MECHANICAL ENGINEERING, BACHELOR OF SCIENCE

College of Engineering

Valeria La Saponara, Ph.D., Vice Chairperson for Undergraduate Studies

The Mechanical & Aerospace Engineering Undergraduate Programs

The Department of Mechanical & Aerospace Engineering administers two undergraduate programs in the College of Engineering: (1) Mechanical Engineering, (2) Aerospace Science & Engineering.

For more information about our programs, see Undergraduate Majors (http://mae.ucdavis.edu/undergraduate/undergraduate-majors/).

Mission

The Department of Mechanical & Aerospace Engineering is committed to educating future engineers so that they may contribute to the economic growth and well-being of the state, the nation, and the world, and to the advancement of knowledge in the mechanical and aerospace sciences.

Objectives

The objectives of the Mechanical Engineering & Aerospace Science and Engineering programs are to produce graduates who do one or more of the following: a. Practice mechanical engineering and/or aerospace engineering in a broad range of agencies, industries, and institutes; b. Pursue graduate education; c. Participate in research and development, and other creative and innovative efforts in science, engineering, and technology; d. Pursue entrepreneurial endeavors.

Mechanical Engineering Undergraduate Program

The Mechanical Engineering program is accredited by the Engineering Accreditation Commission of ABET (http://www.abet.org).

The mechanical engineer uses basic science in the design and manufacture of complex engineering systems, requiring the application of physical and mechanical principles to the development of machines, energy conversion systems, materials, and equipment for guidance & control.

Work in this broad field of engineering requires a thorough knowledge of mathematics, physics, chemistry, material science, applied mechanics, thermodynamics, heat transfer, mass transfer, electricity, manufacturing processes, and economics.

The Mechanical Engineering program is designed to provide knowledge in mechanical engineering and associated applied sciences so that graduates may practice in a broad range of industries, pursue graduate studies, participate in research & development, and/or pursue entrepreneurial endeavors.

Areas of Interest

Students spend their third year in further study of fundamental courses, and in the fourth year they may tailor their studies to their interests by selecting courses in controls and systems analysis, fluid mechanics, heat transfer, mechanical design or thermodynamics. Students can either prepare for graduate study in mechanical engineering or obtain a broad background for entering engineering practice.

Students may select elective courses from among the areas of interest listed below.

Mechanical Design

The creation and improvement of products, processes, or systems that are mechanical in nature are the primary activities of a professional mechanical engineer. The development of a product from concept generation to detailed design, manufacturing process selection and planning, quality control and assurance, and life cycle considerations are areas of study and specialization in the area of mechanical design.

Solutions to such major social problems as environmental pollution, the lack of mass transportation, the lack of raw materials, and energy shortages, will depend heavily on the engineer's ability to create new types of machinery and mechanical systems.

The engineer-designer must have a solid and relatively broad background in the basic physical and engineering sciences and have the ability to synthesize the information from such a background in creative problem solving. In addition to having technical competence, the designer must be able to consider the socioeconomic consequences of a design and its possible impact on the environment. Product safety, reliability, and economics are other considerations.

Code | Title | Units
--- | --- | ---
ENG 122 | Introduction to Mechanical Vibrations | 4
EMS 180 | Materials in Engineering Design | 4
EMS 182 | Failure Analysis | 4
EME 121 | Engineering Applications of Dynamics | 4
EME 134 | Vehicle Stability | 4
EME 139 | Stability of Flexible Dynamic Systems | 4
EME 150B | Mechanical Design | 4
EME 151 | Statistical Methods in Design & Manufacturing | 4
EME 152 | Computer-Aided Mechanism Design | 4
EME 154 | Mechatronics | 4
EME 161 | Combustion & the Environment | 4
EME 163 | Internal Combustion Engines & Future Alternatives | 4
EME 164 | Introduction to Heating, Ventilation & Air Conditioning Systems | 4
EME 171 | Analysis, Simulation & Design of Mechatronic Systems | 4

Suggested Advisors

Engineering & Biomedical Fluid Mechanics

This field of study is based on the fundamentals of fluid mechanics and their broad range of applications in the biomedical and engineering areas. Areas of current research include blood circulation and its potential role in the regulation of normal physiological function and in the development of disease; groundwater and atmospheric flows and their implications for pollutant transport and environmental concerns; aerodynamic flow around transportation vehicles and its impact on vehicle performance; flow in combustion engines and other energy
systems with considerations of efficiency and environmental impact; compressible flows in aircraft engine or gas turbine; and computational fluid dynamics. These areas are investigated both experimentally and computationally.

**Combustion & the Environment**

Combustion is widely used for energy generation, propulsion, heating, and waste disposal, as well as for many other applications. Mechanical engineers are often heavily involved with the design of combustion systems (internal combustion engines, gas turbines, furnaces, etc.) and deal with aspects of combustion ranging from increasing efficiencies to reducing pollutant emissions. This specialization is for those who would like to work in fields that use combustion, or that deal with pollution related to combustion. With the current increased emphasis on reducing pollutants while maintaining or increasing efficiency, the efforts of mechanical engineers in designing and improving combustion systems are becoming more important.

