

BIOLOGICAL SYSTEMS ENGINEERING, BACHELOR OF SCIENCE

College of Engineering

The Biological Systems Engineering Undergraduate Program

Biological Systems Engineering is an engineering major that uses life sciences as its main scientific base. With rapid advances in biology and biotechnology, engineers are needed to work side by side with life scientists to bring laboratory developments into commercial production or field application. Industries in food and fiber production, bioenergy, bioprocessing, biotechnology, food processing, agriculture, forestry, aquaculture, plant and animal production, natural resource management, and waste reduction all need engineers with strong training in biology. In the first two years, the Biological Systems Engineering major requires sequences of courses in mathematics, physics, chemistry, engineering science, and humanities, similar to all accredited engineering programs. In addition to these courses, the major also includes courses in the life sciences and the application to engineering. Exclusive of General Education units, the Biological Systems Engineering major requires a minimum of 163 units (86 units in the lower division; 77 units in the upper division).

Biological Systems Engineering graduates take jobs in biotechnology, energy, food, and medical industries, work for federal, state and local agencies, and pursue graduate work. Students can also use the program as a pathway to professional schools in medicine, veterinary medicine, education, law, or business.

The Biological Systems Engineering program is accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>).

Students are encouraged to adhere carefully to all prerequisite requirements. The instructor is authorized to drop students from a course for which stated prerequisites have not been completed.

Lower Division Required Courses

See the Degree Requirements section.

Upper Division Requirements

If your career objective is a professional degree in the health sciences (e.g., medicine, veterinary medicine, nursing, or dentistry), you should consult with advisors from the appropriate school to plan for successful admission and to ensure that you take specific courses that may be required and that you have the necessary experience. Advisors in the Office of Health Professions Advising can also assist students planning to pursue degrees in these areas.

Areas of Specialization

Biological Systems Engineering is a broad major with many possible areas of specialization, with some examples below. Each area of specialization includes recommended electives for planning purposes. Students in the major are NOT required to select or follow an area of specialization. Following the recommended electives for a specialization

does not result in specialization or concentration notation on a student's transcript or diploma.

- Biotechnical Engineering.
- Agricultural & Natural Resources Engineering.
- Food Engineering.

Required Courses

Lower Division Required Courses

Code	Title	Units
Mathematics		
MAT 021A	Calculus	4
MAT 021B	Calculus	4
MAT 021C	Calculus	4
MAT 021D	Vector Analysis	4
MAT 022A	Linear Algebra	3
MAT 022B	Differential Equations	3
Physics		
PHY 009A	Classical Physics	5
PHY 009B	Classical Physics	5
PHY 009C	Classical Physics	5
Chemistry		
CHE 002A	General Chemistry	5
CHE 002B	General Chemistry	5
CHE 008A	Organic Chemistry: Brief Course	2-4
or CHE 118A	Organic Chemistry for Health & Life Sciences	
CHE 008B	Organic Chemistry: Brief Course	4
or CHE 118B	Organic Chemistry for Health & Life Sciences	
Biological Science		
BIS 002A	Introduction to Biology: Essentials of Life on Earth	5
Engineering		
ENG 017	Circuits I	4
ENG 035	Statics	4
ECS 032A	Introduction to Programming	4
or ENG 006	Engineering Problem Solving	
Biological Systems Engineering		
EBS 001	Foundations of Biological Systems Engineering (Fall only)	4
EBS 075	Properties of Materials in Biological Systems (Winter only)	4
Choose one; a grade of C- or better is required:		
UWP 001	Introduction to Academic Literacies	4
UWP 001V	Introduction to Academic Literacies: Online	
UWP 001Y	Introduction to Academic Literacies	
Choose one:		
ENG 003	Introduction to Engineering Design	4
CMN 001	Introduction to Public Speaking	
CMN 003	Interpersonal Communication Competence (in-person only; CMN 003V does not meet major requirements)	
Total Units		86-88

