrated circuits, circuit analysis of electromagnetic energy transfer systems, the scattering parameters. GE credit: SciEng | SE—II, (I)

**132B. RF and Microwave in Wireless Communication (5)**
Lecture—3 hours; laboratory—3 hours; discussion—1 hour. Prerequisite: course 132A. Passive RF and microwave device design, fabrication, and testing for wireless applications. RF and microwave filter and coupler design. Introductory analysis and design of RF and microwave transistor amplifiers. GE credit: SciEng | SE—II, (III)

**132C. RF and Microwave in Wireless Communication (5)**
Lecture—3 hours; laboratory—3 hours; discussion—1 hour. Prerequisite: course 132B. RF and microwave amplifier theory and design, including transistor circuit models, stability considerations, noise models and low noise design. Theory and design of microwave transistor oscillators and mixers. Wireless system design and analysis. GE credit: SciEng | SE—III, (III)

**133. Electromagnetic Radiation and Antenna Analysis (4)**
Lecture—3 hours; discussion—1 hour. Prerequisite: course 130B. Properties of electromagnetic radiation; analysis and design of antennas: ideal cylindri- cal, small loop, aperture, and arrays; antenna field measurements. GE credit: SciEng | SE—II, (I)

**Quarter Offered:** I=Fall, II=Winter, III=Spring, IV=Summer; 2015-2016 offering in parentheses

**Pre-Fall 2011 General Education (GE):**
- Arts and Humanities: ACH|Arts and Humanities
- Sciences and Engineering: SciEng
- Social Sciences: SocSci
- General Diversity
- Writing Experience

**Fall 2011 and on Revised General Education (GE):**
- Arts and Humanities: SciEng
- Sciences and Engineering: SciEng
- Social Sciences: SocSci
- General Diversity
- Writing Experience
134A. RF/Microwave Systems Design (3) Lecture—3 hours; laboratory—6 hours. Prerequisite: course 308B or 110A or 150A. Class size limited to 24 students. Board-level RF design, fabrication, and characterization of an RF/microwave system, including the antenna, RF frontend, baseband circuits, and digital signal processing models. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | SE.—I. (I) Liu, Momeni

134B. RF/Microwave Systems Design (3) Lecture—3 hours; laboratory—6 hours. Prerequisite: course 134A. Class size limited to 24 students. Board-level RF design, fabrication, and characterization of an RF/microwave system, including the antenna, RF frontend, baseband circuits, and digital signal processing models. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | SE.—II. (II) Liu, Momeni

136A. Electronic Design Project (3) Workshop—1 hour; laboratory—6 hours. Prerequisite: Computer Science Engineering 30; courses 110A, 110B, 110C, 110D, 110E, 110F, 110G, 110H. Pass One required to major in Electronic and Computer Engineering. Group design project that will involve the entire class. GE credit: SciEng | SE.—II. (II)

136B. Electronic Design Project (3) Workshop—1 hour; laboratory—6 hours. Prerequisite: course 136A. Optical, electronic and communication-engineering design of an optoelectronic system operating under performance and economic constraints. Measurement and testing methods will be designed and implemented, and the system will be characterized. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | SE.—II. (II)

140A. Principles of Device Physics I (4) Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 17, Physics 96D. Semiconductor device fundamentals, equilibrium and non-equilibrium statistical mechanics, minority carrier, diffusion, recombination, electrons and holes, p-n and Schottky junctions, first-order metal-oxide-semiconductor (MOS) field effect transistors, bipolar junction transistor fundamentals. GE credit: SciEng | SE.—I. (I)

140B. Principles of Device Physics II (4) Lecture—3 hours; discussion—1 hour. Prerequisite: course 140A. Electrical properties, designs, models and advanced concepts for MOS, Bipolar, and Junction FET (JFET) devices and including minority-carrier distributions, non-ideal effects, and device fabrication methods. MESFET and heterojunction bipolar transistor (HBT) fundamentals. Fundamentals of solar cells, photodiodes, and semiconductor lasers. GE credit: SciEng | SE.—III. (III)

145. Electronic Materials (4) Lecture—3 hours; discussion—1 hour. Prerequisite: course 140B, Engineering 43. Electronic and physical properties of materials used in electronics, including semiconductors, polymeric and MEMS, ceramics, dielectrics, metals, optical materials, organic semiconductors, optical and nonlinear properties, as well as their synthesis and deposition methods. GE credit: SciEng | SE.—I. (I)

146A. Integrated Circuits Fabrication (3) Lecture—2 hours; laboratory—3 hours. Prerequisite: course 140A. Basic fabrication processes for Metal-Oxide-Semiconductor (MOS) integrated circuits. Laboratory assignments covering oxidation, photolithography, impurity diffusion, metallization, wet chemical etching, and characterization work together in producing metal-gate PMOS test chips which will undergo parametric and functional testing. GE credit: SciEng | SE.—I. (I)

146B. Advanced Integrated Circuits Fabrication (3) Lecture—2 hours; laboratory—3 hours. Prerequisite: course 146A. Restricted to Electrical, Computer, and Electrical/Materials Engineering graduate students. Non-majors accommodated when space available. Fabrication processes for CMOS VLSI. Laboratory projects examine deposition of isolation, oxidation, photolithography, processes, metallization, and CV analysis. Topics include implantation, projection alignment, epitaxial growth, thin gate oxidation, and rapid thermal annealing. GE credit: SciEng | SE.—II. (II)

147. Microelectromechanical Systems (4) Lecture—2 hours; laboratory—3 hours. Prerequisite: Chemistry 2A, Engineering 100 or course 100. Restricted to seniors majoring in College of Engineering. Introduction to the theory and practice of micro-electromechanical systems (MEMS), including fundamentals of micro-nanofabrication, microscale sensing and actuation, self assembly, microfluidics and lab-on-a-chip. Weekly hands-on laboratory sections are emphasized on implementation and utilization of MEMS technologies. [Same course as Biomedical Engineering 118] GE credit: SciEng | QL, SE.—II. (II)

150A. Introduction to Signals and Systems I (4) Lecture—4 hours. Prerequisite: Engineering 6 or Mathematics 22A (may be taken concurrently). Course 150B. Characterization and analysis of continuous-time linear systems. Fourier series and transforms with applications. Introduction to communications and digital filter design. GE credit: SciEng | QL, SE.—II. (II)

152. Digital Signal Processing (4) Lecture—2 hours; laboratory—6 hours. Prerequisite: course 150B, course 70 or Computer Science Engineering 154B. Digital signal processing and implementation of real-time digital signal processing. Fundamentals of real-time systems. Programmable architectures including V/O, memory, peripherals, interrupts, DMA. Interfacing issues with A/D and D/A interfaces to a programmable DSP. Specification driven design and implementation of simple DSP applications. GE credit: SciEng | QL, SE.—II. (II)

157A. Control Systems (4) Lecture—3 hours; laboratory—3 hours. Prerequisite: course 150A. Analysis and design of feedback control systems. Examples are drawn from electrical and mechanical systems as well as other engineering fields. Mathematical model of physical systems, stable system criteria, root-locus and frequency domain design methods. GE credit: SciEng | SE.—I. (I)

157B. Control Systems (4) Lecture—3 hours; laboratory—3 hours. Prerequisite: course 157A. Closed system design, transfer-function and state-space methods; sampled-data implementation, digital control. Laboratory includes feedback system experiments and simulation studies. GE credit: SciEng | SE.—II. (II)

160. Signal Analysis and Communications (4) Lecture—3 hours; discussion—1 hour. Prerequisite: course 150A. Signal analysis based on Fourier methods. Fourier transforms, time-sampling, convolution, and filtering; spectral density; modulation: carrier-amplitude, carrier-frequency, and pulse-amplitude. GE credit: SciEng | SE.—I. (I)
180A. Digital Systems I (5) Lecture—3 hours; laboratory—6 hours. Prerequisite: Physics 9C or 9HD. Introduction to digital system design including combinational logic design, sequential and asynchronous circuits, computer arithmetic, memory systems and algorithmic state machine design; computer aided design (CAD) methodologies and tools. GE credit: SciEng | SE.—I, II, I, II.

180B. Digital Systems II (5) Lecture—3 hours; laboratory—6 hours. Prerequisite: course 150A. Computer-aided design of digital systems with emphasis on hardware description languages (VHDL), logic synthesis, and field-programmable gate arrays (FPGA). May cover advanced tools and systems design such as static timing analysis, pipelining, memory system design, testing digital circuits. GE credit: SciEng | SE.—I, II, III.

181A. Digital Systems Design Project (3) Workshop—1 hour; laboratory—6 hours. Prerequisite: courses 170 or Computer Science 122A. Digital-system and computer-engineering design course involving architecture, design, implementation and testing of a prototype application-specific processor under given design constraints. This is a team project that includes a final presentation and report. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | SE.—II, III.

181B. Digital Systems Design Project (3) Workshop—1 hour; laboratory—6 hours. Prerequisite: course 181A. Digital-system and computer-engineering design course involving architecture, design, implementation and testing of a prototype application-specific processor under given design constraints. This is a team project that includes a final presentation and report. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | SE.—II, III.

183. Testing and Verification of Digital Systems (5) Lecture—4 hours; laboratory—4 hours. Prerequisite: courses 170 and 180B. Computer-aided testing and design verification techniques for digital systems; physical fault testing; simulation-based design verification and test generation. GE credit: SciEng | SE.—II, III.

189A-V. Special Topics in Electrical Engineering and Computer Science (1-5) Prerequisite: consent of instructor. Special topics in (A) Computer Science, (B) Programming Systems; (C) Digital Signal Processing; (D) Signal Transmission; (F) Digital Communication; (G) Control Systems; (H) Robotics; (I) Signal Processing; (J) Image Processing; (K) High-Frequency Phenomena and Devices; (L) Solid-State Devices and Physical Electronics; (M) Systems Theory; (N) Active and Passive Circuits; (O) Integrated Circuits; (P) Computer Software; (Q) Computer Engineering; (R) Microprocessing; (S) Electronics; (T) Electromagnetics; (U) Opt-Electronics; (V) Computer Networks. May be repeated for credit when topic differs. GE credit: SciEng | SE.—I, II, III, I, II, III.

190C. Research Group Conferences in Electrical and Computer Engineering (1) Discussion—1 hour. Prerequisite: upper division standing in Electrical and Computer Engineering, consent of instructor. Research group conferences. May be repeated for credit (P/NP grading only). GE credit: SciEng | SE.—II, I, III, I, II, III.

190H. Internship in Electrical and Computer Engineering (1-5) Internship—4 hours. Prerequisite: completion of a minimum of 84 units with approval prior to period of internship; consent of instructor. Supervised work experience in electrical and computer engineering. May be repeated for credit if project is different. (P/NP grading only). GE credit: SciEng | SE.—I, II, III, I, II, III.

193A. Senior Design Project (3) Workshop—1 hour; laboratory—6 hours. Prerequisite: course 196 (may be taken concurrently); consent of instructor. Restricted to senior standing in Electrical or Computer Engineering. Team design project for seniors in Electrical or Computer Engineering. Project involves analysis, design, implementation and evaluation of an Electrical Engineering or Computer Engineering System. Project is supervised by faculty member. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | SE.—I, II, I, II.

193B. Senior Design Project (3) Workshop—1 hour; laboratory—6 hours. Prerequisite: course 193A. Team design project for seniors in Electrical Engineering or Computer Engineering. Project involves analysis, design and implementation of an Electrical Engineering or Computer Engineering System. Project supervised by a faculty member. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | SE.—II, I, III, I, II, III.

195A. Autonomous Vehicle Design Project (3) Workshop—1 hour; laboratory—6 hours. Prerequisite: course 180A, Computer Science and Engineering 30, and one of 115A, 158A, 180B, or Computer Science and Engineering 150. Pass One restricted to major. Design and construct an autonomous race car. Work in groups to design, build and test speed control circuits, a steering control loop. (Deferred grading only pending completion of sequence.) GE credit: SciEng | SE.—I, II, III.

195B. Autonomous Vehicle Design Project (3) Workshop—1 hour; laboratory—6 hours. Prerequisite: course 195A. Design and construct an autonomous race car. Students work in groups to design, build and test speed control circuits, track sensors, circuits, and a steering control loop. (Deferred grading only pending completion of sequence.) GE credit: SciEng | SE.—II, III.

196. Issues in Engineering Design (1) Seminar—1 hour discussion/laboratory—2-8 hours. Prerequisite: upper division standing; consent of instructor. Tutoring in Electrical and Computer Engineering courses, especially introductory courses. For upper-division students who need to work. (P/NP grading only).—I, II, III, I, II, III.

198. Directed Group Study (1-5) Prerequisite: consent of instructor. May be repeated three times for credit. (P/NP grading only) GE credit: SE.

199. Special Study for Advanced Undergraduates (1-5) Prerequisite: consent of instructor. (P/NP grading only).

Graduate

202. Advanced Digital Signal Processing (4) Lecture—4 hours. Prerequisites: courses 201, 260, and 265, and Mathematics 167 are recommended. Multirate DSP theory and wavelets, optimal transform and subband coders in data compression, advanced sampling theory and oversampled A/D converters, transmultiplexers and precoders in digital communication systems, genomic signal processing. Offered in alternate years.—II.

205. Computational Methods in Biomedical Imaging (4) Lecture—4 hours. Prerequisite: Biomedical Engineering 105 or Statistics 120; Biomedical Engineering 108 or course 150A. Analytical tomographic reconstruction from projections in 2D and 3D; model-based image reconstruction methods; maximum like-lihood and Bayesian methods; applications to CT, PET, and SPECT. (Same course as Biomedical Engineering 252) —II.

206. Digital Image Processing (4) Lecture—3 hours; laboratory—3 hours. Prerequisite: course 130B. Two-dimensional systems theory, image perception, sampling and quantization, transform theory and applications, enhancement, filtering and restoration, image analysis, and image process systems.—II.

210. MOS Analog Circuit Design (3) Lecture—3 hours. Prerequisite: courses 110B, 111B and 140B. Analysis and design of MOS amplifiers, bias circuits, voltage references and other analog circuits. Stability and compensation of feedback amplifiers. Introduction to noise analysis in MOS circuits.—I.

211. Advanced Analog Circuit Design (3) Lecture—3 hours. Prerequisite: course 210; Statistics 131A and course 112 recommended. Noise and distortion in electronic circuits. Design and simulation of circuit applications to communication circuits. Specific applications include mixers, low-noise amplifiers, power amplifiers, phase-locked loops, oscillators and receiver architectures.—II.

212. Analog MOS IC Design for Signal Processing (3) Lecture—3 hours. Prerequisite: course 210. Analysis and design of analog MOS integrated circuits. Passive components, single-ended and fully differential op amps, sampled-data and continuous-time filters.—II.

213. Data-Conversion Techniques and Circuits (3) Lecture—3 hours. Prerequisite: course 210. Digital-to-analog and analog-to-digital conversion; component characteristics and matching, sample-and-hold, comparator, amplifier, and reference circuits.—III.

215. Circuits for Digital Communications (3) Lecture—3 hours. Prerequisite: courses 150B and 210 (may be taken concurrently); course 165, 166 or 265 recommended. Analog, digital, and mixed-signal CMOS implementations of communication circuit blocks; gain control, adaptive equalizers, sampling detectors, clock recovery. Offered in alternate years.—II.

216. Low Power Digital Integrated Circuit Design (3) Lecture—3 hours. Prerequisite: course 118B. IC design for low power and energy consumption. Low power architectures, logic styles and circuit design. Variable supply and threshold voltage management. Power estimation. Energy sources, power electronics, and energy recovery. Applications in portable electronics and sensors. Thermodynamics limits.—II.

217. Biomedical Electronics (4) Lecture—3 hours; project. Prerequisite: course 210 or consent of instructor. Special consideration and accommodation will be made for biomedical or signal processing majors who have not taken 210. Circ.
cuit design for medical applications including weak
inversion amplifiers, integrated UFL filters, chopper
stabilization, etc.; electromagnetic interfaces; neurom-
ulation pulse generation; wireless powering of and
communication with implantable devices. Electri-
physiological signaling and aspects of signal pro-
cessing for biomedical systems. —III. (III.)
219. Advanced Digital Circuit Design (3)
Lecture—3 hours. Prerequisite: course 118 or 218A.
Analysis and design of digital circuits. Both bipolar
and MOS circuits are covered. Dynamic and static
RAM cells and semiconductor amplifiers. Advanced MOS
families. Multi-valued logic. —III. (III.)
211. Analog Filter Design (3)
Lecture—3 hours. Prerequisite: courses 100 and
150A. Design of active and passive filters including
filter classification and design techniques; use of
non-linear RF circuit design techniques; dynamic
analysis of cascaded reactive circuits. stability issues
of active filters. —II. (II.)
222. RF IC Design (3)
Lecture—3 hours. Prerequisite: course 132C and
210. Radio frequency (RF) solid-state devices, RF
device modeling and design rules; non-linear RF cir-
cuit design techniques; use of non-linear computer-
aided (CAD) tools, RF power amplifier design.
Offered in alternate years. —II. (II.)
228. Advanced Microwave Circuit and
Device Design Techniques (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite:
theory, design, fabrication, analysis of
advanced microwave circuits and devices. Wide-
band, low noise, high frequency, high gain amplifiers.
Microwave oscillators. Applications of microwave
circuit theory. —II. (II.)
233. High Speed Signal Integrity (3)
Lecture—3 hours. Prerequisite: course 130B, Max-
well’s equations, field theory, transmission line,
complex waves, waveguides, resonant cavities, and
electromagnetics. —II. (II.)
232A. Advanced Applied Electromagnetics I
(3)
Lecture—3 hours; laboratory—3 hours. Prerequisite:
course 132B. The exact formulation of applied electromagnetics
problems using Green’s functions. Applications of these
techniques to transmission circuits. Offered in alter-
ate years. —I. (I.)
232B. Advanced Applied Electromagnetics II
(4)
Lecture—3 hours; laboratory—3 hours. Prerequisite:
course 132B. Advanced treatment of electromagnetics
in applications to passive microwave devices and antennas. Offered in alternate years. —III. (III.)
234. Photonics (4)
Lecture—3 hours; project—1 hour. Prerequisite:
course 230A or 230B. Optical propagation of electromagnetic waves and beams in photonics components and the design of such devices using numerical techniques. Offered in alternate years. —II. (II.)
236. Nonlinear Optical Applications (3)
Lecture—3 hours. Prerequisite: course 130B, course
230A (may be taken concurrently). Nonlinear optical
interactions in optical communication, optical infor-
mation processing and integrated optics. Basic con-
cepts underlying optical nonlinear interactions in
materials and guided media. Not open to credit to
students who have completed course 233. Offered in alternate years. —I. (I.)
237A. Lasers (3)
Lecture—3 hours. Prerequisite: course 130B or the
equivalent and course 235. Theoretical and practi-
cal description of laser physics, interaction of light
with matter, laser resonators, laser diodes, conventional and
solid state lasers. —II. (II.)
237B. Laser Physics II (4)
Lecture—3 hours; extensive problem solving. Prerequi-
tive: course 237A or Applied Science Engineering
265A. Oscillators, relaxation oscillators, instabil-
ity, coherence, gain saturation, intracavity elements, lasers,
pumping, transversely excited. —II. (II.)
238. Semiconductor Diode Lasers (3)
Lecture—3 hours. Prerequisite: course 245A. Under-
standing of fundamental optical transitions in semi-
conductor and quantum-confined systems. Lasers are
applied to diode lasers and selected photonic devices.
The importance of radiative and non-radi-
ative recombinations is discussed. —III. (III.)
239A. Optical Fiber Communications
Technologies (4)
Lecture—4 hours. Prerequisite: course 130B. Physi-
cal layer issues for component and system technolo-
gies in optical fiber networks. Sources of physical
limits and limitations in network scal-
ability. Enabling technologies for wavelength-
division-multiplexing, frequency-division-multiplexing,
and time-division-multiplexing networks. Optical amplifiers and their impact on optical
networks (signal-to-noise ratio, gain equalization,
and crosstalk). —III. (III.)
239B. Optical Fiber Communications
Systems and Networking (4)
Lecture—4 hours. Prerequisite: course 239A. Phys-
cal layer optical communications systems in network
architectures and protocols. Optical systems design
and integration using optical component techno-
lologies. Comparison of wavelength routed WDM,
TDM, and SONET systems and networks. Case studies
of next generation technologies. Offered in alternate
years. —III. (III.)
240. Semiconductor Device Physics (3)
Lecture—3 hours. Prerequisite: course 140B. Physi-
cal properties, characteristics, and models of funda-
mental semiconductor devices, including pn-
and Schottky diodes, MOSFETs and MESFETs Bipar-
lar Junction Transistors, and light emitters/detec-
tors. —II. (II.)
242. Advanced Nanostructured Devices (3)
Lecture—3 hours. Prerequisite: courses 130A and
140B. Physics of nano-scale materials and device
operation. Overview of new devices enabled by
nano-technology; fabrication and characteriza-
tion methods, applications of nano-structures and
devices. Offered in alternate years. —II. (II.)
244A. Design of Microelectromechanical
Systems (MEMS) (3)
Lecture—3 hours. Prerequisite: course 140A, 140B
or consent of instructor. Theory and practice of
MEMS design fundamentals, CAD tools, and case studies. A MEMS design proj-
ected will be fabricated in a
commercial foundry and tested in course 244B.
Offered in alternate years. —I. (I.)
244B. Microsystems (4)
Lecture/discussion—4 hours. Introduction to the
to-
261. Signal Processing for Communications (4)
Lecture—4 hours. Prerequisite: course 165, 260 or consent of instructor. Signal processing in wireless and wireline communication systems. Characterization and distortion of wireless and wireline channels. Channel equalization and maximum likelihood sequence estimation. Channel precoding and pre-equalization. Offsets to transmit diversity. Array processing. Offered in alternate years. —III.

262. Multi-Access Communications Theory (4)
Lecture—3 hours; project. Prerequisite: Statistics 120 or equivalent; course 173A or Engineering Computer Science 152A. Maximum stable throughput of Poisson collision channels. Classic collision resolution algorithms. Carrier sensing multiple access and its performance analysis. System stability analysis. Joint design of the physical/medium access control layers. Capacity region of multi-access channels. Multi-access with correlated sources. Offered in alternate years. —III.

263. Optimal and Adaptive Filtering (4)

264. Estimation and Detection of Signals in Noise (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 260. Introduction to parameter estimation and detections of signals in noise. Bayes and Neyman-Pearson likelihood-ratio tests for signal detection. Maximum-likelihood parameter estimation. Detection of known and Gaussian signals in white or colored noise. Applications to communications, radar, signal processing. —II. (II.)

265. Principles of Digital Communications (4)
Lecture—4 hours; course 165 and 260, or consent of instructor. Introduction to digital communications. Coding for analog sources. Characterization of signals and systems. Modulation and demodulation for the additive Gaussian channel. Digital signal transmission constrained linear filter channels and over fading multipath channels. Spread spectrum signals. —II. (II.)

266. Information Theory and Coding (3)
Lecture—3 hours. Prerequisite: Statistics 120. Information theory—Measure of information. Redundancy reduction encoding of an information source. Capacity of a communication channel, error-free communications. Offered in alternate years. —II.

267. Mobile Communications (4)
Lecture/laboratory—3 hours. Prerequisite: courses 260 and 265 can be taken concurrently. Time-varying multi-path fading channel models and receivers performing channel equalization; multiple access techniques and multiple access receivers design and performance; optimum design and the capacity of wireless channels. Offered in alternate years. —II.

269A. Error Correcting Codes I (3)
Lecture—3 hours. Prerequisite: Mathematics 22A and course 160. Introduction to the theory and practice of block codes, linear block codes, cyclic codes, decoding algorithms,—theory of error correction. —I. (I.)

269B. Error Correcting Codes II (3)
Lecture—3 hours. Prerequisite: course 165 and 269A. Introduction to convolutional codes, turbo codes, trellis and block coded modulation codes, soft-decision decoding algorithms, the Viterbi algo-
rithm, reliability-based decoding, trellis-based decoding, multistage decoding. Offered in alternate years. —II.

270. Computer Architecture (3)
Lecture—3 hours. Prerequisite: course 170 or Computer Science Engineering 154B. Introduction to modern techniques for high-performance single and multiple processor systems. Topics include advanced pipeline design, advanced memory hierarchy design, optimizing pipeline and memory use, and memory sharing among multiprocessors. Case studies of recent single and multiple processor systems. —II. (II.)

272. High-Performance Computer Architecture and Implementation (3)
Lecture—3 hours. Prerequisite: course 170 or Computer Science Engineering 154B and course 270 or Computer Science Engineering 250A. Architectural issues in achieving high-performance via concurrent execution of instructions and associated problems and solutions. Specialized architectures. Offered in alternate years. —I. (I.)

273. Networking Architecture and Resource Management (4)
Lecture—3 hours; project. Prerequisite: Computer Science Engineering 152A or course 173A; Computer Science Engineering 252 recommended. Design and implementation principles of networking architecture and protocols. Internet, ATM and telephony case studies. Topics: Internet technology; application and services; resource management; Quality of Service (QoS) provisioning; traffic engineering; performance evaluation and future research issues. —Same course as Computer Science Engineering 258. —II. (II.)

274. Internet Measurements, Modeling and Analysis (4)
Lecture—3 hours; project. Prerequisite: Computer Science Engineering 252 or course 273. Advanced topics in the theoretical foundations of network measurements, modeling, and statistical inference. Applications to Internet engineering, routing optimization, load balancing, traffic engineering, fault tolerance, anomaly detection, and network security. Individual project requirement. Offered in alternate years. —II. (II.)

276. Fault-Tolerant Computer Systems: Design and Analysis (3)
Lecture—3 hours. Prerequisite: courses 170, 180A. Introduces fault-tolerant digital system theory and practice. Offers an overview of hardware redundancy techniques based on hardware redundancy, time redundancy, information redundancy, and software redundancy. Examines hardware and software reliability analysis, design, and management. Not open for credit to students who have completed course 276A. Offered in alternate years. —II.

277. Graphics Architecture (3)
Lecture—3 hours. Prerequisite: Computer Science Engineering 154B or course 170; Computer Science Engineering 175. Design and analysis of the architecture of computer graphics systems. Topics include the graphics pipeline with a concentration on hardware and software techniques. Covering both parallelism in graphics, and case studies of noteworthy and modern graphics architectures. Offered in alternate years. —II.

278. Computer Arithmetic for Digital Implementations (3)
Lecture—3 hours. Prerequisite: courses 170, 180A. The design and implementation of computer arithmetic logic units are studied with particular emphasis on high-speed digital systems requirements. Additional (subtraction), multiplication and division operations are covered, and fixed and floating-point representations are examined. Offered in alternate years. —II.

281. VLSI Digital Signal Processing (4)
Lecture—3 hours; project. Prerequisite: courses 150B, 170, 180A or consent of instructor. Digital signal processors, building blocks, and algorithms. Design and implementation of processor algorithms, architectures, control, functional units, and circuit topologies for increased performance and reduced circuit size and power dissipation. —II.

282. Hardware Software Co-design (3)
Lecture—2 hours; discussion—1 hour. Prerequisite: course 170, 180B. Specification and design of embedded systems; modeling and performance estimation; hardware/software partitioning; co-simulation; design reuse; platform-based design; reconfigurable computing. —III.

283. Advanced Design Verification of Digital Systems (4)
Lecture—3 hours; project. Prerequisite: courses 170 and 180A. Design verification techniques for digital systems; simulation-based design verification techniques; formal verification techniques, including equivalence checking, model checking, and theorem proving; timing analysis and verification; application of design certification techniques to microprocessors. Offered in alternate years. —II.

Lecture—4 hours. Prerequisite: courses 170 and 180B, or consent of instructor. Computer Science Engineering 122A recommended. Introduction to design and optimization of digital computing systems for embedded applications. Topics include combinational optimization techniques, performance and energy optimization in embedded systems, compilation and architecture-specific technologies, programmable and reconfigurable platforms; design automation and algorithmic improvements to design process. —II. (II.)

286. Introduction to Digital System Testing (3)
Lecture—3 hours. Prerequisite: course 180A; Statistics 120 or 131A. Review of several current techniques used to diagnose faults in both combinational and sequential circuits. Topics include path sensitization procedures, Boolean difference, Dallogram random test generation, TC testing and an analysis of the effects of intermittent faults. Not open for credit to students who have completed course 276A. Offered in alternate years. —II.

289A-V. Special Topics in Electrical and Computer Engineering (1-5)

290. Seminar in Electrical and Computer Engineering (1)
Seminar—1 hour. Discussion and presentation of current research and development in Electrical and Computer Engineering. May be repeated for credit. (S/U grading only.)—I, II, III.

290C. Graduate Research Group Conference in Electrical and Computer Engineering (1)
Discussion—1 hour. Prerequisite: consent of instructor. Research problems, progress, and techniques in electrical and computer engineering. May be repeated for credit. (S/U grading only.)—I, II, III.

291. Solid-State Circuit Research Laboratory Seminar (1)
Seminar—1 hour. Prerequisite: graduate standing. Lectures on solid-state circuit and system design by various visiting experts in the field. May be repeated for credit. (S/U grading only.)—I, II, III.
292. Seminar in Solid-State Technology (1)
Seminar—1 hour. Prerequisite: graduate standing. Lectures and discussions on solid-state technology by various visiting experts. May be repeated for credit. (S/U grading only)—I, III.

293. Computer Engineering Research Seminar (1)
Seminar—1 hour. Prerequisite: graduate standing or consent of instructor. Lectures, tutorials, and seminars on topics in computer engineering. May be repeated for credit up to four times. (S/U grading only)—II, III.

294. Communications, Signal and Image Processing Seminar (1)
Seminar—1 hour. Prerequisite: graduate standing. Communications, signal and image processing, video engineering and computer vision. May be repeated for credit. (S/U grading only)—I, II, III.

295. Systems, Control and Robotics Seminar (1)
Seminar—1 hour. Prerequisite: graduate standing. Lectures on robotics and related areas by faculty and visiting experts. May be repeated for credit. (S/U grading only)—II, III.

296. Group Study (1-5)
Prerequisite: consent of instructor. (S/U grading only)

299. Research (1-12)
(S/U grading only)

Professional

390. The Teaching of Electrical Engineering (1)
Discussion—1 hour. Prerequisite: meet qualifications for having assistant and/or associate-in-electrical-engineering, to be determined by the Electrical Engineering Department. Participation as a teaching assistant or associate-in-engineering is considered on a designated engineering course. Methods of leading discussion groups or laboratory sections, writing and grading quizzes, use of laboratory equipment, and grading laboratory reports. May be repeated for credit. (S/U grading only)—I, II.

396. Teaching Assistant Training Practicum (1-4)
Prerequisite: graduate standing. May be repeated for credit. (S/U grading only)—I, II, III, IV, V, VI.

Engineering: Mechanical and Aerospace Engineering

(Dean of Engineering)

C. P. (Case) van Dam, D. Engr., Chairperson of the Department
Benjamin D. Shaw, Ph.D., Vice Chairperson of the Department

The Mechanical and Aerospace Engineering Undergraduate Programs

The Department of Mechanical and Aerospace Engineering administers three undergraduate programs in the College of Engineering: (1) Mechanical Engineering, (2) Mechanical Engineering/Materials Science, and (3) Aerospace Science and Engineering. For more information about our programs, please see http://mae.ucdavis.edu/ug.php.

The Mechanical Engineering/Materials Science program is not accepting new students.

Mission. The Department of Mechanical and Aerospace Engineering is committed to educating future engineers so that they may contribute to the economic growth and well-being of the state, the nation, and the world, and to the advancement of knowledge in the fields of mechanical and aerospace sciences.

Objectives. The objectives of the programs offered in Mechanical and Aerospace Engineering include the following: to prepare its graduates to practice mechanical and/or aerospace engineering in a broad range of industries, to enable interested graduates to pursue graduate education, to prepare its graduates to participate in research and development, and to foster creative and innovative efforts in science, engineering, and technology and to allow interested graduates to pursue entrepreneurial endeavors.

Preparatory Requirements. In order to change to any major offered by the Department of Mechanical and Aerospace Engineering, student must: have completed at least one quarter (minimum of 12 units) at UC Davis; have completed not more than 135 cumulative units (excluding AP units); be in good academic standing and meet minimum progress requirements; receive a letter grade for all courses that satisfy Engineering degree requirements; have completed at least the following five courses: Mathematics 21A, B, C, Physics 9A and Chemistry 2A and b) have a GPA of 2.800 or better in all completed Mathematics, Physics, Biology and Chemistry courses required for your intended major(s) taken at UC Davis; have two 800 U GPA in completed engineering courses.

Mechanical Engineering Undergraduate Program

The mechanical engineer uses basic science in the design and manufacture of complex engineering systems, requiring the application of physical and mechanical principles to the development of machines, energy conversion systems, materials, and equipment for guidance and control. Work in this broad field of engineering requires a thorough knowledge of mathematics, physics, chemistry, material science, applied mechanics, thermodynamics, heat transfer, mass transfer, electricity, manufacturing processes, and economics. The Mechanical Engineering program is designed to provide knowledge in mechanical engineering and associated applied sciences so that graduates may practice in a broad range of industries, pursue graduate studies, participate in research and development, and/or pursue entrepreneurial endeavors.

Areas of Interest
Students spend their third year in further study of fundamental courses, and in the fourth year, they tailor their studies to their interests by selecting courses in controls and systems analysis, fluid mechanics, heat transfer, mechanical design or thermodynamics. Students can either prepare for graduate study in mechanical engineering or obtain a broad background for entering engineering practice. Students may select elective courses from among the areas of interest listed below.

Mechanical Design. The creation and improvement of products, processes, or systems that are mechanical in nature are the primary activities of a professional mechanical engineer. The development of a product from concept, to design, manufacturing process selection and planning, quality control and assurance, and life cycle considerations are areas of study and specialization in the area of mechanical design. Solutions to such major social problems as environmental pollution, the lack of mass transportation, the lack of raw materials, and energy shortages, will depend heavily on the engineer’s ability to create new types of machinery and their mechanical design. The engineer-designer must have a solid and relatively broad background in the basic physical and engineering sciences and have the ability to synthesize the size and cost of such a background in a creative problem-solving. In addition to having technical competence, the designer must be able to...
consider the socioeconomic consequences of a design and its possible impact on the environment. Product safety, reliability, and economics are other considerations.

Suggested technical electives:
- Aerospace Science and Engineering 133, 139
- Biological Systems Engineering 114, 120, 165
- Biomedical Engineering 118/Electrical and Computer Engineering 147
- Engineering 122, 160 (only one unit of credit towards Technical Electives requirement)
- Materials Science and Engineering 180, 181, 182
- Mechanical Engineering 121, 134, 150B, 151, 152, 154, 155

Biomedical and Engineering Fluid Mechan¬
ics. This field of study is based on the fundamentals of fluid mechanics and their broad range of applications in the biomedical and engineering areas. Areas of current research include blood circulation and its potential role in the regulation of normal physiological function and in the development of disease; groundwater and atmospheric flows and their implications for pollutant transport and environmental concerns; aerodynamic flow around transportation vehicles and its impact on vehicle performance; and flow in combustion engines and other energy systems with considerations of efficiency and environmental impact. These areas are investigated both experimentally and computationally.

Suggested technical electives:
- Aerospace Science and Engineering 138
- Engineering 160 (only one unit of credit towards technical requirements)
- Chemical Engineering 161A, 161B
- Civil and Environmental Engineering 144, 149
- Mechanical Engineering 161, 163

Combustion and the Environment. Combustion is widely used for energy generation, propulsion, heating, and waste disposal, as well as for many other applications. Mechanical engineers are often heavily involved with the design of combustion systems—internal (turbo engines, gas turbines, furnaces, etc.) and deal with aspects of combustion ranging from increasing efficiencies to reducing pollutant emissions. This specialization is for those who would like to work in fields that use combustion, or that deal with pollution related to combustion. With the current increased emphasis on reducing pollutants while maintaining or increasing efficiency, the efforts of mechanical engineers in designing and improving combustion systems are becoming more important.

Suggested technical electives:
- Mechanical Engineering 161, 163
- Civil and Environmental Engineering 149, 150

Suggested Advisers. R.C. Aldredge, R. Davis, P.A. Erickson, I.M. Kennedy, B.D. Shaw

Heat Transfer, Thermodynamics, and Energy Systems. This specialization emphasizes the fundamentals of heat transfer and thermodynamics, and their application to the design of advanced engineering systems. The objective of the program is to introduce students to the fundamental processes of heat transfer and thermodynamics in complex engineering systems. Students will be able to design systems that are more efficient, effective, and reliable systems with less environmental pollution and impact. An understanding of heat transfer and thermodynamics is required for the design of cost-effective systems for power generation, propulsion, heat exchangers, industrial processes, refining, and chemical processing. This area of specialization is important to many industries—and automotive—well as to the thermal design of electronic and computer packages.