---

**Heat Transfer, Thermodynamics, & Energy Systems**

This specialization emphasizes the fundamentals of heat transfer and thermodynamics, and their application to the design of advanced engineering systems. The objective of the program is to introduce students to the fundamental processes of heat transfer and thermodynamics in complex engineering systems so that they are able to design more efficient, cost-effective, and reliable systems with less environmental pollution and impact. An understanding of heat transfer and thermodynamics is required for the design of efficient, cost-effective systems for power generation, propulsion, heat exchangers, industrial processes, refining, and chemical processing. This area of specialization is important to many industries—aerospace, defense, automotive—as well as to the thermal design of electronic and computer packages.

Ground Vehicle Systems
An important aspect of mechanical engineering is the design of more environmentally benign surface vehicles that provide efficient individual and public transportation. Innovations in the field require competence in vehicle dynamics, control of vehicle dynamics, power sources & power transmission, lightweight structures & systems, alternatively fueled power systems, including electrical drives & fuel cells, and mechanical systems.

Suggested Advisors

Transportation Systems
As society recognizes the increasing importance of optimizing transportation systems to minimize environmental degradation and energy expenditure, engineers will need to consider major innovations in the way people and goods are moved. Such innovations will require competence in vehicle dynamics, propulsion and control, and an understanding of the problems caused by present-day modes of transportation. Vehicle control requires an understanding of sensors and actuators, and the integration of yet-to-be-proposed concepts into overall vehicular dynamics. Competence in these areas allows for the development of alternative propulsion concepts, such as electric, hybrid, and fuel cell.

#### Lower Division Required Courses Subtotal 78

#### Upper Division Required Courses

**Engineering**
- ENG 100  Electronic Circuits & Systems  3
- ENG 102  Dynamics  4
- ENG 103  Fluid Mechanics  4
- ENG 104  Mechanics of Materials  4
- ENG 105  Thermodynamics  4
- ENG 190  Professional Responsibilities of Engineers  3

**Mechanical Engineering**
- EME 106  Thermo-Fluid Dynamics  4
- EME 108  Measurement Systems  4
- EME 109  Experimental Methods for Thermal Fluids  4
- EME 150A  Mechanical Design  4
- EME 165  Heat Transfer  4
- EME 172  Automatic Control of Engineering Systems  4

Choose a series: 8
- EME 185A & EME 185B  Mechanical Engineering Systems Design Project and Mechanical Engineering Systems Design Project (taken in consecutive quarters)
- EAE 130A & EAE 130B  Aircraft Performance & Design and Aircraft Performance & Design (taken in consecutive quarters)
- EAE 143A & EAE 143B  Space Vehicle Design and Space Mission Design (taken in consecutive quarters)

**Applied Mathematics Electives**

Choose one: 4
- ECH 140  Mathematical Methods in Biochemical & Chemical Engineering
- ECI 114  Probabilistic Systems Analysis for Civil & Environmental Engineers
- ECS 130  Scientific Computation
- ENG 180  Engineering Analysis
- MAT 118A  Partial Differential Equations: Elementary Methods
- MAT 128A  Numerical Analysis
- MAT 128B  Numerical Analysis in Solution of Equations
- EME 115  Introduction to Numerical Analysis & Methods
- EME 151  Statistical Methods in Design & Manufacturing
- STA 130A  Mathematical Statistics: Brief Course
- STA 131A  Introduction to Probability Theory

**System Dynamics/Mechanical Design Electives**

Choose one: 4
- ENG 122  Introduction to Mechanical Vibrations
- EME 121  Engineering Applications of Dynamics
- EME 139  Stability of Flexible Dynamic Systems

**Restricted Electives**

Choose two: 8
- EAE 129  Stability & Control of Aerospace Vehicles
- EAE 138  Aircraft Propulsion
- EAE 140  Rocket Propulsion
- EAE 142  Orbital Mechanics
- EAE 143A  Space Vehicle Design
- EAE 143B  Space Mission Design
- ENG 188  Science & Technology of Sustainable Power Generation
- EMS 180  Materials in Engineering Design
- EMS 182  Failure Analysis
- EME 134  Vehicle Stability
- EME 152  Computer-Aided Mechanism Design
- EME 161  Combustion & the Environment
- EME 163  Internal Combustion Engines & Future Alternatives
- EME 164  Introduction to Heating, Ventilation & Air Conditioning Systems

**Upper Division Composition Requirement**

Choose one; a grade of C- or better is required: 0-4
- UWP 101  Advanced Composition
- UWP 101V  Advanced Composition
- UWP 101Y  Advanced Composition
- UWP 102E  Writing in the Disciplines: Engineering
- UWP 104A  Writing in the Professions: Business Writing
- UWP 104AV  Writing in the Professions: Business Writing
- UWP 104AY  Writing in the Professions: Business Writing
- UWP 104E  Writing in the Professions: Science
- UWP 104T  Writing in the Professions: Technical Writing

Passing the Upper Division Composition Exam

**Upper Division Required Courses Subtotal 70-74

**Total Units 148-152

1 Students may also choose from EAE 130A, EAE 130B, EME 121, EME 139, EME 150B, EME 151, EME 154, EME 171, ENG 122 if these courses are not used in satisfaction of other degree requirements.