Upper Division Required Courses

Code	Title	Units
Engineering		
ENG 100	Electronic Circuits & Systems	3
ENG 102	Dynamics	4
ENG 104	Mechanics of Materials	4
ENG 105	Thermodynamics	4
ENG 106	Engineering Economics (Winter only)	4
Biological Systems Engineering		
EBS 103/HYD 103N or ENG 103	Fluid Mechanics Fundamentals Fluid Mechanics	4
EBS 125	Heat Transfer in Biological Systems (Spring only)	4
EBS 127	Mass Transfer & Kinetics in Biological Systems (Fall only)	4
EBS 130	Modeling of Dynamic Processes in Biological Systems (Winter only)	4
EBS 165	Bioinstrumentation & Control (Fall only)	4
EBS 170A	Engineering Design & Professional Responsibilities (Fall only)	3
EBS 170B	Engineering Projects: Design (Winter only)	2
EBS 170BL	Engineering Projects: Design Laboratory (Winter only)	1
EBS 170C	Engineering Projects: Design Evaluation (Spring only)	1
EBS 170CL	Engineering Projects: Design Evaluation (Spring only)	2
Statistics		
STA 100	Applied Statistics for Biological Sciences	4
Biological Systems Engineering Electives		
Choose a minimum of 4 units from all upper division Biological Systems Engineering courses not otherwise required, with the exception of:		4
EBS 189 series		
EBS 199	Special Study for Advanced Undergraduates	
Engineering Electives		
Choose a minimum of 8 units; all upper division courses offered by the College of Engineering may be taken as engineering electives with the exception of the following:		8
ECI 123	Urban Systems & Sustainability	
ECS 188	Ethics in an Age of Technology	
ENG 103	Fluid Mechanics	
ENG/PHY 160	Environmental Physics & Society	
All courses 190-197, 199; except ENG 190, may be taken for 2 units of engineering elective credit		
Biological Science Electives		
All upper division courses in the College of Biological Sciences may be used as biological science electives; with the exception of:		9
EVE 175	Computational Genetics	
EXB 102	Introduction to Motor Learning & the Psychology of Sport & Exercise	
EXB 112	Clinical Exercise Physiology	

EXB 115	Biomechanical Bases of Movement
EXB 121	Advanced Sport Psychology
EXB 124	Physiology of Maximal Human Performance
EXB 125	Neuromuscular & Behavioral Aspects of Motor Control
EXB 148	Theory & Practice of Exercise Testing
All 190-199	
May also be taken as biological science electives:	
ABT 161	Water Quality Management for Aquaculture
ANS 118	Fish Production
ANS 143	Pig & Poultry Care & Management
ANS 144	Beef Cattle & Sheep Production
ANS 146	Dairy Cattle Production
ATM 133	Biometeorology
AVS 100	Avian Biology
BIS 002B	Introduction to Biology: Principles of Ecology & Evolution
BIS 002C	Introduction to Biology: Biodiversity & the Tree of Life
CHA 101/EXB 106	Human Gross Anatomy
CHA 101L/ EXB 106L	Human Gross Anatomy Laboratory
ENT 100	General Entomology
ENH 102	Physiological Principles in Environmental Horticulture
ESM 120	Global Environmental Interactions
ESP 100	General Ecology
ESP 110	Principles of Environmental Science
ESP 155	Wetland Ecology
ETX 101	Principles of Environmental Toxicology
ETX 131	Environmental Toxicology of Air Pollutants
FST 102A	Malting & Brewing Science
FST 104L	Food Microbiology Laboratory
FST 119	Chemistry & Technology of Milk & Dairy Products
FST/ETX 128	Food Toxicology
FST 159	New Food Product Ideas
IDI 141	Infectious Diseases of Humans
SSC 100	Principles of Soil Science
WFC 121	Physiology of Fishes
Students may choose other upper division courses with substantial biological content offered by the College of Agricultural & Environmental Sciences; consultation with a faculty advisor and approval by petition is required.	
Upper Division Composition Requirement	
Choose one; a grade of C- or better is required:	
UWP 101 or UWP 101V or UWP 101Y	Advanced Composition
UWP 102B	Writing in the Disciplines: Biology
UWP 102E	Writing in the Disciplines: Engineering
UWP 102F	Writing in the Disciplines: Food Science & Technology