Suggested technical electives:
- Aerospace Science and Engineering 138
- Mechanical Engineering 161, 163

Suggested Advisers. R.C. Aldredge, R. Davis, P.A. Erickson, I.M. Kennedy, J.W. Park, B.D. Shaw

Manufacturing. Manufacturing is concerned with the conversion of raw materials into finished prod¬
ucts by a variety of processes, such as machining, forming, casting, and molding. Modern manufactur¬ing technology is increasingly dependent upon inte¬gration with computer-aided design systems and precision computer controls. State-of-the-art laborato¬ries offer the opportunity for hands-on experience with a wide spectrum of manufacturing equipment.

Suggested technical electives:
- Biomedical Engineering 118/Electrical and Computer Engineering 147
- Electrical and Computer Engineering 160
- Materials Science and Engineering 180, 181
- Mechanical Engineering 150B, 151, 154

System Dynamics and Control. Engineers are increasingly concerned with the performance of inte¬grated dynamic systems in which it is not possible to optimize component parts without considering the overall system. System dynamics and control specialists are concerned with the modeling, analysis, and simulation of all types of dynamic systems and with the use of automatic control techniques to change the dynamic characteristics of systems in useful ways. The empha¬sis in this program is on the physical systems that are closely related to mechanical engineering, but the techniques for studying these systems apply to social, economic, and other dynamic systems.

Ongoing research includes projects on continuously variable transmissions, active and semi-active sus¬pension systems, modeling and control of vehicle dynamics, electromechanical actuator design, elec¬trically controlled fluid systems, analysis of flight control systems, and the design of flight-control systems with humans in the loop.

Suggested technical electives:
- Aerospace Science and Engineering 129, 139, 141
- Electrical and Computer Engineering 160
- Engineering 122
- Mechanical Engineering 121, 134, 154

Suggested Advisers. F.O. Eke, R.A. Hess, S. Joshi

Ground Vehicle Systems. An important aspect of mechanical engineering is the design of more environmentally benign surface vehicles that provide efficient individual and public transportation. Innovations in the field require competence in vehicle dynamics, control of vehicle dynamics, power sources and power transmission, lightweight structures and systems, and, alternatively, powered systems, including electrical drives and fuel cells, and mechatronic systems.

Suggested technical electives:
- Aerospace Science and Engineering 127, 129, 139
- Civil and Environmental Engineering 130, 149, 160
- Engineering 122, 160 (only one unit of credit towards technical electives requirement)
- Mechanical Engineering 121, 134, 152

Suggested Advisers. P.A. Erickson, M.J. Hill, S. Velinsky

Transportation Systems. As society recognizes the increasing importance of optimizing transpor¬tation systems to minimize environmental degradation and energy expenditure, engineers will need to con¬side major innovations in the way people and goods are moved. Such innovations will require competence in vehicle dynamics, propulsion and control, and an understanding of the problems caused by present-day modes of transportation. Vehicle control requires an understanding of sensors and actuators, and the integration of yet-to-be-pro¬posed concepts into overall vehicular dynamics. Competence in these areas allows for the develop¬ment of alternative propulsion concepts, such as electric, hybrid, and fuel cell.

Suggested technical electives:
- Aerospace Science and Engineering 127, 129
- Biological Systems Engineering 114, 120
- Civil and Environmental Engineering 131, 149
- Engineering 122, 160 (only one unit of credit towards Technical Electives requirement)
- Mechanical Engineering 134, 150B, 161, 163

Suggested Advisers. P.A. Erickson, J.W. Park, S. Velinsky

Mechanical Engineering Program Requirements

Students are encouraged to adhere carefully to all prerequisite requirements. The instructor is autho¬rized to drop students from a course for which stated prerequisites have not been completed.

Exclusive of General Education units, the minimum number of units required for the Mechanical Engi¬neering major is 157.

Lower Division Required Courses

| UNITS | Mathematics 21A-21B-21C-21D ............. 16 |
| Course Code | Mathematics 22A-22B-22C-22D-22E ............. 20 |
| Course Code | Physics 9A9B9C9D ............. 19 |
| Course Code | Chemistry 2A2B or 2AH2BH ............. 10 |
| Course Code | Engineering 4 ...................... 3 |
| Course Code | Engineering 6 or Mechanical Engineering 5 ............. 4 |
| Course Code | Engineering 17, 35, 45 (or 45Y) ............. 12 |
| Course Code | Mechanical Engineering 50 .......... 4 |
| Course Code | English 3 or University Writing Program 1, 1Y, 2, 3, 4, Native American Studies 5 .......... 5 |
| Course Code | Communication 1 or 2, 3, 4 ............. 4 |

Upper Division Required Courses

| Engineering 100, 102, 103, 104, 105, 106, 107A & 8, 150A, 165, 172 ............. 22 |
| Mechanical Engineering 183A & 185B (taken in consecutive quarters), or Aerospace Science and Engineering 130A & 130B ............. 8 |
| Engineering 190 ............. 3 |
| Select one course from the following Applied Mathematics Electives: Engineering 180, Mathematics 128C, Mechanical Engineering 115; Statistics 131A ............. 4 |
| Select one course from the following System Dynamics/Mechanical Design Electives: Engineering 122, Mechanical Engineering 121, 150B, 154 or 171 ............. 4 |
| Select two courses from the following Restricted Electives: Aerospace Science and Engineering 129, 139, 140, 141, 142; Materials Science and Engineering 180, 182; Mechanical Engineering 134, 151, 152, 161, 163; Students may also choose from Aerospace Science and Engineering 130A, 130B, Mechanical Engineering 150B, 154, 171 if these courses are not used in satisfaction of other degree requirements . 8 |
| Technical Elective Requirement ............. 7 |
At least four units must be taken from any Upper Division Engineering course, which may include any from the above System Dynamics/Mechanical Design or Restricted Elective lists if these courses are not used in satisfaction of other degree requirements. Up to 4 units may be selected from Biomedical Engineering 185A/B or any engineering 192, 199 not used in satisfaction of other degree requirements. Courses that cannot be used are Biomedical Engineering 110L, Engineering 160, 191, 198 (Gearing up for Graduate School/undergraduate research), Computer Science Engineering 188 or any 197T course.

Up to three units may be used from the following technical electives list:
- Agricultural and Resource Economics 100A, 100B, 112
- Applied Biological Systems Technology 101, 142, 165
- Atmospheric Science 149, 160
- Biological Sciences 2A, 2B, 2C
- Chemistry 2C, 2CH, 8A, 8B and any upper division course except Chemistry 195 and 197
- Economics 100, 101, 102, 103, 122
- Engineering: Any upper division course offered in the college of engineering except Biomedical Engineering 110E, Engineering 160, 191, 198 (gearing up for graduate school/undergraduate research), Computer Science Engineering 188 or any 197T course.
- Environmental and Resource Sciences 100, 100L, 121, 131, 136, 185, 186, 186L
- Exercise Biology 102
- Fiber and Polymer Science 100 (same as Materials Science Engineering 147)
- Food Science and Technology 159, 160
- Geology 17, 32, 35, 36, 50, 50L, 60, 100, 100L, 101L, 130, 131, 160, 162, 163
- Hydrologic Science 110, 124, 134, 141, 142, 143, 144, 146, 151, 182
- Management 11A, 11B, 100, 120, 140, 145, 150, 160, 170, 180
- Mathematics: any upper division course except Mathematics 197TC
- Physics 9HE and any upper division course except Physics 160 (restricted to one unit of technical elective), 195, 197T
- Statistics: any upper division course except Statistics 110, 123, 103, 104, 106, 108
- Upper Division Composition Requirement 0 or 4
  One course from following (grade of C- or better is required): University Writing Program 101, 102E, 104A, 104E, 104T or passing the Upper-Division Composition Exam.

The Mechanical Engineering/Materials Science Undergraduate Program

The Mechanical Engineering/Materials Science program is not accredited by the Engineering Accreditation Commission of ABET; http://www.abet.org.

The Mechanical Engineering/Materials Science program is not accepting new students through Undergraduate Admissions or the change of major process.

The Mechanical Engineering/Materials Science program is a combined major that offers students a unique interdisciplinary experience requiring work with mechanical engineering and materials science and engineering students. In addition to performing work in portions of the mechanical engineering program described above, this program provides the background to understand the structure, properties, and behavior of materials and to pursue these fields in industry and/or graduate scholarship.

Students are encouraged to adhere carefully to all prerequisite requirements. The instructor is authorized to drop students from a course for which stated prerequisites have not been completed.

Exclusive of General Education units, the minimum number of units required for the Mechanical Engineering/Materials Science major is 170.

Lower Division Required Courses

| Mathematics 21A-21B, 21C, 21D | 16 |
| Mathematics 22A-22B | 6 |
| Physics 9A-9B, 9C, 9D | 19 |
| Chemistry 2A-2B, 2A-2BH | 10 |
| Engineering 3 | 3 |
| Engineering 6 or Mechanical Engineering 5 | 5 |
| Engineering 17, 35 or 45 (or 45I) | 12 |
| Mechanical Engineering 50 | 4 |
| English 3 or University Writing Program 1, 1Y, or 1Y, or Comparative Literature 1, 2, 3, or 4, or Native American Studies 5 | 4 |
| Communication 1 or 3 | 4 |

Upper Division Required Courses

| Engineering 100, 102, 103, 104, 105 | 19 |
| Mechanical Engineering 185A & 185B, Materials Science and Engineering 188A & B (taken in consecutive quarters) | 4 |
| Materials Science and Engineering 160, 162, 164, 174 | 16 |
| One course chosen from Materials Science and Engineering 172, 180, 181, 182, 188A-8B (if not used to satisfy above core requirement) | 4 |
| One laboratory course chosen from Materials Science and Engineering 162L or 174L | 2 |
| Select one course from: Engineering 180, 188A, 188B | 4 |
| Mathematics 128C, Mechanical Engineering 115, Statistics 131A | 4 |
| Engineering 190 | 3 |
| Technical Electives | 10 |
| One course must be chosen from the following System Dynamics/Mechanical Design electives: Engineering 122, Mechanical Engineering 121, 150B, 154 | 4 |
| Two courses must be chosen from: Aerospace Science and Engineering 129, 130A, 130B, 138, 139, 189A, 189B, Materials Science and Engineering 147, Mechanical Engineering 134, 151, 152, 161, 163 | 15 |
| Students may also choose from Mechanical Engineering 150B, 154 if not used for the System Dynamics/Mechanical Design elective requirement above. | 4 |
| Students may also choose from Material Science and Engineering 180, 181, 182, if these courses are not used for a Materials Science and Engineering requirement above. | 4 |
| A combined maximum of 4 units of Mechanical Engineering 185A & B, Materials Science and Engineering 188A & B or any course numbered 192 or 199 not used in satisfaction of core requirements may be applied to the technical elective degree requirement. | 0 or 4 |
| Upper Division Composition Requirement | 0 or 4 |
| One course from the following (grade of C- or better is required): University Writing Program 101, 102A, 102B, 102G, 102E, 104A, 104C, 104D, 104E, 104T or passing the Upper-Division Composition Exam. | 4 |

Division of Aerospace Science and Engineering

The Division of Aerospace Science and Engineering administers the Aerospace Science and Engineering Program within the Department of Mechanical and Aerospace Engineering.

Faculty

Roger Davis, Ph.D., Professor

The Aerospace Science & Engineering Undergraduate Program

The Aerospace Science and Engineering program is accredited by the Engineering Accreditation Commission of ABET; http://www.abet.org.

Aerospace Science and Engineering majors learn to apply the principles of the physical sciences and engineering to the design of aerospace vehicles. Specific objectives include the design, development and manufacture of aerospace vehicles and other transportation systems through the integration of disciplines associated with aerodynamics, propulsion, structures, and guidance/control.

Our Bachelor of Science degree in Aerospace Science and Engineering provides a broad background in the physical sciences, and the engineering sciences. These fundamentals, when complemented by the required technical courses, prepare students for employment in government or industry, while simultaneously establishing an excellent foundation for graduate studies.

Students are encouraged to adhere carefully to all prerequisite requirements. The instructor is authorized to drop students from a course for which stated prerequisites have not been completed.

Exclusive of General Education units, the minimum number of units required for the Aerospace Science and Engineering major is 140.

Lower Division Required Courses

| Mathematics 21A-21B, 21C, 21D | 16 |
| Mathematics 22A-22B | 6 |
| Physics 9A-9B, 9C, 9D | 19 |
| Chemistry 2A-2B, 2A-2BH | 10 |
| Engineering 4 | 4 |
| Engineering 6 or Mechanical Engineering 5 | 4 |
| Engineering 17, 35 or 45 (or 45I) | 12 |
| English 3 or University Writing Program 1, 1Y, or 1Y, or Comparative Literature 1, 2, 3, or 4, or Native American Studies 5 | 4 |
| Communication 1 or 3 | 4 |

Upper Division Required Courses

| Engineering 100, 102, 103, 104, 105 | 19 |
| Select one course from: Engineering 180, Mechanical Engineering 115, Mathematics 128C | 4 |
| Engineering 190 | 3 |
| Technical Electives | 7 |
| One course must be chosen from the following astronautics electives: Aerospace Science and Engineering 140, 141 or 142 | 4 |
| The remaining units must be taken from any upper-division engineering course except Biomedical Engineering 110L, Engineering 160, 191, 198 (Gearing up for Grad School/undergraduate research), Computer Science Engineering 188 or any 197T course. | 4 |
| Upper Division Composition Requirement | 0 or 4 |
Courses in Engineering: Mechanical (EME)

Courses in Mechanical Engineering (EME) are listed below: courses in Aerospace Science and Engineering (AEAE) are listed immediately following; graduate courses in Mechanical and Aeronautical Engineering (MAE) follow.

Lower Division

1. Mechanical Engineering (1)
   Lecture—1 hour. Description of the field of mechanical engineering with examples taken from industrial applications, discussion of the practice of engineering, principles, ethics, and responsibilities.
   P/NP grading only.

2. Computer Programming for Engineering Applications (4)
   Lecture—3 hours; laboratory—3 hours. Prerequisite: Mathematics 16A or 21A (may be taken concurrently). Structured programming in C for solving problems in engineering. Introduction to MATLAB and comparison study of C/C++ with MATLAB. Not open for credit to students who have completed course 124. GE credit: QL, SE, SL, VL—II. (J. Cheng)

3. Manufacturing Processes (4)
   Lecture/discussion—3 hours; laboratory—3 hours. Prerequisite: C- or better in Engineering 4 and Physics 9A. Restricted to Mechanical Engineering and Mechanical Engineering/ Materials Science Engineering majors. Modern manufacturing methods, safety, manufacturing inspections, computerized manufacturing and their role in the engineering design and development process. GE credit: SciEng | QL, SE, VL—II, III, IV. (S. Linke, S. Sashi)

3. Internship in Mechanical Engineering (1-5)
   Internship. Prerequisite: lower division standing; approval of project prior to period of internship. Supervised work-study experience in engineering. May be repeated for credit. (P/NP grading only.)

97TC. Mentoring and Tutoring Engineering in the Community (1-4)
   Prerequisite: consent of instructor. Mentoring, coaching, tutoring and/or supervision of students in K-12 schools in Engineering-related topics. May be repeated for credit. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)
   Prerequisite: consent of instructor; lower division standing. (P/NP grading only.)

Upper Division

105. Thermo-Fluid Dynamics (4)
   Lecture—4 hours. Prerequisite: C- or better in Engineering 103 and 105. Restricted to Mechanical Engineering, Aerospace Science and Engineering, and Mechanical Engineering/Materials Science Engineering majors. Inviscid incompressible flow, compressible flow, psychrometrics, reacting mixtures and combustion. GE credit: SciEng | SE—II, III, IV. (J. Delplanque, K. Kendall, S. Shaw)

107A. Experimental Methods (3)
   Lecture—2 hours; laboratory—3 hours. Prerequisite: C- or better in Mechanical Engineering 106. Restricted to Mechanical Engineering, Aerospace Science & Engineering and Mechanical/ Materials Science & Engineering majors. Emphasis on physical experiments to illustrate principles of thermal-fluid systems. Statistical and uncertainty analysis of data; statistical design of experiments; measurement devices; experiments involving thermal cycles, combustion, compressible and incompressible flows. Two units of credit for students who have previously taken Chemical Engineering 155A; one unit of credit for students who have previously taken Chemical Engineering 155B; two units of credit for students who have previously taken Civil and Environmental Engineering 141L. GE credit: SciEng | QL, SE, VL—II, III, IV. (J. Erickson, K. Kendall, P. Shaw)

107B. Experimental Methods (3)
   Lecture—2 hours; laboratory—3 hours. Prerequisite: C- or better in Engineering 100 and Engineering 102, Engineering 104 recommended. Restricted to Mechanical Engineering, Aerospace Science & Engineering and Mechanical/ Materials Science & Engineering majors. Emphasis on the design and selection of mechanical systems. Theory of measurements; Signal analysis; Demonstration of basic sensors for mechanical systems; Experimental project design; Experiments involving voltage measurement; strain gauges, dynamic systems of 9, 1st and 2nd order. Only two units of credit for students who have previously taken Biomedical Engineering 111. Only one unit of credit for students who have previously taken Biological Systems Engineering 165. GE credit: SciEng | QL, SE, VL, WE—II, III, IV. (F. Horsley, L. Saponara)

115. Introduction to Numerical Analysis and Methods (4)
   Lecture—3 hours, lecture/discussion—1 hour. Prerequisite: C- or better in Engineering 6 or course 5 or Computer Science Engineering 30 or Chemical and Materials Science Engineering 6; C- or better in Mathematics 21A, 21B, 21C, 21D, 22A, 22B; C- or better in Physics 9A, 9B, 9C. Number representations, error and stability analysis, roots of nonlinear equations, linear equations, numerical integration, ordinary differential equations. Not open for credit to students who have taken Applied Science Engineering 115. GE credit: SciEng | SE—II, III. (J. Jensen)

121. Engineering Applications of Dynamics (4)
   Lecture—3 hours; laboratory—3 hours. Prerequisite: C- or better in Engineering 102; C- or better in Engineering 6 or course 5 or Computer Science Engineering 30. Restricted to Mechanical Engineering, Aerospace Science and Engineering, and Mechanical Engineering/Materials Science Engineering majors. Technical elective that revisits dynamic principles with emphasis on engineering applications; stressing importance of deriving equations of motion and setting these into form for computer solution with computer simulation lab. Students gain experience with solving complex, real engineering applications. GE credit: SciEng | QL, SE, SL, VL—III. (J. Karron, Margolis)

134. Vehicle Stability (4)
   Lecture—3 hours; laboratory—3 hours. Prerequisite: C- or better in Engineering 102. Restricted to Mechanical Engineering, Aerospace Science and Engineering, and Mechanical Engineering/Materials Science Engineering majors. Introduction to the static and dynamic stability characteristics of transportation vehicles with examples drawn from aircraft, high-performance automobiles, rail cars and boats. Laboratory experiments illustrate dynamic behavior of automobiles, race cars, bicycles, etc. GE credit: SciEng | QL, SE, SL, VL—III. (J. Karron, Margolis)

150A. Mechanical Design (4)
   Lecture—3 hours; discussion—1 hour. Prerequisite: C- or better in Engineering 45 or Engineering 45Y; C- or better in both Engineering 104 and course 50 (may be taken concurrently). Restricted to Mechanical Engineering, Aerospace Science and Engineering, and Mechanical Engineering/Materials Science and Engineering majors. Principles of engineering mechanics applied to mechanical design. Theories of static and fatigue failure of metals. Design projects emphasizing the progression from concept formulation to hardware. Experimental stress analysis and mechanical measurements using strain gages. GE credit: SciEng | QL, SE, VL, WE—II, III, IV. (J. Shaw)

150B. Mechanical Design (4)
   Lecture—3 hours; discussion—1 hour. Prerequisite: C- or better in course 150A. Restricted to Mechanical Engineering, Aerospace Science and Engineering, and Mechanical Engineering/Materials Science and Engineering majors. Principles of engineering mechanics applied to the design and selection of mechanical components. Design projects, which concentrate on conceptual design, engineering analysis, methods of
151. Statistical Methods in Design and Manufacturing (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: C- or better in Engineering 102. Course 150A. Restricted to the course in Engineering 100 and 102. Restricted to Mechanical Engineering, Aerospace Science and Engineering, Mechanical Engineering/Materials Science and Engineering. Methods of statistical analysis with emphasis on applications in mechanical design and manufacturing. Applications include product evaluation and decision making, stress-strength interference, probabilistic design, systems reliability, and fatigue under random loading. GE credit: SciEng | QL, SE, VL—II, III, IV. Farouki, Linke, Ravani

152. Computer-Aided Mechanism Design (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: C- or better in Engineering 102; C- or better in course 5 or Computer Science Engineering 30. Restricted to Mechanical Engineering, Aerospace Science and Engineering, Mechanical Engineering/Materials Science and Engineering. Principles of computer-aided mechanism design. Computer-aided kinematic, static, and dynamic analysis and design of planar mechanisms such as multiple-degree-of-freedom geared linkages. Introduction to kinematic synthesis of mechanisms. Offered in alternate years. GE credit: SciEng | QL, SE, VL—II. Cheng

154. Mechanotronics (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: C- or better in each of the following: Engineering 100 and Engineering 102 and course 50. Restricted to Mechanical Engineering, Aerospace Science and Engineering, Mechanical Engineering/Materials Science and Engineering. Mechatronics system concept and overview, control system design, architecture, microcontroller and interface technology for mechatronics control, sensor for mechatronics systems, actuator drives. GE credit: SciEng | QL, SE, VL—II, III. Yamazaki

161. Combustion and the Environment (4)
Lecture—3 hours; lecture/discussion—1 hour. Pre-requisite: grade of C- or better in course 106. Introduction to combustion kinetics, the theory of premixed flames and diffusion flames, turbulent combustion, formation of air pollutants in combustion systems, concept of pollution devices which include internal combustion engines, gas turbines, furnaces and waste incinerators; alternative fuel sources. Offered in alternate years. GE credit: SciEng | QL, SE, VL—II. Erickson, Park

165. Heat Transfer (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: C- or better in course 5 or Engineering 6 or Computer Science Engineering 30; C- or better in Engineering 103 and 105. Restricted to Mechanical Engineering, Aerospace Science and Engineering, Mechanical Engineering/Materials Science and Engineering. Conduction, convection, and radiation heat transfer. Computational modeling of heat transfer in applications to engineering equipment with the use of digital computers. GE credit: SciEng | QL, SE, VL—II, III, IV. Aldredge, Davis, Kennedy, Shaw

171. Analysis, Simulation and Design of Mechanotronic Systems (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: C- or better in Engineering 100 and 102. Restricted to Mechanical Engineering, Aerospace Science and Engineering, Mechanical Engineering/Materials Science and Engineering. Modeling of dynamic engineering systems in various energy domains. Analysis and design of dynamic systems. Response of linear systems. Digital computer simulation and physical experiments. GE credit: SciEng | QL, SE, VL—II. Hubbard

172. Automatic Control of Engineering Systems (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: C- or better in Engineering 100 and 102. Restricted to Mechanical Engineering, Aerospace Science and Engineering, Mechanical Engineering/Materials Science and Engineering. Classical feedback control; block diagrams; control system performance specifications; stability; feedback; Nyquist plots; stability; phase and gain margins; lead and lag compensators; state variable feedback controllers. GE credit: SciEng | QL, SE, VL—II, III. Eke, Joshi

185A. Mechanical Engineering Systems Design Project (4)
Lecture—1 hour; laboratory—3 hours. Prerequisite: C- or better in course 150A and course 165 (may be taken concurrently); Communications 1 or 3 recommended; upper division composition recommended. Restricted to Senior standing in Mechanical Engineering (EMEC). Major mechanical engineering design experience; the mechanical engineering design process and its use in the design of engineering systems involving appropriate engineering standards and multiple realistic constraints. (Deferred grading only, pending completion of project.) GE credit: SciEng | QL, SE, VL, WE—II, III, IV. Davis, Velinsky

185B. Mechanical Engineering Systems Design Project (4)
Lecture—1 hour; laboratory—3 hours. Prerequisite: course 185A and senior standing in the Department of Mechanical and Aerospace Engineering. Major mechanical engineering design experience; the mechanical engineering design process and its use in the design of engineering systems incorporating appropriate engineering standards and multiple realistic constraints. (Deferred grading only, pending completion of sequence.) GE credit: Sci | QL, SE, VL, WE—II, III, IV. Velinsky, C. Davis

189A-L. Selected Topics in Mechanical Engineering (1-5)
Prerequisite: consent of instructor. Directed group study of selected topics in separate sections in (A) Energy Systems and the Environment, (B) Engineering Controls, (C) Engineering Dynamics, (D) Biomechanics, (E) Fluid Mechanics, (F) Manufacturing Engineering, (G) Mechanical Engineering and Product Design, (H) Materials Systems, (I) MEMS/Nanotechnology, (J) Solid and Structural Mechanics, (K) Thermodynamics, (L) Vehicle and Transportation Systems. May be repeated for credit when the topic is different.

192. Internship in Engineering (1-5)
Internship. Preparation standing; approval of project prior to period of internship. Supervised work experience in mechanical engineering. May be repeated for credit. (P/NP grading only)

197C. Mentoring and Tutoring in Engineering in the Community (1-4)
Prerequisite: upper division standing; consent of instructor. Counseling, coaching, tutoring and/or supervision of programs in K-12 schools in engineering-related topics. May be repeated for credit. (P/NP grading only)

198. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only)
198. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only)

199. Special Study for Advanced Undergraduates (1-5)
Prerequisite: consent of instructor. (P/NP grading only)

Courses in Mechanical and Aeronautical Engineering (MAE)
(Formerly courses in Aeronautical Science and Engineering and Mechanical Engineering)

Graduate

207. Engineering Experimentation and Uncertainty Analysis (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Mechanical Engineering 107A and 107B. Design and analysis of engineering experiments with emphasis on measurement standards, data analysis, regression analysis, uncertainty analysis, including statistical treatment of experimental data intervals, propagation of bias and precision errors, correlated bias approximations, and using litter programs.—C. Davis

208. Measurement Methods in Fluid Mechanics and Combustion (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 165 and Engineering 103. Application of shadown, schlieren and other flow visualization techniques. Introduction to optics and lasers. Measurement of velocity and concentrations in reacting and non-reacting flows with laser diagnostic techniques including LDV, Rayleigh, Raman and fluorescence scattering and CARS. —Aldredge

210A. Advanced Fluid Mechanics and Heat Transfer (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 105 and Mechanical Engineering 165. Development of differential equations governing continuity, momentum and energy transfer. Solutions in laminar flow for exact cases, low and high Reynolds numbers and lubrication theory. Dynamics of inviscid flow. —Aldredge

210B. Advanced Fluid Mechanics and Heat Transfer (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 210A. Study of stability and transition to turbulence. Introduction to the physics of turbulence. Modeling of turbulence for numerical determination of momentum and heat transfer. —Aldredge

211. Fluid Flow and Heat Transfer (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 105 and Mechanical Engineering 165 or the equivalent. Design aspects of selected topics; heat conduction, fins; heat transport in ducts, boundary layers, separated flows; heat exchangers. —Erickson, Park

212. Biomedical Heat and Mass Transport Processes (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Mechanical Engineering 165 and Biological Systems Engineering 125, Chemical Engineering 153 or the equivalent. Application of principles of heat and mass transfer to biomedical systems related to heat exchange between the body and its environment, mass transfer across cell membranes and the design and analysis of artificial human organs. (Same course as Biomedical Engineering 212.) —Aldredge

213. Advanced Turbulence Modeling (4)
Lecture—4 hours. Prerequisite: course 210B. Methods of analyzing turbulence; kinematics and dynamics of homogeneous turbulence; Reynolds stress and high-order closure schemes and their simplification; numerical methods; application to boundary layer type flows; two-dimensional and three-dimensional hydrodynamic and environmental flows. —Aldredge

215. Biomedical Fluid Mechanics and Transport Phenomena (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103 or Chemical Engineering 150B or Civil and Environmental Engineering 141. Application of fluid mechanics and transport to biomedical systems. Flow in normal physiological function and pathological conditions. Topics include cardiovascular and respiratory flows, effect of flow on cellular processes, transport in the arterial wall and in tumors, and tissue engineering. (Same course as Biomedical Engineering 221.)

216. Advanced Thermodynamics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103 and 105, Mechanical Engineering 106. Restricted to graduate students. Review of chemical thermodynamics and chemical kinetics. Discussion of reacting flows, their governing equations and transport phenomena; detonations; laminar flame structure and turbulent combustion. —Alldredge, Kennedy, Shaw

218. Advanced Engineering Systems (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103 and 105, or the equivalent. Review of options available for advanced power generation. Detailed study of basic power balances, component efficiencies, and overall performance for one advanced concept such as a fusion, magnetohydrodynamic, or solar electric power plant. —Aldredge

219. Introduction to Scientific Computing in Solid and Fluid Dynamics (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: Engineering 103 and 104. Scientific calculations with finite element methods for multi-dimensional problems in solid and fluid dynam- ics are performed with examples in C, C++, FORTRAN, and MATLAB script files. Derivation of the basic equations of motion in finite volume form with applications to elasticity, waves. —Delplande

220. Mechanical Vibrations (4)
Lecture—4 hours. Prerequisite: Engineering 122. Multiple degrees of freedom; damping measures; Rayleigh’s method; vibration absorbers; eigenvalues and modeshapes; modal coordinates; forced vibrations; random processes and vibrations; auto-correlation; spectral density; first passage and fatigue failure; nonlinear systems; phase plane. —Aldredge

222. Advanced Dynamics (4)
Lecture—4 hours. Prerequisite: Engineering 102. Dynamics of particles, rigid bodies and distributed systems with engineering applications; generalized coordinates; Hamilton’s principle; Lagrange’s equations; Hamilton/jacobi theory; modal dynamics orthogonality; wave dynamics; dispersion.

223. Multibody Dynamics (4)
Lecture—4 hours. Prerequisite: Engineering 102. Coupled rigid-body kinematics/dynamics; reference frames; vector differentiation; configuration and motion constraints; holonomicity; generalized speeds; partial velocities; mass; inertia tensor/theorems; angular momentum; generalized forces; com- paring Newton/Euler, Lagrange’s methods; computer-aided equation derivation; orientation; Euler; Rodrigues parameters. (Same course as Biomedical Engineering 222.)

225. Spatial Kinematics and Robotics (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: C Language and course 222. Spatial kinematics, screw theory, spatial mechanisms analysis and synthesis, robotic kinematics and dynamics, robotic work space, path planning, robot programming, computer architecture and software implementation. (Same course as Biomedical Engineering 225.) Offered in alternate years. —Ravani
Quarter Offered: I=Fall, II=Winter, III=Spring, IV=Summer; 2015-2016 offering in parentheses
Pre-Fall 2011 General Education (GE): AH=Arts and Humanities, SciEng=Science and Engineering, SecSci=Social Sciences; Div=Domestic Diversity; Wrt=Writing Experience
Fall 2011 and on Revised General Education (GE): AH=Arts and Humanities; SciEng=Science and Engineering; SS=Social Sciences; ACGH=American Cultures; DD=Domestic Diversity; OL=Oral Skills; QL=Quantitative; SL=Scientific; VL=Visual; WC=World Cultures; WE=Writing Experience

226. Acoustics and Noise Control (4)  
Lecture—4 hours. Prerequisite: Engineering 122. Description of sound using normal modes and wave interaction in inviscid fluids in infinite and finite regions. Sound fields; sound absorption in enclosed spaces; sound transmission through barriers; applications in design, acoustic enclosures and sound walls, room acoustics, design of quiet machinery. —Sarigül Klijn

227. Research Techniques in Biomechanics (4)  
Lecture—2 hours; laboratory—4 hours; term paper or discussion—1 hour. Prerequisite: Mathematics 228; and consent of instructor; Exercise Science 215 recommended. Experimental techniques for biomechanical analysis of human movement. Techniques evaluated include data acquisition and analysis by computer, force, strain, displacements, strength assessment, planar and three-dimensional videography, data reduction and smoothing, body segment parameter determination, electromyography, and biomechanical modeling. (Same course as Biomedical Engineering 227/Exercise Science 227)—Williams, Hawkins

228. Introduction to BioMEMS (4)  
Lecture—3 hours; discussion—1 hour. Prerequisite: SS engineering discipline or consent of instructor. Ideal for beginning graduate or advanced undergraduate students interested in microelectromechanical systems (MEMS) topics related to biological systems. Application of states of the art in finite element and optimization techniques. —van Dam

Lecture—4 hours. Prerequisite: consent of instructor; Engineering 45, 100, 104; Engineering 122 recommended. Mechanical design of microelectromechanical systems (MEMS). Model device functionality, lumped parameter models, energy methods; nonlinearities, electrical and mechanical noise sources. Actuation and measurement methods: capacitive, piezoresistive, piezoelectric, and optical techniques. Review of basic electronics: bridge circuits, amplitude modulation, lock-in detection. —Harsley

231. Musculo-Skeletal System Biomechanics (4)  
Lecture—4 hours. Prerequisite: Engineering 102. Mechanics of skeletal muscle and mechanical models of muscle, solution of the inverse dynamics problem, theoretical and experimental methods of kinematic and dynamic analysis, computational and experimental segmental load and muscle forces, applications to gait analysis and sports biomechanics. (Same course as Biomedical Engineering 231.) —Chen

232. Skeletal Tissue Mechanics (3)  
Lecture—3 hours; laboratory—1 hour. Prerequisite: Engineering 104B. Overview of the mechanical properties of the various tissues in the musculoskeletal system, the relationship of these properties to anatomic and histologic structure, and their implications in these properties caused by aging and disease. The tissues covered include bone, cartilage and synovial fluid, ligament and tendon. (Same course as Biomedical Engineering 232)—Fyhrie

234. Design and Dynamics of Road Vehicles (4)  
Lecture—4 hours. Prerequisite: Mechanical Engineering 134. Analysis and numerical simulation of road vehicles with emphasis on vehicle applications. —Velmis

236. Aerodynamics in Nature and Technology (4)  
Lecture—4 hours. Prerequisite: Engineering 103. Introduction to aerodynamics in nature, fundamentals of airflow, atmospheric boundary layers, pedestrian-level winds in urban areas. Criteria for laboratory modeling of atmospheric flows, wind-tunnel testing. —van Dam

237. Analysis and Design of Composite Structures (4)  
Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 104 or equivalent. Modeling and analysis methodology for composite structures including response and failure. Laminated plate bending theory. Introduction to failure processes. Includes discussion of aerospace or civil structural analysis. —Sapora

238. Advanced Aerodynamic Design and Optimization (4)  
Lecture—4 hours; discussion—1 hour. Prerequisite: consent of instructor. Application of aerodynamic theory to aircraft and aerospace design applications. Advanced computer aided aerodynamic analysis. —van Dam

239. Advanced Finite Elements and Optimization (4)  
Lecture—4 hours. Prerequisite: Engineering 180 or Applied Science 115 or Mathematics 128C. Introduction to advanced finite element methods and optimization methods, with application to modeling of complex mechanical, aerospace and biomedical systems. Applications of states of the art in finite element methods to structural and applications under realistic loading conditions and constraints. (Same course as Biomedical Engineering 239)—Sarigül Klijn

240. Computational Methods in Nonlinear Mechanics (4)  
Lecture—4 hours. Prerequisite: Applied Science Engineering 115 or Mathematics 128B or Engineer 180. Deformation of solids and the motion of fluids treated with state-of-the-art computational methods. Numerical nonlinear dynamics; classification of coupled problems; applications of finite element methods to mechanical, aeronautical, and biological systems. (Same course as Biomedical Engineering 240).—Sarigül Klijn

242. Stability of Thin-Walled Structures (4)  
Lecture—4 hours. Prerequisite: Engineering 104 or equivalent. Static stability of thin-walled aerospace structures treated from both theoretical and practical design perspectives. Both analytical and computerized construction considered. Buckling of stiffened panels, shells, and thin-walled beams, experimental methods and failure/crippling processes. —La Sapora

248. Advanced Turbomachinery (4)  
Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103 and 105. Preliminary aerodynamic design of axial and radial flow compressors and turbines. Design of diffusers. Selection of turbomachinery and configurations and approximations to optimum dimensions and flow angles. Introduction to flow analysis. Rotating stall and surge, and aerodynamic considerations. —R. Davis

250A. Advanced Methods in Mechanical Design (4)  
Lecture—4 hours. Prerequisite: Mechanical Engineer 150A and 150B or the equivalents, or consent of instructor. Advanced techniques of solid mechanics to mechanical design problems. Coverage of advanced topics in stress analysis and static failure theories with emphasis in design of machine elements. Design projects emphasizing advanced analysis tools for life cycle evaluation. —Ravani

250B. Advanced Methods in Mechanical Design (4)  
Lecture—4 hours. Prerequisite: course 250A. Applications of advanced techniques of solid mechanics to mechanical design problems. Advanced topics in variational methods of mechanics with emphasis in design of mechanical systems and projects emphasizing advanced analysis tools. —Hill

250C. Mechanical Performance of Materials (4)  
Lecture—4 hours. Prerequisite: undergraduate course in stress analysis and mechanical behavior of materials. Occurrence, mechanisms, and prediction of fatigue and fracture phenomena. Use of stress and strain to predict crack initiation. Use of fracture mechanics to predict crack failure and propagation phenomena. Effects of stress concentration, load sequence, irregular loading, and multi-axial loading. —Velmis

251. Mechatronics System Design (4)  
Lecture—3 hours; discussion—1 hour. Prerequisite: Mechanical Engineering 154 and 172 or Electrical and Computer Engineering 157A, 157B. Design of a mechatronics system, electric actuator, power electronics, micro control motion control, sensor technologies, personal computer-based control systems design, motion control. General operating systems design, motion system control software design, discrete event control software design. Offered in alternate years.—II. Yamazaki

252. Information Processing for Autonomous Robotics (4)  
Lecture—3 hours; discussion—3 hours. Prerequisite: Mechanical Engineering 126. Study of control of mobile and robotic systems. —Joshi

254. Engineering Software Design (4)  
Lecture—3 hours; laboratory—3 hours. Prerequisite: Mechanical Engineering 150B. Principles and design of engineering software. Advanced topics in engineering software design, applications of object-oriented programming, very high-level languages, real-time multi-thread computing and sensor fusion, Web-based network computing, graphics, and GUI in engineering. —Cheng

255. Computer-Aided Design and Manufacturing (4)  
Lecture—3 hours; laboratory—3 hours. Prerequisite: proficiency in a high level programming language such as Fortran, Pascal, or C. Representation and processing of geometrical information in design and manufacturing. Numeric and symbolic computations. Coordinate systems and transformations. Bezier and B-spline curves and surfaces. Interpolation and approximation methods. Intersections, offsets, and blends. Path planning and machine inspection, and robotics applications. —Farouki

258. Hybrid Electric Vehicle System Theory and Design (4)  
Lecture—3 hours; laboratory—3 hours. Prerequisite: Mechanical Engineering 150B, graduate standing in Mechanical and Aeronautical Engineering. Advanced vehicle design for fuel economy, performance, and low emissions, considering regulations, societal demands and manufacturability. Analysis and verification of computer design and control of vehicle systems in real vehicle tests. Advanced engine concepts. —Ravani

260. Gas Dynamics (4)  
Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103 or the equivalent. Flow of compressible fluids. Inviscid flow. Flow with friction, heat transfer, chemically reacting gas and particle mixtures. Normal and oblique shock waves, combustion, blast and expansion waves. Method of characteristics. —Ravani

262. Advanced Aerodynamics (4)  
Lecture—2 hours; discussion—3 hours. Prerequisite: Aeronautical Engineering 126. Study of inviscid and viscous flows about aerodynamic shapes at subsonic, transonic and supersonic conditions. Application of aerodynamic theory to design for reduced drag and increased lift. —Ravani

263. Introduction to Computational Aerodynamics and Fluid Dynamics (4)  
Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103 or consent of instructor. Introduction to numerical methods and their solution of fluid flow problems. Discretization techniques and solution algorithms. Finite difference solutions to classical model equations pertinent to wave phenomena, diffusion phenomena, or equations of the incompressible Navier-Stokes equation. —Hill

264. Computational Aerodynamics (4)  
Lecture—4 hours. Prerequisite: Aeronautical Science and Engineering 126, Engineering 180, or consent of instructor. Numerical methods and codes for aerodynamics flow simulation in the transonic regime. Solutions of steady and unsteady potential and compressible boundary layer equations. Numerical
One course focusing on literature written in English between 1800 and 1900: English 130, 133, 143, 144, 1558, 158A, 181A

One course focusing on literature written in English between 1900 and present: English 3, 13N, 138, 144N, 147, 1508, 155C, 156, 1588, 166, 167, 181B

Non-Historical Distribution Requirements …8

One course in literature and ethnicity, literature and gender, or literature and sexuality:
English 125, 139, 140, 141, 166, 167, 178, 179, 181A, 181B, 185A, 185B, 185C, 186

One course in film and media studies, language studies, cultural studies and contexts, literary and science/technology, or literature and the environment:

Please note that while some courses are identified as fulfilling more than one distribution requirement, a given course can only fulfill one such requirement.

Areas of Emphasis (choose one)……12

Literature, Criticism, and Theory

One upper division English elective.

Two advanced courses, one of which can be a seminar:
English 149, 153, 159, 163, 165, 177, 187A, 188A, 189, 194H, 195H

Creative Writing:
Three sections of English 100F, 100P, 100NF, 100FA, 100PA

Total Units for the Major…………………64

English Majors. Up to four upper division units in a national literature other than English or American, or in Comparative Literature, may count toward the requirements of the major.

Major Advising. All new and prospective English majors are encouraged to see the undergraduate staff adviser, individually, once per year, at minimum.

Foreign Languages. Students who contemplate advanced study in English should prepare for foreign language requirements for higher degrees and should consult with the graduate adviser.

Undergraduate Adviser. See Department website at http://english.ucdavis.edu or the Departmental Advising Office in 177 Voorhies Hall.

Minor Program Requirements:

UNITS

English …………………………….20

Five upper division courses, at least four of which will be literature courses. ……20

Honors and Honors Program. A Senior Honors Program is available to an invited group of English majors, who prepare and write a Senior Thesis [either a research paper or creative writing] in their final year. The honors program consists of four units of 194H and four units of 195H, normally taken during Winter and Spring quarters of the senior year. The senior honors program consists of four units of 194H and four units of 195H, normally taken during Winter and Spring quarters of the senior year. Completion of the program is a prerequisite for High or Highest Honors at graduation.

Eligibility criteria and application materials may be obtained at the Undergraduate Advising office in 177 Voorhies Hall or by accessing the advising website at http://english.ucdavis.edu. For more details, see Graduation Honors, on page 84.

Education Abroad Options. The department strongly encourages interested students to pursue their studies abroad. It is possible for students to complete significant portions of the English major provided that the course is evaluated as at least four UC Davis units; the course is considered upper division by the standards set forth by UC Davis Study Abroad: the student presents copies of the course-work, syllabus, and writing assignments to the department’s advising staff.

Teaching Credential Subject Representative. See the Teacher Education program.

Graduate Study. The Department of English offers programs of study and research leading to the M.A. in literature and creative writing and the Ph.D. in literature. Detailed information may be obtained from the graduate adviser or the Chairperson of the Department.

The department’s affiliation with the Critical Theory Program also provides the opportunity for students in English to prepare for the designated emphasis in Critical Theory (an interdisciplinary program in theories and methodologies in the humanities and social sciences).

Graduate Director. Mark Jerg. Ph.D.

Entry Level Writing. Students must have met the Entry Level Writing requirement before taking any course in English. C. Bates, Director.

Prerequisites. English 3 or University Writing Program 1 is required for all lower division courses (40, 43, 44, 45, 10A, 10B, 10C), and all upper division courses, unless otherwise stated in the course listings. Comparative Literature 1, 2, 3, or 4 and Native American Studies may normally be substituted for English 3 or University Writing Program 1.

Courses in English (ENL)

Lower Division ……………………3

1. Introduction to Literature (4)

Lecture/discussion—4 hours. Prerequisite: completion of Entry Level Writing requirement. Introductory study of several genres of English literature, emphasizing both analysis of particular works and the range of forms and styles in English prose and poetry. Frequent writing assignments will be made. GE credit: ArtHum, Wrt | AH, WE.—I, II, III. (I, II, III.)

4. Critical Inquiry and Literature: Freshman Seminar (4)

Seminar—4 hours. Prerequisite: completion of Subject A requirement and consent of instructor; enrollment limited to freshmen. Critical inquiry into significant literary texts. Emphasis on close reading, classroom dialogue, and the writing of several papers or a longer seminar paper. GE credit: ArtHum, Wrt | AH, WE.

5F. Introduction to Creative Writing: Fiction (4)

Lecture/discussion—4 hours. Prerequisite: completion of Entry Level Writing requirement. Elementary principles of writing fiction. Write both in prescribed forms and in experimental forms of their own choosing. No final examination. May be repeated one time for credit. GE credit: ArtHum, Wrt | AH, WE.—I, II, III. (I, II, III.)

5P. Introduction to Creative Writing: Poetry (4)

Lecture/discussion—4 hours. Prerequisite: completion of Entry Level Writing requirement. Elementary principles of writing poetry. Write both in prescribed forms and in experimental forms of their own choosing. No final examination. May be repeated one time for credit. GE credit: ArtHum, Wrt | AH, WE.—I, II, III. (I, II, III.)

10A. Literatures in English I: To 1700 (4)

Lecture/discussion—3 hours; extensive writing. Prerequisite: course 3 or University Writing Program 1 or its equivalent. Historical introduction to English language and literature from 800-1700. Linguistic borrowing, innovation, and change. Emergence of key literary genres. Colonial America as a new site of English production and consumption. GE credit: ArtHum | AH.—I, II, III. (I, II, III.)

10B. Literatures in English II: 1700-1900 (4)

Lecture/discussion—3 hours; extensive writing. Prerequisite: course 10A. Historical introduction to English language and literature from 1700-1900. Linguistic borrowing, innovation, colonization, and change. Emergence and development of key literary genres. America, Britain, Ireland, England, and India as important sites of English literary production and consumption. GE credit: ArtHum | AH.—I, II, III. (I, II, III.)

10C. Literatures in English III: 1900 to Present (4)

Lecture/discussion—3 hours; extensive writing. Prerequisite: course 10B. Historical introduction to English language and literature from 1900–present. Linguistic borrowing, innovation, and change. Emergence and development of key literary genres. Formal experimentation. Modernism as transnational phenomenon. GE credit: ArtHum | AH.—I, II, III. (I, II, III.)

30A. Survey of American Literature (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or the equivalent. American literature from the seventeenth century to 1865. GE credit: ArtHum, Div, Wrt | ACGH, AH, WE.

30B. Survey of American Literature (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or the equivalent. American literature from 1865 to the present. GE credit: ArtHum, Div, Wrt | ACGH, AH, WE.

40. Introductory Topics in Literature (4)

Lecture/discussion—3 hours; extensive writing. Prerequisite: course 3 or University Writing Program 1 or its equivalent. Study of a special topic. Literature written in English in any period or place or genre. Thematic, formal, or temporal focus. May be repeated two times for credit if content differs. GE credit: ArtHum, Wrt | AH, WE.—I, II, III.

42. Approaches to Reading (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Close reading and interpretation of literary works as a variety of techniques and contemporary approaches. Topics include textual and historical approaches; new criticism; formalism; psychological criticism; feminism and gender; reader-response; materialist approaches. GE credit: ArtHum, Wrt | AH, WE.

43. Introductory Topics in Drama (4)

Lecture/discussion—3 hours; extensive writing. Prerequisite: course 3 or University Writing Program 1 or its equivalent. Close reading of, and topics relating to, selected works of British and American drama from a range of historical periods. May be repeated two times for credit when content differs. GE credit: ArtHum, Wrt | AH, WE.—I, II, III.

44. Introductory Topics in Fiction (4)

Lecture/discussion—3 hours; extensive writing. Prerequisite: course 3 or University Writing Program 1 or its equivalent. Close reading of, and topics relating to, selected works of British and American fiction from a range of historical periods. May be repeated two times for credit when content differs. GE credit: ArtHum, Wrt | AH, WE.—I, II, III.

45. Introductory Topics in Poetry (4)

Lecture/discussion—3 hours; extensive writing. Prerequisite: course 3 or University Writing Program 1 or its equivalent. Topical study and close reading of selections from English and American poetry. May be repeated two times for credit when content differs. GE credit: ArtHum, Wrt | AH, WE.
46A. Masterpieces of English Language (4) Lecture—3 hours; discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Survey of literary conventions and backgrounds in religious thought, intellectual and social history, and related art forms. GE credit: ArtHum, Wrt | AH, WC, WE.

46B. Masterpieces of English Literature (4) Lecture—3 hours; discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Selected works of principal writers from 1640 to 1832. Historical and thematically focused study of literary conventions and backgrounds in religious thought, intellectual and social history, and related art forms. GE credit: ArtHum, Wrt | AH, WC, WE.

46C. Masterpieces of English Literature (4) Lecture—3 hours; discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Selected works of principal writers from 1832 to present. The history of literary conventions and backgrounds in religious thought, intellectual and social history, and related art forms. GE credit: ArtHum, Wrt | AH, WC, WE.

98. Directed Group Study (1-5) Prerequisite: course 3 or University Writing Program 1. (P/NP grading only.)

99. Special Study for Undergraduates (1-5) (P/NP grading only)

Upper Division

100F. Creative Writing: Fiction (4) Discussion—4 hours; development and evaluation of written materials, and conferences with individual students. Prerequisite: course SF or SP, or consent of instructor; priority given to English (Creative Writing) majors. Writing of fiction. May be repeated for credit with consent of instructor. No final examination.—II, III.

100FA. Creative Writing Advanced Fiction (4) Discussion—4 hours. Prerequisite: course 100F. Priority given to English majors. Admission by application only. Development of evaluation of students' work in prose, primarily in the workshop format. Some reading and discussion of published novels and short stories. Conferences with individual students occur once a week; evaluation of students' work to be completed by the students. May be repeated for credit with consent of instructor.—II, III.

100NF. Creative Writing: Non-Fiction (4) Discussion—4 hours; development and evaluation of written materials, and conferences with individual students. Prerequisite: course 3 or University Writing Program 1, or consent of instructor; priority given to English (Creative Writing) majors. Writing of non-fiction. May be repeated for credit with consent of instructor. No final examination.—II, III.

100P. Creative Writing: Poetry (4) Discussion—4 hours. Prerequisite: course SF or SP, or consent of instructor; priority given to English (Creative Writing) majors. Writing of poetry. May be repeated for credit with consent of instructor. No final examination.—II, III.

100PA. Creative Writing Advanced Poetry (4) Discussion—4 hours. Prerequisite: course 100P. Priority to English majors. Admission by application only. Development and evaluation of students' work in poetry, primarily in the workshop format. Some reading and discussion of published works of poetry. Conferences with individual students occur once a quarter. May be repeated for one time credit with consent of instructor.—II, III.

105. History of the English Language (4) Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1 or the equivalent. History of the development of the English language, its evolution, and the role of principal writers and the English language as informed by contemporary linguistic theories. The major syntactic structures of English; their variation across dialects, styles, and registers; their development; and their usefulness in describing the conventions of English. (Same course as Linguistics 106 and University Writing Program 106.) GE credit: ArtHum, Wrt | AH, WE.—II, III.

106. English Grammar Practicum (2) Discussion—2 hours. Prerequisite: course 106/ Linguistics 106 (may be taken concurrently). Practice in teaching the principles of grammar to the kinds of audiences teachers encounter in California. Discussions with teachers who teach in these areas. Examination of pedagogical research on teaching grammar. (P/NP grading only.)

107. Freedom of Expression (4) Lecture—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historical development of fundamental issues in freedom of expression, with emphasis on freedom of literary and artistic expression. GE credit: ArtHum, Wrt | AH, WE.—II.

108. Introduction to Literary Theory (4) Lecture/discussion—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 3 or University Writing Program 1. Key theoretical terms, concepts, and thinkers from the Greeks to the modern era. GE credit: ArtHum, Wrt | AH, WE.—II, III.

109. Introduction to Modern Literary and Critical Theory (4) Lecture—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 3 or University Writing Program 1. History of literary criticism in the modern era, with emphasis on the ties with the past and the special problems presented by modern literary theory. GE credit: ArtHum, Wrt | AH, WE.—II, III.

110. Topics in Medieval Literature (4) Lecture—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically focused study of selected topics in Medieval British literature. GE credit: ArtHum, Wrt | AH, WC, WE.—II.

113A. Chaucer: Troilus and the "Minor" Poems (4) Lecture—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Development of the poet's artistry and ideas from his first work to his masterpiece, "Troilus and Criseyde." GE credit: ArtHum, Wrt | AH, WC, WE.—II.

113B. Chaucer: The Canterbury Tales (4) Lecture—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Literary analysis of the complete "Canterbury Tales." Courtly love, literary forms, medieval science and astrology, theology and dogma as they inform the reading of Chaucer's work. GE credit: ArtHum, Wrt | AH, WC, WE.—II.

115. Topics in Sixteenth and Seventeenth Century Literature (4) Lecture/discussion—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically focused study of works of the Renaissance. Offered irregularly. GE credit: ArtHum, Wrt | AH, WC, WE.

117. Shakespeare (4) Lecture—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically, thematically, or specifically focused study of Shakespeare's works. May be repeated five times for credit. GE credit: ArtHum, Wrt | AH, WC, WE.—II, III.

120. Law and Literature (4) Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1, or the equivalent. Historically, thematically, or specifically focused study of the relationship between law and literature. Offered irregularly. GE credit: ArtHum, Wrt | ACGH, AH, DD, OL, WE.

122. Milton (4) Lecture/discussion—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 3 or University Writing Program 1. Selected major works, including Paradise Lost. GE credit: ArtHum, Wrt | AH, WC, WE.—II.

123. 18th-Century British Literature (4) Lecture—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically focused study of 18th century English literature. GE credit: ArtHum, Wrt | AH, WC, WE.—II.

125. Topics in Irish Literature (4) Lecture—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Intensive study or treatment of special topics relating to the emergence, invention, and reinvention of Irish literature. May be repeated two times for credit when content differs. Offered irregularly. GE credit: ArtHum, Div, Wrt | AH, WE.

130. British Romantic Literature (4) Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically focused study of works of Romantic English literature. GE credit: ArtHum, Wrt | AH, WC, WE.—II.

133. 19th-Century British Literature (4) Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically focused study of works of 19th-century English literature. GE credit: ArtHum, Wrt | AH, WC, WE.—II.

137. British Literature, 1900-1945 (4) Lecture—3 hours; extensive writing. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically focused study of the works of British literature (drama, poetry, prose fiction) from the period between 1900 and the end of World War II. GE credit: ArtHum, Wrt | AH, WC, WE.

138. British Literature: 1945 to Present (4) Lecture—3 hours; extensive writing. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically focused study of the works of British literature (drama, poetry, prose fiction) from the period between 1945 and the present. GE credit: ArtHum, Wrt | AH, WC, WE.

140. Topics in Postcolonial Literatures and Cultures (4) Lecture—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Study of postcolonial literature of Anglophone colonies. Specific emphasis may include literature from and about Anglophone India, the Caribbean, the Middle East, South Asia, Africa, and/or South America. Offered irregularly. GE credit: ArtHum, Div, Wrt | AH, WE.

141. Topics in Diasporic Literatures and Migration (4) Lecture/discussion—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Study of literature, histories, and cultures of one or more diasporic groups. Offered irregularly. GE credit: ArtHum, Div, Wrt | AH, WE.—II.
142. Early American Literature (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically focused study of American literature of the 17th and 18th centuries. GE credit: ArtHum, Wrt | ACGH, AH, WE.

143. 19th-Century American Literature to the Civil War (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically focused study of works of 19th-century American literature. GE credit: ArtHum, Wrt | ACGH, AH, DD, WE.

144. Post-Civil War American Literature (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically focused study of works of post-Civil War American literature. GE credit: ArtHum, Wrt | ACGH, AH, WE.—II.

146. American Literature 1900-1945 (4)
Lecture/discussion—3 hours; extensive writing. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically focused study of American literature (drama, poetry, prose fiction) from the period between 1900 and the end of World War II. GE credit: ArtHum, Wrt | ACGH, AH, WE.—III.

147. American Literature, 1945 to the Present (4)
Lecture—3 hours; extensive writing. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically focused study of American literature (drama, poetry, prose fiction) from the period between 1945 and the present. GE credit: ArtHum, Wrt | ACGH, AH, WE.—II.

150A. British Drama to 1800 (4)
Lecture/discussion—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically focused study of works of English drama prior to 1800. GE credit: ArtHum, Wrt | AH, WE.—III.

150B. Drama from 1800 to the Present (4)
Lecture/discussion—3 hours; extensive writing or discussion. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically focused study of works of British drama from 1800 to the present. GE credit: ArtHum, Wrt | AH, WE.—II.

150C. 20th-Century British Novel (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically focused examination of the 20th-century British novel, with emphasis on impressionism; the revolt against naturalism; the expressionist novel; the anti-modernist reaction; Conrad; Joyce; Woolf; Lawrence; Drabble, Ryls. GE credit: ArtHum, Wrt | AH, WC, WE.

156. The Short Story (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1 or the equivalent. The short story as a genre; its historical development, techniques, and formal character as a literary form. European as well as American writers. GE credit: ArtHum, Wrt | AE2

158A. The American Novel to 1900 (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically organized examination of the rise and development of the American novel from its beginnings; Hawthorne, Melville, Twain, James, and others. GE credit: ArtHum, Wrt | ACGH, AH, WE.—III.

158B. The American Novel from 1900 to the Present (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically organized examination of American novelists of the twentieth century; Faulkner, Hemingway, Capote, Morrison, and others. GE credit: ArtHum, Wrt | ACGH, AH, WE.

159. Topics in the Novel (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historically or thematically organized examination of American novelists of the twentieth century. GE credit: ArtHum, Wrt | ACGH, AH, WE.—III.

160. Film as Narrative (4)
Lecture—3 hours; film viewing—3 hours. Prerequisite: course 3 or University Writing Program 1. A study of modern film as a storytelling medium. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE.—I, II.

161A. Film History I: Origins to 1945 (4)
Lecture—3 hours; film viewing—3 hours. Prerequisite: course 3 or University Writing Program 1. A study of modern film as a storytelling medium. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE.—I.

161B. Film History II: 1945 to present (4)
Lecture—3 hours; film viewing—3 hours. Prerequisite: course 3 or University Writing Program 1. A study of modern film as a storytelling medium. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WE.—II.

162. Film Theory and Criticism (4)
Laboratory—3 hours; discussion—2 hours; lecture—1 hour. Prerequisite: course 3 or University Writing Program 1. Film theory and criticism, with a study of ten major works of international film art. Offered in alternate years. GE credit: ArtHum, Wrt | AH, VL.

163. Literary Study in the British Isles (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 3 or University Writing Program 1. Restricted to enrollment by application only through the Education Abroad Center. Literary Study in the British Isles: On-site study of the literature, film, and/or performance of the British Isles. May be repeated twice if subject matter differs. GE credit: ArtHum, Wrt | AH, VL—III.

164. Writing Science (4)
Lecture/discussion—3 hours; extensive writing. Prerequisite: course 3 or Science and Technology Studies 1, or equivalent. Texts and writing practices in the production of scientific knowledge. Surveys the literary structure of scientific arguments; history of scientific genres; rhetoric and semiotics in scientific culture; graphical systems in the experimental laboratory; narratives of science, including science fiction. [Same course as Science & Technology Studies 164.] GE credit: ArtHum, Wrt | AH, SL, WE.—III, Millburn.

165. Topics in Poetry (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1 and course 45. Intensive examination of various topics expressed in poetry from the turn of the century and American literature. May be repeated for credit when topic covers different poets and poems. GE credit: ArtHum, Wrt | AH, WE.

166. Love and Desire in Contemporary American Poetry (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1. Close reading of contemporary American poems on the themes of love and desire by poets of diverse ethnicities and of gay, lesbian, and heterosexual orientations. Offered in alternate years. GE credit: Div, ArtHum, Wrt | ACGH, AH, WE.

167. Twentieth-Century African American Poetry (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Twentieth-century African American poetry, including oral and written traditions. Authors covered may include Gwendolyn Brooks, Countee Cullen, Robert Hayden, and Langston Hughes. GE credit: ArtHum, Div, Wrt | ACGH, AH, WE.

168. 20th Century American Poetry (4)
Lecture—3 hours; extensive writing. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Historical Study of American poetry since 1900, with thematic and formal focus at the instructor’s discretion. Offered irregularly. GE credit: ArtHum, Wrt | ACGH, AH, WE.—II.

171A. The Bible as Literature: The Old Testament (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1. May be taken independently of course 171B. Selected readings from the Old Testament illustrating various literary forms. Emphasis on the Pentateuch, the Historical Books, and the Wisdom Books. GE credit: ArtHum, Div, Wrt | AH, WC, WE.

171B. The Bible as Literature: Prophets and New Testament (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1. May be taken independently of course 171A. Selected readings from the Old Testament prophets and the New Testament. GE credit: ArtHum, Div, Wrt | AH, WC, WE.

173. Science Fiction (4)
Lecture/discussion—3 hours; extensive writing. Prerequisite: course 3 or Science and Technology Studies 1, or equivalent. The literary modes and methods of science fiction. Representation of the author, and themes of the genre—e.g., time travel, alternative universes, and utopias. Relations of science fiction to science, philosophy, and culture. [Same course as Science and Technology Studies 173.] GE credit: ArtHum, Wrt | AH, WE.—III.

175. American Literary Humor (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1, or standing above freshman. American humorous vision of man, nature, and the supernatural. Includes one or more of the following: colonial humor; southwestern and New England humor; pre- and post-Civil War masters; local colorism; journalistic gadflies; anti-provincialists; modernist poets and prose writers; black humor. GE credit: ArtHum, Wrt | ACGH, AH, WE.—III.

177. Study of an Individual Author (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 110A or 110B. In-depth study of an author’s works; historical context; relation to prede-
178. Topics in Comparative American Literatures

Lecture—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or equivalent. Literary production among different modes of racialization within and beyond U.S. borders. May be repeated twice for credit. GE credit: ArtHum, Div, Wrt | AH, WE.—III.

179. Topics in Comparative American Literatures

Lecture—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 3 or University Writing Program 1 or equivalent. Comparative study of what constitutes “American” literature. Possible emphases: North American or Latin American literature; Pacific Rim or Circum-Pacific; Afrolatino literary production; literary production in the global South; literary production in the African diaspora; local, regional, national, transnational, or other geographical formation; e.g., the global South; literature of Australia. May be repeated twice for credit. GE credit: ArtHum, Div, Wrt | AH, WE.—III.

180. Children’s Literature

Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1. Historical and/or thematic survey of topics in writing about the environment. GE credit: ArtHum, Div, Wrt | ACGH, AH, DD, WE.—I.

181A. African American Literature to 1900

Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1. African American literature from the colonial period to 1900. Particular attention to the rapid development of the African American literary culture from a primarily oral tradition to various literary genres, including the slave narrative. GE credit: ArtHum, Div, Wrt | ACGH, AH, DD, WE.—I.

181B. African American Literature 1900–Present

Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1. Major African American writers in the context of cultural history from 1900 to the present. Writers may include Richard Wright, Ann Petry, James Baldwin, Ralph Ellison, Paule Marshall, Toni Morrison, Alice Walker, Clarence Major. GE credit: ArtHum, Div, Wrt | ACGH, AH, DD, WE.—I.

182. Literature of California

Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1. California literature in the context of California’s social, political, and intellectual history. Reading of poetry, fiction, and essays. Emphasis on nineteenth- and twentieth-century novelists, turn of the century novelists, the Beats, and writers of the last two decades. GE credit: ArtHum, Div, Wrt | ACGH, AH, WE.—III.

183. Adolescent Literature

Lecture—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1, or equivalent. Theoretical, critical, and practical issues informing the study and teaching of American adolescent literature. GE credit: ArtHum, Wrt | AH, WE.

184. Literature and the Environment

Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1. Historical and/or thematic survey of topics in writing about the environment. GE credit: ArtHum, Wrt | AH, WE.

185A. Women’s Writing I

Lecture/discussion—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 3 or University Writing Program 1. Women’s Writing in English before 1800; organized by period, place, genre, or theme. GE credit: ArtHum, Div, Wrt | AH, WE.—III.

185B. Women’s Writing II

Lecture/discussion—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 3 or University Writing Program 1. Women’s Writing in English after 1800; organized by period, place, genre, or theme. Offered irregularly. GE credit: Div, Wrt | AH, WE.

186. Literature, Sexuality, and Gender

Lecture/discussion—3 hours; term paper. Prerequisite: course 3 or University Writing Program 1 or the equivalent. Highbrow literary culture and sexuality in the nineteenth and twentieth centuries. May be repeated for credit. GE credit: ArtHum, Div, Wrt | AH, WE.—IV.

187A. Topics in Literature and Media

Seminar—3 hours; film viewing—3 hours. Prerequisite: course 110A or 110B; consent of instructor. Group study of a topic centered on the relationships between literature and film or other moving-image media. GE credit: ArtHum, Div, Wrt | AH, WE.—I, II.

188A. Topics in Literary and Critical Theory

Seminar—3 hours; term paper. Prerequisite: course 110A or 110B; consent of instructor. Intensive examination of theoretical, critical, and literary issues informing the literary investigation. (S/U grading only.)—I, II.

189. Seminar in Literary Studies

Seminar—3 hours; term paper. Prerequisite: course 110A or 110B. Intensive, focused study of literature at an advanced level. May be organized by topic, author, period, movement, or genre. High participation. GE credit: ArtHum, Wrt | AH, WE.—II, III.

190. Internship in English

Internship—3–36 hours. Prerequisite: course 3 or University Writing Program 1. Internships in fields where students can practice their skills. A maximum of four units is allowed toward the major in English. May be repeated for credit for a total of 12 units. (P/NP grading only.)

190H. Honors Internship

Independently supervised study—120 hours. Prerequisite: course 190H. Preparation of a thesis in course 195H. Limited enrollment; high level of participation expected. GE credit: ArtHum | AH, WE.—II, III.

191H. Honors Seminar

Seminar—3 hours; term paper. Prerequisite: course 191H. Independent study—12 hours. GE credit: ArtHum, Div, Wrt | AH, WE.—II, III.

192. Seminar in Graduate Studies

Seminar—3 hours; term paper. Prerequisite: course 110A or 110B; one advanced study course; admission to English Department Senior Honors Program in Literature. Critical preparation for writing an honors thesis in course 195H. Limited enrollment; high level of participation expected. GE credit: ArtHum | AH, WE.—II, III.

194. Seminar for Honors Students

Seminar—3 hours; term paper. Prerequisite: course 110A or 110B; one advanced study course; admission to English Department Senior Honors Program in Literature. Critical preparation for writing an honors thesis in course 195H. Limited enrollment; high level of participation expected. GE credit: ArtHum | AH, WE.—II, III.

195H. Honors Seminar

Seminar—3 hours; term paper. Prerequisite: course 195H. Independent study—12 hours. GE credit: ArtHum, Div, Wrt | AH, WE.—IV.

196. Directed Group Study

Directed study—1 hour; research papers. Selected topics for intensive investigation. May be repeated for credit when different topic or period is studied. (S/U grading only.)—I, III.

197. Tutored Group Study

Directed study—1 hour; research papers. Selected topics for intensive investigation. May be repeated for credit when different topic or period is studied. May be repeated for credit when different topic or period is studied. (S/U grading only.)—I, III.

198. Directed Group Study

Directed study—1 hour; research papers. Selected topics for intensive investigation. May be repeated for credit when different topic or period is studied. (S/U grading only.)—I, III.

199. Special Studies for Advanced Undergraduates

Seminar—3 hours; conference and term paper. GE credit: ArtHum, Div, Wrt | AH, WE.—II.

200. Introduction to Graduate Studies in English

Seminar—3 hours; term paper or discussion—1 hour. Prerequisite: graduate standing. Introduction to literary scholarship with specific attention to the elements of professionalism and to different modes of literary investigation. (S/U grading only.)—I, II.

205. Anglo-Saxon Language and Culture

Lecture—3 hours; conference and term paper. The language and culture of Anglo-Saxon England; readings in Old English prose and poetry.

206. Beowulf

Discussion—3 hours; oral and written reports; conferences with students. Prerequisite: course 205 or the equivalent. A study of the poem and the Heroic Age of Germanic literature.

207. Middle English

Discussion—3 hours; term paper. Study of the phonology, morphology, syntax, and lexicon between 1100 and 1350 with investigation of the major dialects; pertinent facts on both the internal and external linguistic history; intensive reading of texts.

210. Readings in English and American Literature

Seminar—3 hours; conference and term paper. Content varies according to specialty of instructor. May be repeated if topics differ. —I.

225. Topics in Irish Literature

Seminar—3 hours; conference and term paper. Prerequisite: graduate standing. Varied topics, including the nine-teenth-century novel, contemporary Irish poetry, rise of the drama, or a study of a major author. May be repeated for credit if topic differs.

230. Study of a Major Writer

Seminar—3 hours; conferences with individual students—1 hour; research papers. Artistic development of one major writer and his intellectual and literary milieu. May be repeated for credit when a different writer is studied.—III.

232. Problems in English Literature

Seminar—3 hours; conferences with individual students—1 hour. Selected issues in the current study and critical assessment of a limited period or topic in English literature. May be repeated for credit when different period or topic is studied.

233. Problems in American Literature

Seminar—3 hours; conferences with individual students—1 hour; research papers. Selected topics for intensive investigation. May be repeated for credit when different topic or period is studied. —I, III.

234. Dramatic Literature

Lecture—3 hours, conference—1 hour. Historical introduction to dramatic theory and practice. Dramaturgy, comedy, and tragicomedy. May be repeated for credit if topic differs.

235. Theory of Fiction

Seminar—3 hours; conference—1 hour. Prerequisite: graduate standing. Studies of fiction as it relates to the professional writer’s practice of the craft. For students in the Creative Writing Program. May be repeated for credit when focus differs.

236. Poetics

Seminar—3 hours; conference—1 hour. Prerequisite: graduate standing. Theories of poetry as revealed in structure, prosody, and idiom of British and American poems, variably approached—through intensive study of a single poet, historically, or theoretically—

Quarter Offered: I=Fall, II=Winter, III=Spring, IV=Summer; 2015-2016 offering in parentheses

Seminar—3 hours; term paper. Prerequisite: course 237 or the equivalent. Advanced topics in literary theory and criticism. Preparation and evaluation of research papers. May be repeated for credit when topic and/or reading lists differ. Offered in alternate years.—III.

240. Medieval Literature (4)
Seminar—3 hours; conference—1 hour. Studies of medieval literature from the Civil War to 1914. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—II.

242. Sixteenth-Century Literature (4)
Seminar—3 hours; conference—1 hour. Studies in sixteenth-century literature. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—II.

244. Shakespeare (4)
Seminar—3 hours; conference—1 hour. Studies in Shakespeare. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—II.

246. Seventeenth-Century Literature (4)
Seminar—3 hours; conference—1 hour. Studies in seventeenth-century literature. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—II.

248. Eighteenth-Century Literature (4)
Seminar—3 hours; conference—1 hour. Studies in eighteenth-century literature. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—II.

250. Romantic Literature (4)
Seminar—3 hours; conference—1 hour. Studies in Victorian literature. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—II.

254. Twentieth-Century British Literature (4)
Seminar—3 hours; conference—1 hour. Studies in twentieth-century British literature. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—II.

256. Early American Literature (4)
Seminar—3 hours; conference—1 hour. Studies in Early American literature. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.

258. American Literature: 1800 to the Civil War (4)
Seminar—3 hours; conference—1 hour. Studies in American literature from 1800 to Civil War. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.

260. American Literature: Civil War to 1914 (4)
Seminar—3 hours; conference—1 hour. Studies in American literature from the Civil War to 1914. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.

262. American Literature after 1914 (4)
Seminar—3 hours; conference—1 hour. Studies in American literature after 1914. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—II.

264. Studies in Modern British and American Literature (4)
Seminar—3 hours; conference—1 hour. Studies in modern British and American literature. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.

270. Studies in Contemporary World Literature (4)
Seminar—3 hours; conference—1 hour. Prerequisite: graduate standing, consent of instructor, with preference given to those enrolled in the master's program in Creative Writing. Emerging global, international or transnational theories, techniques, and individual works of contemporary world prose or poetry. Discussion, seminar reports, research papers. May be repeated for credit when topic differs.—II, III.

285. Literature by Women (4)
Seminar—3 hours; conference—1 hour. Studies in literature by women and the theoretical approaches to literature by women. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—II.

288. Prospectus Workshop (2)
Conference—2 hours. Must have passed Department Preliminary Exam. Training in writing the dissertation prospectus. Participation in group discussions of preparatory assignments and final proposal. (S/U grading only.)—I, II, III.

289. Article Writing Workshop (2)
Conference—2 hours. Prerequisite: consent of instructor, and at least 12 credits of upper division courses. Participation in group discussions of article drafts. May be repeated one time for credit. (S/U grading only.)—II, III.