UWP 102G	Writing in the Disciplines: Environmental Writing
UWP 104A or UWP 104AY	Writing in the Professions: Business Writing
UWP 104E	Writing in the Professions: Science
UWP 104F or UWP 104FY	Writing in the Professions: Health
UWP 104T	Writing in the Professions: Technical Writing
The Upper Division Composition Exam administered by the College of Letters & Sciences cannot be used to satisfy the upper division composition requirement for students in the Biological Systems Engineering program.	
Total Units	77

Total Units: 163-165

Areas of Specialization

Biotechnical Engineering

Biotechnology involves the handling and manipulation of living organisms or their components to produce useful products. Students specializing in biotechnical engineering integrate analysis and design with applied biology to solve problems in renewable energy production, bioprocessing, control of biological systems, and production of biomaterials and bioproducts.

Students may focus on the mechanisms and processes for the sustainable production and use of energy from renewable biological sources. Students may also focus on the challenges in scaling up laboratory developments to industrial production, including production, packaging, and application of biocontrol agents for plant pests and diseases; genetically altered plants; plant materials and food products; and microbial production of biological products, tissue culture, and bioremediation. Students may also focus on the development of biosensors to detect microorganisms and specific substances useful in the development of products based on biological processes and materials.

Biotechnical engineers work in the biotech industries on process design and operation, scale-up, and instrumentation, sensing, automation, and control.

Recommended Biological Science Electives

Code	Title	Units
BIS 101	Genes & Gene Expression	4
BIS 102	Structure & Function of Biomolecules	3
BIS 103	Bioenergetics & Metabolism	3
BIT 160	Principles of Plant Biotechnology	3
BIT 161A	Genetics & Biotechnology Laboratory	6
BIT 161B	Plant Genetics & Biotechnology Laboratory	4
MIC 102	Introductory Microbiology	3
MIC 103L	Introductory Microbiology Laboratory	2
MIC 115	Recombinant DNA Cloning & Analysis	3
MCB 120L	Molecular Biology & Biochemistry Laboratory	3
MCB 121	Advanced Molecular Biology	3
MCB 126	Plant Biochemistry	3

MCB 162	Human Genetics & Genomics	3
MCB 182	Principles of Genomics	3
PLS 152	Plant Genetics	4

Recommended Engineering Electives

Code	Title	Units
BIM 109	Biomaterials	4
BIM 117	Modeling Strategies for Biomedical Engineering	4
BIM 118	Microelectromechanical Systems	4
BIM 140	Protein Engineering	4
BIM 143	Biomolecular Systems Engineering: Synthetic Biology	4
BIM 151	Mechanics of DNA	3
BIM 152	Molecular Control of Biosystems	4
BIM 161A	Biomolecular Engineering	4
BIM 162	Introduction to the Biophysics of Molecules & Cells	4
EBS 135	Bioenvironmental Engineering	4
EBS 161	Kinetics & Bioreactor Design	4
ECH 160	Fundamentals of Biomanufacturing	3
ECI 148A	Water Quality Management	4
ECI 149	Air Pollution	4
ECI 150	Air Pollution Control System Design	4
ECI 153	Deterministic Optimization & Design	4
ENG 180	Engineering Analysis	4

Agricultural & Natural Resources Engineering

With the world population continuing to grow over the next several decades, grand challenges exist in food security and social, economic, and environmental sustainability. Meeting the needs of agriculture and the effective use of natural resources will require continuing innovation. Students specializing in agricultural and natural resources engineering combine analysis and design with applied biology to solve problems in producing, transporting, and processing biological products to provide food, fiber, energy, pharmaceuticals, and other human needs.

Students may focus on automation and control of field operations and engineered systems, robotics, and the biomechanics of humans and animals. They may also focus on engineering issues related to the sustainable use of natural resources, particularly energy and water, but also land and air.