290F. Seminar in Creative Writing of Fiction (4)
Seminar—3 hours, 1 additional hour of writing. Prerequisite: consent of instructor; graduate standing, with preference given to those enrolled in master's program in Creative Writing. Writing of literary fiction. Discussion of published fiction, with emphasis on autobiography, biography, memoir, the occasional or the second novel, and/or non-fiction prose narratives. May be repeated for credit.—I, II, III.

290N. Seminar in Creative Writing of Non-Fiction (4)
Seminar—3 hours, term paper. Prerequisite: consent of instructor, graduate standing, preference given to those enrolled in master's program in Creative Writing. The writing of literary non-fiction, with emphasis on autobiography, biography, memoir, the occasional or the second novel, and/or non-fiction prose narratives. May be repeated for credit.—II, III.

290P. Seminar in Creative Writing of Poetry (4)
Seminar—3 hours, 1 additional hour of writing. Prerequisite: consent of instructor; graduate standing, with preference given to those enrolled in master's program in Creative Writing. Writing of poetry. Examination of written materials and individual student conferences. May be repeated for credit.—I, II, III.

299. Directed Group Study (1-5)
Prerequisite: consent of instructor; graduate standing. May be repeated for credit. (S/U grading only.)—I, II, III (1, II, III)

299D. Special Study for the Doctoral Dissertation (1-12)
Prerequisite: consent of instructor; graduate standing. May be repeated for credit. (S/U grading only.)

Professional

391. Teaching Creative Writing (2)
Discussion—2 hours. Prerequisite: graduate standing; appointment as Teaching Assistant in the English Department. Designed for new instructors of English 237 or 5P; discussion of ways to facilitate creative writing workshops and to respond to student manuscripts. (S/U grading only.)

393. Teaching Literature and Composition (2)
Discussion—2 hours. Prerequisite: graduate standing; appointment as Teaching Assistant in the English Department. Designed for new instructors of English 3 or the equivalent courses; discussion of problems related to teaching literature and composition to lower division students. (S/U grading only.)—II, III.

396. Teaching Assistant Training Practicum (1-4)
Prerequisite: standing. May be repeated for credit. (S/U grading only.)—I, II, III (I, II, III)

Entomology and Nematology

Formerly the departments of Entomology and Nematology

(Formerly the departments of Entomology and Nematology)
The Major Program

The Entomology major is a general biological science program. The curriculum is designed to develop an understanding of fundamental biological concepts by studying insects. Insects offer unique opportunities to study biological systems and are model experimental animals. Many insects are either pests, or beneficials, that have great importance to the economy, environment, or public health. Students may focus on specific areas of interest including agricultural entomology, insect systematics and evolution, insect behavior and ecology, medical entomology, and insect molecular biology and toxicology.

The Program. Students begin their study in entomology with selected insect biology courses. After completing these courses, students may enroll in courses in their particular area of interest. The Entomology Faculty encourages students to do research internships in their laboratories.

Career Alternatives. Entomology graduates find careers in many different areas of applied or basic biology. Graduates have the opportunity to continue in professional graduate programs such as veterinary or human medicine, or get advanced degrees leading to careers in biotechnology, conservation biology, or academic teaching and research. Many graduates have participated in internship programs with the California Department of Food and Agriculture and found career diagnostic laboratories, conducting insect surveys, and/or developing entomological collections. Other graduates have worked in agriculture in the area of insect pest management. Graduates are prepared for managerial and technical positions with state and federal agencies and in agricultural production and supporting industries. Some entomology graduates pursue careers in primary, secondary, and college level science education.

B.S. Major Requirements:

Preparatory Subject Matter .......................... 49-53 Biological Sciences 2A, 2B, 2C .......................... 15 Chemistry 2A, 2B, 8A, 8B .......................... 16 Mathematics 1A-18B-16C or 17A-17B-17C or 21A-21B-21C 9-12 Physics 1A, 1B ............................................. 6 Statistics 13, 32, or Plant Sciences 120, 21 or Engineering 5 ............................................. 3-4 Depth Subject Matter ................................. 34-40 Microbiology 104, Plant Biology 14B, Plant Pathology 120 or Microbiology 162 3-5 Biological Sciences 101 .................................. 4 Entomology 105, Environmental Science and Policy 100 or Evolution and Ecology 101 ............................................. 4 Evolution and Ecology 100 ................................. 4 Biological Sciences 102 and 103 or Animal Biology 102 and 103 ............................................. 6-10 Entomology 100, 100L .................................. 6 At least 7 units from Entomology 102, 103, 104, 107, 109, or 116 or Nematology 110 ................................. 7 Restricted Electives .................................... 34 Upper division Entomology and Nematology courses ............................................. 14 Upper division electives related to student’s interest with approval of adviser ............ 20 Total: At least 12 units from Entomology 192, 197 and 199 may count toward fulfilling depth subject matter or restricted elective units. Total Units for the Major ................. 117-127

Major Adviser. S. Lawler, S. Nadler

Minor Program Requirements: The Department of Entomology has five minor programs open to students in other disciplines who are interested in rounding out their academic study with a concentration in the area of entomology.

Insect Biology ....................................... 19-33 Entomology 100, 100L ................................. 6 At least seven units from Entomology 102, 103, 104, 107, 109, 110, 116 ......... 7 At least two additional upper division Entomology courses [except courses 192, 198, 199] ............................................. 6-10 Agricultural Pest Management .......................... 21-23 Entomology 100, 100L, 110, 135 ............. 15 At least two courses: Animal Science 102, Plant Sciences 105, 176, Plant Pathology 120 ............................................. 6-8 Insect Ecology and Evolution ......................... 20-21 Entomology 100, 100L, and Entomology 105 or 104 ................................. 9-10 At least seven units from Entomology 103, 107, 109, 116, 158 ............................................. 7 Evolution and Ecology 149 or Environmental Science and Policy 150 ................................. 4 Medical-Veterinary Entomology ....................... 19 Entomology 100, 100L, 104, 153, 156, 160 ............................................. 15 At least four units from Entomology 156, 158, Microbiology 162 ................................. 4 Forensic Entomology ................................... 22 Entomology 100, 100L, 102, 158, 163 .................. 13 Biological Science 2A .................................. 5 Entomology 105, Evolution and Ecology 101, or Environmental Science and Policy 100 ................................. 4 Minor Adviser. S. Lawler, S. Nadler

Graduate Study, The Department of Entomology offers a program of study and research leading to the M.S. and Ph.D. degrees. See Graduate Studies, on page 111 and the Graduate Announcement, for further details.

Graduate Advisers. See http://entomology.ucdavis.edu/grad/.

Related Courses. See courses in Nematology.

Courses in Entomology (ENT)

Lower Division

1. Art, Science and the World of Insects (3) Lecture—3 hours, laboratory—3 hours. Fusion of entomology and art to create an appreciation of insects to human welfare. GE credit: SciEng, Wrt | SE, SL, WE.—I. (II.)

3. Evolution and Entomology (3) Lecture—2 hours, lecture/discussion—1 hour. Introduction to insect physiology and evolutionary biology. GE credit: SciEng.—II. (I.)

4. Environmental Entomology (3) Lecture—3 hours, laboratory—3 hours. GE credit: SciEng.—II. (I.)

5. Insect Behavior and Ecology (3) Lecture—2 hours, lecture/discussion—1 hour. GE credit: SciEng.—II. (I.)

6. Insect Pest Management (3) Lecture—2 hours, lecture/discussion—1 hour. GE credit: SciEng.—II. (I.)

7. Insect Systematics (3) Lecture—3 hours, laboratory—3 hours. GE credit: SciEng.—II. (I.)

8. Insect Toxicology (3) Lecture—2 hours, laboratory—2 hours. GE credit: SciEng.—II. (I.)

9. Insect Zoology (3) Lecture—2 hours, lecture/discussion—1 hour. GE credit: SciEng.—II. (I.)

10. Natural History of Insects (3) Lecture—3 hours. Designed for students not specializing in entomology. Not open for credit to students who have had course 100, but students who have taken this course may take course 100 for credit. An introduction to the insects detailing their great variety, structures and functions, habits, and their significance in relation to plants and animals including man. GE credit: SciEng | SE, SL—II. (II.)

11. Special Topics in Entomology (2) Seminar—2 hours. Freshman seminar course for in-depth examination of a special topic within the subject area. May be repeated two times for credit. (P/NP grading only)—I.-II., III.

12. Internship (1-12) Internships—3-36 hours. Prerequisite: consent of instructor. Work/learn experience on and off campus in all subject areas offered by the department, supervised by a member of the faculty. May be repeated up to 12 units of credit. (P/NP grading only).

13. Special Study for Undergraduates (1-5) (P/NP grading only).

Upper Division

100. General Entomology (4) Lecture—3 hours, term paper. Prerequisite: Biological Sciences 1B. Biology, anatomy, physiology, development, classification, ecology and relation of insects to human welfare. GE credit: SciEng, Wrt | SE, SL, WE.—I. (II.)

200. General Entomology Laboratory (2) Laboratory—6 hours. Prerequisite: course 100 (may be taken concurrently). Anatomy, development, population ecology, methods of collecting, classification and identification of insects. GE credit: SciEng.—II. (I.)

300. Functional Insect Morphology (3) Lecture—2 hours, laboratory—3 hours. Prerequisite: course 100. Study of the basic external and internal structures, organs and tissues of insects, with emphasis on functional systems. Functional anatomy, histology and fine structures of important organs and tissues will be discussed. GE credit: SciEng.—II. (I.)

400. Insect Physiology (4) Lecture—3 hours, discussion—1 hour. Prerequisite: course 100 or course in physiology or invertebrate zoology. Processes by which insects maintain themselves, reproduce, and adapt to their environments as models for basic/applied research through detailed analysis of metabolic, physiological, and behavioral processes. Emphasis on analysis of morphological, histological, and functional processes. GE credit: SciEng | SE, SL, WE.—II. (I.)

700. Insect Ecology (4) Lecture/discussion—3 hours, term paper. Prerequisite: Biological Sciences 2B. Introduction to insect ecology, combining fundamental concepts and questions in ecology with ideas, hypotheses and insights from insects. Integrates aspects of individual, population, community and ecosystem ecology. Emphasis on the scientific process: observing nature, asking...
135. Introduction to Biological Control (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 100 or 110. Principles of biological control of arthropod pests and weeds. Biology of parasitic protozoa, nematodes, and predators. Introduction to classical and augmentative biological control. Role of biological control in pest management. Offered in alternate years—II. (I.) Yang

153. Medical Entomology (3)
Lecture—3 hours. Prerequisite: Biological Sciences 1A, 1B, upper division standing in one of the biological sciences, or consent of instructor. Basic biology and classification of medically important arthropods with special emphasis on the ecology of arthropod-borne diseases and principles of their control. Relationships of arthropods to human health. GE credit: SciEng, Wrt | SE, SL, WE.—II. (II.) Scott

156. Biology of Parasitism (3)
Lecture—3 hours. Prerequisite: Biological Sciences 1A or consent of instructors. Lectures on the biology of ectoparasites and their interactions with their hosts. Offered in alternate years—I. Kaya, Forrester

158. Forensic Entomology (3)
Lecture—2 hours; laboratory—4 hours. Prerequisite: Biological Sciences 1A or Entomology 100, upper division standing. Arthropods, their general biology, succession, development and population cycles and population biology in matters of criminal prosecution and civil litigation. Emphasis on basic entomological, biological and development concepts and methods, development of reasoning abilities, implication, development of opinions and evidence. GE credit: SciEng or SocSci, Wrt | WE.—III. (III.) R. Kimsey, Nadler

180A. Experimental Ecology and Evolution in the Field (4)
Lecture/laboratory—3 hours; fieldwork—3 hours. Prerequisite: course 105, or Environmental Science and Policy 100; Evolution and Ecology 100; Evolution and Ecology 101. Experimental design in ecological field examination. Examination of primary literature, experimental design, independent and collaborative research, analysis of original research paper based on field experiments. (Same course as Evolution and Ecology 180A.) Offered in alternate years. (Deferred grading only; pending completion of sequence.) GE credit: SciEng | QL, VL, WE.—II. (II.) Yang

180B. Experimental Ecology and Evolution in the Field (4)
Lecture/laboratory—3 hours; fieldwork—3 hours. Prerequisite: Biological Sciences 1A or Entomology 100, Evolution and Ecology 100, Evolution and Ecology 101, or Environmental Science and Policy 100; course 105. Experimental design in field ecology. Examination of primary literature, experimental design, independent and collaborative research, analysis of data, development of original research paper based on field experiments. (Same course as Evolution and Ecology 180B.) Offered in alternate years. (Deferred grading only; pending completion of sequence.) GE credit: SciEng | QL, SE, SL, WE.—III. (III.) Yang

201. Internship (1-12)
Internship—3.3-6.6 hours. Prerequisite: completion of 84 units and consent of instructor. Laboratory experience or fieldwork off and on campus in all subject areas offered in the Department of Entomology. Internships supervised by a member of the faculty. (P/NP grading only.)
Environmental Horticulture

[College of Agricultural and Environmental Sciences] Faculty. See Plant Sciences, on page 476. The Program. Students of Environmental Horticulture learn how plants improve the environment and the quality of our lives. Plants are used to revegetate and restore disturbed land, control landscapes, control erosion, and reduce energy and water consumption. The ornamental use of plants to improve the aesthetic quality of urban and rural landscapes, recreational areas, and commercial sites is an important aspect of the study of environmental horticulture.

Students interested in Environmental Horticulture can obtain a B.S. degree in Environmental Horticulture and Urban Forestry and may specialize in Floriculture/Nursery Management, Urban Forestry, Landscape Management/Floral or Urban Biodiversity/Restoration. Students can develop an individual major with the help of an Environmental Horticulture faculty adviser and approval of the College's Individual Major Committee. A minor in Environmental Horticulture or Landscape Restoration is available to students in other majors.

Career Alternatives. Opportunities in this field include growing and/or managing plants in a variety of settings, including nurseries, golf courses and arboreta, consulting as an urban, landscape, or restoration horticulturist, business ownership, working for public agencies or private landscape firms/corporations, park management and landscape contracting. Students are encouraged to develop internships on or off campus to augment their activities in the classroom and laboratory.

Graduate Study. For graduate study related to this field, see the M.S. and Ph.D. degree programs in the graduate groups of Horticulture and Agronomy, Plant Biology, Ecology, and Genetics. Also see Graduate Studies, on page 111.

Related Courses. See Plant Biology and Plant Sciences.

Courses in Environmental Horticulture (ENH)

GE credit: SciEng | SE, VL. — I. (II) Volder

Lower Division

1. Introduction to Environmental Horticulture/Urban Forestry (3)

Lecture—3 hours. Introduction to the use of plants to enhance the physical, visual and social environment. The use of ecological principles in developing sustainable, low maintenance landscape systems will be presented. Career opportunities will be discussed. GE credit: SciEng, Wrt | SE, SL, VL. — I. (II) Volder

Upper Division

100. Urban Forestry (4)

Lecture—2 hours; laboratory—3 hours, term paper. Prerequisite: Biological Sciences 1C or Plant Sciences 2. Principles and practices of planning and managing urban vegetation. Basics of trees and shrubs, natural resource inventory, and development of long term urban forest management plans. GE credit: SciEng | SE. — I. (II) Cadonasso

101. Trees of the Urban Forest (2)

Lecture—1 hour, laboratory—2 hours. Prerequisite: course 6 or consent of instructor. Identification and evaluation of 200 tree species of the urban forest on campus, in the Arboretum, and in the city of Davis; appraisal and aesthetic values, condition, and branch structure; contribution of trees to this ecosystem. (I.) Gillett

102. Physiological Principles in Environmental Horticulture (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Biological Sciences 1C. Physiological principles and processes essential to floriculture, nursery crop production, turfgrass and landscape horticulture. Emphasis on the control of vegetative and reproductive development for a broad species range in greenhouse and extensive landscape environments. GE credit: SciEng | VL, SE. — I. (II) Harding

105. Taxonomy and Ecology of Environmental Plant Families (4)

Lecture—2 hours; laboratory—6 hours. Prerequisite: course 6 or consent of instructor. Classification and identification of introductions of native species used in urban forests, with emphasis on floral and vegetative characteristics of the prominent families of angiosperms and gymnosperms, adaptations to environmental variations in western landscapes, and horticultural classification. GE credit: SciEng | VL, SE. — I. (II) Evans

125. Greenhouse and Nursery Crop Production (5)

Lecture—3 hours, discussion—1 hour; laboratory—3 hours. Prerequisite: Plant Sciences 2 or Biological Sciences 1C. Principles and techniques for the production of ornamental greenhouse and nursery crops. Hands-on experience producing greenhouse crops. Optional weekend field trip. GE credit: SciEng | SE, WE.

129. Analysis of Horticultural Problems (4)

Lecture—1 hour; laboratory—6 hours. Prerequisite: course 102, Entomology 110, Plant Pathology 120, and Soil Science 100 or the equivalents. Methods of analysis of common plant disorders seen in the landscape, greenhouse, and nursery. Diagnosis of plant disorders caused by soil, water, chemical agents, climatic conditions or cultural practices. Approaches to diagnosis that emphasize acquisition and integration of information. GE credit: SciEng | SL, SE— I. (II) Durzan

130. Turfgrass and Amenity Grassland Utilization and Management (4)

Lecture—2 hours; discussion—1 hour; laboratory—3 hours. Prerequisite: Biological Sciences 1C or Plant Sciences 2. Utilization and management of amenity

Environmental Geology

[College of Letters and Science] The minor in Environmental Geology examines the multidisciplinary factors of geology and related earth science fields, and planning and resources oriented programs. Students in the minor are encouraged to participate in internships that assist them in solidifying the Environmental Geology minor with their Geology major or other major field areas that include geologic components. The minor is sponsored by the Department of Earth and Planetary Sciences in 2119 Earth and Physical Sciences Building.

Quarter Offered: Fall, II, IV, Summer, Pre-Fall 2011 General Education (GE): AH = Arts and Humanities; SC = Science and Engineering; SS = Social Sciences; AGCM = American Cultures, DD = Domestic Diversity, WR = Writing Experience Fall 2011 and on Revised General Education (GE): AH = Arts and Humanities; SE = Science and Engineering; SS = Social Sciences; AGCM = American Cultures, DD = Domestic Diversity, OL = Oral Skills, QL = Quantitative, SL = Scientific, VL = Visual, WC = World Cultures, WE = Writing Experience
150. Genetics and Plant Conservation: The Biodiversity Crisis (3)
Lecture/discussion—3 hours. Prerequisite: Biological Sciences 1C or the equivalent. Conservation of genic diversity, measurement of diversity, threats to diversity and reasons for protection, the process of extinction, distribution of diversity, determination of what to conserve and means of conservation. Examples drawn largely from forest tree species. GE credit: SciEng | SE, SL—III. (III) Neale

160. Restoration Ecology (3)
Lecture—3 hours. Prerequisite: Plant Biology/Evolutionary Ecology 117 or Evolution and Ecology 121 or Plant Biology 147 or the equivalent. Conceptual bases of restoration ecology; tools used by restoration ecologists to solve practical problems; scope and success of actual restoration projects. GE credit: SciEng | SE, SL, WE—II. (III) Eviner

160L. Restoration Ecology Laboratory (1)
Laboratory/discussion—3 hours. Prerequisite: course 160 (may be taken concurrently). Companion field course to course 160. A series of part-day and all-day visits to various field sites, involving site evaluations, guest field presentations by local restorationists, and actual restoration activities. Not open for credit to students who have completed course 160 prior to spring 2004. GE credit: SciEng | SE, SL—III. (III) Eviner

Graduate
229. Analysis of Horticultural Problems (5)
Lecture—1 hour; laboratory—8 hours; discussion—1 hour; project. Prerequisite: equivalent of B.S. degree in Environmental Horticulture and Urban Forestry, Plant Biology, Applied Biological Systems and Environment, or related major, or consent of instructor. Methods of analysis of common plant disorders seen in the landscape, greenhouse, and nursery. Diagnosis of plant disorders caused by soil, water, insects, disease, chemical agents, climatic conditions or cultural practices. Approaches to diagnosis that emphasize acquisition and integration of information. Not open for credit to students who have completed course 241.

Environmental Horticulture and Urban Forestry

(see page 476)

The Major Program
Students majoring in Environmental Horticulture and Urban Forestry learn how plants improve the environment and the quality of our lives. The major focuses on the biological and physical concepts and horticultural principles of plant production, management of plants and plant ecosystems in landscape settings and sociological aspects of plant/people interactions in the urban environment. Plants are used to revegetate and restore disturbed landscapes, control erosion, improve the environment and water consumption. The ornamental use of plants to improve the aesthetic quality of urban and rural landscapes, recreational areas, interspecies and commercial sites is an important aspect of the major. Students may select one or more of the following three areas of specialization: Floriculture/Nursery, Plant Biodiversity/Restoration, or Urban Landscape Management.

Internships and Career Opportunities. Students are encouraged to develop internships on or off campus to augment their activities in the classroom and laboratory. Internships are available with the departmental faculty, the UC Davis Arboretum, landscape designers, government agencies or regional nurseries. Career opportunities in this field include growing and/or managing plants in a variety of settings, including nurseries and arboretas, consulting as an urban, landscape, or restoration horticulturist; business ownership; working for public agencies or private landscape firms/corporations; park management and landscape contracting.

B.S. Major Requirements:
UNITS
Communications 1 recommended as part of the College English Composition Requirement or the Words and Images Core Literacy Component.
Preparatory Subject Matter
Environmental Horticulture 1 and 6 7
Landscape Architecture 30 4
Biological Sciences 2A, 2B, and Plant Sciences 2 2 14
Chemistry 2A-2B 10
Environmental Science and Policy 1 or 10 or 30 4-5
Physics 1A-1B 6
Plant Sciences 21 3-4
Mathematics 16A or Statistics 13 3-4
University Writing Program 102B, 102G, 104E, or other upper division composition course (may overlap with college composition requirement; may be satisfied by passing the English Composition exam) 4-6
Lower division restricted electives 6
Select one lower division science course and one lower division social science/humanities course in consultation with adviser; minimum 6 units.
Depth Subject Matter
Environmental Horticulture 102 or Plant Sciences 100A 3-4
Environmental Horticulture 105 or Plant Sciences 105A 4-5
Plant Biology 117 or Plant Sciences 150 4
Plant Sciences 171 4
Soil Science 100 5
Select two from: Plant Pathology 150, Plant Pathology 120, Plant Sciences 105 or 176 7-9
Select two from: Plant Sciences 192 (minimum of 3 units) 3
Upper division restricted electives 12
Select two upper division resource science courses and two upper division social science/humanities courses in consultation with adviser 14
Areas of Specialization (choose one)
No course may be used to satisfy more than one requirement.
Floriculture/Nursery Option
Environmental Horticulture 120, 125 8
Applied Biological Systems Technology 165 2
Entomology 135 4
Plant Sciences 100C or 158 or Soil Science 109 4
Plant Biodiversity/Restoration Option
Environmental Horticulture 160, 160 4

Environmental Horticulture 150, or Evolution and Eco 100, or Plant Biology 116 3-5
(a) Select one course from: Environmental Science and Management 141, Environmental Science and Policy 127, 155, Plant Sciences 130,130, Wildlife, Fish, and Conservation Biology 155 3-4
(b) Select one course from: Environmental Science and Policy 155, Plant Biology 108, 117, 119, Plant Sciences 102, 144, 147/147, 163, 176, Wildlife, Fish, and Conservation Biology 156, 157 3-5
Select one additional class from section a or b 3-5
Urban Landscape Management Option 16-17
Environmental Horticulture 100, 133 8
Applied Biological Systems Technology 165 2
Plant Sciences 162 3
Science and Society 18 or Landscape Architecture 150 3-4
Total Units for the Major 114-130

Major Adviser. T.P. Young

Advising Center for the major is located in 1224 Plant and Environmental Sciences 3307527738

Environmental Policy Analysis and Planning

(see page 476)

The Major Program
The major in environmental policy analysis and planning develops skills for designing and assessing policy in fields related to environmental quality and natural resource management and an understanding of governmental policymaking.

Any student in good standing is eligible to transfer to the major; to do so, please see the staff adviser, Melissa Whaley, in 2134 Wickson Hall, or the master adviser, Prof. J. Sanchirico, in 2102 Wickson Hall.

The Program. This major provides students with a strong background in policy analysis, including the evaluation of policy alternatives and the study of factors affecting policy formulation and implementation. Key components of this interdisciplinary training include a general background in the natural sciences relevant to environmental, economic, political science, statistics, and research methodology to quantitatively analyze environmental problems and policy options. In addition, students are encouraged to develop substantive knowledge in a specific field of environmental policy, such as urban and regional planning, water policy, transportation and energy, climate policy, or conservation management.

Careers. Environmental policy analysis and planning graduates are prepared for employment in environmental, natural resource, energy, and transportation focused public agencies, consulting firms, non-governmental organizations, and businesses, or as legislative aides for elected representatives. The major is also excellent preparation for students who want to go on to graduate work in law, planning, public policy, science, economics, or business.

B.S. Major Requirements:
UNITS
English Composition and Public Speaking Requirement 3-8
University Writing Program 101, 102A-G, 104A-E, or passing the Upper Division English Composition exam 0-4
Communication 1 or 3 or Dramatic Art 10 3-4

### Depth Subject Matter | 47-51

Students must take these units on a letter grade basis, and must attain an overall grade point average of 2.00 or higher in the Depth Subject Matter courses.)

- **Environmental Science & Policy 110, 160, 168A, 168B | 17**
- **Environmental Science & Policy 161 | 4**
- **Environmental Science & Policy 178 | 4**
- **Environmental Science & Policy 179 | 4**
- **Select one course from: Agricultural & Resource Economics 106, Sociology 106, Statistics 100, 103, 103P, or 108 | 4-5**
- **Agricultural & Resource Economics 100A or Economics 100 | 4-5**
- **Agricultural & Resource Economics 176, Environmental Science & Policy 125, or Environmental Science & Policy 175 | 4**
- **Applied Biological Systems Technology 150 | 4**
- **Environmental Science & Policy 179 | 2**
- **Select one course from: Applied Biological Systems Technology 181N, 182, or Environmental Science & Management 185 or 186 | 4-5**

### Areas of Specialization

*choose one* | 12-17

Students must select courses in the Areas of Specialization that have not been taken in the Depth Subject Matter.

### City & Regional Planning

- **Environmental Science & Policy 171 | 2**
- **and 172 | 8**
- **Select one course from: Civil & Environmental Engineering 162, 165 or Environmental Science 100 | 3-4**
- **Select one course from: Art History 168, Community & Regional Development 149, 152, 156, or 171, Environmental Science & Policy 173 or Political Science 100 | 2-5**

### Climate Change Policy

- **Environmental Science & Policy 165N | 3**
- **Select one course from: Agriculture & Resource Economics 176, Economics 125, Environmental Science & Policy 163, 167, or 171 | 4**

### Conservation Management

- **Select two courses from: Environmental Science & Policy 169, 170, or 172 | 6-8**
- **Select one course from: Environmental Science & Management 160, Environmental Science & Management 100, Environmental Science & Policy 100, 121, or 127, Evolution & Ecology 115, 138, or Wildlife, Fish, & Conservation Biology 154 or 153 | 3-5**

### Energy & Transportation Planning

- **Economics 125, Engineering 106, or Environmental Science & Policy 175 | 3-4**
- **Select two courses from: Civil & Environmental Engineering 162, 165, Environmental Science & Policy 163, 167, or 172 | 4**
- **Select one course from: Atmospheric Science 116, Civil & Environmental Engineering 123, Engineering 160, Environmental Science & Management 131, or Geology 130 | 4-5**

### Environmental Policy & Politics

- **Select one course from: Political Science 100, 104, 105, 107, or 109 | 4**
- **Select one course from: Political Science 162, 164, 165, or 170 | 4**
- **Select one course from: Civil Engineering 165, Environmental Science & Policy 165N, 166N, 167, 169, 170, 171, or 172 | 4**
- **Select one course from: Agricultural & Resource Economics 106, 176, Civil & Environmental Engineering 153, Economics 130, or Environmental Science & Policy 175 | 4**

### Integrative Policy

- **Students choosing this individualized track must consult with a faculty adviser to identify an area of emphasis within this track and to select four upper division courses with a common theme. Possible areas of emphasis are marine policy, pollutants in the environment, planning in the presence of environmental hazards, sustainable development, and environmental and natural resource economics. If you are considering this track, please contact the major adviser as soon as possible.**

### Water Management

- **Select two courses from: Environmental Science & Policy 166H, 169, or Hydrologic Science 150 | 6**
- **Select two courses from: Environmental Science & Management 100, 121, or 127, Environmental Science & Policy 151, 155, Geology 134, Hydrologic Science 141, 143, Soil Science 118, Wildlife, Fish, & Conservation Biology 120, Biological Sciences 124, Environmental Science & Policy 116N, 124, 150C, or 152 | 6-8**

### Total Units for the Degree | 108-128

### Major Adviser

J. Sanchirico *(Environmental Science and Policy)*

### Minor Program Requirements:

The faculty for environmental policy analysis and planning offers the following minor. The Environmental Policy Analysis minor is natural and social science students desiring basic training in policy analysis theory and methods.

### Environmental and Resource Sciences

(Continued from page 298)

The **Environmental Science and Management** (ESM) major is designed for students who are interested in solving environmental problems from an interdisciplinary perspective linking the natural and social sciences.

Students who choose this major will study the interaction of physical, biological, and social components of environmental problems. Students completing the program will understand the scientific basis for environmental decision making and the legal, economic, and political issues involved in management of the environment.

**The Program.** Courses in biology, chemistry, physics, economics, geology, and calculus form the lower-division preparatory foundation of the curriculum. These are then tied together with Environmental Science and Policy 1, “Environmental Analysis” which provides an interdisciplinary analysis of social-environmental problems. The upper-division core consists of foundation courses in physical, biological, and social sciences, as well as applied courses in environmental monitoring, GIS, impact reporting, and statistical analysis. In their junior year, students must choose a specialized track from the following six options:

- (a) Ecology, Biodiversity, and Conservation
- (b) Natural Resource Management
- (c) Climate Change and Air Quality
- (d) Geospatial Information Science
- (e) Watershed Science
- (f) Soils and Biogeochemistry

A capstone course is required for all seniors and serves to integrate the science, policy, management and biology aspects of the ESM major. All students gain practical experience through field courses and a required internship. Selected students may also pursue an honors thesis in their senior year. The ESM major is jointly administered by the Departments of Environmental Science and Policy (ESP) and Land, Air and Water Resources (LAWR). Any student in good standing is eligible to transfer to the major, to do so, please see the student affairs officers in 2134 Wickson Hall or in 1150 Plant and Environmental Sciences Building.

**Careers.** Graduates from this program are prepared to pursue careers as practicing environmental scientists, resource analysts and planners working for public agencies and private firms specializing in environmental quality, natural resources or ecological research. The major is also an excellent preparation for graduate or professional training in physical and/or biological environmental science graduate programs, as well as in environmental law, administration and environmental policy.
B.S. Major Requirements:

**UNITS**
- English Composition and Public Speaking requirement ........................................... 3-8
  - University Writing Program 101, 102A-G, 102A-E, or passing the Upper Division English Composition exam .......................... 0.4
  - Communication 1, 3, or Dramatic Art 1 ................................. 3-4
- Preparatory Subject Matter ............................................. 44-52
  - Biologica Sciences 2A, 2B, 2C .................................. 15
  - Geology 1 or 50 (Geology 50 recommended) ................................. 3-4
  - Chemistry 2A, 2B, or 2AH ........................................... 3-5
  - Physics 1A, 1B, 7A, 7B ........................................... 6-12
  - Economics 1A ..................................................... 4
  - Mathematics 16A, 16B, 17A, 17B, or 21A, 21B (Mathematics 17A, 17B recommended) ........................................ 6-8
  - Environmental Science and Policy ....................................... 1
  - Satisfaction of the General Education requirement ... 3-4

**Depth Subject Matter** .................................................. 28-32
  - Environmental Science and Management .................................. 120
  - Environmental Science and Policy 100 or Evolution and Ecology 101 .................. 4
  - Environmental Science and Policy 162 ................................. 3-4
  - Statistics 131 or 100 (Statistics 100 recommended) ........................ 4
  - Select three courses from: Environmental Science and Management 10B or Environmental Science and Policy 179 ................................. 3-4
  - Applied Biological Systems Technology 150 ............................ 4
  - Internship-Environmental Science and Management or Environmental Science and Policy 192 ........................................... 3-4
  - Core Course-Environmental Science and Management 195 .......... 2
  - Honors Thesis (optional)-Environmental Science and Management 194H .......................... 0.3

**Ecology, Biodiversity and Conservation Track** ............................................. 36-46
  - Select one course from: Atmospheric Science 60, 116, 133, Environmental Science and Policy 121, 131, Environmental Science and Policy 152, Geology 134, or Soil Science 100 ........................................... 3-5
  - Select one course from: Environmental Science and Policy 170, 171, 172 or 179 ........................................... 4
  - Evolution and Ecology 100 ........................................... 4
  - Select one course from: Environmental Science and Policy 127 or Wildlife, Fish, and Conservation Biology 154 ........................................... 4
  - Select one course from: Environmental Science and Policy 123, 124, Plant Sciences 147 and 147L, or Wildlife, Fish, and Conservation Biology 100 ........................................... 3-4
  - Select one course from: Environmental Science and Policy 121 or Wildlife, Fish, and Conservation Biology 122 ........................................... 4
  - Evolution and Ecology 104, 115, Environmental Science and Policy 151, 155, Plant Biology 117 or Wildlife, Fish, and Conservation Biology 155 ........................................... 3-4
  - Select one course from: Evolution and Ecology 147 or Environmental Horticulture 160 ........................................... 3-4
  - Select one biome level course on wetlands, forests, or water (See adviser for list) ............ 3-5
  - Select one organismal biology course on birds, mammals, or plants (See adviser for list) ........................................... 3-5
  - Complete one lab associated with either the biome level or organismal biology course ........................................... 2-3

**Natural Resource Management Track** ............................................. 32-42
  - Select three courses from: Environmental Science and Management 116, 166N, 167, 168A, 169, 171, 172 or 179 ........................................... 9-13
  - Select one course from: Environmental Science and Policy 161 or Hydrologic Science 150 ........................................... 3-4
  - Statistics 103 (or equivalent upper-division statistics) .......................... 4
  - Select two courses from: Entomology 104, Environmental Science and Policy 141, 144, Environmental Science and Policy 151, 155, Evolution and Ecology 115, Plant Biology 117, Plant Sciences 130 or Wildlife, Fish, and Conservation Science 10, 111, 120, or 134 ........................................... 6-8
  - Select two courses from: Atmospheric Science 116, Environmental Science and Management 121, 131 or Soil Science 100 ........................................... 6-9
  - Environmental Science and Management 185 or 186 ........................................... 4

**Climate Change and Air Quality Track** ............................................. 32-41
  - Atmospheric Science 60 ........................................... 4
  - Select three courses from: Atmospheric Science 115, 116, 133, Environmental Science and Management 131, Geology 108 ........................................... 9-12
  - Select two courses from: Environmental Science and Policy 100, 121, Environmental Science and Policy 116N, Hydrologic Science 143 or Soil Science 100 ........................................... 6-9
  - Select one course from: Environmental Science and Management 145 .......................... 4
  - Environmental Science Policy and Management 124, 150C, 151, 155, Evolution and Ecology 115 or Plant Sciences 130 ........................................... 3-4
  - Select one course from: Evolution and Ecology 147 or 149 ........................................... 4
  - Select two courses from: Environmental Science and Policy 163, 165N, 166N, 167, 171, 172 or 179 ........................................... 6-8

**Geospatial Information Science Track** ............................................. 31-39
  - Select two courses from: Applied Biological Systems Technology 181N, 182, Environmental Science and Management 185, or 186 ........................................... 8-9
  - Select two courses from: Environmental Science Policy and Management 163, 165N, 166N, 167, 171, 172 or 179 ........................................... 6-8
  - Select two courses from: Environmental Science Policy and Management 121, Statistics 104, 106, 108, 130A, 130B or 137 ........................................... 8
  - Other applicable intertechnology courses from the Engineering department including database management, digital library science and network and Web technologies, if documented for spatial information with approval.
  - Select three courses from the following options. Must cover both physical and biological courses from Atmospheric Science 110, 116, 133, Soil Science 100, Environmental Science and Policy 124, 150C, 151, 152, 155, Geology 136, Plant Sciences 100 or 108, 109, 111, or 120 ........................................... 16-21
  - Select two courses from: Environmental Science and Policy 121, Environmental Science Policy and Management 108 or Hydrologic Science 101, 108, 110, 111, 130A, 130B or 137 ........................................... 8
  - Other applicable intertechnology courses from the Engineering department including database management, digital library science and network and Web technologies, if documented for spatial information with approval.

**Watershed Science Track** ............................................. 38-46
  - Select two courses from: Atmospheric Science 160, Environmental Science and Management 144, Environmental Science and Policy 116N, 150A, 150C, 151, 155, Geology 132, Plant Biology 117 or Plant Sciences 130 ........................................... 6-8
  - Select two courses from: Environmental Science and Policy 121 or Hydrologic Science 150 ........................................... 5
  - Soil Science 100 ........................................... 6
  - Select two courses from: Environmental Science and Policy 100 or Hydrologic Science 141 (but not both), Hydrologic Science 142, 143, Environmental Science and Management 108 or Hydrologic Science 151 (but not both) ........................................... 6-8
  - Select one course from: Geology 33, 139, 140 ........................................... 3-5
  - Select one course from: Applied Biological Systems Technology 181N or 182 ........................................... 4
  - Select one course from: Soil Science 105, 118, or 120 ........................................... 4-5
  - Select two courses from: Environmental Science and Policy 166N, 168A, 169, 172, 179, Hydrologic Science 150, or Landscape Architecture 60 ........................................... 6-9
  - Atmospheric Science 133 ........................................... 4
  - Select one course from: Entomology 116, Environmental Science and Policy and Management 108 or Hydrologic Science 151, or Wildlife, Fish, and Conservation Biology 120 ........................................... 3-4

**Total Units for the Major** ............................................. 110-143

**Major Advisers.** Marcel Holyoak (Environmental Science and Policy) and Tarrance Nathan (Land, Air and Water Resources)

**Advising resources** for the major, including peer advising, are located in both the Environmental Science and Policy and Land, Air and Water Resources departments.

Students whose last names begin with the letters A-L, please see Melissa Whaley in 2134 Wickson Hall. Students whose last names begin with the letters M-Z, please see Elizabeth Shull in 1150 Plant and Environmental Sciences.

**Courses in Environmental Science and Management (ESM)**

**Lower Division**

**8. Water Quality at Risk (3)**
  - Lecture—2 hours; discussion—1 hour. Natural and human threats to water quality, science and policy in all aspects of attaining, maintaining, and managing water quality, water contamination. Decoding popular media coverage of water quality and water contamination. Students must co-requisite course as Science and Society 8.) Not open to students who have successfully completed Environmental and Resource Sciences 8. (Formerly Environmental and Resource Sciences 8.) GE credit: SciEng or SocSci, Wrt | SE, SS, WE.—II. (II.) Hernes

**30. World Ecosystems & Geography (3)**
  - Lecture—3 hours. Introduction to the earth’s major geographic regions and associated ecosystems, such as deserts, temperate forests, and oceans with an examination of how climate, vegetation regimes, ecological processes, agriculture and other human activities interact in different regions of the world. (Same course as Environmental Science and Policy 30.) Not open to students who have successfully completed Environmental and Resource Sciences 30. (Formerly Environmental and Resource Sciences 30.) Offered alternate years. GE credit: SciEng | SE, SS, WE.—II. (II.) Jackson

**47. Watershed Processes and Water Quality in the Tahoe Basin (2)**
  - Lecture/lab—21 hours; fieldwork—9 hours; discussion—3 hours. GE credit: Pre-requisite: basic knowledge of environmental, soil, or hydrologic sciences. Watershed processes, runoff, water-quality management, restoration in Lake Tahoe Basin. Sails, precipitation-runoff, remediation and adaptive management related to erosion control, effective solu-
tions, development of restoration strategies. Students develop field restoration. Course involves 3 days of instruction in Tahoe City as Hydrologic Science 47.) Not open to students who have successfully completed Environmental and Resource Sciences 47. (Formerly Environmental and Resource Sciences 47.) GE credit: SciEng | QL, SE, SL.—IV. (IV) Griser

92. Internship (1-12)
Internship—3-36 hours. Prerequisite: lower division standing and consent of instructor. Work experience off and on campus in resource sciences. Internship supervised by a member of the faculty. (P/NP grading only.) May be repeated for credit. —I, II, III. (I, II, III)

98. Directed Group Study (1-5)
Prerequisite: consent of instructor. Primarily for lower division students. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)
Prerequisite: consent of instructor. Primarily for lower division students. May be repeated for credit. (P/NP grading only.)

Upper Division

100. Principles of Hydrologic Science (4)
Lecture—4 hours. Prerequisite: Chemistry 2B, Mathematics 1A, 1B, or Physics 7A or 9A. Topics include hydrology (surface and ground water), hydraulic flow through porous media, water in the soil-plant-atmosphere continuum, water quality, flow through open channels, and representative water-resource problems. Not open to students who have successfully completed Environmental and Resource Sciences 100. (Formerly Environmental and Resource Sciences 100.) GE credit: SciEng | QL, SE, SL.—I. (I) Griser

108. Environmental Monitoring (3)
Lecture/discussion—2 hours; laboratory—2 hours; fieldwork. Prerequisite: entry level course work in student's major, specifically, Evolution and Ecology 101 (Evolution and Ecology), Environmental Science and Policy 100 (Environmental Biology and Management), Environmental Toxicology 101 (Environmental Toxicology), Wildlife, Fish, and Conservation Biology 100 (Wildlife, Fish, and Conservation Biology), Environmental and Resource Sciences 100 (Hydrologic Science), Soil Science 100 (Soil Science, Environmental Horticulture 100 (Environmental Horticulture and Urban Forestry), Landscape Architecture 50 (Landscape Architecture) or the equivalent for any of these courses. Instrumentation and methods for environmental monitoring; GPS, sensors, datalogging, and GIS. Wide range of measurement techniques for environmental parameters. Not open to students who have successfully completed Environmental and Resource Sciences 108. (Formerly Environmental and Resource Sciences 108.) GE credit: SciEng | SE, SL.—III. (III)

120. Global Environmental Interactions (4)
Lecture—3 hours, discussion—1 hour. Prerequisite: one college level chemistry course, one college level biology course. Limited to 25 students per discussion section. Relationships among climate, hydrology, biogeochemical cycles, soils and vegetation distribution in diverse landscapes and biomes. Emphasis on physical, chemical, and biological processes affecting ecosystems from the poles to the equator, and human impacts on the environment. Not open to students who have successfully completed Environmental and Resource Sciences 60 or 120. (Formerly Environmental Resource Sciences 60 and 120.)—II. (II) Hotchkiss

121. Water Science and Management (3)
Lecture—2 hours; discussion—1 hour. Prerequisite: Physics 10 or Geology 1. Role of water as an essential natural resource in contemporary society. Aspects of the water cycle, including descriptions of natural phenomena and underlying physical causes. Water for cities, agriculture, industry, wild life and recreation; case studies of water management. Not open to students who have successfully completed Environmental and Resource Sciences 121. (Formerly Environmental and Resource Sciences 121.) GE credit: SciEng | QL, SE, SL.—I. (I) Sandowal

131. Air as a Resource (3)
Lecture—2 hours; discussion—1 hour. Prerequisite: Chemistry 10. Degradation of the atmospheric resource, historical aspects and effects of air pollution examined. Emphasis on primary and particulate pollutants and discussion of their impact. Not open to students who have successfully completed Environmental and Resource Sciences 131. (Formerly Environmental and Resource Sciences 131.) GE credit: QL, SE, SL.—II. (II) Zhang

141. Role of Fire in Natural Ecosystems (4)
Lecture—3 hours; term paper. Prerequisite: basic biological concepts: Biological Sciences 2A or Plant Sciences 2; ecology/evolution: Biological Sciences 2B or 2C. Fire regimes and roles in major North American vegetation types, especially in the west. Physics of fire, fire effects on organisms and ecosystems, functions, management, fires, fire use by indigenous people. Not open to students who have successfully completed Environmental and Resource Sciences 141. (Formerly Environmental and Resource Sciences 141.) GE credit: SciEng | SE, SL, WE.—II. (II) Latimer

144. Trees and Forests (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Plant Sciences 2 or Biological Sciences 1C or 2C. Biological structure and function of trees as organisms; understanding of forests as communities and as ecosystems; use of forests by humans; tree phenology, photosynthesis, respiration, soil processes, life histories, dormancy, forest biodiversity, and agroforestry. [Same course as Plant Sciences 144.] Not open for credit to students who have completed Plant Biology 1 144 or Environmental and Resource Sciences 144. (Former course Plant Biology/Environmental Horticulture/Environmental and Resource Sciences 144.) GE credit: SciEng | SE, SL.—I. (I) Berry, Dahlglen, Rice

185. Aerial Photo Interpretation and Remote Sensing (4)
Lecture—2 hours; laboratory—4 hours. Prerequisite: upper division standing. Basics of remote sensing and photogrammetry; aerial. Remote sensing applications. Not open to students who have successfully completed Environmental and Resource Sciences 185. (Formerly Environmental Resource Sciences 185.) GE credit: SciEng | SE, SL—III. (III)

186. Environmental Remote Sensing (5)
Lecture—3 hours; laboratory—6 hours. Prerequisite: Mathematics 16B and Physics 7C or 9B; upper division standing; Landscape Architecture 150 recommended. Overview of satellite, airborne, and ground-based remote sensing, building on properties of electromagnetic radiation. Applications include hydrologic processes, weather and climate, ecology and land use, soils, geology, forestry, and agriculture. Computer based analysis and visualization of images and processing techniques. Not open to students who have successfully completed Hydrologic Science 186 or Environmental and Resource Sciences 186. (Formerly Hydrologic Science 186 and formerly Environmental and Resource Sciences 186.) GE credit: SciEng | QL, SE, SL—II. (II) Utin

192. Internship (1-12)
Internship—3-36 hours. Prerequisite: completion of 84 units; consent of instructor. Work experience off and on campus in resource sciences. Internship supervised by a member of the faculty. (P/NP grading only.)—I, II, III.

194H. Senior Honor Thesis (2-6)
Independent study—2-6 hours. Prerequisite: senior standing, overall GPA of 3.50 or higher and consent of master adviser. Independent study, guided research on an environmentally related subject of special interest to the student. GE credit: SciEng | SE, SL, WE

195. Integrating Environmental Science and Management (2)
Lecture/discussion—2 hours. Prerequisite: senior status in Environmental Science and Management major or other environmental science major (e.g. Environmental Resource Science; Environmental Biology and Management; Environmental Toxicology; Environmental Policy Analysis and Planning; Wildlife, Fish, and Conservation Biology; Hydrologic Science.) consent of instructor. Practical aspects of environmental improvement through integrated analyses of contemporary issues or problems associated with advocacy, regulation, science and resource management from the perspectives of the physical and ecological sciences and current policy/management. May be repeated two times for credit. GE credit: SciEng or SocSci | SS or SE.—II. (II) Griser

198. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only.)—I, II, III. (I, II, III)

199. Special Study for Advanced Undergraduates (1-5)
Prerequisite: consent of instructor. (P/NP grading only.)—I, II, III. (I, II, III)

Environmental Science and Policy

Environmental Science and Policy

The Program of Study

Environmental Science and Policy is a teaching and research department offering courses, workshops, and directed group study classes that focus on the complex relationships among environmental relations. The department offers Bachelor of Science degrees in Environmental Science and Management and in Environmental Policy Analysis and Planning. Courses in Environmental Science and Policy also supplement major programs in a wide variety of established disciplines.

Current Information. Through its continuing contacts with many other departments and teaching divisons of the school, the department develops a variety of special courses and workshops each year. Check with the Department office for up-to-date information about our courses and workshops.

Graduate Study. The Graduate Group in Ecology which focuses on Environmental Science & Policy offers an M.S. and Ph.D. degree program. Further information about graduate programs in ecology should be obtained from the chairperson of the Graduate Group in Ecology.

Group Office. 1005 Wicksom Hall 530; 752-6792; http://ecology.ucdavis.edu/

Courses in Environmental Science and Policy (ESP)

Lower Division

1. Environmental Analysis (4)
   Lecture—3 hours; discussion—1 hour. Prerequisite: University Writing Program 1 or English 3 or equivalent; sophomore standing. Economics 1A and Biological Sciences 28 recommended. Analysis of the physical, biological, and social interactions which constitute environmental problems. Emphasis on analysis of environmental problems, the consequences of proposed solutions, and the interaction of environmental scientific and public policy creating solutions. GE credit: SciEng or SocSci | SE or SS, SL.—I. (I.) Arnold, Baskett

10. Current Issues in the Environment (3)
   Lecture—3 hours. Prerequisite: elementary biology recommended. The science behind environmental issues, and policies affecting our ability to solve domestic and international environmental problems. Resources, environmental quality, regulation, environmental perception and conservation. Integrative case studies. Open only for credit to students who have completed course 1. GE credit: SciEng | SE or SS, SL, WE.—II. (II.) Holyoak

30. World Ecosystems & Geography (3)
   Lecture—3 hours introduction to the earth’s major geographic regions and associated ecosystems, such as deserts, temperate forests, and oceans with an examination of how climate, vegetation regimes, ecological processes, agriculture and other human activities interact in different regions of the world. (Same course as Environmental Science and Management 30.) Open to students who have successfully completed Environmental and Resource Sciences 30. (Formerly Environmental and Resource Sciences 30.) Offered in alternate years. GE credit: SciEng | SE, SL, WC.

92. Internship (1-12)
   Internship—3-36 hours. Prerequisite: lower division standing and consent of instructor. Work experience off and on campus in all subject areas offered in the College of Agricultural and Environmental Sciences. Internship supervised by member of the faculty. (P/NP grading only.)

98. Directed Group Study (1-5)
   Prerequisite: consent of instructor. Primarily for lower division students. (P/NP grading only.)

Upper Division

100. General Ecology (4)
   Lecture—3 hours; discussion—1 hour. Prerequisites: Biological Sciences 1A, 1B, 1C, Mathematics 16A, 16B, 16C, and 101B. Theoretical and experimental analysis of the distribution, growth and regulation of species populations, predator-prey and competitive interactions; and the organization of natural communities. Discovery and ecological principles to selected environmental problems. GE credit: SciEng | SE, SL.—I., II, (II.) Harrison

   Lecture—3 hours; discussion—1 hour. Prerequisite: Anthropology 1 or 2 or course 30 or Evolution and Ecology 100 or Biological Sciences 101. Interdisciplinary study of diversity and change in human societies, using principles of anthropology, evolutionary ecology, history, archaeology, psychology, and other fields. Topics include population dynamics, subsistence transitions, family organization, disease, environment, population, and resource conservation. (Same course as Anthropology 101.) GE credit: SocSci, Div, Wrt | SS, WC, WE.—II. (II.)

105. Evolution of Societies and Cultures (4)
   Lecture—3 hours; discussion—1 hour. Prerequisite: Anthropology 1 or 2 or course 30 or Evolution and Ecology 100 or Biological Sciences 101. Interdisciplinary study of social and cultural evolution in humans. Culture as a system of inheritance, psychology of cultural learning, culture as an adaptive system, evolution of maladaptations, evolution of technology and institutions, evolutionary transitions in human history. Consideration of genetic and cultural variation. Only 2 units of credit to students who have completed course 1 or Anthropology 101 prior to fall 2004. (Same course as Anthropology 105.) GE credit: SciEng or SocSci, WC, WE.

(a) Environmental Science

110. Principles of Environmental Science (4)
   Lecture—3 hours; discussion—2 hours. Prerequisite: Physics 1A or 7A, Mathematics 16B or 21B, and Biological Sciences 1A. Physical and biological principles and ecological concepts, and systems approach to policy analysis of atmospheric environments, freshwater and marine environments, land use, energy supplies and technology, and other resources. GE credit: SciEng | QL, SE, SL.—II. (II.) Holyoak

111. Marine Environmental Issues (1)
   Discussion—1 hour; seminar—2 hours. Prerequisite: upper division standing or consent of instructor; concurrent enrollment in at least one course from courses 124, 152, Evolution and Ecology 106, 110, 114; residence at or near Bodega Marine Laboratory required. Student must complete the application available at http://www.bml.ucdavis.edu. An examination of critical environmental issues occurring in coastal waters. Course links together material from concurrent courses at BML to develop an integrative understanding of marine environments and their conservation. Introduces students to group discussions, and interaction with visiting speakers. May be repeated twice for credit. (Same course as Evolution and Ecology 111.) GE credit: SciEng | SE, SL,—IV. (IV.) Gaylord, Largier, Morgan, Sanford

116N. Oceanography (3)
   Lecture—2 hours; laboratory—3 hours; field work. Prerequisite: one of Geology 1, 2, 16 or 50. Advanced oceanographic topics: Chemical, physical, geological, and biological research methods and data analysis; marine resources, anthropogenic impacts, and climate change; integrated earth/ocean/atmosphere systems; weekly lab and one weekend field trip. Offered in alternate years. (Same course as Geology 116N.) GE credit: SciEng | SE, SL.—II.

(b) Ecological Analysis

121. Population Ecology (4)
   Lecture—3 hours; discussion—1 hour. Prerequisite: Biological Sciences 1B, 1C, Mathematics 16A-16B. Development of exponential and logistic growth models for plant and animal populations, analysis of age structure and genetic structure, analysis of competition and predation among species, development of models using data to make predictions and solving problems. GE credit: SciEng, Wrt | QL, SS, SE, SL.—II. (I.) Basket, Hashings

123. Introduction to Field and Laboratory Methods in Ecology (4)
   Lecture—3 hours; laboratory—6 hours. Prerequisite: course 100 or the equivalent. Credit: Statistics 102 or the equivalent. Introduces students to methods used for collecting ecological data in field and laboratory situations. Methods used by population ecologists and community ecologists; emphasis on experimental design, scientific writing and data analysis. GE credit: SciEng | SE, SL,—III. (III.) Groszklas

124. Marine and Coastal Field Ecology (3)
   Lecture—3 hours; discussion—1 hour; laboratory—3 hours; fieldwork—3 hours. Prerequisite: upper division standing or consent of instructor. Introductory animal biology (Biological Sciences 1B) recommended. Residence at or near Bodega Marine Laboratory required. Student must complete the application available at http://www.bml.ucdavis.edu. Ecology of marine populations and communities living in diverse habitats along the California coast. Hands-on learning using scientific process and tools of the biological trade to address ecological questions arising during field trips. Critical thinking through discussion of scientific literature. Offered irregularly. GE credit: SciEng | SE, SL.

127. Plant Conservation Biology (4)
   Lecture/discussion—3 hours; discussion—1 hour; term paper. Prerequisite: Environment and Policy 100 or equivalent in division general ecology. Principles governing the conservation of plant species and plant communities, including the roles of fire, exotic species, grazing, pollution, soils, and population genetics; analytic and practical techniques for plant conservation; and introduction to relevant legal, ethical, and policy issues. Limited enrollment. Offered irregularly. GE credit: SciEng | SE, SL.

(d) Aquatic Ecosystems Analysis

150A. Physical and Chemical Oceanography (4)
   Lecture—3 hours; discussion—1 hour. Prerequisite: Environmental Science and Policy/Geology 116, Physics 9B, Mathematics 22C, Chemistry 1C, or upper division standing in a natural science and consent of instructor. Physical and chemical properties of seawater, fluid dynamics, air-sea interaction, currents, waves, tides, mixing, major oceanic geochemical cycles. (Same course as Geology 150A.) GE credit: SciEng | QL, SE.—I. (II.) McClain, Spero, Largier

150B. Geological Oceanography (3)
   Lecture—3 hours. Prerequisite: Geology 50 or 116. Introduction to the origin and geologic evolution of ocean basins. Composition and structure of oceanic crust; marine volcanism; and deposition of marine sediments. Interpretation of geologic history of the ocean floor in terms of seafloor spreading theory. (Same course as Geology 150B.) GE credit: SciEng | SE.—II. (II.) McClain

150C. Biological Oceanography (4)
   Lecture—3 hours; discussion—1 hour; fieldwork—one weekend field trip required. Prerequisite: Biological Sciences 1A and a course in general ecology or consent of instructor. Ecology of major marine habitats, including intertidal, shelf benthic, deep-sea and plankton communities. Existing knowledge and contemporary issues in research. Segment devoted to human use. (Same course as Geology 150C.) GE credit: SciEng | SE, SL.—IV. (IV.) Gaylord, Spero, Largier

151L. Limnology (4)
   Lecture—3 hours; discussion—1 hour; special project. Prerequisite: Biological Sciences 1A and junior standing. The biology and productivity of inland waters with emphasis on the physical and chemical environment. GE credit: SciEng | SE, SL.

151L. Limnology Laboratory (3)
   Laboratory—4 hours; two weekend field trips. Prerequisite: course 151 (may be taken concurrently); junior, senior, or graduate standing. Limnological studies of lakes, streams and wetlands with interpretation of aquatic ecology. GE credit: SciEng | SE.
Environmental Science and Policy

152. Coastal Oceanography (3)
Lecture—2 hours; discussion—1 hour; laboratory—3 hours; fieldwork—3 hours. Prerequisite: upper division standing or consent of the instructor; physics (Physics 9B), calculus (Mathematics 21B) and exposure to physical and chemical oceanography (Geology/Environmental Science and Policy 150A) are recommended; residence at or near Bodega Marine Laboratory required. Must student complete the application available at http://www.bodega.ucsb.edu. Oceanography of coastal waters, including bays, river plumes, nearshore and estuaries; focus on transport patterns, how they are forced and implications for ecological and environmental problems for students in oceanography, ecology, environmental engineering, geology and hydrology. GE credit: SciEng | SE, SL—IV. (IV) Larger

155. Wetland Ecology (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 100 or Plant Biology 117 required; course 110 or 151 recommended. Introduction to wetland ecology. The structure and function of major wetland types and principles that are common to wetlands and that distinguish them from terrestrial and aquatic ecosystems. GE credit: SciEng | SE, SL—I. (I) Rejmanek

155L. Wetland Ecology Laboratory (3)
Lecture—6 hours; fieldwork—2 one-day weekend field trips. Prerequisite: course 155 required (may be taken concurrently). Modern and classic techniques in wetland field ecology. Emphasis on sampling procedures, vegetation analysis, laboratory procedures, and examples of successful wetland restoration techniques. GE credit: SciEng | SE, SL—I. (I) Rejmanek

(c) Environmental Policy Analysis

160. The Policy Process (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Political Science 1; Economics 1A; Intermediate statistics; course 127. Alternative models of public policy-cyamaking and application to case studies in the U.S. and California. GE credit: SocSci | SS.—III. (III) Arnold

161. Environmental Law (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: upper division standing and one course in environmental science (course 1, 10, 110, Biological Sciences 1A, Environmental Toxicology 10, or Resources Sciences 100); Political Science 1 and University Writing Program 1 recommended. Introduction for non-law School students to some of the principal issues in the law and the judicial interpretation of some important environmental statutes, e.g., NEPA. GE credit: SocSci, Wrt | SS.—II. (II) Ogden

162. Environmental Policy (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Economics 1A. Comparison of economic with sociocultural approaches to understanding the causes of environmental problems and strategies for addressing them. Includes different approaches to the policy process, policy instruments, and environmental behavior. Applies these principles to several problems. GE credit: SocSci | SS.—II. (II) Springborn

163. Energy and Environmental Aspects of Transportation (4)
Lecture—3 hours. Intensive writing. Prerequisite: Economics 1A or Engineering 106. Engineering, economic, and systems planning concepts. Analysis and evaluation of energy, air quality and selected environmental impacts of transportation applications and strategies. Strategies for reducing pollution and petroleum consumption in light of institutional and political constraints. Evaluation of vehicle emission models. (Same course as Civil and Environmental Engineering 163.) Offered in alternate years. GE credit: SciEng or SocSci, Wrt | SE or SS, SL, WE—I. (I) Sperling

164. Ethical Issues in Environmental Policy (3)
Lecture—3 hours. Prerequisite: courses 160, 168A; seniors only in Environmental Policy Analysis and Planning or by consent of instructor. Basic modes of ethical reasoning and criteria of distributive justice applied to selected topics in environmental policy-making. Offered irregularly. GE credit: SocSci | SS.

165N. Climate Policy (3)
Lecture/discussion—3 hours. Prerequisite: course 1 Economics 1A, or consent of instructor. Models, data and assumptions behind competing arguments regarding society’s response to the prospect of climate change at the state, national and international level from economic, ethical and policy science perspectives. (III) Springborn

166N. Ocean and Coastal Policy (3)
Lecture—3 hours. Prerequisite: course 1 or consent of instructor. Limited enrollment. Overview of U.S. and International ocean and coastal policy, including energy, coastal land-use and water quality, protected areas and species. Offered in alternate years. GE credit: SocSci | SS.—II. (II) Sancilio

167. Energy Policy (4)
Lecture—4 hours; term paper. Prerequisite: Economics 1A, Mathematics 168, or consent of instructor. Survey of primary energy resources (fossil, renewable, nuclear), energy conversion methods, future energy demand scenarios, and environmental impacts of energy. Overview of energy policy in the U.S. Analysis of the government’s role in addressing energy-related environmental and national security issues. Offered in alternate years. GE credit: SocSci | SS.—III. (III) Ogden

168A. Methods of Environmental Policy Evaluation (5)
Lecture—3 hours; discussion—1 hour; term paper. Prerequisite: Statistics 13; Economics 100 or Agricultural and Resource Economics 100A, Mathematics 168 or 218; course 175. An introduction to the evaluation of complex environmental problems; impact analysis, benefit-cost analysis, distributional analysis, decision making under uncertainty, and multi-criteria evaluation. GE credit: SocSci | SS.—II. (II) Ogden

168B. Methods of Environmental Policy Analysis (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 168A. Continuation of course 168A, with emphasis on examination of the literature for applications of research and evaluation techniques to problems of transportation, air and water pollution, land use, and energy policy. Students will apply the methods and concepts by means of a major project. GE credit: SocSci | SS.—III. (III) Sancilio

169. Water Policy and Politics (3)
Lecture—3 hours. Prerequisite: Economics 1A or Political Science 1. Politics and policy making associated with water issues, including waters of pollution/quality and water supply. The politics of water decision making and effectiveness of water policy. Broad focus on federal water policy, with case examples from the national, state and local levels. GE credit: SciEng or SocSci | SS.—II. (II) Lubell

170. Conservation Biology Policy (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 and Economics 1A, Economics 100 or Agricultural and Resource Economics 100A recommended. Analysis of policies designed to conserve species and their habitats. Emphasis on how individual incentives affect the success of conservation policies. Valuation of biodiversity and non-timbered resources. Criteria for deciding conservation priorities. GE credit: SciEng or SocSci | SS.—II. (II) Schuwirth

171. Urban and Regional Planning (4)
Lecture—3 hours; discussion—1 hour. Term paper. Prerequisite: course 1; a course in social science and a course in environmental science. How cities plan for growth in ways that minimize environmental harm. Standard planning tools (general plan, zoning ordinance) and innovative new approaches. Focus on planning requirements and practices in California. Relationships between local, regional, state, and federal policy. GE credit: SocSci | SS, WE—II. (II) Handy

172. Public Lands Management (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Economics 1A. An alternative approach to public lands managed by Federal and state agencies. The role each agency’s legislation plays in determining the range of resource allocations. GE credit: SocSci | ACHG, SS.—I. (I) Lubell

173. Land Use and Growth Controls (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Political Science 1, Economics 1A, intermediate statistics [Sociology 106 or Statistics 102 or the equivalent] and local government behavior (Sociology 157, 158 or Political Science 100, 102 or 104.) Exposes students to the economic, political, and legal factors affecting land use and growth controls, and helps students critically evaluate written materials in terms of their arguments and supporting data. GE credit: SocSci | SS.

175. Natural Resource Economics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Agricultural and Resource Economics 106 or Economics 100 or the equivalent. Economic concepts and policy issues associated with natural resources, renewable resources (ground water, forests, fisheries, and wildlife populations) and non-renewable resources (minerals and energy resources, soil). (Same course as Agricultural and Resource Economics 175.) GE credit: SciEng | VL, SS.

176. Applied Research Methods (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Statistics 103 or Sociology 106 or the equivalent. Research methods for analysis of urban and regional land use, transportation, and environmental problems. Application of various data collection and analysis techniques; demographic analysis; basic forecasting, air quality, and transportation models. Collection, interpretation, and critical evaluation of data. GE credit: SocSci | VL, SS.—II. (II) Handly

179. Environmental Impact Assessment (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: upper division standing and one course in environmental science (course 100, 110 or the equivalent). Introduction to the information resources and methods typically used in environmental impact analysis. Emphasis on how environmental information is applied to planning, environmental regulation, and public policymaking, with case studies from California land use and natural resource policy. GE credit: SocSci | SS.—II. (II) Quinn

191A. Workshop on Food System Sustainability (3)
Laboratory/discussion—2 hours; laboratory—4 hours. Prerequisite: course 179 concurrently. Introduction to Geographic Information Systems (GIS) by using ArcView for assessment and environmental planning. Not open for credit to students who have completed Applied Biological Systems Technology 180, 181 or Agricultural Systems and Environment 132. GE credit: SciEng | SE.

(g) Other Courses

90. Workshops on Environmental Problems (1-8)
Laboratory—2-16 hours. Prerequisite: consent of instructor. Workshops featuring empirical analyses of contemporary environmental problems by multidisciplinary student teams. Guided by faculty and lay professionals, the teams seek to develop an integrated view of a problem and outline a series of alternative solutions. Open to all upper division and graduate students (as space permits) only. GE credit: SE.—I, II, III. (I, II, III)

191A. Workshop on Food System Sustainability (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: upper division standing; Planned Behavior 15; Community and Regional Development 20, Agricultural and Resource Economics 121, Plant Sciences 150 or consent of the instructor. Priority enrollment for seniors in the sustainable agriculture core and systems major; limited to 25 students per section. First in a two-quarter senior capstone course sequence. Identifies projects addressing specific problems and
opportunities of sustainable agriculture and food systems, form multidisciplinary teams, and identify and connect with stakeholders to understand their needs and concerns. GE credit: SciEng | SE.—I. (I.) Tomich

191B. Workshop on Food System Sustainability (5) Lecture—2 hours; laboratory—3 hours. Prerequisite: course 191A. Priority enrollment for seniors in the sustainable agriculture and food systems major, limited to 25 students per section. Continuation of course 191A. Student teams conduct analyses of a specific issue in sustainable agriculture or food systems, prepare a critical assessment of technological, economic, environmental, and social dimensions of options, and present their results to stakeholders. GE credit: SciEng | SE.—II. (II.) Tomich

192. Internship (1-12) Internship—3-36 hours. Prerequisite: completion of 84 units and consent of instructor. Work experience off and on campus in all subject areas offered in the College of Agricultural and Environmental Sciences. Internships supervised by a member of the faculty. (P/NP grading only)

197T. Tutoring in Environmental Science and Policy (1-3) Tutorial—2-6 hours. Prerequisite: upper division standing and consent of instructor. Experience in teaching under guidance of faculty member. (P/NP grading only)

198. Directed Group Study (1-5) (P/NP grading only)

199. Special Study for Advanced Undergraduates (1-5) Prerequisite: consent of instructor. (P/NP grading only.)

Graduate

212A. Environmental Policy Process (4) Lecture—3 hours; discussion—1 hour. Prerequisite: course in public policy (e.g., Environmental Science and Policy 160); environmental law (e.g., Environmental Science and Policy 161); course in bureaucratic theory (e.g., Political Science 187 or Environmental Science and Policy 164); course in statistics (e.g., Sociology 106 or Agricultural and Resource Economics 106). Introduction to selected topics in the policy process, applications to the field of environmental policy. Develops critical reading skills, understanding of frameworks of the policy process and political behavior, and an ability to apply multiple frameworks to the same phenomena. Offered in alternate years. (Same course as Ecology 212A.)—III. Lubell

212B. Environmental Policy Evaluation (4) Lecture—1 hour; discussion—1 hour; seminar—2 hours. Prerequisite: intermediate microeconomics (e.g., Economics 100); Statistics 108 or Agricultural and Resource Economics 106; policy analysis (e.g., Environmental Science and Policy 168A or the equivalent); Agricultural and Resource Economics 176. Methods and practices of policy analysis; philosophical and intellectual bases of policy analysis and the political role of policy analysis. (Same course as Ecology 212B.) Offered in alternate years. —(III.) Sparhawk

220. Tropical Ecology (3) Lecture—2 hours; discussion—1 hour. Prerequisite: advanced introductory ecology course—course 100, Evolution and Ecology 101, 117; Evolution and Ecology 138 recommended. Open to graduate and undergraduate students who meet requirement subject to consent of instructor. An overview of present status of knowledge on structure and processes of major tropical ecosystems. Differences and similarities among tropical and temperate systems. Offered in alternate years. —(III.) Rejmanek

228. Advanced Simulation Modeling (3) Lecture—2 hours; discussion—1 hour. Prerequisite: courses 128-128L, Statistics 108 or Agricultural and Resource Economics 106. Advanced techniques in simulation modeling; optimization and simulation, dynamic parameter estimation, linear models, error propagation, and sensitivity testing. Latter half of course will introduce model evaluation in ecological and social system models.

252. Sustainable Transportation Technology and Policy (3) Lecture—2 hours; discussion—1 hour. Prerequisite: course 160 or the equivalent. Role of technical fixes and demand management in creating a sustainable transportation system. Emphasis on transportation options, including alternative fuels, electric propulsion, and IVHS. Analysis of market demand and travel behavior, environmental impacts, economics and politics. (Same course as Civil and Environmental Engineering 252.)—III. Spetich

275. Economic Analysis of Resource and Environmental Policies (4) Lecture/discussion—4 hours. Prerequisite: Agricultural and Resource Economics 204/Economics 204. Development of economic analysis with particular emphasis on market failure concepts, welfare economics, theory of renewable and non-renewable resource use, and political economic models. Applications to policy issues regarding the agricultural/environment interface and managing resources in the public domain. (Same course as Agricultural and Resource Economics 275.)—III. (III.)

278. Research Methods in Environmental Policy (3) Lecture/discussion—3 hours. Prerequisite: Agricultural and Resource Economics 106 or the equivalent. Introduction to scientific research in environmental policy. Major issues in the philosophy of the social sciences. How to design research that acknowledges theoretical assumptions and that is likely to produce evidence in an intersubjectively reliable fashion with explicit recognition of its uncertainties.

298. Directed Group Study (1-5) (P/NP grading only)

299. Research (1-12) Prerequisite: graduate standing. (S/U grading only.)

Department Office, 4138 Meyer Hall 530-752-1142; http://evtxx.ucdavis.edu

Faculty

Gary N. Cher, Ph.D., Professor (Environmental Toxicology, Nutrition) Michaela S. Deriess, Ph.D., Professor Niles Gaskwad, Ph.D., Assistant Professor Michele La Merrill, Ph.D., M.P.H., Assistant Professor Patricia Oteiza, Ph.D., Professor (Environmental Toxicology, Nutrition) Robert H. Rice, Ph.D., Professor Takayuki Shibamoto, Ph.D., Distinguished Professor Ronald S. Tjeerdema, Ph.D., Professor Barry W. Wilson, Ph.D., Professor (Animal Science, Environmental Toxicology) Andrew Whitehead, Ph.D., Assistant Professor Matthew J. Wood, Ph.D., Associate Professor Qizhang, Ph.D., Associate Professor

Emeriti Faculty

Arthur Craigmill, Ph.D., Specialist in Cooperative Extension, Emeritus Donald G. Crosby, Ph.D., Professor Emeritus Dennis P. H. Hsieh, Sc.D., Professor Emeritus James N. Seiber, Ph.D., Professor Emeritus Michael W. Stimmann, Ph.D., Specialist in Cooperative Extension, Emeritus Dorothy E. Woolley, Ph.D., Professor Emeritus

Affiliated Faculty

George V. Alexeeff, Ph.D., Adjunct Professor Deborah Bennett, Ph.D., Associate Professor (Public Health Sciences, School of Medicine) Matt Hengel, Ph.D., Assistant Adjunct Professor Dirk Holstege, Ph.D., Assistant Professor Norman Kado, Ph.D., Adjunct Professor Sree Kanthaswamy, Ph.D., Associate Adjunct Professor John Knezovich, Ph.D., Adjunct Professor Charlie Li, Ph.D., Assistant Adjunct Professor Melanie Marty, Ph.D., Associate Adjunct Professor Alyson E. Mitchell, Ph.D., Professor (Food Science and Technology) Cecilia Van Breda, Ph.D., Lecturer (UC Davis Extension Forensics Program and Department of Justice) Zachary A. Wong, Ph.D., Adjunct Professor

The Major Program

Toxic agents found in the environment include pesticides, food additives, industrial waste, and metals as well as chemicals produced by animals, plants, fungi and bacteria. Students in the Environmental Toxicology major learn how toxicants produce adverse effects by understanding both their environmental fates and biological activities. They learn about monitoring concentrations and the distribution and persistence of agents found in water, soil, air and foods. Toxicity testing procedures and exposure assessments are used to help evaluate potential for harm to humans and other species. By understanding the cellular targets and biochemical mechanisms of perturbation by toxicants, toxicologists can better estimate adverse effects. Overall, students learn mechanisms by which toxic agents act, their origin and fate and how toxicologists evaluate the risk of adverse effects and balance them against the benefits of us.