Agricultural and natural resources engineers are employed as practicing professionals and managers with agricultural producers, equipment manufacturers, irrigation districts, food processors, consulting engineering firms, start-up companies, and government agencies. Graduates with interest in biomechanics work in industry on the design, evaluation, and application of human-centered devices and systems, as well as on improving worker health and safety.

Recommended Biological Science Electives

Code	Title	Units
Animal Emphasis		
AVS 100	Avian Biology	3

ANS 112	Sustainable Animal Agriculture	3
ANS 143	Pig & Poultry Care & Management	4
ANS 144	Beef Cattle & Sheep Production	4
ANS 146	Dairy Cattle Production	5
NPB 101	Systemic Physiology	5
SSC 100	Principles of Soil Science	5

Aquaculture Emphasis

ANS 118	Fish Production	4
ANS 131	Reproduction & Early Development in Aquatic Animals	4
ABT 163	Aquaculture Systems Engineering	3
WFC 120	Biology & Conservation of Fishes	3
WFC 121	Physiology of Fishes	4

Biomechanics Emphasis

BIS 102	Structure & Function of Biomolecules	3
NPB 101	Systemic Physiology	5
CHA 101/EXB 106	Human Gross Anatomy	4

Plant Emphasis

ENT 100	General Entomology	4
ENH 102	Physiological Principles in Environmental Horticulture	4
ESP 100	General Ecology	4
ETX 101	Principles of Environmental Toxicology	4
HYD 124	Plant-Water-Soil Relationships	4
MIC 120	Microbial Ecology	3
PLB 111	Plant Physiology	3
SSC 100	Principles of Soil Science	5
PLS 101	Agriculture & the Environment	3
PLS 114	Biological Applications in Fruit Production	2

Recommended Engineering Electives

Code	Title	Units
EBS 128	Biomechanics & Ergonomics	4
EBS 145	Irrigation & Drainage Systems	4
BIM 109	Biomaterials	4
BIM 116	Physiology for Biomedical Engineers	5
BIM 126	Tissue Mechanics	3
ECI 141	Engineering Hydraulics	3
ECI 142	Engineering Hydrology	4
ECI 144	Groundwater Systems Design	4
ECI 145	Hydraulic Structure Design	4
ECI 148A	Water Quality Management	4
ECI 171	Soil Mechanics	4
ENG 111	Electric Machinery Fundamentals	4
ENG 121	Fluid Power Actuators & Systems	4
ENG 180	Engineering Analysis	4

Additional Recommended Electives (Do not count towards major requirements)

Code	Title	Units
ABT 150	Introduction to Geographic Information Systems	4
ABT 161	Water Quality Management for Aquaculture	3
ABT 163	Aquaculture Systems Engineering	3

ABT 165	Irrigation Practices for an Urban Environment	3

Food Engineering

Producing the food we eat every day constitutes the largest industrial sector of the U.S. economy, and this production involves the work of engineers in a wide variety of food industries, both at home and around the world. Students specializing in food engineering design food processes and operate equipment and facilities for production of high quality, safe, and nutritious food with minimal impact of these operations on the environment.

Students learn to apply engineering principles and concepts to handle, store, process, package, and distribute food and related products. In addition to engineering principles, the food engineering specialization provides an understanding of the chemical, biochemical, microbiological, and physical characteristics of food. Students study concepts of food refrigeration, freezing, thermal processing, drying, and other food operations, food digestion, and health and nutrition in food system design.

Food engineers work as practicing engineers, scientists, and managers in the food industry.

Master Undergraduate Advisor

S. Vougioukas

Students graduating with a B.S. degree in Biological Systems Engineering from UC Davis are prepared to:

- Apply life sciences in engineering at the biochemical, cellular, organism, and macro levels.
- Solve biological systems engineering problems while employed in the private or public sector.
- Consider the environmental, economic, and social consequences of their engineering activities.
- Communicate effectively with professional colleagues and public constituencies.
- Act in an ethical manner.
- Continue their education to adapt and thrive in a changing professional world.