The Program. Preparatory courses in biology, chemistry, mathematics, and physics are required to provide fundamental principles which underlie toxicology. Students in the major are expected to understand the environmental fates and biological activities of different classes of toxic substances, and the legislative issues which arise from chemical use. Opportunities are available to develop in-depth understanding in areas of emphasis through selection of electives.

Specializations/Emphases. Elective coursework in many disciplines can complement the required core courses. Providing a framework for selecting restricted electives, the major offers specializations in (1) Environmental Toxicology and Chemistry, (2) Forensic Science and Regulatory Toxicology, and (3) Molecular and Biomedical Toxicology. The first category includes topics in chemical fate, transport and degradation, as well as ecology, wildlife, etc.

Quarter Offered: I—Fall; II—Winter; III—Spring; IV—Summer; 2015-2016 offering in parenthesis

Fall 2011 and on Revised General Education (GE): AH—Arts and Humanities; SS—Social Sciences; AS—Baccalaureate Programs; DD—Diverse Communities; Div—Diverse Diversity; Wrt—Writing Experience

Environmental Sciences 303
Environmental Toxicology

and aquatic toxicology. The second category includes forensic science, environmental policy and management. The third category includes pharmacology, biotechnology, medicine, veterinary medicine, and food toxicology. Students are encouraged to select course work from these specializations and beyond to match their interests.

Internships and Career Alternatives. Occupations that use environmental toxicology include risk assessment, pharmaceutical development, food additive toxicity testing, managing regulatory compliance, use of forensic analysis, pest control, monitoring and field sampling, industrial hygiene, and environmental health and safety. A substantial proportion of graduates elect to pursue advanced training in graduate or professional schools. Others with the B.S. degree have gone on to law, medical, pharmacy, or veterinary medical school, as well as to graduate degrees in pharmacology, toxicology, agricultural and environmental chemistry, or public health. During undergraduate study, optional internships or research projects are recommended to provide training and work experience to help students pursue future goals.

Courses in Environmental Toxicology (ETX)

Lower Division

10. Introduction to Environmental Toxicology (3)

Lecture—3 hours. Hazardous substances, their effects on human and environmental health, and environmental and public health. During undergraduate study, optional internships or research projects are recommended to provide training and work experience to help students pursue future goals.

Minor Adviser, M.S. Denison

Graduate Study. Programs of study leading to M.S. and Ph.D. degrees through related Graduate Groups such as Pharmacology and Toxicology, Biochemistry, Molecular, Cellular, and Developmental Biology, Agricultural and Environmental Chemistry, and Master’s Degree Program. For information on graduate study, contact the Advising Office or the appropriate graduate adviser; see Graduate Studies, on page 111.
130. The Role and Applications of Toxicology in Modern Industry (3) Lecture—3 hours. Prerequisite: course 101 required; course 112A recommended. Role of toxicology in industry research and development, human health and environmental protection, hazard and risk evaluations, risk assessment, and communications, product stewardship, and regulatory compliance. Scientific principles and methods of toxicology in chemical, energy, pharmaceutical, pesticide, biotechnology industries. GE credit: SciEng | QL, SE, SL, VL, WE. —III. (III.) Wong

138. Legal Aspects of Environmental Toxicology (3) Lecture—3 hours. Prerequisite: course 10 or 101 recommended. Federal and California legislation concerning air and water pollution, pesticide use, food and feed additives, consumer protection, and occupational exposure to toxic substances; roles of federal regulatory agencies; alternatives to government control. GE credit: SciEng | SE, VL, WE. —II. (II.) Alexeiff

146. Exposure and Dose Assessment (3) Lecture—3 hours. Prerequisite: course 112A; course 135 recommended. The exposure component of risk assessment; air and water pollution, pesticide use, food and feed additives, consumer protection, and occupational exposure to toxic substances; roles of federal regulatory agencies; alternatives to government control. GE credit: SciEng | SE, VL, WE. —II. (II.) Alexeiff

190. Seminar (1) Seminar—1 hour. Prerequisite: consent of instructor. Selected topics presented by students, faculty, or outside speakers covering current research and instructional activities within environmental toxicology. Reports and discussion concerning oral and written presentations, literature sources, and career opportunities. P/N credit: SciEng | SE, VL, WE. —I. (I.) Bennett

190C. Research Group Conference (1) Discussion—1 hour. Prerequisite: consent of instructor. Weekly conference of advanced research methods and the interpretation of research results. P/N credit: SciEng | SE, VL, WE. —II. (II.) Clunie

190S. Environmental Toxicology Career Seminar (1) Seminar—1 hour. Careers in environmental toxicology: discussions with graduates from the Department of Environmental Toxicology and other experts in the field. P/N credit: SciEng | SE. —II. (II.) Heiken

192. Internship (1-12) Internship—3.6 hours. Prerequisite: completion of 84 units and consent of chair. Work experience off and on campus in all subject areas offered in the College of Agricultural and Environmental Sciences. Internships supervised by a member of the faculty. P/N credit: SciEng | SE. —I. (I.) Holsteg

194HA-194HB. Honors Research (3-3) Discussion—1 hour; laboratory—6 hours. Prerequisite: senior standing, minimum GPA of 3.250, consent of instructor. Specific research project conducted under the supervision of a faculty sponsor. Experience to include experimental design, learning new techniques, data analysis and interpretation of findings. P/N credit only; deferred grading standing completion of sequence. GE credit: SE.

194HC. Honors Research (3) Laboratory—6-9 hours; discussion—1 hour. Prerequisite: senior standing, minimum GPA of 3.250; and consent of instructor. Additional standing completion of sequence. GE credit: SciEng | QL, SE, SL, VL, WE. —III. (III.) Love

197T. Tutoring in Environmental Toxicology (1-5) Hours and duties will vary depending upon course being tutored. Prerequisite: advanced standing in Environmental Toxicology, a related major, or the equivalent experience and consent of instructor. Teaching Toxicology including conducting discussion groups, regular departmental courses under direct guidance of staff. May be repeated for credit up to a total of 5 units. (P/N grading only.) GE credit: SE.

198. Directed Group Study (1-5) P/N grading only. GE credit: SE.

199. Special Study for Advanced Undergraduates (1-5) (P/N grading only.) GE credit: SE.

Graduate

203. Environmental Toxicants (4) Lecture—3 hours; discussion—1 hour. Prerequisite: Chemistry 128C (or the equivalent), or Chemistry 8B recommended. Mechanisms of toxicants, selected toxicants illustrating their occurrence, structure, and the reactions undergoing detection, toxicity, fate, and ecological importance. Offered in alternate years. —II. Beck, Seibe

214. Mechanisms of Toxic Action (3) Lecture—3 hours. Prerequisite: Biological Sciences 102, 103, and consent of instructor. Chemical, biochemical, and molecular mechanisms underlying the adverse effects of toxic agents. Students are required to write a grant proposal and participate in a grant review panel. Offered in alternate years. —II. Denison, Hammond

220. Analytical Toxicants (3) Lecture—3 hours. Prerequisite: coursework in organic chemistry. Principles of microanalysis of toxicants. Theoretical considerations regarding separation, detection and quantitative determination of toxicants using various instrumental techniques. (Same course as Forensic Science 220.)—I. (I.) Zhang

220L. Analysis of Toxicants Laboratory (2) Laboratory—6 hours. Prerequisite: course 220 (may be taken concurrently). Laboratory techniques for microanalysis of toxicants. Separation, detection, and quantitative determination of toxicants using chemical and instrumental methods. —II. (II.) Zhang

228. Gas Chromatography/Mass Spectrometry of Toxic Chemicals (3) Lecture—1 hour; discussion—1 hour; laboratory—3 hours. Prerequisite: course 220 and Chemistry 129C; or consent of instructor. Application of GC/MS techniques to investigate toxic chemicals. Mass spectral fragmentations and their application to the structural elucidation. Practical application of GC/MS in current research. Preference to Environmental Toxicology graduate students. Offered in alternate years. —III. Holsteg

232. Current Topics in Neurotoxicology (3) Lecture—3 hours. Prerequisite: core courses in one of the following courses: Pharmacology and Toxicology, Agricultural and Environmental Chemistry, Biochemistry and Molecular Biology, Cell and Developmental Biology, Immunology, Molecular Cellular and Integrative Physiology or Neuroscience. Restricted to upper level undergraduate students must obtain permission from the course coordinator. General principles of neurotoxicology, the cell and molecular mechanisms, and health impacts of specific neurotoxicants and the contribution of neurotoxic compounds to complex neurodevelopmental disorders and neurodegenerative diseases. (Same course as Forensic Science 232 )—III. (III.) Lin

240. Ecotoxicology (3) Lecture—3 hours. Prerequisite: elementary course in toxicology and ecology or the equivalent. Consent of instructor. Principles of toxicology as applied to chemical action on natural populations, communities, and ecosystems. Physical, chemical, and biological characteristics which make toxicants ecologically toxic, modeling, and field research. Selected case histories are analyzed and presented in class. —III. (III.) Whitehead

250. Reproductive Toxicology (3) Lecture—3-1/2 hours, lecture/discussion—1.5 hours. Prerequisite: Physiology 220 or Pharmacology—Toxicology 203. Application of toxicological principles in reproductive studies. Effects of toxicants on the male, female, and developing embryo/fetus. Critical evaluation of reproductive toxicity studies and development of mechanistic approaches to understanding how chemical exposure can adversely affect reproduction. Offered in alternate years. —II. Cherr, Golub

260. Immunotoxicology (3) Lecture—3 hours. Prerequisite: undergraduate or graduate introduction to immunology coursework recommended, but not required; consent of instructor. Provides students with skills and knowledge for evaluating and applying research on the impact of environmental toxicants on immunological function in human and wildlife populations. Offered in alternate years. —Golub.

270. Toxicology of Pesticides (3) Lecture—3 hours. Prerequisite: one course each in (a) Organic Chemistry, (b) Biochemistry, (c) Toxicology (course 101 or equivalent), or consent of instructor; graduate standing. Classification and chemical properties of pesticides, their mode of action, metabolism and disposition, pesticide resistance, effects on human health and ecology and methods of risk benefit analyses. Offered in alternate years.

278. Molecular Techniques (3) Lecture—3 hours. Prerequisite: graduate standing or consent of instructor. Recombinant DNA technology and its applications. (Some course as Forensic Science 278.) Offered in alternate years. —II. Denison, Rice

280. Forensic DNA Analysis (3) Lecture—3 hours. Prerequisite: coursework in genetics and molecular biology; recommended: graduate standing. Critical analysis of forensic DNA analysis; past, present, and emerging technologies; legal and quality assurance issues. DNA extraction, DNA quantitation, multiplex amplification of STR systems, and analysis of STR typing data. (Same course as Forensic Science 280.)—II. (II.) von Beroldingen

281. Principles and Practice of Forensic Serology and DNA Analysis (3) Lecture—2 hours; lecture/discussion—3 hours. Prerequisite: Forensics/course 278 or Forensics/course 280, or equivalent; consent of instructor. Restricted to students enrolled in the M.S. in Forensic Science Program or by consent of Forensic Science Program Director. Comprehensive overview of forensic serology and DNA typing techniques and technologies. Strong emphasis on real-world applications and the understanding and practice of forensic DNA analysis; past, present, and emerging technologies; legal and quality assurance issues. DNA extraction, DNA quantitation, multiplex amplification of STR systems, and analysis of STR typing data. (Same course as Forensic Science 281.)—II. (II.) Rice

284. Non-Human Forensic DNA—Thy and Casework Application (2) Lecture—2 hours. Prerequisite: consent of instructor required for all students enrolled in the MS Forensics program; upper division Molecular Biology and Genetics or its equivalent. Restricted to graduate standing. Provides a comprehensive understanding of plant and animal forensic biology in terms of sam-

Environmental Toxicology 305
Epidemiology

See Medicine and Epidemiology (VME), on page 339.

Faculty
Sharif Aly, D.V.M., M.V.P.M., Ph.D., Assistant Professor (Population Health and Reproduction)
E. Robert Avril, D.V.M., Ph.D., Professor (Population Health and Reproduction)
Rahman Azari, Ph.D., Lecturer (Statistics)
Hsing Jung Bang, Ph.D., Associate Professor (Public Health Sciences)
Christopher M. Barker, Ph.D.
(Internal Medicine)
Deborah Bennett, Associate Professor (Department of Public Health Sciences)
Waltter Boyce, D.V.M., Ph.D., Professor (Population Health and Reproduction)
Kenneth Brown, M.D., Professor (Nutrition)
Diana Cassady, D.P.H., Associate Professor (Department of Public Health Sciences)
Munirah Chigwewe, M.P.H., Ph.D., Assistant Professor (Medicine and Epidemiology)
Bruno Cheomel, D.V.M., Ph.D., Professor (Population Health and Reproduction)
Patricia Cogliano, D.V.M., Ph.D., Assistant Professor (Pathology, Microbiology, and Immunology)
Rosemary Cress, Ph.D., Associate Professor (Public Health Sciences)
Beate Crossley, Ph.D., Associate Professor (California Animal Health and Food Safety Laboratory)
Kathryn DeRiemer, Ph.D., Associate Professor (Public Health Sciences)
Lori Dermaley, M.D., M.P.H., Assistant Professor (Internal Medicine)
Kathryn Dewey, Ph.D., Professor (Nutrition)
Christian Drake, Ph.D., Professor (Statistics)
Jonathan Ducore, M.D., Professor (Pediatrics)
Holly Ernest, D.V.M., Ph.D., Professor (Population Health & Reproduction)
Thomas B. Farver, Ph.D., Professor (Population Health and Reproduction)
Janet Foley, M.S., Ph.D., Emeritus (Medicine and Epidemiology)
Estella Gerraghty, M.D., M.S., M.P.H., Assistant Professor (Internal Medicine)
David R. Gibson, Ph.D., Professor (Public Health Sciences)
Ellen Gold, Ph.D., Professor (Public Health Sciences)
Lynette Hart, Ph.D., Professor (Population Health and Reproduction)
Danielle Harvey, Ph.D., Associate Professor (Public Health Sciences)
Iva Hertz-Picciotto, Ph.D., Professor (Public Health Sciences)
Ashley Hill, D.V.M., M.V.P.M., Ph.D., Assistant Professor (California Animal Health and Food Safety Laboratory)
Martin Hoffman, M.D., Professor (Physical Medicine and Rehabilitation)
Ana Maria Isail, Ph.D., Associate Professor (Public Health Sciences)
Jiming Jiang, Ph.D., Professor (Statistics)
Philip Kass, M.V.P.M., D.V.M., Ph.D., Professor (Population Health and Reproduction)
Kyoumung Kim, Ph.D., Associate Professor (Department of Public Health Sciences)
Sunny Kim, Ph.D., Associate Professor (Public Health Sciences)
Richard L. Kravitz, M.D., Professor (Internal Medicine)
Christine Kreuder-Johnson, Ph.D., Associate Professor (Wildlife Health Center)
Michelle A. La Merrill, M.P.H., Ph.D., Assistant Professor (Public Health Sciences)
Gay Yung Kim, Ph.D., Associate Professor (Department of Public Health Sciences)
Jerry Binns, M.D., Ph.D., Professor (Family and Community Medicine)
Diana L. Migliore, Ph.D., Assistant Professor (Public Health Sciences)
William Reisen, Ph.D., Professor (Center for Vectorborne Diseases)
Lihong Qi, Ph.D., Associate Professor (Department of Public Health Sciences)
David M. Rocke, Ph.D., Professor (Department of Public Health Sciences)
Patrick Romano, M.D., M.P.H., Professor (Internal Medicine)
Joan Dean Rowe, M.P.V.M., D.V.M., Ph.D., Associate Professor (Population Health and Reproduction)
Christian Sandrock, M.D., M.P.H., Associate Professor (Internal Medicine)
Marc Schenker, M.D., Ph.D., Professor (Public Health Sciences)
Thomas Scott, Ph.D., Professor (Entomology)
Woutina Smith, D.V.M., M.P.H., Ph.D., Associate Professor (Pathology, Microbiology and Immunology)
Christine Stewart, M.P.H., Ph.D., Assistant Professor (Department of Nutrition)
Robert Szabo, M.D., Professor (Orthopedic Surgery)
Daniel Tancredi, Ph.D., Assistant Professor (Pediatrics)
Xiaowei Yang, Ph.D., Assistant Professor (Department of Public Health Sciences)
Michael Ziccardi, Ph.D. (Wildlife Health Center)

Emeriti Faculty
Robert Bondurant, D.V.M., Professor Emeritus
James Case, D.V.M., Ph.D., Professor Emeritus
Nancy East, M.V.P.M., D.V.M., Professor Emeritus
Bruce Eldridge, Ph.D., Professor Emeritus
Neil Flynn, M.D., M.P.H., Professor Emeritus
Sharon Hietala, Ph.D., Professor Emeritus
Robert Shumway, D.V.M., M.V.P.M., Ph.D., Emeritus
Mark Thurmond, D.V.M., M.V.P.M., Ph.D., Emeritus
Alvin Wiggins, Ph.D., Emeritus

Graduate Study. The Graduate Group in Epidemiology offers programs of study and research leading to the M.S. and Ph.D. degrees. Areas of emphasis include environmental/occupational epidemiology; infectious disease epidemiology; zoonotic and vector-borne diseases; epidemiologic methods and biostatistics; health services and health economics; nutritional epidemiology; reproductive, perinatal, developmental and pediatric epidemiology; wildlife epidemiology; and social and behavioral epidemiology. For detailed information regarding the program, address the chairperson of the group or see the website.

Graduate Advisers. Janet Foley (Medicine and Epidemiology), Lihong Qi (Public Health Sciences), and William Reisen (Center for Vectorborne Diseases)

Required Courses for the Program
Prerequisite Courses. Prerequisites may be taken concurrently with required and/or advanced courses below.
Mathematics 16A-16B or 21A-21B Statistics 102, 106, and 108, or Preventive Veterinary Medicine 402, 403

Required Courses. These courses are required of all students in the program; M.S. and Ph.D. degrees. These requirements cannot be waived and must be met before a student’s Qualifying Examination.
Epidemiology 202, 203, 204, 205, 206, 207, 208 and 290 One course from: Population Health and Reproduction 202 or Statistics 44

Related Courses. For additional course work in Epidemiology, please see Medicine and Epidemiology, Preventive Veterinary Medicine, Population Health and Reproduction, Public Health Sciences, and Statistics.

Courses in Epidemiology (EPI)

Graduate
202. Quantitative Epidemiology I: Probability (5)
Lecture—4 hours, laboratory—2 hours. Prerequisite: Mathematics 16A/B or 17A/B or 21A/B or equivalent; Statistics 102 and 108 or Population Health and Reproduction 402 and 403 or equivalent; concurrent or previous enrollment in a basic epidemiology course (e.g., course 205). Foundations in probability for epidemiologists. Emphasis on properties of and relationships between distributions and application of probability concepts to epidemiology. Includes a mathematical skills laboratory to assist in solution of epidemiologic problems.

203. Quantitative Epidemiology II: Statistical Inference (4)
Lecture—3 hours, laboratory/discussion—1 hour. Prerequisite: course 202, or Statistics 130A, or 131A, or 133; basic course in Epidemiology (205 or equivalent). Provides the mathematical statistics foundation for statistical models, methods, and data analysis.
204. Quantitative Epidemiology III: Statistical Models (4)
Lecture—4 hours; laboratory/discussion—1 hour. Prerequisite: course 203, or Statistics 130B, or 131B, or 133; Statistics 108 recommended; basic course in Epidemiology (205 or equivalent); consent of instructor. Introduces statistical models, methods, and data analysis in the areas of generalized linear model and survival analysis methodology.

204A. Foundation of Statistical Models, Methods, and Data Analysis for Scientists (4)
Lecture—3 hours; laboratory/discussion—1 hour. Prerequisite: Statistics 130A, or Statistics 131A, or Statistics 133, course 228 recommended. Provides the mathematical statistics foundation for statistical models, methods, and data analysis. —II. (II) Bang

204B. Statistical Models, Methods, and Data Analysis for Scientists (4)
Lecture—3 hours; laboratory/discussion—1 hour. Prerequisite: course 204A; Statistics 108 recommended. Introduces statistical models, methods, and data analysis in the areas of generalized linear, survival, and correlated data methodology. —III. (III) Li

205A. Principles of Epidemiology (4)
Lecture—4 hours. Prerequisite: Preventive Veterinary Medicine 202 or consent of instructor. Basic epidemiologic concepts and approaches to epidemiologic research, with examples from veterinary and human medicine, including outbreak investigation, infectious disease epidemiology, properties of tests, and an introduction to epidemiologic study design and surveillance. (Same course as Preventive Veterinary Medicine 405).—Gold

206. Epidemiologic Study Design (4)
Lecture—30 sessions; discussion—9 sessions; laboratory—2 sessions. Prerequisite: course 205 or consent of instructor. Builds on concepts presented in course 205. Concepts of epidemiologic study design—clinical trials, observational cohort studies, case–control studies—introduced in course 205A are covered in more depth, using a problem-based format. Discussion of published epidemiologic studies. (Same course as Preventive Veterinary Medicine 406A).—Gold

207. Advanced Epidemiologic Methodology (4)
Lecture/discussion—4 hours. Prerequisite: course 206. In-depth development of advanced epidemiologic concepts, theory, methods, and applications for observational studies, including random and systematic error, confounding, causal inference, effect modification, internal and external validity, estimability and interpretation of effect measures, and advanced study designs. —Hertz-Picciotto, Kass

208. Analysis and Interpretation of Epidemiologic Data (3)
Lecture—16 sessions; laboratory—21 sessions; project. Prerequisite: course 204 (may be taken concurrently) and 207, and either Statistics 144 or Population Health and Reproduction 202 and entry level statistical software [e.g., SPSS, BMDP, SAS, MiniTab, S-Plus]. Application of theory and concepts of statistics and epidemiology to analysis and interpretation of data typically found in veterinary and human epidemiologic research. —I. (I) Beckett

220. Problems in Epidemiologic Study Design (4)
Lecture—3 hours; term paper. Prerequisite: Preventive Veterinary Medicine 405 and 406 or the equivalent; Population Health and Reproduction 207 concurrently; Statistics 102 and 106 or the equivalent. Design and development of research protocols and funding applications for peer review. Application of research methods data collection and management and statistical analysis in research proposals. Methods of evaluating research proposals, mechanisms of funding, specifying human subject considerations. —II. (II) Romano

222. Epidemiological Modeling (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: Preventive Veterinary Medicine 405. Techniques of model building and simulation of infectious diseases will be discussed using selected modeling philosophy, construction and validation will be emphasized. Offered in alternate years. —II.

223. Spatial Epidemiology (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: Preventive Veterinary Medicine 405 or Environmental Studies 126 or Veterinary Medicine 409. Geographic Information Systems (GIS) and spatial statistics. Students are expected to complete a term project based on their graduate research. Offered in alternate years. —II.

224. Health and Ecological Risk Analysis (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: Preventive Veterinary Medicine 406 or consent of instructor; background in statistics, including multiple variable techniques; a course in differential equations. A methodological approach to risk analysis for human and animal-related health and ecological issues. Basic principles of risk analysis, including perception, communication, assessment, and management. Emphasis on the assessment of risk. —III.

225. Advanced Topics in Epidemiology Methods (2)
Discussion—2 hours. Prerequisite: courses 205B, 206, and 207 (or equivalents, with consent of instructor). A in-depth study of topics in epidemiology: theory and methods, selected from: causal inference, confounding, study design, or other related areas, with year to year variation. Readings are assigned and students are expected to lead discussions on them. May be repeated for credit when topic differs. Offered irregularly. —III. Hertz-Picciotto

226. Methods for Longitudinal and Repeated Measurement Data (3)
Lecture—2 hours; discussion—1 hour. Prerequisite: course 204 or consent of instructor. Mixed models for longitudinal data (LD)/repeated measurements; Mean and covariance models; General linear LD models; Random effects models; Linear mixed effects models for continuous outcome; Generalized linear mixed effects model for discrete outcome including binary, ordinal and count data. —I. (I) Gold

229. Geographic Information Systems for Health Professionals (4)
Lecture—2 hours; laboratory—6 hours. Emphasis on basic geographic and data management principles. Focus on software proficiency in application to analyzing/solving health-related problems. For graduate and professional students in epidemiology, public health, preventive veterinary medicine, health informatics with interest in spatial techniques in research. —III. (III)

240. Principles of Injury Epidemiology (3)
Lecture/discussion—3 hours. Overview of the epidemiology of human injury, including general principles, surveillance methods, analysis of injury patterns, environmental factors, treatment issues and engineering and legal interventions related to vehicular injuries, drownings, falls, fires and burns, poisonings, firearm injuries, and other intentional injuries. —II. (II) Romano

250. Introduction to Clinical Research Design and Epidemiology (1)
Lecture—1 hour. Prerequisite: graduate standing or medical/nursing personnel. For medical personnel who are or will be involved in medical research. Review of basics of clinical study design and analysis of clinical data. (S/U grading only.)—I. (I) McCurdy, Romano

251. Environmental Epidemiology (3)
Lecture—3 hours. Prerequisite: Preventive Veterinary Medicine 405 (may be taken concurrently); upper division undergraduates who have completed Environmental Studies 126; or the equivalent. Examination of the human health effects and the risk of disease from community, occupational, and personal exposure to toxic substances. Offered in alternate years. —I. Schenker

252. Social Epidemiology (2)
Lecture/discussion—2 hours. Prerequisite: course 205A; consent of instructor. Social determinants of health; psychosocial and physiological pathways; health and social inequality; gender and racial/ethnic disparities in health; social support, social cohesion and health; social gradient in behavioral risk factors; social ecological approaches to health intervention; interventions addressing social determinants. (Same Course as Public Health Sciences 252.)—III.

260. Epidemiology of Chronic Diseases and Aging (3)
Lecture—discussion—3 hours. Overview of the epidemiology of chronic disease in old age. Topics include biology of aging, epidemiology of cardiovascular disease, neoplasms, osteoporosis and fractures, psychosocial factors and health in old age, dementia, functional status and prevention of disease. —II.

270. Research Methods in Occupational Epidemiology (3)
Lecture—discussion—3 hours. Prerequisite: Environmental Studies 126 or Preventive Veterinary Medicine 405; and Statistics 102 or Epidemiology and Preventive Medicine 402. Methods used in epidemiologic research on occupational hazards. Topics include design and analysis of cohort and case-control studies, sample size, measuring dose, choosing a control group, validation of employment and health data, interpreting negative studies, and analysis software. Offered in alternate years. —III.

272. Cancer Epidemiology (2)
Recitation—1 hour; discussion—1 hour. Prerequisite: must have basic understanding of epidemiologic and statistical concepts that are covered in courses 205A, 205B, 206 (may be taken concurrently), and Statistics 102. We will cover the underlying concepts essential to understanding cancer epidemiology, such as trends in incidence and survival, epidemiologic methods used to assess cancer etiology, prevention and control, and an introduction to the cancerinitiation and progression multi-stage model. —II. (II) Cress

290. Seminars in Epidemiology (1)
Seminar—1 hour. Students will actively participate in presentation and discussion of ongoing or published research projects in epidemiology. (S/U grading only.)—III.

291. Seminars in Human Health Services Research and Clinical Epidemiology (1)
Seminar—1 hour. Critical review, evaluation, and discussion of research in health services and clinical epidemiology. Presentation of statistical, epidemiologic, and econometric methods. Students present their own research and critique the work of others. May be repeated for credit. [Same course as General Medical 291.] (S/U grading only.)—I, II, III. (I, II, III)

298. Group Study (1-5).
Seminar—1-5 hours. Group study in selected areas of epidemiology.

299. Research (1-12).
Research in selected areas of epidemiology. (S/U grading only.)

Quarter Offered: I—Fall, II—Winter, III—Spring, IV—Summer, 2015-2016 offering in parentheses.

Pre-Fall 2011 General Education (GE): AH—Arts and Humanities; SC—Science and Engineering; SS—Social Sciences; ACH—American Cultures; DD—Domestic Diversity; OL—Oral Skills; QL—Quantitative; SL—Scientific; VL—Visual; WC—World Cultures; WE—Writing Experience

Fall 2011 and on Revised General Education (GE): AH—Arts and Humanities; SC—Science and Engineering; SS—Social Sciences;
Evolution and Ecology

Within the humanities and social sciences. The A.B. degree is especially appropriate for those students who wish to combine the arts or languages with evolution and ecology for career preparation in such areas as scientific writing, translating or illustration.

Career Alternatives. A degree in Evolution, Ecology and Biodiversity prepares the student for career opportunities in research, teaching, health professions, veterinary medicine, agriculture, environmental management, and industry. Many students gain some research experience while at UC Davis and choose to continue their training at the graduate level. This track offers careers in academics, government, environmental organizations, or business.

A.B. Major Requirements:

Preparatory Subject Matter .......................... 41-45
Biological Sciences 2A-2B-2C ............. 15
Chemistry 2A-2B-2C ....................... 10
Mathematics 17A-17B (17C recommended) or 21A-21B (21C recommended) or Statistics 100 or 102 ............ 4-8
Physics 1, 1A-1B or 8A-8B ................. 6

Depth Subject Matter ......................... 36
Biological Sciences 101 ................. 4
One course from: Evolution and Ecology 100; Geology 107; Anthropology 151 .......... 3-4
One course from: Evolution and Ecology 101; Environmental Policy 100; Wildlife, Fish, and Conservation Biology 151 .............. 4
Additional upper division coursework in biological science to achieve a total of 36 or more units ........................................ 24-25
Include at least one course from each of the areas of study below.

Areas of Study:

(1) Biodiversity: Entomology 103; Evolution and Ecology 105, 108, 112, 140; Microbiology 105; Nematology 110; Plant Biology 116, 148; Plant Sciences 147; Wildlife, Fish, and Conservation Biology 110, 111, 120, 134.

Note: A maximum of four units of variable-unit courses (numbered 192, 198, 199) may be applied to the upper division elective unit requirement. Courses numbered 197T are not applicable to the upper division elective unit requirement.

Total Units for the Major .................. 77-81

B.S. Major Requirements:

Preparatory Subject Matter .......................... 56-66
Biological Sciences 2A-2B-2C ............. 15
Chemistry 2A-2B-2C ....................... 15
Chemistry 8A-8B or 118A-118B-118C .......... 6-12
Mathematics 17A-17B-17C or 21A-21B (21C recommended) ............ 8-12
Physics 7A-7B-7C ................. 12

Depth Subject Matter ......................... 49
Biological Sciences 101, 105 (or 102+103), 107, 109, 110 ........ 10-14

Laboratory or field course: At least one of the courses taken to fulfill these requirements must include a laboratory or field component.

Two courses in Advanced Evolution or Evolution and Ecology 102, 103, 107, 115, 117*119*, 120, 121, 123, 138, 141, 147, 149, 150, 161, 180A and 180B, 181.

Minor Program Requirements:

Quarter Offered: Fall, II-Winter, III-Spring, IV-Summer, 2015-2016 offering in parentheses

Pre-Fall 2011 General Education (GE): ArtHum=Arts and Humanities; SciEng=Science and Engineering; SocSci=Social Sciences; DivDom=Domestic Diversity; Wr=Writing Experience

Fall 2011 and on Revised General Education (GE): AH=Arts and Humanities; SE=Science and Engineering; SS=Social Sciences;

AOGH=American Cultures; DD=Domestic Diversity; OL=Oral Languages; QL=Quantitative; SL=Scientific; VL=Visual; WC=World Cultures; WE=Writing Experience
Major Advisers. Students transferring to UC Davis from another institution and majoring in Evolution, Ecology and Biodiversity must consult an adviser immediately upon matriculation so that their transfer credits can be applied to the major requirements. All new students in the major should contact the Biology Academic Success Center for adviser assignment. Substitutions of courses not on the above list for major requirements are arranged with the adviser.

Advising Center for the major is located at the Biology Academic Success Center (BASC), 1023 Sciences Laboratory Building, 530/752-0410; http://www.biosci.ucdavis.edu/BASC. Pre-professional students should establish contact with the Pre-health Sciences Advising office in 111 South Hall, to learn what specific courses are required on their transcripts.

Teaching Credential Subject Representative. Students planning for a teaching career should consult the School of Education in regard to requirements for certification, see the Teaching Credential/M.A. Program on page 115.

Courses in Evolution and Ecology (EVE)

Lower Division

2. Biodiversity (3)
Lecture—2 hours; lecture/discussion—1 hour. Introduction to nature, scope and geographical distribution of biodiversity (the diversity of life, with emphasis on plants and animals, especially insects). Humans and biodiversity—domestication, aesthetics, ethics and valuation. Species richness and “success.” Biodiversity through time; monitoring, evaluation of conservation; global and continental. (Same course as Entomology 2.) Offered irregularly. GE credit: SciEng, Wrt | JE, SL, WE.

10. Evolution for Non-Biologists (4)
Lecture—3 hours. Introduction to evolutionary biology for the general public. Offered in alternate years. GE credit: SciEng | QL, SE, SL — (I) Begun.

Lecture—3 hours; discussion—1 hour. Prerequisite: elementary biological recommended. Ecological principles with emphasis on humans and their interactions with the environment; how humans affect and depend on natural ecosystems; the future of the Earth’s biota considered irregularly. GE credit: SciEng | QL, SE, SL, WE.

12. Life in the Sea (3)

92. Internship (1-12)
Internship—3-36 hours. Prerequisite: lower division standing; consent of instructor. Work experience off and on campus in all subject areas offered in the Department of Evolution and Ecology. Internships supervised by a member of the faculty. May be repeated for credit. (P/NP grading only) — (I, II, III, (I, II, III) — Begun.

98. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only) GE credit: SE.

99. Special Study for Lower Division Students (1-5)
(P/NP grading only) GE credit: SE.

Upper Division

100. Introduction to Evolution (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Biological Sciences 1A, 1B, 1C, or 2A, 2B, 2C; Biological Sciences 101; Mathematics 16A, 16B, 16C or the equivalent; Statistics 13 or 100 (Statistics 100 recommended). A general survey of the origins of biological diversity and evolutionary mechanisms. GE credit: SciEng | QL, SE, SL — (I, II, III, (I, II, III) — Begun. Course:

101. Introduction to Ecology (4)
Lecture—3 hours; lecture/discussion—1 hour. Prerequisite: Biological Sciences 1A, 1B, 1C, or 2A, 2B, 2C; Mathematics 16A, 16B, 16C or the equivalent. A general examination of ecological principles. GE credit: SciEng | QL, SE, SL, VL — (I, II, III, (I, II, III) Gaylord, Rejmanek, Schoener, Strong, Williams.

101Q. Introduction to Computer Models in Ecology (1)
Autotutorial—1.5 hours; extensive problem solving—1.5 hours. Prerequisite: concurrent enrollment in course 101. Computational methods and mathematical models used to study ecological phenomena. Offered irregularly.

102. Population and Quantitative Genetics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Biological Sciences 101, and Statistics 100 or 102, and computer literacy obtained by randomly generating, genetic drift, natural selection, inbreeding, migration, and mutation in theory and actuality. The resemblance between relatives and consequences of selection for application of these ideas to topics such as the evolution of sex. Offered in alternate years. GE credit: SciEng | SE — (I) Langley.

103. Phylogeny, Speciation and Macroevolution (4)
Lecture—3 hours; laboratory/discussion—3 hours. Prerequisite: course 100. Statistical inference of evolutionary patterns and processes above the species level. Topics include phylogenies and divergences times, character evolution, biogeographic history, and rates and patterns of lineage diversification, with an emphasis on the origin of species. Offered in alternate years. GE credit: SciEng | QL, SE, SL — (I, II) Moore, Turelli

104. Community Ecology (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 101 or Environmental Science and Policy 101. Population growth and density dependence; predation; exploitative, interference and apparent competition; coexistence mechanisms; niches, spatial and temporal variation; stability, diversity, and productivity of food webs; applications to conservation and biological control. Emphasis on quantitative understanding through models, concepts, and empirical evidence. GE credit: SciEng | SE, SL, VL.

105. Phylogenetic Analysis of Vertebrate Structure (4)
Lecture—2 hours; laboratory—6 hours. Prerequisite: Biological Sciences 1A and 1B, or 2B and 2C. The structure of the classes and subclasses of vertebrates is described. Prerequisites: upper division standing or consent of instructor; introductory animal biology (Biological Sciences 1B or 2B), invertebrate zoology (course 112), and/or ecology (course 101) are recommended. Survey of the invertebrate phyla, emphasizing aquatic forms, and focusing on morphology, development, natural history, ecology, and phylogenetic relationships. Limited enrollment. Offered in alternate years. — (II) Grosberg, Sanford

112. Biology of Invertebrates (3)
Lecture—3 hours. Prerequisite: Biological Sciences 1B, or 2B and 2C; courses in systematics, ecology, and evolution recommended. Survey of the invertebrate phyla, emphasizing aquatic forms, and focusing on morphology, development, natural history, ecology, and phylogenetic relationships. Limited enrollment. Offered in alternate years. — (II) Grosberg, Sanford

112L. Biology of Invertebrates Laboratory (2)
Lecture—6 hours. Prerequisite: Biological Sciences 1B, or 2B and 2C; course 112 concurrently. Field and laboratory experience with representative members of the major invertebrate phyla discussed in course 112. Emphasis on comparative morphology, natural history, ecology, and behavior of living invertebrates. Two field trips required. Offered in alternate years. — (II) Grosberg, Sanford

114. Experimental Invertebrate Biology (3)
Lecture—2 hours; discussion—1 hour; laboratory—3 hours; fieldwork—3 hours. Prerequisite: upper division standing or consent of instructor; introductory animal biology (Biological Sciences 1B or 2B), invertebrate zoology (course 112), and/or ecology (Evolution and Ecology 101, and/or Evolution and Ecology 100) are recommended; residence at or near Bodega Marine Lab required. Student must complete the application available at http://www.bml.ucdavis.edu. This course includes an intensive study of the invertebrate phyla, emphasizing aquatic forms, and focusing on morphology, development, natural history, ecology, and phylogenetic relationships. Limited enrollment. Offered in alternate years. — (II) Grosberg, Sanford

Pre-Fall 2011 General Education (GE): Arts & Humanities; SciEng—Science and Engineering; SocSci—Societal Studies; DivD—Diverse Diversity; Wrt—Writing Experience
Fall 2011 and on Revised General Education (GE): AH—Arts and Humanities; SE—Science and Engineering; SS—Social Sciences; AGCH—American Cultures; DD—Diverse Diversity; QL—Oral Skills; QQ—Quantitative; SL—Scientific; VL—Visual; WC—World Cultures; WE—Writing Experience

Quarter Offered: I-Fall, II—Winter, III—Spring, IV—Summer, 2011-2016 offering in parentheses.
115. Marine Ecology (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 1A or 1B, or Biological Sciences 2A, or consent of instructor. Processes affecting the distribution, abundance, and diversity of plant and animal life in the sea. Introduction to marine habitat diversity and human impacts on marine ecosystems. Offered in alternate years. GE credit: SciEng | SE, SL, VI, WE. —II. Stanichewicz

117. Plant Ecology (4)
Lecture—3 hours; fieldwork—3 hours. Prerequisite: Biological Sciences 1A, 1B, 1C, or 2A, 2B, 2C. Plant Biology 111 recommended. The study of the interactions between plants, plant populations or vegetation types and their physical and biological environment. Special emphasis on California. Four full-day field trips and brief write-up of class project required. (Same course as Plant Biology 117.) —II. Latimer, Rejmanek

119. Population Biology of Invasive Plants and Weeds (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: Biological Sciences 1A, 1B, 1C, or 2A, 2B, 2C; introductory statistics recommended. Origin and evolution of invasive plant species and weeds, reproduction and dispersal, seed ecology, modeling of population dynamics, interactions between invasive species and native species, crop/weed competition, biological control. Laboratories emphasize design of competition experiments and identification of weedy species. (Same course as Plant Biology 119.) GE credit: SciEng | SE. —II. III. Dow, Rejmanek

120. Global Change Ecology (3)
Lecture/discussion—3 hours. Prerequisite: course 100 and 101 or equivalents. Treatment of historical evolution of the biosphere resulting from physical, chemical and biological influences. Special focus upon changes caused by humans. Topics pertain to biodiversity, resources, conservation, and ecosystem services. —II. Strong

131. Human Genetic Variation and Evolution (3)
Lecture—3 hours. Prerequisite: Biological Sciences 1B or 2B. Introduction to genome-wide nucleotide sequence variation in human populations and computational methods for its analysis. Topics to include forensics, disease gene mapping, and studies of human evolutionary history. Misuses, such as eugenics, and ethical/legal issues will be discussed. Offered in alternate years. —II. Remmela

138. Ecolatitudes (5)
Lecture—3 hours; discussion—1 hour. Extensive writing. Prerequisite: one course in Biological Sciences, Entomology, Wildlife, Fish, and Conservation Biology. Geography, or tropical experience, or consent of instructor. Biological and human-related aspects of the ecology of low latitudes. Distribution, numbers, and relationships of tropical organisms. Problems of development and conservation in the context of ecological and evolutionary theory. Offered in alternate years. GE credit: SciEng, Writ | SE, SL, WE. —III. Shapiro

140. Paleobotany (4)
Lecture—3 hours; laboratory—2 hours. Prerequisite: Biological Sciences 1A, 1B, 1C, or 2A, 2B, 2C. Introduction to plant fossil record, beginning with invasion of land in the Silurian, emphasizing origin and evolution of major groups and adaptations and changing composition and distribution of floras in relation to plate tectonics and climatic change. —Doyle

141. Principles of Systematics (3)
Lecture—2 hours; independent study. Prerequisite: Biological Sciences 1B or 2B; course 100 recommended. Historical background, philosophical rationale, contemporary approaches, and working rules of biosystematics, including International Code of Zoological Nomenclature. Offered in alternate years. GE credit: SciEng, Writ | OL, QL, SE, SL, VI, WE. —III. Shapiro

147. Biogeography (4)
Lecture—3 hours, term paper. Prerequisite: Biological Sciences 1A and 1B, or 2A, 2B. Movement of terrestrial and marine organisms and biotic and biologic changes in the geographic distribution of organisms. Offered in alternate years. GE credit: SciEng | SE, SL, WE. —II. Shapiro

149. Evolution of Ecological Systems (4)
Lecture—3 hours; term paper. Prerequisite: course 101 or Environmental Studies 100 (or the equivalent), and course 100 (or the equivalent). Evolution as an organizing force in natural communities. Co-adaptation in trophic and competitive relationships. Ecology of polynuromorphs, clines, and speciation. Offered in alternate years. GE credit: SciEng | SE, SL, WE. —I. Shapiro

150. Evolution of Animal Development (3)
Lecture—3 hours. Prerequisite: Biological Sciences 101; and course 100 (may be waived for graduate students with consent of instructor). Comparative analysis of animal development and the genetic basis for morphological differences. Offered in alternate years. GE credit: SE, WE. —II. Kopp

161. Microbial Phylogenomics—Genomic Perspectives on the Diversity and Diversification of the Biosphere (4)
Lecture—3 hours. Prerequisite: Biological Sciences 2A, 2B, or 2C or equivalent. Use of DNA and genomic sequencing in studying the diversity of microorganisms. Diversity of microbes, phylogenetics, genome sequencing, comparative phylogenomics, lateral gene transfer, molecular ecology, metagenomics, and studies of the human microbiome. Offered in alternate years. GE credit: SciEng | SE or (II) | Eisen

175. Computational Genetics (3)
Lecture—2 hours; discussion—1 hour. Prerequisite: Biological Sciences 101 and Statistics 100 or 102. The use of computers to solve problems in genetics and evolution. Introduction to a general purpose computer language (Python), computational statistical methods, and applications such as QTL mapping, linkage detection, estimation of rates of evolution, and gene finding. Offered irregularly.

180A. Experimental Ecology and Evolution in the Field (4)
Lecture/laboratory—3 hours; fieldwork—3 hours. Prerequisite: course 100; course 101, or Environmental Science and Policy 100; Entomology 102. Experimental design in field ecology. Examination of primary literature, experimental design, independent and collaborative research, analysis of data, development of original research paper based on field experiments. (Same course as Entomology 180A.) Offered in alternate years. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | SE, SL, WE. —III. Yang

180B. Experimental Ecology and Evolution in the Field (4)
Lecture/laboratory—3 hours; fieldwork—3 hours. Prerequisite: Evolution and Ecology or Entomology 180A; course 100; Environmental Science and Policy 100; Entomology 105. Experimental design in field ecology. Examination of primary literature, experimental design, independent and collaborative research, analysis of data, development of original research paper based on field experiments. (Same course as Entomology 180B.) Offered in alternate years. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | QL, SL, VI, WE. —III. Yang

181. Ecology and Evolution of Animal-Plant Interactions (4)
Lecture—1.5 hours; lecture/discussion—1.5 hours; term paper; intensive writing or discussion. Prerequisite: Biological Sciences 2B and 2C required. Biological Sciences 2C may be taken concurrently. Animal adaptations for eating plants, pollinating flowers, dispersing seeds. Plant adaptations to herbivore defense, attraction of mutualists; role of coevolutionary arms race, mutualists and cheaters in plant/animal speciation. Exploration through lectures, original scientific literature, discussions and term paper. Offered in alternate years. GE credit: SciEng | QL, QI, SE, SL, WE. —II. Strauss

189. Introduction to Biological Research (1)
Discussion—1 hour. Prerequisite: upper division standing in Evolution and Ecology or related biological science; consent of instructor. Introduction to research methods in biology and discussion of research by faculty, graduate, and undergraduate students. May be repeated for credit up to a total of 6 units. (P/NP grading only) GE credit: SE. —I, II, III, IV, V

190. Undergraduate Seminar (2)
Seminar—2 hours. Prerequisite: upper division standing in the biological sciences or a related discipline. Student reports on current topics with emphasis on integration of concepts, synthesis, and state-of-the-art research approaches. Reviews of literature and reports of undergraduate research may be included. May be repeated for credit. (P/NP grading only) GE credit: SE. —II. Shapiro

192. Internship (1-12)
Internship—3-36 hours. Prerequisite: completion of 84 units and consent of instructor. Work experience off and on campus in all subjects offered in the Department of Evolution and Ecology. Internships supervised by a member of the faculty. (P/NP grading only)

194HA-194HB-194HC. Research Honors Laboratory—6 hours. Prerequisite: Students who have completed 135 units and qualify for the honors program (as defined by the current catalog). Students pursue intensive research under the guidance of a faculty advisor. Students are expected to complete the full three-quarter sequence culminating in the writing of an honors thesis. (Deferred grading only, pending completion of sequence.) GE credit: SciEng | SE, WE.

197. Tutoring in Biological Sciences 2B (1-2)
Tutorial—3-6 hours. Prerequisite: Biological Sciences 1B or Biological Sciences 2B with a grade of B or better. Assisting the instructor by tutoring students in a Biological Sciences 2B laboratory. Tutoring is voluntary and is supervised by a Laboratory Teaching Assistant and the Biological Sciences 2B Laboratory Coordinator. May be repeated three times for credit. (P/NP grading only) GE credit: SE

198. Directed Group Study (1-5)
(P/NP grading only)

199. Special Study for Advanced Undergraduates (1-5)
(P/NP grading only) GE credit: SE. —I, II, III. (I, II, III)

Graduate

210. Molecular Phylogenetic Analysis (3)
Lecture—2 hours; laboratory—3 hours. Theory and practice of inferring phylogenetic trees using molecular sequence data. Practical techniques for obtaining sequence data, advantages and disadvantages of common approaches for inferring trees, statistical methods for comparing alternative hypotheses. (Same course as Entomology 210.) Offered irregularly. —Nadler

211. Applied Phylogenetics (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: course 103 or 210 or Population 165N, or the equivalent, graduate standing. Applications of phylogenetic methods to fields outside of systematics. Core lectures/labs in remedial phylogenetics, phylogenography, conservation, and comparative morphology. Special topics vary yearly. May be repeated one time for credit. —II. Moore, Wainright

220. Species and Speciation (3)
Lecture—2 hours; discussion—1 hour. Prerequisite: course 100, Philosophy 108 or the equivalent. History and Philosophy of Science 130B recommended. Current status of species concepts, models of specia-
phy, History, Native American Studies, Performance Studies, Psychology, Sociology, and Spanish.

The Designated Emphasis in Feminist Theory and Research affords graduate students in affiliated programs the opportunity to augment their Ph.D. in a given discipline with a specialization Feminist Theory and Research. Typically a doctoral student in good standing may seek admission to the Designated Emphasis in Feminist Theory and Research and enroll in Designated Emphasis in Feminist Theory and Research courses. Those students in affiliated Ph.D. programs who complete the requirements of the Designated Emphasis will have this noted on their transcripts and their Ph.D. diploma will note the “Special Emphasis in Feminist Theory & Research.” Students must complete all the requirements for the Ph.D. in their home department. The requirements for the Designated Emphasis in Feminist Theory and Research are the successful completion of the two core courses in fiber and polymer synthesis and Women’s Studies 200B, and two additional courses focusing on women and gender, one in the student’s home department and one outside their home department. A member of the DE affiliated faculty must be a member of the student’s qualifying examination. Analysis of gender is expected to be a central component of both the student’s qualifying examination and doctoral research.

Students should consult with the Chair of the Designated Emphasis in Feminist Theory and Research before enrolling in a graduate course for which they wish to receive credit to ensure that it will count toward fulfilling the requirements of the Designated Emphasis. If possible, please bring a copy of the syllabus or an expanded course description to your meeting.

Graduate Adviser. Contact Maxine Craig in 1101 Hart Hall 530-522-6429; mbcraig@ucdavis.edu.

Fiber and Polymer Science

(College of Agricultural and Environmental Sciences) Faculty. See under Textiles and Clothing, on page 525.

The Major Program
The Fiber and Polymer Science major is concerned with the physical, chemical, and structural properties of fibers and polymers and how these relate to fiber and polymer performance and end-use.

The Program. All students in this major take a common core of course work in chemistry, physics, and mathematics, and depth subject matter in fiber and polymer science; polymer chemistry and physical chemistry, and technical writing. In the restricted electives, students select courses from areas such as computer science and mathematics, chemistry, marketing and management, material and advanced fiber and polymer science, and textiles.

Career Alternatives. The major prepares the student for a career in a wide range of industries in the areas of research and development, technical marketing and management, production, quality control, and science teaching (on completion of an additional year in the teaching credential program). The companies employing Fiber and Polymer Science graduates are those in fiber, polymer, industrial product, textile and/or chemical business. Graduates are prepared to enter the graduate program in textiles or agricultural and environmental chemistry with a specialization in fiber and polymer chemistry, and fiber and polymer science programs at other universities.

Courses in First-Year Seminar (FRS)

Questions pertaining to the following course should be directed to the instructor or to the Center for Excellence in Teaching and Learning.

Lower Division

1. First-Year Seminar (1)
   Seminar—1 hour. Open only to: students who have completed fewer than 45 quarter units; transfer students in their first academic year at UC Davis. Investigation of a special topic through shared readings, discussions, written assignments, term papers, and special activities (such as fieldwork, site visits, laboratory work, etc.). Emphasis placed upon student participation in learning. Students may take more than one First-Year Seminar, but may not take more than one in any given quarter. May be repeated for credit if topic differs. —I, II, III. (I, II, III.)

2. First-Year Seminar (2)
   Seminar—2 hours. Open only to: students who have completed fewer than 45 quarter units; transfer students in their first academic year at UC Davis. Investigation of a special topic through shared readings, discussions, written assignments, term papers, and special activities (such as fieldwork, site visits, laboratory work, etc.). Emphasis placed upon student participation in learning. Students may take more than one First-Year Seminar, but may not take more than one in any given quarter. May be repeated for credit if topic differs. —I, II, III. (I, II, III.)

3. First-Year Seminar (3)
   Seminar—1 hour. Open only to: students who have completed fewer than 45 quarter units; transfer students in their first academic year at UC Davis. Investigation of a special topic through shared readings, discussions, written assignments, term papers, and special activities (such as fieldwork, site visits, laboratory work, etc.). Emphasis placed upon student participation in learning. Students may take more than one First-Year Seminar, but may not take more than one in any given quarter. May be repeated for credit if topic differs. —I, II, III. (I, II, III.)

4. First-Year Seminar (2)
   Seminar—2 hours. Open only to: students who have completed fewer than 45 quarter units; transfer students in their first academic year at UC Davis. Investigation of a special topic through shared readings, discussions, written assignments, term papers, and special activities (such as fieldwork, site visits, laboratory work, etc.). Emphasis placed upon student participation in learning. Students may take more than one First-Year Seminar, but may not take more than one in any given quarter. May be repeated for credit if topic differs. (P/NP grading only).—I, II, III. (I, II, III.)

Fisheries

See Animal Science, on page 153; Biological and Agricultural Engineering, on page 179; and Wildlife, Fish, and Conservation Biology, on page 544.

Food Science

(College of Agricultural and Environmental Sciences)

The Major Program

Food science is a discipline in which biological, physical, and sensory sciences are integrated for the study of foods to ensure their safety, quality, and healthful properties. The food science curriculum encompasses food chemistry and biochemistry, food safety and microbiology, food processing and preservation, and sensory and consumer sciences.

Career Alternatives. Opportunities for employment include positions in the food and allied industries, government agencies, and educational and research institutions. Graduate study for the food science student may lead to the M.S. or Ph.D. degree in food science, or in related fields such as agricultural chemistry, biochemistry, microbiology, and nutrition.

B.S. Major Requirements:

Preparatory Subject Matter..................... 61

Depth Subject Matter.......................... 49

Food Science and Technology 100A, 100B, 100C, 100E, 104E

Communication 1

Mathematics 16A-16B-16C

Biological Sciences 2A

Chemistry 2A-2B-2C; 8A, 8B (or more advanced series)

Physics 7A-7B-7C

Food Science and Technology 50

Nutrition 10 (or approved substitute)

Select one of the following five options:

Food Science Option

The Food Science option provides a broad exposure to food chemistry, food microbiology and food processing. Students find positions in quality assurance, product development, and food processing in the food industry.

Restricted Electives for the Food Science option .................................................. 18

The restricted electives are:

1. Provide a broad exposure to students who would seek positions in quality assurance, product development, and processing in the food industry
2. Prepare students for graduate study in food science or related programs,
3. Prepare students for professional school in the health sciences. Select courses from a...
Food Science (A Graduate Group)

Group Office, 1204 RMI South Building 530-752-8035; Fax 530-752-0382; http://www.foodscience.ucdavis.edu

Food Science and Technology (College of Agricultural and Environmental Sciences)

Michael J. McCarthy, Ph.D., Professor Emeritus
Academic Senate Distinguished Teaching Award

Food Science (A Graduate Group)

Food Science and Technology Option

The Brewing Science option prepares students for careers in production or quality assurance within the brewing industry or other food fermentation industries (e.g., other alcoholic beverages, vinegar and cheese). The option also prepares students for graduate study in food science or related programs, exposes the students to diverse topics, including chemistry, biochemistry, microbiology, and processing.

Specific course requirements

Major Adviser
A.E. Mitchell (Food Science and Technology)

Advising Center
For the major is located in 1208 RMI South Building 530-752-8368.

Graduate Study
A program of study and research leading to the M.S. and Ph.D. degrees in Food Science is available (see below). For further information on graduate study, contact the graduate advisor.

Food Science (A Graduate Group)

Gary M. Smith, Ph.D., Chairperson of the Group
Group Office, 1204 RMI South Building 530-752-8035; Fax 530-752-0382; http://www.foodscience.ucdavis.edu

Faculty
Includes members from twelve departments in the Colleges of Agricultural and Environmental Sciences and Engineering, and the Schools of Medicine and Veterinary Medicine.

Graduate Study
The interdepartmental Graduate Group in Food Science offers programs of study leading to the M.S. degree and to the Ph.D. degree.

Graduate studies stress the application of the biological, chemical, physical, and behavioral sciences to the processing, preservation, quality evaluation, public health aspects, and utilization of foods. For the M.S. degree, there are four areas of specialization: chemistry-biochemistry, microbiology, engineering-technology, and sensory science. Individually designated programs are also acceptable. For the Ph.D., there are four areas of emphasis: biochemistry, chemistry, microbiology/fermentation, and sensory science. Detailed information regarding graduate study is available through the Group Chairperson or the Group Office.

Graduate Advisers

Courses in Food Science and Technology (FST)

Quarter Offered:

I = Fall, II = Winter, III = Spring, IV = Summer; 2015-2016 offering in parentheses.

Pre-Fall 2011 General Education (GE): ArtHum—Arts and Humanities; SciEng—Science and Engineering; SocSci—Social Sciences; ACHG—American Cultures; DD—Domestic Diversity; Wrt—Writing Experience

Fall 2011 and on Revised General Education (GE): AH—Arts and Humanities; SE—Science and Engineering; SS—Social Sciences; AGCH—American Cultures; DD—Domestic Diversity; QL—Oral Skills; QL—Quantitative; SL—Scientific; VL—Visual; WC—World Cultures; WRT—Writing Experience

1. Principles of Food Science (3)
Lecture—2 hours; discussion—1 hour. Food science fundamentals. Fresh and processed food technologies; world food problems; food composition; food microbiological and toxicological safety; food laws; evaluation of acceptability and nutritional value. Not open for credit to students who have completed any Food Science and Technology course except course 101. GE credit: SciEng | GE credit: SciEng | SE, VL. —I, II, III. (I) Barile

2. Introduction to Brewing and Beer (3)
Lecture—3 hours. Basic description of brewing and associated processes, from raw materials to final product; history of brewing and brewing science; types of beer worldwide; world beer market; basics of beer quality, including wholesomeness; role of scientist in brewing. GE credit: SciEng | SE, SL—II, III. (I, II, III) Smith, Young

3. Introduction to Food Preservation (3)
Lecture—2 hours; laboratory—2 hours. Prerequisite: Chemistry 2A, Biological Sciences 2A, Statistics 13. Restricted to Food Science Majors. Introduction to modes of fresh food preservation including use of chemicals and microbes, heat and energy, control of water and atmosphere, and by indirect approaches such as packaging, hypothermy design and sanitation. GE credit: SciEng | QL, SE. —II. (I) McCarthy

4. Food Product Development Field Study (1)
Discussion—6 hours; fieldwork—2 days (course given between winter and spring quarters). Prerequisite: advance enrollment required in winter quarter with instructor; background knowledge in foods from such courses as Food Science and Technology 1. Commercial aspects of the large-scale development, distribution, and evaluation of food products intended for human consumption. (Former course Consumer Science 47.) (P/NP grading only.) GE credit: SE

50. Introduction to Food Preservation (3)
Lecture—2 hours; laboratory—2 hours. Prerequisite: Chemistry 2A, Biological Sciences 2A, Statistics 13. Restricted to Food Science Majors. Introduction to modes of fresh food preservation including use of chemicals and microbes, heat and energy, control of water and atmosphere, and by indirect approaches such as packaging, hypothermy design and sanitation. GE credit: SciEng | QL, SE. —II, III. (I, II, III) Smith, Young

99. Special Study for Undergraduates (1-5)
(P/NP grading only.)

Upper Division

100A. Food Chemistry (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Chemistry 8B; Biological Sciences 1A recommended. Chemical aspects of food composition. Emphasis on the functional properties and reactions of the major components of foods: carbohydrates, lipids, proteins, and water. GE credit: SciEng | SE, VL. —II. (I) Young

100B. Food Chemistry Laboratory (2)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 100A or consent of instructor. Sensory quality, chemical and microbial safety, and nutritional properties of foods. Effects of food processing and preservation on these properties. Selected properties of food commodities. GE credit: SciEng | QL, SE, VL. —II. (I) German

101A. Food Chemistry Laboratory (2)
Lecture/laboratory—4 hours. Prerequisite: course 100A (may be taken concurrently). Chemical aspects of food composition described in course 100A. GE credit: QL, SE, VL. —II. (I) Slusky

101B. Food Properties Laboratory (2)
Lecture/laboratory—1 hour/3 hours. Prerequisite: course 100B (may be taken concurrently). Study of properties of food described in course 100B. GE credit: SciEng | QL, SE, VL. —II. (II) Barile

102A. Malting and Brewing Science (4)
Lecture—4 hours. Prerequisite: Biological Sciences 102, 103, senior standing required. The technology of the malting, brewing and fermentation processes is integrated with the chemistry, biochemistry and microbiology that determine industrial practices and product quality. GE credit: QL, SE. —I. (II) Bamforth
102B. Practical Malting and Brewing (4)
Lecture/discussion—2 hours; laboratory—6 hours. Prerequisite: course 102A and analytical experience beyond Chemistry 2C, such as Viticulture and Enology 123. Food Science and Technology 103, 123L, Molecular and Cellular Biology 120L. Open to seniors only in Fermentation Science or Food Science and Technology. Provides practical working knowledge of analytical methods used in malting and brewing experience with brewing materials and processes and chemical analysis of samples that illustrate the range of values experienced in practice and pilot scale brewing. GE credit: SciEng | QL, SE, —II. (Ill.) Bamforth

103. Physical and Chemical Methods for Food Analysis (4)
Lecture—2 hours; discussion—1 hour; laboratory—3 hours. Prerequisite: Chemistry 2C, Biological Sciences 102 or the equivalent; calculus recommended. Not open for credit to students enrolled in College of Engineering. Applications of the conservation of mass and energy to food processing. Elements of engineering thermodynamics, fluid mechanics, heat and mass transfer. Quantitative analysis through problem solving and simula-

110A. Physical Principles in Food Processing (3)
Lecture—2 hours; laboratory—2 hours. Prerequisite: Physics 5A and 5B or 7A/7B-7C or the equivalent; calculus recommended. Not open for credit to students enrolled in College of Engineering. Applica-
tions of the conservation of mass and energy to food processing. Elements of engineering thermodynamics, fluid mechanics, heat and mass transfer. Problem solving. GE credit: SciEng | QL, SE, VL, —I. (I.) McCarthy

110B. Heat and Mass Transfer in Food Processing (3)
Lecture—2 hours; laboratory—2 hours. Prerequisite: course 110A or the equivalent. Applied Biological Systems Technology 110L recommended (may be taken concurrently). Rate processes: conduction, convection, and radiation heat transfer; microwave heating, refrigeration, freezing, condensation; mass transfer during drying and storage. GE credit: SciEng | QL, SE, VL, —I. (I.) Singh

110L. Food Processing Laboratory (2)
Laboratory—3 hours; discussion—1 hour. Prerequi-
site: course 110A may be taken concurrently. Open to Science majors only. Laboratory exercises to gain experience with common food processing oper-
ations at the bench and pilot plant scales. GE credit: SciEng | QL, SE, VL, —I. (I.) Rishwurm

117. Design and Analysis for Sensory Food Science (4)
Lecture—3 hours; discussion—1 hour. Methods of design and analysis for sensory food science. Experimen-
tal design strategies and statistical models for product development and consumer testing. Data analysis and computation including the relative merits and limitations of para-

119. Chemistry and Technology of Milk and Dairy Products (4)
Lecture—4 hours; demonstrations and a field trip. Prerequisite: Biological Sciences 1A and 102, or consent of instructor. Composition, structure and properties of milk and products derived from milk. Prepa-
ration and processing of milk and its products. GE credit: SciEng | QL, SE, VL, —I. (I.) Rosenberg

120. Principles of Meat Science (3)
Lecture—3 hours. Prerequisite: Biological Sciences 1A. Anatomical, physiological, developmental, and biochemical aspects of muscle underlying the con-
version of muscle to meat. Includes meat processing, preservation, microbiology and public health issues associated with meat. (Same course as Ani-
mal Science 120.) GE credit: SciEng

120L. Meat Science Laboratory (2)
Discussion—1 hour; laboratory—3 hours. Prerequi-
site: Biological Sciences 1A; course 120 may be taken concurrently. Laboratory exercises and stu-
dent participation in transformation of live animal to carcass and肉, structural and biochemical changes related to meat quality, chemical and sen-
yory evaluation. GE credit: SciEng | QL, SE, VL, —II. (II.)

121. Introduction to Enzymology (3)
Lecture—3 hours. Prerequisite: Biological Sciences 103. Principles of physical, chemical and catalytic properties of enzymes and their importance. Purifica-
tion, characterization, and quantitative evaluation of reaction conditions on activity are stressed. Specif-
icity and mechanism of action by use of selected enzymes. (Former course Biochemistry and Biophysics 123.) GE credit: SciEng | QL, SE, VL, —II. (II.) G. Smith

123L. Enzymology Laboratory (2)
Lecture—1 hour; laboratory—3 hours. Prerequisite: Biological Sciences 103, course 123C (if concurrently). Laboratory procedures involved in detection, purifi-
cation and characterization of enzymes. (Former course Biochemistry and Biophysics 123L.) GE credit: SciEng | QL, SE, VL, —II. (II.) Smith

127. Sensory Evaluation of Foods (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: Agricultural Management and Rangeland Resources 120 or course 117. A critical examination of meth-
ods and sensory measurements applied to food and beverage systems; descriptive analysis and con-
troller tests and their application to quality assur-
ance, product development and optimization. GE credit: SciEng | QL, SE, VL, —II. (II.)

128. Food Toxicology (3)
Lecture—3 hours. Prerequisite: Biological Sciences 102, 103. Chemistry and biochemistry of toxins occurring in foods, including plant and animal tox-
ins, intentional and unintentional food additives. The assessment of food safety and toxic hazards. (Same course as Environmental Toxicology 128.) GE credit: SciEng | SE.—II. (III.) Mitchell, Shibamoto

131. Food Packaging (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: Chemistry 8B, Biological Sciences 1A, Physics 7C. Principles of food packaging. Functions of pack-
ing. Properties of metal, glass and paper materials and packages. Design, fabrication, and applications of food packaging. Packaging of fresh and processed foods, including fruits and vege-
tables, dairy foods, beer and wine. GE credit: SciEng | QL, SE, VL, —II. (II.)

151Y. Food Freezing (1)
Discussion—1 hour; web virtual lecture. Prerequisite: course 110A or the equivalent. Mechanisms of ice crys-
talization, interpretation of freezing diagrams, and models of heat transfer in biological systems. GE credit: SciEng | QL, SE, VL, —II. (II.)

159. New Food Product Ideas (3)
Lecture—3 hours. Prerequisite: upper division stand-
ning with background course work in food science (course 50 or 100A), biological sciences (Biological Sciences 2A, 2B, 2C), or the physical sciences (Phys-
ics 7A, 7B, 7C or Chemistry 2A, 2B, 2C). Create, refine, test and present viable ideas for new food products. Activities include trend monitoring, consumer research, idea generation, concept screening, and new product concept presentations. GE credit: ArtHum or SocSci | AH or SS, OL, WE.—I. (I.) Biltle-
kof

160. Food Product Development (4)
Lecture—1 hour; discussion—1 hour; laboratory—6 hours. Prerequisite: upper division standing with back-
ground course work in food science (course 50 or 100A), biological sciences (Biological Sciences 2A, 2B, 2C), or the physical sciences (Physics 7A, 7B, 7C or Chemistry 2A, 2B, 2C). Product imple-
mentation stage of food product development includ-
ing preliminary product description, prototype development, product testing, and formal presenta-
tion of a new product development. GE credit: SciEng | OL, SE, VL, —III. (III.)

190. Senior Seminar (1)
Seminar—1 hour. Prerequisite: senior standing or consent of instructor. Selection of topics and students on recent advances in food science and technology. Reports and discussions concerning oral and written presentations, literature sources and career opportunities. GE credit: SciEng | OL, SE, —II. (II.)

192. Internship for Advanced Undergraduates (1-12)
Internship—3.36 hours. Prerequisite: consent of instructor. Work experience on or off campus in the practical application of food science. (P/NP grading only.) GE credit: SE.

198. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only.) GE credit: SE.
Food Service Management

(Continued)

tion of food as an analytical tool and as a measure of consumer perception and acceptance. Advanced examination of the sensory and cognitive systems associated with the perception of flavor.—I. (I) O’Mahony

219. Biochemistry, Microbiology and Technology of cheeses of the World (4)

Lecture—4 hours. Prerequisite: course 119 and Biological Sciences 103 or course 100A, 123, Biological Sciences 103, Chemistry 1078, 1288 or consent of instructor. Restricted to graduate level students or senior undergraduate students with appropriate background in biochemistry and microbiology. Compositional and physico-chemical aspects of milk and their implications on cheesemaking; enzymatic, microbiological and physical aspects of cheesemaking; cheese as a biological composite; designing cheese quality attributes; cheese aging. Cheese from fresh and processed foods. Students will be required to read and critically evaluate flavor chemistry literature. [Same course as Viticulture and Enology 213].—II. (III) Ebeler, Heymann

227. Food Perception and the Chemical Senses (2)

Lecture—2 hours; laboratory—3 hours. Prerequisite: course 107 (may be taken concurrently) or consent of instructor. Basic principles of chemistry and biochemistry to in tissues and foods. Regulation of absorption, transport, and metabolism of lipids. Implications of dietary fats and supplements. Students will become familiar with basic principles of flavor chemistry, analysis, and formation in fresh and processed foods. Students will be required to read and critically evaluate flavor chemistry literature. [Same course as Viticulture and Enology 213].—II. (III) Geraghty

213. Flavor Chemistry of Foods and Beverages (3)

Lecture/discussion—3 hours. Prerequisite: Chemistry 88, Viticulture and Enology 123, Viticulture and Enology 123L, or course 103 or consent of instruc-

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only) GE credit: SE.

Graduate

201. Food Chemistry and Biochemistry (4)

Lecture—4 hours. Prerequisite: undergraduate course in organic chemistry and biochemistry; undergraduate course in food chemistry is recom-

202. Chemical and Physical Changes in Food (4)

Lecture—3 hours; term paper. Prerequisite: Biological Sciences 103, Chemistry 1078. Fundamental principles of chemistry and physics are applied to a study of changes in water binding properties and activity, changes in proteins, nutrients, toxic constitu-

204. Advanced Food Microbiology (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1C, 103, course 104 or a course in microbiology. Principles of and recent developments in food microbiology, including food pathogen virulence and detection, parameters of microbial growth in food, and the microbiology of food and beverage fermentations.—II. (II) Nilin

205. Industrial Microbiology (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1A, 102, 103, Microbiology 130A-130B or Biological Sciences 101 recommended. Use of microorgan-

207. Advanced Sensory-Instrumental Analyses (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: course 107 and consent of instructor. Basic prin-

210. Proteins: Functional Activities and Interactions (3)

Lecture—3 hours. Prerequisite: Biological Sciences 103, Chemistry 1078, 1288. Chemistry of proteins as it pertains to research in food and nutrition. Relations between lipid structure and their physical properties

198. Directed Group Study (1-5)

(P/NP grading only)—Steinberg

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only)—Steinberg

Food Service Management

(Continued)

Quarter Offered: I=Fall, II=Winter, III=Spring, IV=Summer; 2015-2016 offering in parentheses

Pre-Fall 2011 General Education (GE): Environ and Soci Sci; Div=Dominant Diversity; Wrt=Writing Experience

Fall 2011 and on Revised General Education (GE): AH=Arts and Humanities; SE=Science and Engineering; SS=Social Sciences; ACGH=American Cultures; DD=Dominant Diversity; OL=Oral Skills; QL=Quantitative; SL=Scientific; VL=Visual; WC=World Cultures; WE=Writing Experience

192. Internship (1-12)

Internship—3.36 hours. Prerequisite: one upper divi-
sion course in Food Service Management and con-
sent of instructor. Work experience on or off campus in practical aspects of food service management, supervised by a faculty member. (P/NP grading only)—Steinberg

197. Tutoring in Food Service Management (1-2)

Discussion/laboratory—3 or 6 hours. Prerequisite: Dietetics or related major; completion of the Food Service Management course in which tutoring is done. Tutoring of students in food service management assistance with discussion groups or labora-
tory sections; weekly conference with instructor in charge of course; written evaluations. May be repeated if tutoring a different course. (P/NP grading only)—Steinberg

198. Directed Group Study (1-5)

(P/NP grading only)—Steinberg

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only)—Steinberg

Graduate

201. Food Chemistry and Biochemistry (4)

Lecture—4 hours. Prerequisite: undergraduate courses in organic chemistry and biochemistry; undergraduate course in food chemistry is recom-

202. Chemical and Physical Changes in Food (4)

Lecture—3 hours; term paper. Prerequisite: Biological Sciences 103, Chemistry 1078. Fundamental principles of chemistry and physics are applied to a study of changes in water binding properties and activity, changes in proteins, nutrients, toxic constitu-

204. Advanced Food Microbiology (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1C, 103, course 104 or a course in microbiology. Principles of and recent developments in food microbiology, including food pathogen virulence and detection, parameters of microbial growth in food, and the microbiology of food and beverage fermentations.—II. (II) Nilin

205. Industrial Microbiology (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1A, 102, 103, Microbiology 130A-130B or Biological Sciences 101 recommended. Use of microorgan-

207. Advanced Sensory-Instrumental Analyses (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: course 107 and consent of instructor. Basic prin-

210. Proteins: Functional Activities and Interactions (3)

Lecture—3 hours. Prerequisite: Biological Sciences 103. The relationships of structure of proteins to their biological functions. Structural proteins, complexing proteins, and catalytic proteins in plant and animal materials and products.

211. Lipids: Chemistry and Nutrition (3)

Lecture—3 hours. Prerequisite: Biological Sciences 103, Chemistry 1078, 1288. Chemistry of lipids as it pertains to research in food and nutrition. Relations between lipid structure and their physical properties

in tissues and foods. Regulation of absorption, transport, and metabolism of lipids. Implications of dietary fats and supplements. Students will become familiar with basic principles of flavor chemistry, analysis, and formation in fresh and processed foods. Students will be required to read and critically evaluate flavor chemistry literature. [Same course as Viticulture and Enology 213].—II. (III) Geraghty

213. Flavor Chemistry of Foods and Beverages (3)

Lecture/discussion—3 hours. Prerequisite: Chemistry 88, Viticulture and Enology 123, Viticulture and Enology 123L, or course 103 or consent of instruc-

217. Advanced Food Sensory Science (3)

Lecture—3 hours. Prerequisite: course 107 (may be taken concurrently) or consent of instructor. Advanced study of the techniques and theory of the sensory measurement of food as an analytical tool and as a measure of consumer perception and acceptance. Advanced examination of the sensory and cognitive systems associated with the perception of food.—I. (I) O’Mahony

219. Biochemistry, Microbiology and Technology of Cheeses of the World (4)

Lecture—4 hours. Prerequisite: course 119 and Biological Sciences 103 or course 100A, 123, Biological Sciences 103, Chemistry 1078, 1288 or consent of instructor. Restricted to graduate level students or senior undergraduate students with appropriate background in biochemistry and microbiology. Compositional and physico-chemical aspects of milk and their implications on cheesemaking; enzymatic, microbiological and physical aspects of cheesemaking; cheese as a biological composite; designing cheese quality attributes; cheese aging. Cheese from fresh and processed foods. Students will be required to read and critically evaluate flavor chemistry literature. [Same course as Viticulture and Enology 213].—II. (III) Ebeler, Heymann

227. Food Perception and the Chemical Senses (2)

Lecture—2 hours; laboratory—3 hours. Prerequisite: course 107 (may be taken concurrently), or consent of instructor. Examination of the anatomy and physiology of the chemical senses (taste, smell, and the trigeminal senses) and how they are involved in the perception of food and food intake.—II. Guiraud

290. Seminar (1)

Seminar—1 hour. May be repeated for credit. (S/U grading only)—I, II, III. (I, II, III)

290C. Advanced Research Conference (1)

Discussion—1 hour. Prerequisite: graduate standing and consent of instructor. Critical presentation and evaluation of original research by graduate students. Planning of research programs and proposals. Discussion led by individual major instructors for their research group. (S/U grading only)—I, II, III. (I, II, III)

291. Advanced Food Science Seminar (1)

Seminar—1 hour. Prerequisite: completion of at least one quarter of course 290. Oral presentation of student’s original research, discussion, and critical evaluation. (S/U grading only)—I, II, III. (I, II, III)

298. Group Study (1-5)

(S/U grading only)

299. Research (1-12)

Prerequisite: graduate standing. (S/U grading only)

Professional

396. Teaching Assistant Training Practicum (1-4)

Prerequisite: graduate standing. May be repeated for credit. (S/U grading only)—I, II, III. (I, II, III)

Forensic Science (A Graduate Group)

Robert H. Rice, Ph.D., Chairperson of the Group
Group Office, 1909 Galileo Ct., Suite B
Davis, CA 95618; 530-747-3922; http://forensicscience.ucdavis.edu

Faculty
Faculty members are listed on the website.

Graduate Study. The Forensic Science Graduate Group offers the degree of MS in Forensic Science. This program, offering a Plan I Thesis or a Plan II Capstone Project option, has two tracks, DNA or Criminalistics, enabling the student to take core courses emphasizing the physical or biological sciences. Each track requires the student to take eight to nine core courses, totaling 24-27 units, three units of seminar, and the appropriate number of elective/research units, depending on the selection of Plan I or Plan II, for a total of 54 units. Students can take courses outside their specializations, but they must complete the courses required for their own track. The FOR seminar course in the fall quarter is required for new students. The FOR spring seminar can be taken in any spring quarter before graduation. Students must also take one additional Seminar course in another department or program.

Preparation. Appropriate preparation is an under-graduate degree in physical or natural sciences engineering or a closely related field with a GPA of 3.00 or higher. Examples include Biochemistry, Chemistry, Molecular Biology, Biology, Genetics, and Environmental Toxicology. The student must have completed at least one year each of general chemistry, organic chemistry, general physics and math through calculus I.

Offered recommended courses include general biology, biochemistry, genetics and statistics.

Graduate Advisors. Ralph Aldredge (Mechanical and Aerospace Engineering), Youn Hsieh (Division of Textiles and Clothing), Christopher J. Hopkins (Forensic Science Graduate Program), Sree Kanthaswamy (Anthropology), Robert B. Kinsey (Entomology), Donald Land (Chemistry), Terence Murphy (Plant Biology), Ben Sacks (Population Health & Reproduction)/Canid Diversity and Conservation (Laboratory-Center for Veterinary Genetics), Bahram Ravani (Mechanical & Aeronautical Engineering), Moshe Rosenberg (Food Science and Technology), Matt Wood (Environmental Toxicology)

Courses in Forensic Science (FOR Graduate)

200. Fundamental Concepts in Forensic Science (3)
Lecture—2 hours; fieldwork—0.25 hours; lecture/ laboratory—0.25 hours; seminar—0.5 hours. Overview of forensic science. Problem solving strategies for problem solving, analytical tools, and professional and ethical considerations. —I. (Sensabaugh)

205. Microscopy and Microanalytical Methods in Forensic Science (3)
Lecture—2 hours; seminar—1 hour. Prerequisite: consent of instructor. Introduction to optical and electron microscopy. Transmission, diffraction, reflection and absorption; polarized light and polarization crystals, phase contrast, radiography, image recording, SEM analysis of gunshot residues, prints, glass, EDS, XRF analysis, signal-to-noise ratios, minimum detection limits, and statistics. Restricted to students enrolled in the M.S. in Forensic Science Program. As a minimum, year each of the following chemistry, organic chemistry, calculus, + physics. Offered in alternate years. —III. (van Berthemb)

210. Advanced Spectroscopy Methods in Forensic Science (3)
Lecture—3 hours. Restricted to Forensic Science Graduate program or consent of instructor. Discuss, evaluate and interpret advanced molecular spectra/structure, Infrared Spectroscopy, such as chemical applications of spectroscopic methods, vibrational, rotational spectra, electron spectra, photoelectron spectroscopy generated by various analytical instruments used in forensic science community. Offered in alternate years. —II. (Wood)

210. Personal Identification Methods in Forensic Science (3)
Lecture—2 hours. Prerequisite: restricted to students enrolled in the M.S. Forensic Science Program or consent of instructor. Methods for identifying individuals from evidence at a crime scene, suspects or victims, crime scene examination and analytical methods used to support such investigations. Topics include forensic anthropology and odontology, taxonomy, facial reconstruction/recognition; eyewitness identifications, biometric systems. —III. (Hopkins)

212. Scientific Evidence and Courtroom Testimony (3)
Lecture—2 hours; discussion—1 hours. Prerequisite: graduate students enrolled in the MS Forensic Science program or by consent of instructor. Explores the relationship between science and the criminal justice system. Admissibility of scientific testimony and documentary proof during the trial, concepts of relevancy, hearsay and opinion rule, examination of expert witnesses, impact of Kelley-Fry and Daubert decisions & court testimony. —II. (Harmon, Maucieri)

215. Forensic Fire and Arson Investigation (3)
Lecture—3 hours. Prerequisite: open only to students enrolled in the M.S. Forensic Science program or by consent of the Forensic Science Program Director. Principles and techniques of scientific investigation of fires and related crimes; offer peer-reviewed protocols for processing and analysis of scenes, discussion, collection, analysis of physical evidence, and describe the scientific method for decision-making in fire/arson investigation. Offered in alternate years. —III. (DeHart)

218. Technical Writing in Forensic Science (3)
Lecture—2 hours; extensive writing or discussion—1 hour. Prerequisite: consent of the instructor required for all students not enrolled in the Forensic Science graduate program. Restricted to graduate standing in the Forensic Science Program. How to write clearly, credible forensic science reports and scientific articles, that [a] serve the forensic system, (b) meet their readers’ varying needs and (c) reflect well on the author. —III. (Neumann)

220. Analysis of Toxicants (3)
Lecture—3 hours. Prerequisite: coursework in organic chemistry. Principles of microanalysis of toxicants. Theoretical considerations regarding separation, detection and quantitative determination of toxicants using chemical and instrumental techniques. (Same course as Environmental Toxicology 220.) —I. (Zhang)

221L. Forensic Science Analytical Instrumentation (2)
Lecture/discussion—1 hour; laboratory—3 hours. Methodology and instruments used for the analysis of substances of interest in the discipline of Forensic Science. Practical experience with modern instrumental techniques & methodologies used in the advanced forensic laboratory. Limited to students accepted in the Forensic Science Graduate program subject to the approval of the instructor if the student has the appropriate chemistry, calculus and physics courses required of students in the graduate forensic science program. Offered in alternate years. —II. (Land)

240. Homicide Crime Scene Investigation (3)
Lecture—3 hours; laboratory—3 hours. Processing and evaluating complex homicide scenes. Functions and activities of police agencies. Recognition, documentation, identification, and collection of evidence. —IV. (Land)

263. Forensic Computer Science Investigations (3)
Lecture—3 hours. Prerequisite: graduate student. Restricted to students in the Forensic Science Graduate program unless approved by the Forensic Science Program Director. Statistics that are used by the forensic scientist, their limitations/applications in presenting forensic science in such as areas such as DNA, STR results, trace evidence correlation, fingerprint statistics, population sampling and the Bayes method. Offered in alternate years. —II. (Peiser)

268. Statistics in Forensic Science (3)
Lecture—3 hours. Prerequisite: consent of instructor. Restricted to students enrolled in the M.S. Forensic Science Program or by consent of Forensic Science Program Director. Statistics that are used by the forensic scientist, their limitations/applications in presenting forensic science in such as areas such as DNA, STR results, trace evidence correlation, fingerprint statistics, population sampling and the Bayes method. Offered in alternate years. —II. (Land)

277. Forensic Genetics: Next Generation Techniques and Applications (3)
Lecture—3 hours. Prerequisite: undergraduate courses in fundamental and applied principles of: genetics, biochemistry, and molecular biology, or consent of instructor. Restricted to Forensic Science Graduate students (GFOR) or consent of instructor. Review organization/function of the human genome, recent developments, next generation sequencing techniques including preparation of DNA samples, principles of the new generation sequencing assay formats and biochemical reactions. Will include quality control parameter, and bioinformatic approaches. Offered in alternate years. —I. (Kanthaswamy)

278. Molecular Techniques (3)
Lecture—3 hours. Prerequisite: graduate standing or consent of instructor. Recombinant DNA technology and its applications. (Same course as Environmental Toxicology 278) Offered in alternate years.—I. (Denison, Rice)

280. Forensic DNA Analysis (3)
Lecture—3 hours. Prerequisite: coursework in genetics and molecular biology. Foundation in theory and practice of forensic DNA analysis; past, present, and emerging technologies, legal and quality assurance issues. DNA extraction, DNA quantitation, multiplex amplification of STR markers, fingerprinting, electrophoresis of amplified products, and analysis of STR typing data. (Same course as Environmental Toxicology 280.) —II. (Von Berndaligen)

281. Principles and Practice of Forensic Serology and DNA Analysis (3)
Lecture—2 hours; lecture/discussion—3 hours. Prerequisite: course/Environmental Toxicology 278 or course/Environmental Toxicology 280, or equivalent; consent of instructor. Restricted to students enrolled in the M.S. in Forensic Science Program or by consent of Forensic Science Program Director. Comprehensive overview of forensic serology and DNA typing techniques and technologies. Long emphasis on real-world applications, including preservation and tracking of biological evidence, detection and identification of bodily fluids, and methods to detect, quantify, and type human DNA. (Same course as Environmental Toxicology 281.)—II. (Rodzen)

283. Forensic Biology (3)
Lecture—2 hours; discussion—1 hour. Prerequisite: consent of instructor. Restricted to students enrolled in the M.S. in Forensic Science Program or by consent of Forensic Science Program Director. Overview of the foundational concepts in forensic biology, chemical and molecular biology of biologi cal evidence, genetic basis of biological uniqueness, evolutionary basis of species differences, patterns and dynamics of evidence deterioration, and the legal professions considerations associated with biological evidence. —II. (Sensabaugh)

Quarter Offered: I=Fall, II=Winter, III=Spring, IV=Summer; 2015-2016 offering in parentheses

Pre-Fall 2011 General Education (GE) Courses: Arts and Humanities; Science and Engineering; Social Sciences; Diversity and Domesticity; Writing Experience

Fall 2011 and on Revised General Education (GE) Courses: Arts and Humanities; Science and Engineering; Social Sciences; Diversity and Domesticity; Writing Experience

284. Non-Human Forensic DNA—Theory and Casework Application (2)

Lecture—2 hours. Prerequisite: consent of instructor required for all students not enrolled in the MS Forensics program; upper division Molecular Biology and Genetics or its equivalent. Restricted to graduate standing. Focus on comprehensive understanding of plant and animal forensic biology in terms of sample collection, preservation, analytical methods, and of the invaluable lines of inquiry these forensic evidence may permit. (Same course as Environmental Toxicology 284.) Offered in alternate years. —I. Kanthawamy

289. Survey in Forensic Science (3)

Lecture—3 hours. Analytical methods in contemporary forensic science. Clandestine laboratories in California, crime scene management, examination and analysis of human hair, forensic ballistics/trajectory reconstruction, shoe/tire print impressions, serial murder restoration, forensic aspects of alcohol impairment, bloodstain pattern interpretation, microscopy of building materials, biological aspect of forensic science. May be repeated for credit when topic differs. —I, II, III. Hopkins

290. Seminar in Forensic Science (1)

Seminar—3 hours. Students will be exposed to topical areas in Forensic Science by presentations conducted by expert guest speakers. The seminar will also serve as a medium whereby the exiting students will present the research conducted as part of their thesis requirement. May be repeated for credit when topic differs. Restricted to students enrolled in the M.S. Forensic Science Program. (S/U grading only)—I, II, III. Hopkins

290C. Graduate Research Conference in Forensic Science (1)

Independent study—1 hour. Individual and/or group conference on problems, progress and techniques in forensic science and research. May be repeated for credit when topic differs. (S/U grading only)—I, II, III. Hopkins

293. Forensic Science Research Methodology (2)

Lecture—1.5 hour; extensive writing or discussion—0.5 hours. Prerequisite: graduate students enrolled in the MS Forensic Science Program or by consent of instructor. Introduction to identification, formulation, and solution of meaningful scientific problems encountered in the Forensic Science area including experimental design and/or theoretical analysis of new and prevailing techniques, theories and hypotheses. Students will present and defend their thesis research/journal article proposals. Limited enrollment. (S/U grading only)—I, II, III. Kimsy

298. Group Study in Forensic Science (1-5)

(S/U grading only)

299. Research in Forensic Science (1-12)

Prerequisite: consent of instructor. (S/U grading only)

(College of Letters and Science)
Julia Simon, Ph.D., Chairperson of the Department
Department Office, 213 Sproul Hall
530-752-1219; http://french.ucdavis.edu

Faculty
Jeff Fort, Ph.D., Associate Professor
Claire Goldstein, Ph.D., Associate Professor
Noah Guynn, Ph.D., Associate Professor
Eric Ruesch, Associate Professor
Julia Simon, Ph.D., Professor Emeritus
Toby Warner, Ph.D., Assistant Professor

Emeriti Faculty
Claude Abraham, Ph.D., Professor Emeritus
Edward M. Bloomberg, Ph.D., Professor Emeritus
Simone Clay, Ph.D., Emeritus Lecturer
Gerald Herman, Ph.D., Senior Lecturer Emeritus

Margo R. Kaufman, M.A., Senior Lecturer Emerita
Manfred Kusche, Ph.D., Senior Lecturer Emeritus
(Comparative Literature, French and Italian)
Marshall Lindsay, Ph.D., Professor Emeritus
Maria I. Manoliu, Ph.D., Professor Emerita
Michèle Prager, Ph.D., Professor Emerita
Leslie Robic, Professor Emerita
(French and Italian, Women and Gender Studies)
Ruth B. York, Ph.D., Senior Lecturer Emerita

The Major Program

The major program assures proficiency in all four of the language skills—speaking, understanding, reading, and writing—and acquaints students with the intellectual and cultural contributions of the French-speaking world through the study of its literature, traditions, and institutions.

The Program. The department encourages its students to work closely with the academic adviser in designing their course to meet their interests and internships within the broad requirements prescribed by the program and to avail themselves of the guidance of an excellent teaching faculty. Each year, a substantial number of students with good preparation in French participate in the university's very popular Education Abroad Program, which maintains centers at four French universities.

Career Alternatives. Foreign language teachers, a cardiologist, a naval commander at the Pentagon, a professor of Political Science, lawyers, sales representatives, journalists, speech pathologist, a law professor, translators, a senior applications programmer, travel agents, independent business owners, a curator museum curators, nurses, financial managers, stock brokers, and an industrial attaché for a French Trade Commission, all graduated with a major in French from UC Davis and represent only a small fraction of the career choices documented in a recent survey of department graduates.

One French literature course from among the following: 101, 102, 103, 115, 116, 117A, 117B, 118A, 118B, 119A, 119B, 120, 121, 124, 125, 127, 128, 130, 133, 140, 141, 140, 160, 161, 162...

Two elective courses in French literature, language, or culture from among the following: 101, 102, 103, 104, 105, 106, 107, 108, 127, 128...

French 100...

Honors Program. Candidates for high or highest honors in French must write a senior thesis under the direction of a faculty member. For this purpose, honors candidates must enroll in French 194H (4 units) and French 195H (4 units). Normally, a student will undertake the honors project during the first two quarters of the senior year; other arrangements must be authorized by the department chair. Only students who, at the end of the junior year (135 units), have attained a cumulative grade-point average of 3.500 in courses required for the major will be eligible for the honors program. The requirements for earning high and highest honors in French are in addition to the regular requirements for the major in French.

Education Abroad Program. The department of French and Italian encourages students to study abroad in the Summer Abroad program, the Quarter Abroad Program, or the Education Abroad program. With the approval of a major adviser, applicable courses taken abroad may be accepted in the major or minor programs.

Teaching Credential Subject Representative. See the Teaching Credential/M.A. Program on page 115.

Graduate Study. The Department offers programs of study and research leading to the Ph.D. degree in French. Candidates for the Ph.D. have the option of enriching their degree program by preparing a designated emphasis in African American and African Studies, Critical Theory, Feminist Theory and Research, Classics and Classical Reception, Second Language Acquisition, or Studies in Performance and Practice. Detailed information may be obtained from the graduate adviser or the department chairperson.

Graduate Adviser. C. Goldstein

Prerequisite Credit. Credit will normally be given for a course if it is the prerequisite of a course already successfully completed. Exceptions can be made by the department chairperson only.

Courses in French (FRE)

Students offering high school language preparation as a prerequisite must take a placement test.

Course Placement. Students with two years of high school French normally take French 2, those with three years take French 3 and those with four years take French 21.

Major Adviser. J. Fort

Minor Program Requirements:

French

French 100...

French 1 A.

One French literature course from among the following: 101, 102, 103, 115, 116, 117A, 117B, 118A, 118B, 119A, 119B, 120, 121, 124, 125, 127, 128, 130, 140, 141, 140, 160, 161, 162...

French 100...

Quarter Offered: I-Fall; II-Winter; III-Spring; IV-Summer; 2015-2016 offering in parent program.

Pre-Fall 2011 General Education (GE): A:Art/Humanities; S:Science and Engineering; SS:Social Sciences; Div:Domestic Diversity; Wrt:Writing Experience

1A. Accelerated Intermediate Elementary French (15)
Lecture/discussion—15 hours. Prerequisite: placement exam required. Introduction to French grammar and development of all language skills in a cultural context with special emphasis on communication. Open only to students who have completed course 1. GE credit: ArtHum | AH, WC.—I, II, III. (I, II, III.) Simon

15. Elementary French (5)
Discussion—5 hours; laboratory—1 hour. Introduction to French grammar and development of all language skills in a cultural context with special emphasis on communication. Course is taught abroad. Open only to students who have completed course 1 or 2 or 3 in the 10th or higher grade in high school may receive unit credit for this course on a P/NP grading basis only. Although a passing grade will be charged to the student’s P/NP option, no petition is required. All other students will receive a letter grade unless a P/NP petition is filed. Not open for credit to students who have completed course 1 or 1A. GE credit: ArtHum | AH, WC.—I. (I.)

2. Elementary French (5)
Discussion—5 hours; laboratory—1 hour. Prerequisite: course 1. Continuation of course 1. Not open for credit to students who have taken course 1A. GE credit: ArtHum | AH, WC.—I, II, III. IV. (I, II, III, IV.) Webb

3. Elementary French (5)
Discussion—5 hours; laboratory—1 hour. Prerequisite: course 2 or 2 or 3. Not open for credit to students who have taken course 1A. Continuation of course 2. GE credit: ArtHum | AH, WC.—I, II, III, IV. (I, II, III, IV.) Webb

21. Intermediate French (5)
Lecture/discussion—4 hours; laboratory—1 hour. Prerequisite: course 2A or 2A or 3A. Review of grammar and vocabulary acquired in the elementary sequence, as well as the study of new grammatical structures and a continuing enrichment of vocabulary through oral work in class, written exercises, readings and compositions. Not open for credit to students who have completed course 2A or 2A or 2A. GE credit: ArtHum | AH, OL, WC, WE.—I, II, II, II, III, III. Simon

22. Intermediate French (5)
Lecture/discussion—4 hours; laboratory—1 hour. Prerequisite: course 21 or 21 or 21S. Continuation of course 21 or 21 or 21S. Review of grammar and vocabulary, as well as the study of new grammatical structures and a continuing enrichment of vocabulary. Not open for credit to students who have completed course 22S. GE credit: ArtHum | AH, OL, WC, WE.—I, II, III, II, III, III. Simon

225. Intermediate French (5)
Lecture/discussion—4 hours; laboratory—1 hour. Prerequisite: course 21 or 21 or 21S. Continuation of course 21 or 21 or 21S. Review of grammar and vocabulary, as well as the study of new grammatical structures and a continuing enrichment of vocabulary. Not open for credit to students who have completed course 22S. GE credit: ArtHum | AH, OL, WC, WE.—I, II, III, II, III, III. Simon

50. French Film (4)
Lecture—1 hour; discussion—2 hours; term paper. Introduction to the tradition of French cinema from its invention by Melies and the Lumiere brothers through New Wave (especially the works of Truffaut and Godard) and more recent developments in French and Francophone film taught in English. Offered in alternate years. GE credit: ArtHum, Wrt | AH, VL, WC, WE.—II, III, III. Simon

51. Major Works of French Literature in Translation (4)
Lecture—2 hours; discussion—1 hour; term paper. Readings in English translation of key works of French and Francophone literature from the Middle Ages to the present. Particular attention is given to the long-standing interest of French writers in issues of social, regional, gender, sexual, and ethnic identity. GE credit: ArtHum, Div, Wrt | AH, WC, WE.—II, III, III, III. Fort, Guynn

52. France and the French-Speaking World (4)
Lecture—2 hours; discussion—1 hour; term paper. Taught in English. A survey of the history and culture of France and the French-speaking world, especially Canada, the Caribbean, and Africa. Study of social, cultural, and historical issues that occupy the French-speaking world, with particular attention to mass media. GE credit: ArtHum, Div, Wrt | AH, WC, WE.—III, III, III. Webb

53. French as a World Language (4)

98. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only)

99. Special Study for Undergraduates (1-5)
Prerequisite: consent of instructor. (P/NP grading only)

Upper Division
Course 100 is the prerequisite for the majority of the upper division literature courses.

100. Composition in French (4)
Lecture—3 hours; term paper. Prerequisite: course 23. Introduction and practice in expository writing in French, with emphasis on organization, correct syntax, and vocabulary building. GE credit: ArtHum | AH, WC, WE.—II, II, III, III, III. Simon

101. Introduction to French Poetry (4)
Lecture—3 hours. Prerequisite: course 100 or consent of instructor. Analysis and evaluation of works representing the main types of French poetry. Study of French poetic conventions and versification. GE credit: ArtHum | AH, WC, WE.—II, II

102. Introduction to French Drama (4)
Lecture—3 hours. Prerequisite: course 100 or consent of instructor. Analysis and evaluation of plays representing the main types of French drama, with emphasis on dramatic structure and techniques. GE credit: ArtHum | AH, WC, WE.—II, II

103. Introduction to French Prose (4)
Lecture—3 hours; short papers. Prerequisite: course 100 or consent of instructor. Analysis and evaluation of works representing main types of French prose, with emphasis on narrative structure and techniques. GE credit: ArtHum | WC, WE.—III, III, Simon

104. Translation (4)
Lecture—3 hours; extensive writing. Prerequisite: course 100 or the equivalent. Practice in English-to-French and French-to-English translation using a variety of non-literary materials, illustrating different problems and styles. III, III. Russell Webb

105. Advanced French Grammar (4)
Lecture—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 23 or the equivalent. Understanding of and extensive practice with various grammatical structures in French. Lexical-semantic, morphological, and syntactic analysis. GE credit: Wrt.—II, Russell Webb

105S. Advanced French Grammar (4)
Lecture—3 hours; extensive writing or discussion—1 hour. Prerequisite: course 23 or 23S. Understanding of, and extensive practice with, various grammatical structures in French. Lexical-semantic, morphological, and syntactic analysis. Taught abroad. Not open for credit to students who have taken course 105. GE credit: WE.—I. (I.)

106. French in Business and the Professions (4)
Lecture—1 hour; discussion—2 hours. Prerequisite: course 100 or consent of instructor. The French language as used in the commercial sphere. Emphasis on proper style and form in letter-writing, and in non-literary composition. Technical terminology in such diverse fields as government and world business. GE credit: WE.—I. (I.)

107. The Making of Modern France (4)
Lecture—3 hours, term paper. Prerequisite: course 100 or consent of instructor. Introduction to French culture through a historical approach to topics such as the citizen and the state (politics, justice, social security), the nation and centralization, the rise of public education, colonization, class and social relationships. Offered in alternate years. GE credit: ArtHum | WE.—II, II, Simon

107A. Pre and Early Modern France (4)
Lecture—3 hours, term paper. Prerequisite: course 100 or consent of instructor. Introduction to early modern French culture through a historical approach to topics such as the absolute monarchy, the role of the parlements, the French revolution, and the political regimes of the nineteenth century. Offered in alternate years. GE credit: ArtHum, Wrt.—I. (I.) Simon

107B. The Making of Modern France (4)
Lecture—3 hours, term paper. Prerequisite: course 100 or consent of instructor. Introduction to French culture through a historical approach to topics such as the nation-state, centralization of the monarchy, and the rise of public education, colonization, class and social relationships. Taught abroad. Not open for credit to students who have completed course 107. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WC, WE.—II, II, Simon

108. Modern French Culture (4)
Lecture—3 hours; extensive writing. Prerequisite: course 100 or consent of instructor. Survey of modern French culture from the Dreyfus affair to the present day. Topics may include women and French culture, decolonization and modernization, education, social welfare and immigration. GE credit: WE.—Simon

109. French Phonetics (4)
Lecture/discussion—3 hours; laboratory—1 hour. Prerequisite: course 23 or the equivalent. Introduction to the sound-inventory of French and practice in phonetic transcription, with a focus on ways in which phonetic contrasts signal grammatical contrasts, spoken forms and spelling, formal differences between the “Standard” and other varieties across the French-speaking world. Offered in alternate years. GE credit: ArtHum or SocSci | AH or SS.—III. Russell Webb

110. Stylistics and Creative Composition (4)
Lecture—3 hours; frequent papers. Prerequisite: course 100 or consent of instructor. Intensive course in creative composition using a variety of techniques
and literary styles, patterned on Queneau's Exercices de style. Practice in such stylistic modifications as its influences in tense, mood, modality, etc. The writing of poetry. GE credit: WC.—II. (II.)

115. Medieval French Literature and Society (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 100. Social and cultural life of medieval France as studied through its representation in such literary works as Chanson de Roland, courtly love lyric, Arthurian romances of Chrétien de Troyes, Aucassin et Nicolette, selected fabliaux and fables. Offered in alternate years. GE credit: ArtHum | AH, WC, WE.—I. Guynn

116. The French Renaissance (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 100. Overview of major works and writers with particular attention to the historical context of the turbulent 16th century. Writers to be read may include Rabelais, Marot, Ronsard, Du Bellay, Marguerite de Navarre, Montaigne, and D'Au- igne. Offered in alternate years. GE credit: ArtHum | AH, WC, WE.—I. (II.)

117A. Baroque and Preclassicism (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 100. The literature and intellectual culture of the period between the Renaissance and French classicism. Offered in alternate years. GE credit: ArtHum | AH, WC, WE.—II. (II.) Simon

117B. The Classical Moment (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 100. Literature, culture, and politics in the Age of Louis XIV. May be repeated one time for credit. Offered in alternate years. GE credit: ArtHum | AH, WC, WE.—II. (II.) Simon

118A. The Age of Reason and Revolution (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 100. History of the French roman from the Middle Ages to the Revolution with particular emphasis on the novels of the 18th century. Offered in alternate years. GE credit: ArtHum | AH, WC, WE.—III. (III.) Simon

118B. Private Lives and Public Secrets: The Early French Novel (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 100. History of the French roman from the Middle Ages to the Revolution with particular emphasis on the novels of the 18th century. Offered in alternate years. GE credit: ArtHum | AH, WC, WE.—II. (II.) Simon

119A. The Romantic Imaginary (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 100. Major concepts and themes of French romanticism, such as dream and the supernatural, isolation, love, eroticism, revolution, individuality, nature, the mal du siècle, Romantic irony, the creative imagination, the cult of ruin. Offered in alternate years. GE credit: ArtHum | AH, WC, WE.—II. (II.) Simon

119B. Realism, History and the Novel (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 100. Narrative and historical codes of French realist fiction, with emphasis on the representation of history in the realist novel, its depiction of social realities such as class and gender, and its relation to the historical situation of post-revolutionary society. Offered in alternate years. GE credit: ArtHum | AH, WC, WE.—II. (II.) Simon

119C. From Baudelaire to Surrealism (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 100. Study of the main poets and poetic movements from the mid-19th to the early 20th century, including Baudelaire, the Symbolists, and the Surrealists. Offered in alternate years. GE credit: ArtHum | AH, WC, WE.—I. (I.)

120. Modern French Thought (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 100. Overview of post-Second World War French intellectual currents from existentialism to structuralism and deconstruction. Readings will include Sartre and de Beauvoir, Camus, Lévi-Strauss, Lacan, Barthes, Foucault, Derrida, Kristeva, Sollies, Cixous, and Irigaray. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WC, WE.—I. (I.) Fort

121. Twentieth Century French Novel (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 100. Poets and theories of the novel, from Proust to the Nouveau Roman and beyond. Readings from among Gide, Sartre, de Beauvoir, Camus, Breton, Beckett, Robbe-Grillet, Sarrasite, Simon, Barthes, Duras, Tournier, Pèrec, Modiano, Guibert, Toussaint. Offered in alternate years. GE credit: ArtHum, Wrt | AH, WC, WE.—II. (II.) Fort

122. French and Francophone Film (4)
Lecture/discussion—4 hours; extensive writing; fieldwork—3 hours. Prerequisite: course 100 or consent of instructor. Focus on the film from the Lumière Brothers to the present. Topics may include analysis of film form and narrative, major filmmakers and film trends, and film theory. May be repeated one time for credit. Offered in alternate years. GE credit: ArtHum | AH, VL, WC, WE.—II. (II.) Fort

124. Post-Colonialist and Francophone Literature (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 100. Post-Independence Black African and/or Caribbean and/or African North literatures written in French. Selected topics include: identity and subjectivity in postcolonial, women's voices, languages and oral cultures, cultural syncretism, theories of postcolonialism. May be repeated one time for credit. Offered in alternate years. GE credit: ArtHum, Div | AH, VL, WC, WE.—II. (II.) Adejumobi

125. French Literature and Other Arts (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 100. Relationship between French literature and other arts: painting, music, cinema, architecture, opera—from different periods. May be repeated one time for credit when topic differs. Offered in alternate years. GE credit: ArtHum, Wrt | AH, VL, WC, WE.—I. (I.) Simon

125B. French Literature and Other Arts (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 100. Relationship between French literature and other arts, such as painting, music, cinema, architecture, opera, from different periods. Taught abroad. May be repeated one time for credit when topic differs. Offered in alternate years. GE credit: ArtHum, Wrt | AH, VL, WC, WE.—II. (II.) Simon

127. Paris: Modernity and Metropolitan Culture (4)
Lecture/discussion—3 hours; term paper. Prerequisite: course 100. Representation of Paris in 19th and 20th century texts and its importance in defining the experience of French and Francophone culture. Offered in alternate years. GE credit: ArtHum, Wrt | AH, VL, WC, WE.—I. (I.) Simon

128. Topics in French Culture (4)
Lecture—3 hours; extensive writing. Prerequisite: course 100 or consent of instructor. In-depth study of a particular topic in French culture. May include the Court of Louis XIV, the French Revolution and Immigration. May be repeated one time for credit when topic differs. Offered in alternate years. GE credit: ArtHum | AH, VL, WC, WE.—II. (II.) Simon

140. Study of a Major Writer (4)
Lecture—3 hours; term paper. Prerequisite: course 100; consent of instructor. Concentrated study of works of a single author. May be repeated one time for credit if subject matter changes. GE credit: ArtHum | AH, WC, WE.—II. (II.)

141. Selected Topics in French Literature (4)
Lecture—3 hours; term paper. Prerequisite: course 100; consent of instructor. Subjects and themes such as satiric and didactic poetry of the Middle Ages, poetry of the Pléiade, theater of the eighteenth century, pre-romantic poetry, autobiography, literature and film, etc. May be repeated two times for credit when topic differs. GE credit: ArtHum | AH, WC, WE.—II. (II.)

141B. Topics in French Literature (4)
Lecture—3 hours; term paper. Prerequisite: course 100; consent of instructor. Subjects and themes such as satiric and didactic poetry of the Middle Ages, poetry of the Pléiade, theater of the eighteenth century, pre-romantic poetry, autobiography, literature and film, etc. Taught abroad. May be repeated two times for credit when topic differs. GE credit: ArtHum | AH, WC, WE.—II. (II.)

150. Linguistic Study of French-Sound and Form (4)
Seminar—3 hours; term paper. Prerequisite: course 109 and Linguistics 1, or consent of instructor. Introduction to the linguistic study of modern French, with focus on sound structure and form, inflection and derivation. GE credit: ArtHum or SocSci | AH or SS, WE.—II. (II.) Simon

161. Linguistic Study of French—Form and Meaning (4)
Seminar—3 hours; term paper. Prerequisite: course 104, 105, 160, 162 and Linguistics 1, or permission of instructor. Applied linguistic study of modern French, with focus on sentence construction and constituency, meaning and discourse functions. GE credit: ArtHum or SocSci | AH or SS, WE.—III. (III.) Russell Webb

162. History of the French Language (4)
Lecture—3 hours; term paper. Prerequisite: one from course 105, 109, 160, or 161; Linguistics 1 or consent of instructor. Major periods in development of the French language, from Latin to contemporary popular aspects, with emphasis on relationship between socio-cultural patterns and evolution of the language. Offered in alternate years. GE credit: ArtHum or SocSci | AH or SS, WC, WE.—II. (II.) Russell Webb

192. Internship (1-12)
Internship—3.5-6 hours; term paper. Prerequisite: upper division standing and consent of instructor. Practical application of the French language through work experience in government and/or business, culminating in an analytical term paper on a topic approved by the sponsoring instructor. (Fall/ Winter grading only.)

194H. Special Study for Honors Students (4)
Independent study—4 hours. Prerequisite: open only to French majors of senior standing who qualify for honors program. Guided topical research, under the direction of a faculty member, leading to a senior honors
thesis on a topic in French literature, civilization, or language studies. (P/NP grading only.) GE credit: AH, WC, WE.

195H. Honors Thesis (4)
